The Fine-Art Court contains a collection of very beautiful life-like, and spirited figures, modelled in wax with most surprising minuteness and artistic feeling, both in the position and grouping. They represent the natives of Mexico, and also the American Indians (p. 833), habited in their proper costume, and displaying their characteristic customs in the several phases of civilized and savage life, with a truthfulness in the varied expressions and anatomical development of the different effigies, which is most remarkable. An Indian, rejoicing in triumph over the despair of a white victim, whom he has bound and is about to scalp, but whose sufferings he is prolonging with savage cruelty, may be especially cited in illustration of this particular excellence; and the group of three figures, entitled "a confessional," as an instance, displaying a rich vein of humour. The "Aquador," or water-carrier; the "Remedor," or street-cobbler in his tattered garments; the group of civilized Indians laden with produce; the group of savage Indians, called "Mocos," the *Pandanus*, a national dance, illustrated by two Indian women dancing to the guitar, played by a male figure, with numerous other examples which might be adduced, are also all deserving of equal praise.

#### INDIA.

The Figures in the Indian Courts, which have, it appears, been contributed by several Exhibitors, are either modelled in clay or plaster, or else carved in wood, and painted to represent the natural colours of the various objects. The largest group, which was contributed by Mr. Mansfield, of the East India Company's civil service, is contained in a model of the "Jamma Bundi," or the encampment of a government collector, whilst moving about on his annual tour through his district (pp. 926, 927). The figures are of plaster, and the buildings of wood. The double-poled tent of the collector is pitched at a short distance from the village; and he is represented as sitting within it, surrounded by the "Mauleedar," and other revenue-officers. Several petitioners are congregated around the door of the tent, soliciting a remission of part of the payments due from them. The figures of men and animals are about three hundred in number, and present a lively representation of Indian life and character. Some are indolently lying under the trees, some are gazing at the performance of a snake-charmer, and some feeding an elephant; whilst others, more intent on the business of the day, are having their petitions written out by the village accountants, or "Coolkurnees." The village, near which the encampment is formed, is represented inside a fortified wall, which surrounds it, and which is shown in section. There are also to be seen the numerous shops and rows of houses in the village, with the inhabitants engaged in their various pursuits.

The best executed and most instructive models, however, are those of clay, manufactured in Kishnaghur (p. 926), representing the various castes and professions of the Hindoos, which collection comprises upwards of sixty illustrations, some consisting of several figures. Here, almost in the closest juxtaposition with the splendid cotton-carding, spinning, and weaving machinery exhibited in Class VI., there is to be seen a Bengal woman cleaning cotton with the strung bow, and another spinning with the most primitive of apparatus; and the weaver preparing his thread on his roughly-made loom. Not far from Nasmyth's steam-hammer, the "Khamar," or Bengal blacksmith, is represented with his simple bellows, forge, and anvil; and within a very short distance from the latest refinements in agricultural implements and machinery, are illustrations of ploughing and harrowing with apparatus which no European could use; and rice-grinding that must require all the patience of an Indian to perform. On a line with the locomotive-engines which convey our correspondence with a celerity not dreamed of a few years since, and even now insignificant in com-

parison with the lightning speed of the Electric-telegraph, are effigies of the *Dawk-runner*, or Bearers of the Government Mail-bags; and the *Dawk-bandy-burdar*, or messenger who carries Post-office Parcels; and closely watched by the unarmed policeman are the *Bro-jobassees*, or armed watchman, and the *Chowkeedar*, or village watchman. These are only a few of the groups of this most suggestive and well-executed collection. It will recompense the most attentive study; and the visitor cannot fail to be astonished at the very simple implements used by the Hindoos to effect operations for which costly and ponderous machinery are generally employed with us. An instance in addition to those already cited may be pointed out in the primitive pair of wooden cylinders for crushing the sugarcane, which are turned by a single individual with a cross-handle, whilst two others are engaged, the one in feeding the machine, and the other in taking away the juice and the crushed cane. This simple machine, although not comparable with the gigantic three-roller crushing-mill with its attached steam-engine, seen in Class VI., nevertheless shows that the Indians were acquainted with the principles involved in its construction.

Less perfect in point of execution than the Kishnaghur clay-figures, but still most interesting, are the models manufactured at Gokak (p. 926), which it appears are not made as articles of export, but only to order. This collection comprises about forty illustrations, out of which may be especially noticed, as representing trades, the Cotton-printer, the Potter, the Woman grinding meal, the Bengal Water-carrier, or *Bheestee*, and the Washerwoman, or *Dhobie*.

The Models illustrating the practices of the Thug murderers excite the most painful interest, and represent the following incidents:—A traveller, induced to sit down and smoke, has his attention directed to the heavens, when the fatal handkerchief is applied by a Thug who stands behind him; but in another group a horseman is successfully defending himself from an attack on the part of the Thugs, one of whom he has slain. The mutilation of the bodies of the murdered, and their concealment in a well, and the strangling of travellers on horseback and on foot, are also represented. It is stated that some of these Thug murderers, after having been arrested and reclaimed, and domiciled in a school of industry, were the manufacturers of the carpets exhibited in the Indian tent.

The other Models contained in the Indian Court comprise thirty-five figures in wood from the Rajah of Jodhpore; a model of a European court of justice, and also one of a native court; models of a silk-factory and an indigo-factory, of a native oil-mill, and of a farm-establishment (p. 927). A series of male and female figures, exhibited by T. E. J. BOILEAU, (p. 927), represent the principal Sects in Uchin China and Travancore.

#### MALTA.

The Figures from Malta, which are modelled in wax, have not the same claims to merit as those before described, but have still a certain amount of excellence. They represent the Grand Master Valetta, the Grand Master Lonzadari, with the Master of the Order of Malta, and a Knight, in their proper costume (p. 946).

#### SPAIN

Three Exhibitors contribute models illustrative of the manners and dresses of Spain. Two of these send figures in painted terra-cotta representing the inhabitants of Andalusia and Malaga; but the examples are not numerous, though they are remarkable for the beauty and correctness of the modelling (p. 1347). The other Exhibitor has sent a model of one-half of the interior of the arena for Bull-fights at Madrid, made in wood, and containing, it is said, about 4,000 figures, exhibiting the various incidents proper to the place (No. 289, p. 1347).

There are eleven Exhibitors in this section; of these there are—

- 4 Holders of a Prize Medal.
- 1 Who obtained Honourable Mention.
- 6 Unrewarded.

• 11 Total.

The number of Exhibitors from the various countries is as follows:—

British Colonies:—

India — — — — 6  
Malta — — — — 1

Spain — — — — 3  
United Kingdom — — — 1

—  
—  
11

LIST OF AWARDS.

CUBERO, J. (Spain, No. 282, p. 1347). Prize Medal for Three Terra-cotta Figures, representing the Costumes of Malaga.

EAST INDIA COMPANY, The Hon. (India, Class XXX., p. 926). Prize Medal for a series of upwards of Sixty Clay Figures manufactured at Kishnagur, representing the various occupations of the Hindoos.

GUTIERREZ DE LEON, R. (Spain, No. 281A, p. 1347). Prize Medal for Three Terra-cotta Figures, representing the costumes of Andalusia.

MATA ANQUILERA, J. (Spain, No. 289, p. 1347). Honourable Mention for an interesting Model of a Bull-fight, illustrated by 4,000 figures.

MONTANARI, N., Upper Charlotte Street, Fitzroy Square (Class XXX., No. 224, pp. 833, 834). Prize Medal for his very beautiful and interesting series of Statuettes illustrating the customs of the Mexicans.

“III. COLLECTIONS OF PRODUCE.

Under this general title there are to be noticed four very important and instructive collections. Two of them consist of the Imports of Raw Materials and Manufactures into Liverpool and Hull respectively; one of the Inorganic and Organic produce of India, and one of Unwrought Materials and Manufactures from the State of Maryland, in the United States. The two most important are those of Liverpool and India, both from their extent and careful arrangement.

UNITED KINGDOM.

*The Collection of Imports into the Port of Liverpool* (pp. 803—816), exhibited by the Liverpool Local Committee, contains about five hundred and fifty different substances; but as in most cases several varieties of each kind are exhibited, it comprises a far greater number of specimens than is indicated by this estimate. The numerous articles included in this collection are arranged systematically under the following heads:—

CLASS A.—ORGANIC SUBSTANCES.

Section I. *Animal Products.*

1. Mammalia.
2. Aves (Birds).
3. Reptilia (Reptiles).
4. Pisces (Fishes).
5. Mollusca.
6. Insecta (Insects).
7. Radiata.
8. Articles produced by Insects.

Section II. *Vegetable Substances.*

1. Oils and Balsams.
2. Fruits, Nuts, &c.
3. *Materia Medica* (Medicinal products).
4. Vegetable Juices and Vegetable Extracts.
5. Dyeing Materials.
6. Tanning Materials.
7. Spices.
8. Oil Seeds.
9. Agricultural Seeds.
10. Diotetic Articles.
11. Vegetable fibres.
12. Timber and Hard Woods.
13. Miscellaneous (Hops and Rushes).
14. Tobacco.
15. Feculas.

CLASS B.—INORGANIC SUBSTANCES.

Section I. *Metallic.*

Section II. *Non-Metallic.*

To each article are appended the Commercial and Scientific names, and the name of the Class or Order to which they belong, with the quantity imported into Liverpool; the locality whence they were exported, and the use of each substance in the Arts are also indicated.

A glance at the numerous divisions and subdivisions just cited will immediately suggest how valuable and interesting such collections would be to the principal seats of British manufacturing industry, especially if they were made so comprehensive as to comprise all raw materials; and not only such as are usually imported, but those also which are known to be useful in the arts, or are likely to prove so, from the quantities in which they can be obtained. These Museums of Raw Produce would, however, be rendered even still more useful by the appointment of energetic curators, fully qualified by previous studies to impart accurate scientific and commercial information concerning their contents.

It appears from the statement of Mr. Thomas C. Archer, by whom the Liverpool collection was arranged, that the cost of it was about 400*l.*, which must be regarded as a very small expense in comparison with the importance of the results to be derived from it. Ten months were occupied in making the collection; but it appears that the greater part of each day was consumed in obtaining the necessary funds, in soliciting samples from the produce-brokers, and in overcoming the hostile prejudices which existed concerning it. The evenings only were devoted to the classifying and naming the specimens which were obtained by gift or purchase. The time consumed was, it was stated, one of the principal items of cost, as the Liverpool Local Committee had to reimburse to Mr. Archer his salary from the Government, which he ceased to receive during the ten months he was engaged in making the collection. About 200*l.* were thus expended; but a large portion of this outlay is attributed to loss of time in soliciting subscriptions; for had sufficient funds been placed at the disposal of the Liverpool Local Committee in the first instance, Mr. Archer conceives that a collection ten times as extensive might have been formed, at a cost but little above that of the present one. This, indeed, was collected under great disadvantage; a few cases being provided as they were required or could be afforded. Much credit is due to the Liverpool Local Committee, and especially to Mr. Archer, for the perseverance which they evinced in prosecuting their labours under such difficulties, as well as for having produced, notwithstanding, so extensive and valuable an exhibition for so small an expense. As a detailed list of the specimens comprised in this display is given in the *Illustrated Catalogue*, pages 803—817, it is unnecessary to reprint it in this Report.

*The Collection of Imports into the Port of Hull*, exhibited by the Hull Local Committee, is of the same description as that of Liverpool, but far less extensive. This was to be anticipated from the relative commercial importance of the two towns, and from the nature of the trade of Hull, which is chiefly with the Baltic. Hence Flax, Iron, Tallow, Cereal-grains, Linseed, and Linseed-cake, form important items in it. Altogether there are about one hundred and twenty different substances exhibited, to which are appended the commercial and scientific names, and the quantity of each imported into Hull. A detailed list of the collection is given at pages 816 and 817 of the *Illustrated Catalogue*.

INDIA.

The next of the series under review is the Miscellaneous Collection of Mineral, Vegetable, and Animal Substances (pages 860—907), used by the natives of India in their various Arts and Manufactures, as well as in Medicine. They were principally gathered from the Bazaars of the Bengal Presidency, by Dr. J. Forbes Royle, during his residence in India; but they include also some additions obtained by Dr. Falconer, in Cashmere, and by Dr. Stocks, in Scinde.

In the arrangement of this collection for the Great Exhibition, Dr. Royle states that he is much indebted to Mrs. Royle for her assistance. It is important, from the vast number of substances contained in it, which amount to between eleven and twelve hundred in number, procured

from a few only of the Bazaars of India. They are used by the natives for a variety of purposes; but though many of those which are said to be useful as Medicines may not possess active properties, others are known with certainty to be some of the most powerful and efficient drugs; and it may also be inferred that there must be many others possessed of useful properties, though they are but little known in Europe. But independently of their medicinal uses, there are among the various substances many which are useful as food, or in the arts; as, for instance, the different Cereal grains and pulses; Starch-yielding Seeds and Roots, Oil-seeds, Gums and Resins, Dyes, &c., as well as Animal and Mineral bodies. These substances show, at a glance, the resources which the natives of India possess, and have long possessed, for practising many of the arts in which they attained, at a very early period, a very high degree of perfection, with apparently very imperfect means.

The collection is further interesting, both in a literary and scientific point of view, because most of the substances, which are here gathered into a focus, have their properties described in the various works on the *Materia Medica* which are at present in use in India. In those works a variety of synonymes are given, with the names of the same substances as known in the Hindoo, Persian, and Arabic languages, and very frequently in the Greek also. The universal knowledge of these productions is accounted for by the circumstance that the medical works which are in use by the Mahomedan Hakim in India are translations from the Arabic into Persian, with which has been incorporated information from the writings of the Hindoos. The Arabs, at the Court of Haroun-al-Rashid, it is well known, made translations from the Greek authors, such as Dioscorides; and hence it will be understood why many of the substances, mentioned in such Persian translations as are now in use in India, have both the Arabic and Greek synonymes assigned to them. By means of this collection we are enabled to examine numerous specimens of Asiatic natural productions, which are all labelled with their synonymes; and hence it is frequently possible to ascertain the very substances which both the Arabs and the Greeks have described, and to which they assigned an Eastern origin. Thus the *Nardus* (Spikenard) of the Greeks may be shown to be the *Jatamansi* of the Hindoos; and Dr. Falconer has identified their *Costus* with the *Koot* or *Koost* of the Arabs, a product of the mountains of Cashmere, which in former times found its way to Europe, and at present forms an extensive article of commerce with China. Many of these interesting parallels have been traced out by Dr. Royle, in his *Essay on the Antiquity of Hindoo Medicine*, as well as in his *Illustrations of Himalayan Botany*. He has also been able to identify some of the plants mentioned in the sacred writings, from their Arabic synonymes, as he has shown in his paper, *The Mustard-tree and the Hyssop of Scripture*.

As a complete list of the articles contained in this invaluable collection is given in the *Illustrated Catalogue* (pages 893-907), it is only necessary here to state that it comprises Nine hundred and nine substances of vegetable origin, Thirty-two animal products, and Two hundred and two bodies derived from the mineral kingdom. To every specimen its scientific name and synonymes are appended, and also the locality whence it was obtained. The vegetable substances comprise 193 Roots, 10 Woods, 202 Barks, 445 Fruits and Seeds, 12 Galls, and 47 Gums, Resins, and Gum-resins. If a collection of all those products which are but little known were rendered available, under certain restrictions, to the investigations of the scientific chemist, it would undoubtedly do much to advance our knowledge in organic chemistry, and could not fail to be productive of material benefits, not only to the science of medicine, but also to the arts.

#### UNITED STATES OF AMERICA.

The Collection of some of the Products and Manufactures of the State of Maryland (United States, 371, p. 1459), which is contained in an ornamental cabinet made of the principal woods of that State, comprises about Eighty different substances. The chief of them are ores, chemi-

cals, and woods; and the cabinet itself illustrates the uses to which the woods may be applied. The Jury of Class IV. having also awarded a Medal to this interesting collection, it is to be expected that the various objects exhibited will be discussed in detail in their Report; but as the *Illustrated Catalogue* does not contain a list of them, the following summary will not be regarded as misplaced:—

#### MINERALS.

Anthracite Coal—2 kinds.  
Bituminous Coal.  
Building-stone.  
Copper-ore—3 varieties.  
Free-stone.  
Gold-ore.  
Granite—2 varieties.  
Iron-ore—8 kinds.  
Lead-ore.  
Marble—3 varieties.  
Soap-stone—Steatite.

#### METALS.

Copper rods.  
Copper sheets—3 kinds.  
Pig-iron.  
Wrought-iron.  
Yellow-metal.

#### METALLIC MANUFACTURES.

Iron Nails.  
Shots.  
Stereotype-plate.  
Types.

#### CHEMICAL MANUFACTURES.

Alum (Double sulphate of alumina and potash).  
Bichromate of potash.  
Blue vitriol (Sulphate of Copper).  
Chloride of lime (Hypochlorite of Lime).  
Chrome-yellow (Chromate of Lead).  
Chrome-green (Chrome-yellow and Prussian-blue).  
Copperas (Proto-sulphate of Iron).  
Epsom-salts (Sulphate of Magnesia).  
Glue (Gelatin).  
Magnesia.  
Magnesia, Carbonate of.  
Prussian blue (Sesqui-ferrocyanide of Iron).  
Red lead (Red oxide of Lead).  
Saltpetre (Nitrate of Potash).  
Soap.  
Stearic acid.  
White zinc (Oxide of Zinc).

#### BUILDING MATERIALS.

Bricks—3 kinds.  
Fire-bricks.  
Lute-bricks.

#### VEGETABLE SUBSTANCES.

##### 1. Woods.

Ash.  
Beech.  
Cedar.  
Cherry.  
Hickory.  
Holly.  
Lime.  
Locust.  
Maple—2 kinds.  
Mulberry.  
Oak.  
Pine.  
Poplar.  
Walnut.

##### 2. Cereal Seeds and Meal.

Barley.  
Buckwheat.  
Buckwheat-meal.  
Indian-corn, yellow and white.  
Indian-corn-meal.  
Oats.  
Rye.  
Wheat, white and red.  
Wheat-flour.

## 3. Tobacco.

Chewing Tobacco.  
Leaf Tobacco.

## 4. Vegetable Manufactures.

Cotton Goods.  
Flax Thread.  
Paper.

## 5. Animal Products.

Belt-Leather.  
Calf Leather.  
Cloth, of mixed cotton and wool.  
Felt.  
Morocco Leather.  
Silk.  
Woollen Cloth.

The number of Exhibitors in this section is Four, to all of whom Prize Medals have been awarded.

The following is the classification of the contributors, according to their respective countries:—

|                          |   |   |   |   |
|--------------------------|---|---|---|---|
| America                  | - | - | - | 1 |
| British Colonies (India) | - | - | - | 1 |
| United Kingdom           | - | - | - | 2 |

## LIST OF AWARDS.

ARCHER, THOMAS C., Liverpool (Class XXIX., No. 270, pp. 803-817), Prize Medal, for the collection of the samples of Foreign Articles imported into Liverpool within the last five years, of which he was the Collector and Arranger.

HULL LOCAL COMMITTEE (Class XXIX., No. 290, pp. 816, 817), Prize Medal, for the collection of Sample Imported Articles of the port of Hull.

MARYLAND, COMMITTEE OF (United States, No. 371, p. 1459), Prize Medal (*the same Award being given by the Jury of Class IV.*), for a cabinet containing specimens of some of the products and manufactures of the State of Maryland.

ROYLE, Dr. J. FORBES, India (p. 893), Prize Medal, for a collection of Mineral, Vegetable, and Animal Substances, useful in Medicine and the Arts.

To which may be added, the Award of a Prize Medal to the Sultan of Turkey, for numerous examples of Soaps, Candles, Confectionery, and Pipes, which have been noticed in the respective articles on those subjects also included in the present Report.

## D. MANUFACTURES FOR PERSONAL USE.

## I. DRESSING-CASES, WRITING-DESKS, WORK-BOXES, &amp;c.

Although Writing-desks are comprised in the list of articles allotted to Class XXIX., yet, as they are also included in that of Class XVII., to which they appear more properly to belong, they are displayed in both. The latter class, however, contains the greater number of examples; and, likewise, the most important of those which are covered with Russia and other leathers, and either "chequered" or ornamented after the manner of the bookbinder. Work-boxes are not nearly so numerous, and are chiefly from Belgium. Dressing-cases, consequently, form the chief portion of the contributions in the branch of art now under consideration; and they are exhibited almost exclusively by British and French manufacturers, who appear to monopolise the supply of these articles. On account, therefore, of the prominent position of Dressing-cases in Class XXIX., they will be chiefly treated of in the subsequent remarks; Writing-desks and Work-boxes being, however, noticed, wherever they call for especial observation. The latter may, indeed, be regarded, in some instances, as modifications of dressing-cases, in which some of the contents are allowed to predominate over others; for those cabinets very frequently contain writing materials or apparatus for ladies' work; and, on the other hand, the fittings of writing-desks or work-boxes sometimes comprise a toilette-set, more or less complete. Of both of these kinds several examples are shown in the Exhibition.

DRESSING-CASES.~ The tasteful and compact arrange-

ment of these most useful receptacles belong to a very modern period; but they have, probably, not even yet attained the high degree of elegant convenience of which they are capable. In their primitive character, however, which is simply that of containing some of the materials of personal adornment,—even the dressing-case is of considerable antiquity. There is a remarkable allusion to coffers of ivory, probably wrought into the forms of buildings, and containing perfumes, in Psalm xlv. 8; where the passage describes the dressing of a queen by her maids of honour, when preparing to receive her royal spouse.

At a later period, in the days of Roman luxury, the toilette-box of a Roman lady seems, at least sometimes, to have exhibited a methodical arrangement of its contents, and to have been elaborately decorated with the best art of the period. "In the spring of 1794," says Carl August Böttiger, "some labourers digging for a well in the garden belonging to the convent of the nuns of St. Paul, not far from the Subura, at the foot of the Esquiline-hill, came upon a large subterranean chamber filled with crumbled ruins; from which, after some time, they succeeded in extricating a chest filled with an ancient Roman toilette-apparatus." The casket was of silver, as well as all the articles found with it, and the same authority continues to state that the dressing-box itself was 2 feet in length, 1½ foot in breadth, and 1 foot in height. It was quadrangular, and consisted of two truncated pyramids, joined at their bases, one of which constituted the box and the other the cover. The exterior ornament of this cabinet, represented a variety of most interesting sculptures relating to the adorning and bringing home of a bride; and the inscription "*Secunde et Proiecta Vivalis*," seems to confirm the supposition that the cabinet was a female dressing-case and a wedding gift.\*

With this ancient casket was also discovered another receptacle, of the species which the Romans denominated *Capsula*; and which, by the chains attached to it, appeared to be intended for suspension from the arm. This vessel formed a box of sixteen sides on the exterior, having a circular cover; and greatly resembled a *Scrinium* for containing manuscript rolls, especially as it was decorated on the outside with raised figures of eight of the Muses, interchained with garlands; the remaining Muse being placed on the summit. The capsula measured 1 foot in height, and was about 15 inches broad at the base. Within the case was a flat top or tablet of copper, dividing it into one large central compartment, surrounded by four of a smaller size, probably originally intended to receive volumes of books. The contents, however, were boxes, essence-phials, small pateræ and ewers, several toilette-spoons, a taper-stand in the form of a closed hand, a beautiful little vase covered with arabesque figures, and some ornaments for a litter; all which furniture was of silver. The size, the extent, and the luxury, of these antique dressing cases will, however, be considered less remarkable, when it is remembered that the perfumes, the ornaments, the mirrors, and all the toilette-furniture of a female, was called by the Roman juriconsults "*Mundus Muliebris*," or a woman's world; and, indeed, they have their parallels in the Great Exhibition.

Cases for combs and mirrors, which were usually kept together, were common in England from the latter half of the sixteenth century; when the haberdashers and milliners, who dealt in foreign small-wares had increased to an extent unknown before in all the streets of the metropolis, and in the Upper-Pawn or gallery of the Royal Exchange. Some of the cabinets of this period also contained bottles of sweet waters; and pomanders, or perforated silver balls for perfume, for neutralizing disagreeable odours or infection. Such a toilette-case was presented, in 1562, to Queen Elizabeth, as a New-year's gift, from Sir John Alee; it being described as a coffer of wood, carved, painted, and gilt, with combs, glasses, and balls.

\* Böttiger's *Sabina oder Morgenscenen in dem Putzzimmer einer reichen Römerin*, p. 62, Leipzig, 1803; translated in the *New Monthly Magazine*, 1818, vol. x., p. 419.

In general, however, down to, perhaps the middle of the eighteenth century, the most costly toilette-furniture seems to have consisted of a great variety of articles which covered the dressing-table. It is possible that the thought of fitting up a single receptacle with various useful contents, was suggested by the boxes brought from Japan towards the close of the seventeenth century. These were made to contain a number of smaller boxes for powder, patches, &c., of different shapes, and contrived neatly to fit each other. In the "Pop's Dictionary," contained in the very curious tract on female costume, published by Evelyn in 1690, entitled "*A Voyage to Marryland, or the Lady's Dressing-room Unlocked*," a cassette of silver filigree is mentioned, and explained to signify "a dressing-box;" but from the description, it really appears to have been a case for perfumed waters. All the rest of the appointments consist of a profusion of scattered luxuries, like those which are also described in the commencement of Pope's "*Rape of the Lock*."

A lady's dressing-case of the present day would appear to have been originally contrived with a view of containing almost as many articles of convenience or luxury as were enumerated by Evelyn as belonging to a lady, towards the end of the seventeenth century; and however appropriate such may have been to that period, it is certainly ill adapted for travelling in the nineteenth century; excepting, perhaps, for long voyages in half-civilized countries, or unfrequented tracts where the ordinary necessities of the toilette are not procurable. In travelling, however, through the polished cities of Europe, it is not more needless to be encumbered with a store of gold, when circular notes are obtainable, than it is to carry large quantities of perfumery or any other similar article which can be readily purchased. And if the many vessels usually introduced into a lady's dressing-case were reduced in number and size, it might become nearly as portable as that of a gentleman. Yet, although this is obvious, it is remarkable that not a single example of a lady's dressing-case is to be found in the Exhibition suitable for convenient package or for rapid travelling, when superfluous baggage is very undesirable. At the same time there are numerous instances of gentlemen's dressing-cases, extremely portable, mostly made of leather, which has been found better adapted for the purpose than wood.

The ordinary description of Dressing-cases, Writing-desks, and Work-boxes, admit of classification into two very distinct branches of manufacture, allied, however, by the contents of the cases, some of which are the same in both kinds. The first class is that in which the case is composed of hard-woods, and its ornamentation due entirely to the arts of the cabinet-maker and buhl-worker. The second class comprises all those examples in which the body of the box is made of soft woods, or moulded in pasteboard, and afterwards covered with leather of various kinds. The exterior is then ornamented, either in a simple style, with creasing-tools guided by means of a wooden straight-edge, or more elaborately with tools similar to those of the bookbinder. Besides wood and leather, it should be stated that papier-maché has been introduced into this manufacture, as indeed into many others; and frequently with more regard to a glittering appearance than to beauty of design, of which, however, this material is perfectly susceptible. The natives of India, China, and Japan, have employed their various arts in the manufacture of dressing-cases, desks, and work-boxes, suitable for the use of Europeans, and have adorned these respective productions according to their own peculiar styles of ornament.

The articles on which the Jurors of Class XXIX. were principally required to decide, are those belonging to the first two of the preceding varieties: yet, on consulting the Award-books, it would appear that other Juries have also investigated the merits of some of those productions. It is, however, satisfactory to find that they have, by their decisions, confirmed the Awards of the Jury to which they properly belong. Those Awards have been, in most instances, omitted in the list for Class XXIX., as no Exhibitor is entitled to more than one recompense for the same description of goods: they are, however, for obvious reasons, mentioned in this Report.

## AUSTRIA.

The chief contributions in the Austrian Department are a Dressing-case, and a Dressing-table, covered with velvet and ornamented with pierced ivory, in which both the material and the ornament are evidently ill-adapted for the intended purpose. Besides these, there are some Ladies' Work-boxes of wood, and Dressing-cases and Work-boxes of papier-maché, both of which varieties are of an inferior description, and not remarkable for cheapness.

## BELGIUM.

Five Exhibitors, from that once fashionable watering-place, the town of Spa, contribute numerous articles of the so-called Spa-ware, consisting of Work-boxes, Netting-boxes, Reading-desks, Portfolios, Glove-boxes, and other similar articles: these are made of sycamore or maple wood, which has been coloured by immersion in the natural ferruginous waters of the place. The iron compounds (probably chiefly tannate of iron), which are formed by the combination of the peroxide of iron with the vegetable juices, not only develop the minute structure of the grain, but also give an agreeable slate-tint to the wood, which then forms a pleasing background to the elaborate paintings with which the manufactures are embellished. After having been decorated, they are preserved from injury by several coats of varnish, which still farther increases the beauty of the wood, by bringing out the grain.

## BRITISH COLONIES.

The contributions from the British Colonies are numerous, but they must, in most cases, be regarded rather as curiosities than as articles of large sale. From Ceylon there is only one article, namely, a Desk of Porcupine-quills, arranged parallel to one another, and surrounded with a border of carved ivory, the sunken portions being filled with colour. The Indian Court contains numerous specimens of boxes made of a variety of materials, and ornamented with great taste in several different patterns. Amongst these may be enumerated a Desk and Envelope-box of ivory and sandal wood, and a Porcupine-quill box from Calcutta; a beautifully and elaborately carved Cutch-box, and several specimens of boxes from Bombay, ornamented with tasteful and minute inlaying. *New South Wales* contributes a Desk of polished woods of different kinds. From *New Zealand* there is a box which may be regarded as a native dressing-case, as it is used by the aborigines to contain their head-dresses. In the *South African* Section is exhibited an Olive-wood work-box, which has been sent from the GROENKLOOF MISSIONARY STATION. And lastly, from *Van Diemen's Land*, Mr. McNAUGHTEN contributes a Writing-desk and a Work-box, made of Musk-wood, and inlaid with pine, black-wood, she-oak, and myrtle.

## CHINA.

There are Three Exhibitors of Writing-desks and Work-boxes in the Chinese Department. Mr. CHARLES COPELAND (p. 1427) sends a Writing-desk used by the Chinese, which contains pencils and other materials for writing, and also a *Swan-pan* or calculating board; and a Japanese Writing-desk, inlaid with mother-of-pearl. Two examples of Japan desks are also exhibited by HEWETT and Co. (p. 1421), one of which is ornamented with a bouquet of flowers formed of mother-of-pearl, and the other with a landscape painted in relief with gold bronze. These specimens are interesting as belonging to a class of goods now much imitated by the papier-maché manufacturer, but must not be regarded as of the highest class of Japanese ware. The now most celebrated manufacturer of these goods, says our colleague M. Natalis Rondot, is Hip-quai of Canton, who has made for himself a beautiful, though small, collection of lac-ware caskets. - M. DE STROBEL, of Leyden, also possesses many of the most beautiful examples extant; and the Museum of the Hague also contains many rich specimens. A Camphor-wood work-box, with carved ivory fittings, is sent by HANCOCK and Co.

## EGYPT.

The Egyptian Court contains a Writing-case made of Alizier-wood.

## FRANCE.

Although the Exhibitors in the French Department are few, their display, chiefly of Dressing-cases, is most gorgeous and costly, and the articles contributed are remarkable alike for their beauty, brilliancy, and variety. The cabinet-maker of Paris stands unrivalled for the elegant lightness of his designs and the exquisite finish of his workmanship; and the same is true of the French artist in buhl and marqueterie. Hence it will be readily credited that the plain French caskets are unsurpassed, and the more ornate, unequalled. With regard to the fittings—whilst due praise must be given for the taste displayed in the designs, the spirited enlacing, the execution of the enamel, and the due balance of bright and frosted work, yet at the same time it must be stated that the French silver has not the high degree of finish usual in the fittings of an English dressing-case. This defect is in a great measure to be ascribed to the metal being polished without the workman having recourse to those numerous preparatory manipulations which give evenness to the surface. Hence the undulations of surface betray how much has been done by the burnisher and how little by the polisher. The cutlery and glass are also inferior. It must, however, be stated that these dressing-cases are relatively far cheaper than those of the English; and although each silver article is lighter, yet, as there are more fittings and their size larger—for an ewer and a washing dish are usually included—in the aggregate there is a much greater weight of silver given in proportion to the amount paid. There is in some measure due to the almost nominal duty on silver plate in France, which is only 11 fr. per kilogramme (34d. per troy ounce of 480 grains). It contains 50 parts of alloy in 1000, with a toleration of a farther quantity of alloy, not to exceed 11 parts per 1000. The French have not yet succeeded in the manufacture of Russia and other better classes of leather dressing-cases, and but few examples are to be found in their section; these appertain to the class of goods belonging to Class XVII., the Jury for which has examined them.

In 1847 there were in Paris One hundred and fifty-eight dressing-cases, work-box, and writing-case makers, employing Nine hundred and eighty workpeople (382 men, 30 women, 68 boys), who manufactured goods valued at 155,120*fr.*

## PERSIA.

The Persian Court contains examples of inlaid and japanned Work-boxes, and also a Pen-case, which are contributed by Mr. Mills, jun., who states that they were collected by his father during his residence in that country. They may, therefore, be considered as truly representing this description of manufacture in Persia.

## PORTUGAL.

His Majesty the King of Portugal (1237, p. 1318) contributes an elegant Ebony Writing-case, inlaid with ivory.

## SAXONY.

One Exhibitor in the Saxon Department, W. ROCKHAUSEN (172, p. 1112), sends several creditable glove-boxes, made of rosewood and sycamore, some inlaid with mother-of-pearl. The prices of these are 42*s.*, 45*s.*, and 60*s.* per dozen. There is also a lady's dressing-case in his collection, valued at 60*s.*, which, from its simplicity, recalls the remark of Böttiger, after describing the Roman toilet-box before spoken of, when he says, "Our ladies are generally satisfied with boxes of atlas (satin) or rosewood, inlaid with brass or silver, while the ancient fair condescended not below silver materials, and the workmanship of a sculptor."

## SWEDEN.

The Swedish Court contains a Writing-case which calls for no particular comment.

## UNITED KINGDOM.

The Exhibitors of Dressing-cases and Work-boxes principally, but also of Desks in Classes XXIX. and XVI., are nineteen in number. Besides these, there are Fourteen Exhibitors in Classes XXII., XXVI., XXVIII., and XXX., whose productions did not come under the notice of the Jury of Class XXIX.; and the fact that writing-desks and writing-cases are exhibited chiefly in Class XVI. has been already adverted to. Confining the present remarks, therefore, to the two first-named Classes (XXIX. and XVI.), it may be stated, that the general display of British Dressing-cases, &c., is highly creditable to the numerous Exhibitors. Beside many examples of the more usual kinds of wood dressing-cases, remarkable for their cheapness and excellence, it comprises some examples of a more costly description, which, in comparison with those in the French Department, are, unquestionably, higher in price, even after making all allowances for the lower duty of silver in France. They are, however, exquisitely finished, in all the details of the case and fittings, which are unsurpassed for excellence of workmanship. Indeed, the silver-work is far higher in point of finish than the French, a circumstance which has already been commented upon. In Leather Dressing-cases the British have no competitors, either for cheapness or excellence of workmanship; and the numerous examples which are displayed were highly praised by the Foreign Jurors.

It is chiefly within the last twenty years that Leather Dressing-case making has attained its present high state of development; and this is principally to be attributed to the liberal support of the better class of workmanship given by the leading houses in the trade, and to the judicious encouragement of the individual efforts of their workmen by a due appreciation of their merits. The improvements which have taken place within the last ten years in the manufacture of dyed leathers in England, has also had a very beneficial effect on this branch of manufactures. The number of Leather-case makers in Great Britain is not large, there being only 468 workmen and 250 females. As the best description of work is produced principally in London, the greatest number of workmen are there employed, amounting to 308, the workwomen being only 20; whilst, in Sheffield, there are no less than 200 females, who are considered to be very skilful, and only 47 workmen, employed, who are chiefly occupied with the more common dressing-cases, and in making the better kinds of razor-cases. In Birmingham, there are 50 workmen and 30 girls, also engaged on articles of a second class. Beside these, there are many workmen employed in making wood dressing-cases and the various fittings; but the Reporters have not been able to ascertain their number. It may be remarked, that the glass trays and covers are made principally in London and Birmingham, whilst Sheffield produces the metal covers, and shares with London in the supply of the cutlery. The hinges, handles, and other metal work, are obtained chiefly from Birmingham.

One of the largest Exhibitors of Dressing-cases, Work-boxes, and Desks, in Class XXIX., is our colleague, Mr. J. J. MECHI (No. 45, p. 791), who is, by his position of Juror, precluded from competing for a recompense. In justice, therefore, to the excellence of his productions, the following resolution was proposed to the other Jurors of this class by M. Natalis Bondot, seconded by Viscount Canning, and carried unanimously, on the 23rd of July, 1851:—

*"M. J. J. Mechi a exposé une collection de Necessaires-de-toilette, de Papeteries, de Tables et Coffrets-à-ouvrage dans laquelle on trouve une remarquable diversité de modèles et d'ornements."*

*"Membre du Jury de la Classe XXIX, M. Mechi ne peut en raison de cette haute position recevoir aucune récompense. Le Jury regrette qu'il ne lui soit permis, pour cette raison, d'inscrire le Nom de M. Mechi parmi les plus dignes; mais il est heureux de constater la belle, importante, et intelligente fabrication des ouvrages que M. Mechi a exposés."*

## WURTEMBERG.

Wurtemberg is represented by one firm, WERNER and Co. (No. 86, p. 1119), who exhibits stained Sycamore

work-boxes. The sycamore is first coloured with an artificial ferruginous water, and, after staining, the block is cut up into veneers, which are used to cover the work-boxes. These are not ornamented with paintings like the Spa-wares of Belgium, already noticed.

There are Fifty Exhibitors in this subdivision. Of these are:—

|    |                                  |
|----|----------------------------------|
| 6  | Holders of a Prize Medal.        |
| 5  | Who obtained Honourable Mention. |
| 40 | Unrewarded.                      |
| 50 | Total.                           |

The number of Exhibitors from the various countries is as follows:—

|   |           |    |

#### LIST OF AWARDS.

ASPREY, CHARLES, 166 New Bond Street (Class XXIX., No. 50, pp. 791-92). Honourable Mention, for a beautiful set of twelve Malachite and Ormolu Table-ornaments, the price of which was stated to be 240*l.*; and also for some Dressing-cases and Writing-desks.

AUCOC, sen., Paris (France, No. 1052, p. 1229). Prize Medal (*the same Award by the Jury of Class XXIII.*) for a collection of very rich and elegant Dressing-cases; some with silver and others with *vermeil*, or silver-gilt mounts and fittings. The most remarkable objects are: a Dressing-case of Yew (*Bois d'If*), value 80*l.*, with chased silver mounts and fittings; and a Lady's ebony Dressing-case, value 400*l.* It is furnished with *vermeil* fittings, comprising, besides numerous trays and jars, a square washing-basin and ewer, also of *vermeil*. Taking the weight of silver and the amount of workmanship into consideration, the prices quoted were considered to be very reasonable.

AUTOR, L. D. J., Paris (France, No. 11, p. 1170). Prize Medal (*the same Award by the Jury of Class XXIII.*), for a collection of very excellent and tastefully ornamented Toilet-boxes, comprising a Lady's Dressing-case of ebony and buhl, with silver mounts, valued at 300*l.*, and containing 183 ounces troy of silver; a rustic ebony and buhl Dressing-case (180*l.*), containing 148 ounces troy of silver; and a Gentleman's ebony and buhl Dressing-case, with elegant silver mounts, the price of which was 57*l.* The prices of these and other articles were considered to be very reasonable.

AUSTIN, GEORGE, Dublin (Class XXIX., No. 36, p. 791). Honourable Mention, for a Lady's Dressing-case, with silver fittings, and a Gentleman's Dressing-case, made of Irish bog-yew, also with silver fittings; and for Writing-desks of Coromandel-wood, which are more remarkable for the goodness of the workmanship than for any excellence in the ornaments. The price of the Lady's Dressing-case is 90*l.*, and that of the Gentleman's 80*l.*

EDWARDS, T. J., King Street, Holborn (Class XXIX., No. 89, p. 795). Prize Medal, for Dressing-cases and Writing-desks, of the very highest class of workmanship, both as regards the box and the mounts, but very high in

price. In the construction of the boxes a friction-hinge is employed, which excellent contrivance admits of the various compartments remaining open to any required extent, and avoids the necessity for numerous loose trays. The more remarkable objects supplied by this Exhibitor are a Lady's Dressing-case with silver-gilt fittings, value 160*l.*, a Gentleman's Dressing-case, and a Gentleman's Writing-desk, value 50*l.* The Lady's Dressing-case contains a tooth-brush-tray, 2 soap-trays, nail-brush-tray, a toothpowder-tray, a salve-box, 3 scent bottles, 2 large jars, 2 pairs of scissors, 2 button-hooks, a piercer, 2 cork-screws, 2 pen knives, tweezers, 2 bodkins, 2 pearl-backed hair-brushes, 2 tortoiseshell hair-brushes, 2 tortoiseshell combs, a shoe-horn, ink-bottle, a gold pen, a gold pencil-case, and a blotting-book.

LAURENT, F., Paris (France, No. 564, p. 1205). Prize Medal, for great excellence in workmanship and in the design of numerous caskets, the most remarkable of which are, an Ebony and Buhl Dressing-case, with silver mounts, value 127*l.*; a Buhl Jewel-box, 7*l.* 10*s.*; a Buhl Writing-desk and Papetière, 20*l.*; and a Shawl-box, 26*l.*

LECCHARS, WM., 38 Piccadilly (Class XXIX., No. 44, p. 791). Prize Medal (*the same Award by the Jury of Class XXIII.*), for various Dressing and Travelling-cases tastefully designed, and of excellent workmanship. The following are some of the articles deemed worthy of special notice:—A Lady's Dressing-case of walnut-tree, clamped with pierced silver plates and corner-pieces in the mediæval style, and fitted with a variety of silver-mounted toilette-bottles, with a looking-glass and candle-holders, the value of which was stated to be 300*l.*; a very convenient Sac-de-voyage for a gentleman, in plain morocco; and a cylindrical morocco case, containing a plated travelling Tea-equipage, including a tea-pot, an apparatus for boiling water, and knives and forks, the price of which is 18*l.*

MARIN, JONAH STEPHEN, Spa (Belgium, No. 414, p. 1164). Honourable Mention (*Prize Medal awarded by the Jury of Class XXVIII.*), for a large collection of Spa-ware, comprising numerous examples, all well manufactured and embellished with fair copies of paintings, and original and tasteful groups of flowers. Work-boxes are exhibited, ranging in price from 2*l.* to 5*l.* 5*s.* each, and Blotting-cases from 3*l.* to 5*l.* each, according to the amount of work in the ornament.

MISSON, E. and L., Spa (Belgium, No. 412, p. 1164). Honourable Mention (*the same Award by the Jury of Class XXVIII.*), for several well-finished articles of Spa-ware, comprising Work-boxes, Netting-boxes, in nests of five sizes, &c., ornamented with paintings, for the most part very creditably executed. The pieces most deserving notice are, a large Work-box, 3*l.* 8*s.*; one somewhat smaller, embellished with a representation of a Spanish bull-fight, 3*l.* 4*s.*; and Netting-boxes from 2*s.* upwards.

STRUDWICK, THOMAS, 14 New Bond Street (Class XXIX., No. 42, p. 791). Honourable Mention for Dressing-cases of the cheaper description, but yet of very good workmanship. As an example may be cited a Gentleman's Dressing-case, made of yew and clamped on the outside with ornamental German silver plates and corner-pieces, the mounts and covers of the trays and jars being of solid silver. It contains 3 scent-bottles, an ink-box, a light-box, tooth and nail-brush trays, a shaving-soap box, a square soap-box, a tooth-powder box, 2 salve boxes, 2 razors, 2 pair of scissors, a nail-file, a punch, a button-hook, 4 tooth instruments, and 2 penknives. The price of this case is only 38*l.*

#### IN PARASOLS AND UMBRELLAS.

1. *Parasols*.—The first employment of those portable protections from the sun and rain, called Parasols and Umbrellas, probably commenced with the former of those inventions, in a region where the intensity of the light and heat rendered a shade almost indispensable. In the contrivance of such a shelter, the pole and top of a tent seem to have originally suggested the well-known form, which in its general features of a dome or a canopy still remains unaltered. But as the materials of the ancient parasol rendered it a heavy instrument, it appears to have been always carried by an attendant over the head of the

owner. Hence it became an indication of high rank. The recent discoveries at Nineveh show that the Parasol "was generally carried over the king in time of peace, and sometimes even in war. In shape," continues Dr. Layard, "it resembled very closely those now in common use, but it is always seen open in the sculptures. It was edged with tassels, and was usually adorned at the top by a flower or some other ornament. On the later bas-reliefs a long piece of embroidered linen or silk, falling from one side like a curtain, appears to screen the King completely from the sun. The parasol was reserved exclusively for the monarch, and is never represented as borne over any other person." It will be remembered that this interesting statement refers to the Assyrian empire, between the years 1200 and 603 before the Christian era.

There appear to have been more than one species of sun-shade proper to Egypt, as represented in the sculptures and paintings of that country. Of these, one appears to have been either a fan of palm-leaves or coloured feathers, fixed upon a long handle; in other cases, the figure seems intended to represent the canopy of a parasol, drawn with the imperfect skill of an Egyptian artist. Sir Gardner Wilkinson has engraved a delineation of an Ethiopian princess, travelling in her chariot through Upper Egypt to Thebes, wherein the car is furnished with a kind of umbrella fixed on a tall strong staff rising from the centre, and in its arrangement closely resembling the chaise-umbrellas of the present time.

From the very limited real use of the Parasol in Asia and Africa, it seems to have passed both as a distinction and a luxury into Greece and Rome, especially in the declining ages of those countries. The *Shiadeion*, or Day-shade, of the Greeks, was carried over the head of the effigy of Bacchus; and the daughters of the aliens at Athens were required to bear parasols over the heads of the maidens of the city, at the great festival of the Panathenæa. At Rome, when the veil could not be spread over the roof of the amphitheatre, it was the custom for females and effeminate men to defend themselves from the sun with the *Umbrella* or *Umbraculum* of the period; and this covering appears to have been formed of skin or leather, capable of being raised or lowered as circumstances might require.

Although the use of the Parasol was thus early introduced into Italy, and had probably been continued there as a vestige of ancient Roman manners, yet so late as 1668, Thomas Coryat notices the invention in such terms as indicate that it was not commonly known in his own country. After describing the fans of the Italians, he adds, "Many of them do carry other fine things of a far greater price, that will cost at least a ducat (5s. 6d.), which they commonly call in the Italian tongue *Umbrellæ*, that is, things that minister shadow unto them for shelter against the scorching heat of the sun. These are made of leather, something answerable to the form of a little canopy, and hooped in the inside with divers little wooden hoops that extend the umbrella in a pretty large compass. They are used especially by horsemen, who carry them in their hands when they ride, fastening the end of the handle against one of their thighs; and they impart so long a shadow unto them, that it keepeth the heat of the sun from the upper part of their bodies."

It is probable that a similar contrivance existed at the same period in Spain and Portugal, whence it was taken to the New World. Defoe, it will be remembered, makes Robinson Crusoe state that he had seen Umbrellas employed in the Brazils, "where they were found very useful in the great heats which are there," and that he constructed his own instrument in imitation of them. "I covered it with skins," he adds, "the hair outwards, so that it cast off the rain like a pent-house, and kept off the sun so effectually, that I could walk out in the hottest of the weather with greater advantage than I could before in the coolest." In commemoration of this ingenious production, one species of the old heavy Umbrellas was called "The Robinson."

But the use of such a defence against the heat was not unknown in England, though probably only used as a luxury, even in the early part of the seventeenth century. Ben Jonson mentions it by name in a comedy produced

in 1616; and in 1640 it occurs in Beaumont and Fletcher's "Rule a Wife and have a Wife," when Althea says—

"Are you at ease? Now is your heart at rest?  
Now you have got a shadow, an Umbrella,  
To keep the scorching world's opinion  
From your fair credit."—

As a canopy of state, the use of the Umbrella appears to have been general in Southern Europe from a very early period: it is found in the ceremonials of the Byzantine Church; it was borne over the Host in processions; it formed part of the pontifical regalia; and about A.D. 1179, when Pope Alexander III. took refuge in Venice from the Emperor Frederick I., he bestowed on Sebastiano Zani, the Doge, and his successors, the privilege of placing the Pontifical parasol over their armorial ensigns.

Without, however, attempting to trace any further the frequent appearance of the parasol in the early history of Europe, we may be allowed to make a few statements regarding the Parasol of the Chinese. According to the statement of Dr. Morrison, Parasols and Umbrellas in the Celestial Empire appear to be first referred to in books printed about A.D. 800,\* the tradition being, that the *Soñ*, which signifies to cover or shade off the sun and rain, originated "in standards and banners waving loose in the air." This date, however, has been recently proved to be many centuries too modern, by the evidence of a very curious book of Chinese ceremonies, entitled *Tcheou-Li*, or the Rites of Tcheou, for the first time translated and published by the late M. Biot.† The author of the work was Prince Tcheou-Kong, brother of Won-Wong, the first Emperor of the Tcheou dynasty, who wrote it at the beginning of the twelfth century before the Christian era. In this valuable work is contained a descriptive detail of the duties of the several officers belonging at the period to the Chinese Court; and it directs that the workmen making the wheels of the Imperial carriages should also place the *dais* upon the cars. The figure of this *dais* contained in the Chinese edition of the *Tcheou-Li*, and the particular description of it given in the explanatory commentary of Lin-hi-ye, both identify it with an umbrella.‡ The latter describes the *dais* to be composed of 28 arcs, which are equivalent to the whalebone ribs of the modern instrument, and the staff supporting the covering to consist of two parts, the upper being a rod 3-10ths of a Chinese foot in circumference, and the lower a tube 6-10ths in circumference, into which the upper half was capable of sliding.

It is probable that the most general use of the Parasol in France and England was adopted from China about the middle of the seventeenth century. At that period pictorial representations of it are frequently to be found, some of which exhibit the peculiar broad and deep canopy belonging to the *Lo Sun*, or large parasol of the Chinese officers of government, carried by attendants. In 1664, Evelyn states that a Jesuit showed him such a collection of varieties as he had never seen before, sent from the missionaries of Japan and China to their order at Paris, to be preserved in their repository, but brought for them to London by the East India ships. In the engraved title-page to his *Kalendarium Hortense*, published in the same year, a black page is represented as bearing a closed umbrella or sun-shade.

2. *Umbrellæ*.—In the preceding notices these artificial shades have been regarded chiefly as protections against the light and heat of the sun, with but slight reference to their equally great value as defences against rain. Their adoption for this purpose appears to have been much later than their use in the former capacity, and to have been but very slowly established in England. It is, however, mentioned by Gay, in his *Trivia*, so early as 1712, in one of his many vivid descriptions of the manners at the beginning of the last century; and he appears to affirm that

\* Dr. R. Morrison's *Chinese Dictionary*, vol. I., part 2, p. 694, No. 8202.

† *Le Tcheou Li, ou Rites des Tcheou: Traduit pour la Première fois du Chinois par feu Edouard Biot*, Paris, 1821, 8vo. Vol. II., p. 472.

‡ M. Biot's Translation, p. 498.

§ *Ibid.*, p. 478.

any defence, excepting from the rain, could never be required in the streets of London. The verses in question are suggestive of two very curious observations connected with the history of the articles under consideration. From the beginning of the present century, the use of the parasol as a protection against the sun has been increasing in England until it has become universal amongst females, contrary to the declaration of the concluding lines. The Umbrella, on the contrary, though apparently well known in Gay's time, did not come into general use until the close of the last century. Jonas Hanway is stated to have been one of the first men who commonly carried one, for it was usually regarded as proper to females only;\* and he, probably, brought the practice from Persia or from the continent. In the *Statistical Account of Glasgow*, by Dr. Cleland, it is related that about the year 1781 or 1782, the late Mr. John Jamieson, surgeon, brought with him an Umbrella on his return from Paris, which was the first seen in the city, and attracted universal attention. The earliest specimens of the English Umbrella were made of oiled-silk, which, when wet, were exceedingly difficult to open or to close: the stick and furniture were heavy and inconvenient, and the article generally very expensive.† Its transition to the present convenient portable form is due partly to the substitution of silk and gingham for the heavy and troublesome oiled-silk, which admit of the ribs and stretchers being made much lighter; and also to the many ingenious mechanical improvements in the frame-work which have been made from time to time, chiefly by English and French manufacturers, several of which have been patented. No change has proved a greater convenience than that from the old-fashioned ring and string, for securing the Umbrella when closed, to the clip and Indian-rubber braid; and yet, before this was accomplished, many transitions had to be passed through, which must be familiar to most persons: these outward improvements may be taken as the type of numberless others which are not appreciated, because they are not generally seen and understood.

We may now pass to the consideration of the various contributions from the different countries, first, however, premising that from England and France the largest quantities have been received.

#### AUSTRIA.

The Parasols and Umbrellas of Austria are gaudy, and not very well finished, and, indeed, evince but little skill or taste on the part of her two manufacturers who exhibit the finished articles.

Notwithstanding this, it appears that they are exported to some extent to several of the Mediterranean markets, for which it appears that they are well adapted. The prices at which they are sold are considerably higher than those for which goods of a better quality can be furnished by the English maker: in illustration may be cited the cheapest children's parasols of each of the two makers, which are sold wholesale at 1s. 1½d. and 2s. each respectively, and women's silk parasols of very ordinary finish at 7s. and 9s. each. The other Exhibitors send merely parasol and umbrella handles and sticks, which are generally reasonable in price, and of fair workmanship. The following are quotations of some of the cheapest as well as the dearest of these productions. WERNA, J. (Austria, No. 572, p. 1036), Umbrella-sticks with bone handles 9d. each; parasol sticks

of white wood, and long bone handles 1s. and 1s. 3d. each. TIFFE, A., carved bone Umbrella-sticks with handles of bone, 2s. 6d. and 3s. 6d., with ivory handles fairly carved 10s. 6d. each. LANDRA, J., Umbrella and Parasol sticks of carved wood 4½d., 5d., and 10½d. each; these latter were considered to be cheap. The ivory and bone carving, however, bears no comparison, in point of design and execution with the carving of the Meerscham pipe-bowls reviewed in another article.

#### BELGIUM.

The contributions from Belgium consist of Parasols only, and were sent chiefly by one Exhibitor; for although parasols covered with rich lace are exhibited in the North-east gallery with other articles of lace, they cannot be regarded as appertaining to this branch of trade.

The Parasols exhibited (No. 432) are well manufactured, but are not in such good taste as those made in France; whilst at the same time they are dearer than similar goods sent by the English makers. The prices quoted vary from 20s. to 25s. each, for plain parasols, covered and lined with silk.

#### BRITISH COLONIES.

The richer contributions from the East Indies and the Island of Ceylon consist of State Parasols or Umbrellas, many splendid examples of which adorn the Indian Courts. The most remarkable example is the gorgeous State-umbrella from Moorsshedabad, exhibited by His Highness the Maharajah of NAPOOR. This beautiful object is represented in the *Illustrated Catalogue*, p. 924. The ribs and stretchers, which are gilt, are sixteen in number, and divide the umbrella into as many segments, covered with silk exquisitely embroidered with gold and silver ornaments; the upper part of the design is complete in each compartment, but at the lower it is formed into a graceful running border, to which a fringe is fastened. The handle is hollow, and is formed of thick silver plates. Other examples contributed by his HIGHNESS THE RAJAH OF DHOLEPORE (p. 924) comprise the *Soorooj Mooshee*, or native parasol, covered with rich damask silk, and having likewise a silver handle; and the gold umbrella with silver top and handle, and enriched with gold fringe. Of the more usual descriptions may be cited several specimens of Bengalee *Chattahs* or small umbrellas, conical in form, with manifold plaits, and consequently ribs and stretchers. These chattahs are composed of the leaves of *Licuala peltata*, and are the description used by the poorer classes of natives of Bengal during the rainy season. Of the same class is an umbrella made in Gowhattee, of the same material, but used by the higher classes of natives in Assam. There is also a conical umbrella of painted and varnished cloth, made in Calcutta, and, as if to illustrate how difficult it is for the native taste to adapt itself to European requirements, there is a very inferior imitation of an English umbrella, having ten ribs, covered with crimson calico, and lined and fringed with dark green. This umbrella, it appears, is generally used by Europeans throughout India.

#### CHINA.

In China the Umbrella is still a mark of high rank, but not exclusively so; it must not, however, be inferred that it is as commonly used amongst the middle classes of society as in England, for this is far from being the case, for it is not their custom to go out when it rains, and the poorer inhabitants of China depend chiefly on appropriate clothing to protect them from the sun and rain; for example, the Chinese boatman, thatched in with his coat made of straw, and hat composed of straw and split bamboo, may defy the heaviest shower. Coats made of skin, usually with the fur outside, likewise afford effectual protection, so that, unless the foot passenger desires to go short distances in his ordinary habiliments, the umbrella is unnecessary. These remarks, taken from an entertaining paper in the *Penny Magazine*, vol. iv., p. 479,

\* That the use of the Umbrella was once considered as too effeminate for men, is remarkably illustrated by the following passage contained in *The Female Tattle* of Dec. 12, 1709:—"The young gentleman belonging to the Custom-house, that, for fear of rain, borrowed the Umbrella at Will's Coffee-house, in Cornhill, of the mistress, is hereby advertised, that to be dry from head to foot on the like occasion, he shall be welcome to the maid's patten."

† An advertisement published in 1787 by Thomas Folgham, 112 Cheselde, states that he has "a great assortment of his much-approved pocket and portable Umbrellas, which, for lightness, elegance, and strength, far exceed anything of the kind ever imported or manufactured in this kingdom. All kinds of common umbrellas prepared in a particular way, that will never stick together."

\* In *Alexander's Costume of China*, Part 8, is a plate representing a group of Chinese, habited for rainy weather, which accords with this description.

entitled "Umbrellas in the East," are evidence that the umbrella is not an article of such paramount importance in China as in England; and yet Umbrellas and Parasols are made in considerable numbers in the provinces of Kwang-tung, Fo-kien, and Hoo-kwang, and form an important branch of commerce. They are exported from Canton, Amoy, and Shanghai, to India, the Indian Archipelago, and even to South America; in 1846, 300,000 were sent out from these ports.\* Almost all the parasols and umbrellas are covered with oiled paper, which is afterwards painted and varnished. At Canton umbrellas are termed *Kittysols*, from the Spanish word *quitésol*; the Chinese name is *Chi-yu-an*, or *Yu-che*. Two examples only are exhibited in the Chinese Court; they are contributed by Messrs. Hewett and Co., but present nothing remarkable beyond the great number of ribs, which amount to forty-two. These ribs are formed of wood; and instead of being embraced by the fork of the stretcher, as is the case in European umbrellas, they have a groove cut in the middle of their length, into which the stretcher is secured by a stud of wood. The head of each rib fits into a notch formed in the ring of wood, which is fastened on to the top of the stick, there being a separate notch for each rib. The slider is of wood, and has forty-two notches, namely, one for each stretcher, which, like the ribs, is formed of wood. The covering of the umbrellas exhibited is of oiled paper coarsely painted.

#### FRANCE.

In the higher class of Umbrellas and Parasols, France undoubtedly stands pre-eminent. The tasteful designs and sharp and excellent carving of the ivory handles, and the artistic grouping of the colours of the various silks used in the manufacture of parasols, and the supple dressing of the silks for umbrellas, give to the French manufactures a decided superiority; added to which, the frames were much lighter and neater than those made in England until a very recent period. The French parasols and umbrellas have, in consequence of their lightness and elegance, acquired a high reputation in America and Italy, to which countries large quantities are annually exported, as well as to the French colonies. Taking an average of the annual exports of Silk Umbrellas and Parasols from 1827 to 1836 inclusive, their value was 36,360*l.*; between 1837 and 1846 it was 54,172*l.*; and in 1847 it had reached to 70,088*l.*; so that in twenty years the exports had nearly doubled in value. To obtain, however, the true exponent of the annual exports in umbrellas, must be added the average value of the uncovered frames exported in the same years; in the first-named period it was 7,160*l.*; in the second, 9,160*l.*; and in 1847, 9,280*l.*: so that the value of the umbrellas, parasols, and frames which were exported in that year was 79,368*l.* Whilst the foreign trade of France has been rapidly increasing as regards silk umbrellas, she has lost ground in those covered with gingham, in which her trade was never large, owing to the competition of the English makers. Thus, from 1827 to 1836 the mean annual value of the exports was 1,240*l.*; from 1837 to 1846 it was 960*l.*; and in 1847 it was reduced to 480*l.* According to the *Statistique de l'Industrie à Paris*, Part II., p. 825, etc., it appears that in 1847 there were in Paris 377 masters engaged in the business of umbrella and parasol making, and employing 1,429 workpeople (601 men, 742 women, 45 boys, 31 girls); who, according to M. Natalis Rondot's estimate produced goods to the amount of 96,320*l.* in that year; not much more than one-fourth part of which was exported, as will be seen by comparing the foregoing figures. In 1850 the exports were somewhat less than in 1847; thus the value of the silk umbrellas and parasols was 67,380*l.*, of gingham umbrellas 89*l.*, of umbrella and parasol-frames 9,095*l.*, making a total of 66,564*l.*

Besides the umbrella mounters and finishers, there were in 1847 in Paris 74 manufacturers, employing 304 workpeople (264 men, 6 women, 34 boys) engaged in the production of sticks, handles, and tips, whose returns were 30,400*l.*

#### Of the 377 parasol and umbrella mounters and finishers—

|     |                                   |
|-----|-----------------------------------|
| 31  | employed more than 10 workpeople. |

| 36                               | less than     | 40    |

Parasols and Umbrellas were formerly made by the corporate body of "*Boursiers*" (leather purse makers), who were at the same time breeches makers, cap makers, collar-makers, brace-makers, powder-puff, game-bag, and travelling-bag makers. In 1754, says M. Natalis Rondot, there were 250 master purse-makers in Paris; and quoting the *Journal du Citoyen* of that date, he remarks, that the folding parasol sold at from 12*s.* to 17*s. 6d.* each, and the common parasol from 7*s. 3d.* to 11*s. 3d.* each. Two questions naturally suggest themselves, what was the form of these instruments, and what their weight; fortunately both questions can be answered satisfactorily. In the well-known French Encyclopædias\* there are plates representing the whole of the objects made by the "*Boursiers*," and the tools employed in their manufacture. The usual parasol or umbrella of that period which is there figured, closely resembles the ordinary gig-umbrella of the present day, and, slightly modified in form, is still used by the peasantry of France. The folding parasol was constructed with jointed ribs so as to fold back, and was likewise self-opening. The rod was a metallic tube, and contained a spiral spring which acted upon and pressed upwards an inner rod. To this inner rod were jointed the stretchers, which in this construction were placed above the ribs instead of below, as in the ordinary form; beside which they were much shorter so as to admit of their being concealed by the covering. By the elasticity of the spiral spring contained in the hollow stem, the inner rod was pressed outwards and lifted the stretchers, and by their means raised the ribs also, so that in its ordinary or natural state the umbrella was always open, and would continue so unless constrained to remain closed by a catch. On releasing the catch it consequently sprang open. In order that it might be easily closed, four cords were attached to four of the ribs and passed to the handle; and a loop embracing these cords passed down by the side of the handle, and enabled the possessor to close his umbrella without difficulty. From the authority already quoted we learn that whalebone was employed for the ribs, and that their number varied with their length: for example, when 24 inches long, the number employed was 8; when 25 inches, 9; and when 26, 28, and 30 inches, 10 were used. Calico was employed to cover umbrellas and silk to cover parasols. The use of parasols was common in Lyons at that period (1786); they were carried by men as well as women; "they were rose-coloured, white, and of other colours, and were so light as to be carried without inconvenience." In Vol. V. of the *Dictionnaire des Arts et Métiers*, published in 1788, and forming part of the *Encyclopédie Méthodique*, mention is made of parasols contained in walking-sticks, which fly out by the action of a spring as soon as a catch is released. The comparative "lightness" of Parasols may be judged of by the annexed statement, which relates to umbrellas of different periods, from 1645 to 1849, contributed to the last French Exposition in the latter year by M. Farge—

\* Diderot and D'Alembert's *Encyclopédie ou Dictionnaire Raisonné des Sciences des Arts et Métiers*. Paris, 1751-1765. Recueil des Planches, Tom. I. *Encyclopédie Méthodique*. Paris, 1782-1830. Section Arts et Métiers, vol. vi. (1786).

\* *Etude pratique du Commerce d'Exportation de la Chine*. Par Natalis Rondot, pp. 117, 118.

| Umbrellas of | Length of ribs.<br>Inches. | Weight.<br>lbs. oz. |
|--------------|----------------------------|---------------------|
| 1645         | 31½                        | 3 8½                |
| 1740         | 29                         | 1 13                |
| 1780         | 28½                        | 1 8½                |
| 1840         | 27½                        | 0 13½               |
| 1849         | 27                         | 0 8½                |

Hence it appears that the Umbrella of the present day weighs only one-seventh of that of a century ago. From 1808 to 1848, a period of 40 years, there were 80 Patents of invention, 3 of importation, and 41 for improvements relating to the Umbrella-trade taken out in France. Some of these are for mechanical contrivances allied to those before described; some are for improvements in the ordinary frames, and others for the adaptation of machinery as a substitute for hand-labour. With all this, the productions of France must be characterised as high in price; the ordinary wholesale price of a good silk umbrella of the self-opening construction ranges from 20s. to 40s., and that of parasols from 13s. to 80s.; but then they are in every respect exquisitely finished. The French manufacturer is also famous for many ingenious contrivances: for example, with respect to Travelling-umbrellas, which may be removed from the stick and packed in a portmanteau or placed in the pocket; and others too numerous to mention in detail.

#### PORTUGAL.

The Umbrellas in the Portuguese Department, Nos. 1127 to 1143, and the Parasols, Nos. 1144 to 1150, comprising about 30 varieties, are contributed by one Exhibitor, and may be characterised as creditable, though not remarkable, productions. The umbrellas are both with whalebone and steel ribs, covered with black silk, and have ivory and wood handles. The parasols are also made with metal frames, some for ladies', others for children's use, and are covered with plain and striped silks.

#### PRUSSIA.

The contributions from Prussia are from only one Exhibitor, and consist merely of Umbrella and Parasol handles, which are sold at low prices. In 1846, Prussia possessed Seventy-seven manufactories of umbrellas and parasols, which gave employment to Five hundred work-people.

#### TUNIS.

The Tunisian Court contains many examples of Parasols, some of which are made of leather and silk, and others of silk adorned with ostrich feathers.

#### TURKEY.

Although we have not to cite any examples of umbrellas or parasols as having been sent, yet, in treating of these articles, it is desirable to allude to the very prevalent employment of these useful shelters by the middle-classes of Turkey as a remarkable instance of the introduction of European customs into that country. So much, however, still remains of the regal attributes of the umbrella, that, in passing before the palace of the Sultan, the custom is to lower it; a compliment which the sentinel on duty does not fail to enforce from the foreigner, who, unconscious of the forms of society, may happen to pass with his umbrella elevated.\*

#### UNITED KINGDOM.

Whilst France stands pre-eminent for articles of the highest class, England is without a rival in the production of parasols and umbrellas of the plainer descriptions. This is to be attributed not so much to the introduction of new and expensive machinery (for it is still almost as simple as that figured a hundred years since in the French Encyclopædias before mentioned), as to the judicious subdivision of labour, and the importation free of duty of her colonial canes for the ribs and sticks; likewise whalebone for ribs, and lastly, also free, horn and ivory for the handles. Her cheap and abundant manufacture of gingham and plain silks, also, gives her decided advantages over other nations.

It is not possible to determine with certainty the exact yearly produce in the parasol and umbrella trade, which, for finished goods, is chiefly centred in London; but some idea may be formed of its importance when it is stated that several of the large city houses dispose of from 250 to 500 dozens of parasols and umbrellas weekly. The prices of the commoner kinds is marvellously low, as will be understood when it is stated that children's gingham parasols are sold wholesale from 4d. each, and women's from 10½d. each. Silk parasols commence at 10½d. each, and gingham umbrellas at 7d. and 10d. each, according to the size. Alpaca umbrellas range from 6s. to 12s. each, and silk umbrellas from 3s. 6d. to 22s. each. To the price of the silk parasol there is scarcely an assignable limit, as any amount of expensive lace may be used to adorn it; the highest price quoted was 5l. 5s., but the example was far less elegant than most of the specimens in the French Department, and much higher in price. Our umbrella-manufacturers would, indeed, do well to profit by the example of their French brethren, by calling artistic talent to their aid in devising new models. For there are many English artists who are capable of furnishing excellent designs for the ivory carver, and of superintending the carving of the first model; with whose aid we should gradually find good engraving taking the place of its present substitute high-polish, whilst the cost on each individual article would be very slightly increased. A little artistic help is likewise desirable in the assortment of harmonious tints; and, at the next Exhibition, there will be no examples of crimson parasols with yellow fringes.

We are indebted for the cheapness of the commoner umbrellas to three causes:—

To the small cost of labour attributable to the dexterity and industrious habits of the artisan; to the low price of gingham, which is sold at less than 3d. per yard; and to the employment of split and dyed ratan canes for the ribs in lieu of whalebone. M. Meyers (XXIX., No. 140, p. 797), reports that his weekly sales of cane ribs average 12,000 sets, eight to the set; the wholesale price of which is 10d. per dozen sets, or a little more than three farthings for each umbrella. Although ratan-canes are used for some other purposes, the statement of the quantity imported into the United Kingdom, during the last ten years, will not be deemed out of place in the present Report.

#### RATAN CANES (not Ground-ratan).

| Years. | Number imported. | Number entered for home consumption.  |
|--------|------------------|---------------------------------------|
| 1841   | 9,784,379        | 4,949,609                             |
| 1842   | 4,101,369        | 4,687,257                             |
| 1843   | 4,181,050        | 4,465,195                             |
| 1844   | 8,145,757        | 8,293,984                             |
| 1845   | 10,667,036       | Free, and therefore no account taken. |
| 1846   | 8,794,776        |                                       |
| 1847   | 12,324,768       |                                       |
| 1848   | 7,974,413        |                                       |
| 1849   | 4,723,264        |                                       |
| 1850   | 12,760,726       |                                       |

A large quantity of whale-fins is likewise imported, and is consumed principally in the manufacture of umbrella-ribs.

Whale-fins Imported during the last Ten Years into the United Kingdom:—

| Years. | Imported.<br>Cwts. | Entered for home consumption.<br>Cwts. |
|--------|--------------------|--|
| 1841   | 6,369              | 6,272                                  |
| 1842   | 4,348              | 4,368                                  |
| 1843   | 6,609              | 6,297                                  |
| 1844   | 8,041              | 7,160                                  |
| 1845   | 11,484             | Free, and therefore no account taken.  |
| 1846   | 9,101              |  |
| 1847   | 8,128              |  |
| 1848   | 7,765              |  |
| 1849   | 8,926              |  |
| 1850   | 9,498              |  |

It has been previously stated, that one element of cheap production is the low price paid for labour. This position we now proceed to illustrate, first remarking that the putting-together of umbrella and parasol frames with cane

and whalebone ribs, is chiefly done by small masters in London, who employ lads to assist them; that the covering is performed by women and girls at their homes; and that in the lowest priced goods, the joint labour of an entire family is necessary to eke out a subsistence. The fixing of the handlets and ferrules is often done at the warehouses.

In order that the reader may better appreciate the small amount of the wages paid for putting the frames together, the subjoined description of the various processes is given. The frame-maker requires a capital of from 3*l.* to 6*l.*, in order that he may erect a couple of very primitive-looking lathes with a circular saw; a rose-cutter for forming the tips, and several drills, all of which screw into the mandril of the lathes; also a paring-knife, a small vice, and three or four pairs of pliers; and lastly, a "weighing-board." The circular saw, rose-cutter, and paring-knife are comparatively modern improvements. He must rent a room or shop, and pay for fuel and candles. He has likewise to provide all the iron-wire and brass-plate out of what he receives in wages; but the stick, ribs, stretchers, and runners are furnished to him. In order to work economically he must employ two lads, but he usually finds it more to his interest to employ four, to whom he pays 4*s.* per week.

1. *Preparing the Stick.* The stick, which is usually of stained beech, is first sawn off to a length; one end is tapered with the paring-knife, to prepare it for receiving the ferrule; two grooves are cut in with the circular-saw in the direction of the length of the stick, in order to receive the two springs, one for sustaining the umbrella open, and the other for keeping it closed. The springs are then made out of iron wire, and fastened one in each groove, the fastening being effected by simply driving one end of the spring into the handle; the other is left free, but is prevented from flying out by means of a cross wire, the insertion of which requires two operations, viz., drilling a hole and inserting and rivetting the wire. A stopper is formed by bending a piece of wire like a staple, and it is then inserted into two holes drilled above the top spring, in order to prevent the slider from going too far; lastly, two holes are drilled near the top of the stick, through these the cross wire is inserted, and when finished it presents the appearance of a double staple, one loop being on one side of the stick and one on the other. In preparing the stick it has passed at least *nineteen* times through the hand.

2. *Preparing the Ribs.* Each rib is roughly tapered with the paring-knife at one end, and is rendered smooth and conical by holding it in the direction of its length in the groove of a wheel lined with fish-skin, which wheel is made to revolve rapidly in the lathe; the taper end of the rib is then held across a steel fly-cutter or "machine," likewise running in the lathe, which cutter has a circular groove of the proper radius of curvature formed on its periphery. By rotating the rib in the hand its "tip" is rendered spherical; the tip is then varnished, and has a hole drilled in it, to admit of fastening on the covering; and each rib is cut to the proper length by sawing off the opposite end: the "head" of the rib is lapped with thin brass-plate and rounded, and is then drilled, to admit of the "head-wire," on which it is afterwards hinged; the rib is also lapped near its centre with brass-plate, and drilled, in order to admit of fastening on the stretcher; and, lastly, the stretcher is attached by means of an axis of wire, the ends of which are riveted. Each rib passes not less than *thirteen* times through the hand; and, as there are eight ribs, the frame consequently passes *one hundred and four* times through the hand in this stage of the construction.

3. *"Weighing" the Ribs.* Unless every rib be of equal strength, the umbrella will not "set round," hence the necessity for the "weighing" process. This operation is somewhat analogous to that which engineers employ in ascertaining the deflection of a beam, and is effected by a very simple instrument. The weighing-board is about 3 feet 6 inches long and 2 feet deep, and is affixed to a wall, the longer side being parallel to the horizon; and there are in different parts of it a multitude of small holes for the reception of wire pegs. The rib to be weighed is

placed over one peg close to its stretcher, and under another peg, so far distant from the first as to reach nearly to the head of the rib; a small leaden weight is then hung on to the tip, and of course deflects the rib; the amount of the deflection (indicated by graduations on the arc of a circle affixed to the board) gives the relative strength of the ribs, which are assorted out in sets accordingly. The weighing adds *eight* more operations to those already enumerated.

4. *"Threadling" the Ribs.* Each stretcher, which it will be remembered is attached to the rib, is taken up in turn and threaded on to a wire, and is then inserted, each one in its respective place, in the notches of the slider, and all are made secure by binding the wire round the top of the slider, which is grooved for that purpose. The head-wire is now inserted through four of the ribs, and is then passed through the two loops of the "cross wire," at the top of the stick; and now the four remaining ribs are threaded, and the head-wire secured by twisting its ends together with pliers. Reckoning that this adds four operations, the frame will have passed *one hundred and thirty-five* times through the hands of the workman or his assistants.

All this labour is performed for  $\frac{3}{4}$ d. to  $\frac{1}{2}$ d. in the case of parasols, and for  $\frac{1}{4}$ d. to 1d. in that of umbrellas. A workman can, nevertheless, earn fair wages at these prices, provided he is supplied regularly with work; but he is frequently subjected to much loss by being kept waiting about in the wholesale warehouses, which sometimes occasions a loss of at least half a day to him. The prices just quoted are those paid for the lowest description of work, but for putting together the frame of an umbrella with whalebone-ribs the workman gets  $\frac{2}{3}$ d. Of the cheaper kinds of umbrellas, say those at 1*s.* per dozen, a workman and four lads can make four gross per week, for which he receives 4*s.* After deducting the wages of his lads, 16*s.*, and the cost of the materials he supplies, which is about 8*s.*, it leaves him 24*s.* for himself.

*Covering of Umbrellas.* This is paid for according to the description of work, the commonest at the rate of 1*s.* per dozen, and the best 4*s.* per dozen.

The frames, which are made of metal, are almost exclusively manufactured in Birmingham. The stick, ribs, stretchers, and ferrule, are all metallic, and require, after covering, merely the insertion of a long wood or ivory handle and the ferrule to complete the umbrella. These frames can be furnished at from 7d. to 10d. each, and although not so cheap as the cane-frames, they are consumed and exported in enormous quantities, in consequence of the small bulk which they occupy. Many improvements have of late years been made, not only in the machinery used for making the metallic frames, but also in the construction of the frame itself. Amongst those most deserving of notice, may be cited the improvements of Mr. HOLLAND (No. 131, p. 797) and Mr. BOSS (No. 146, p. 798). Either of their constructions adds about 2*s.* to the price of an umbrella. In conclusion, it may be stated that the umbrella-manufacture in the United Kingdom is in a very prosperous condition, and is rapidly increasing.

#### WURTEMBERG.

There are Four Exhibitors of Umbrella-handles from this country, the carving on some of which is very humorous: the most important collection has been rewarded for other ivory goods which were exhibited at the same time, and which formed the largest proportion of the contribution. (See Toys).

The number of Exhibitors of Parasols and Umbrellas, or their components, such as handles, sticks, and mounted frames, is Thirty-three; of these, there are—

- 5 Holders of a Prize Medal.
- 2 Who obtained Honourable Mention.
- 26 Unrewarded.

33

The number of Exhibitors from the various countries is as follows:—

|                                     |   |   |   |   |   |    |
|-------------------------------------|---|---|---|---|---|----|
| Austria                             | - | - | - | - | - | 5  |
| Belgium                             | - | - | - | - | - | 1  |
| British Colonies (India and Ceylon) | - | - | - | - | - | 2  |

## LIST OF AWARDS.

BOSS, ISAAC ABRAHAM, 6 Bury Street (Class XXIX., No. 146, p. 798). Honourable Mention is accorded to this Exhibitor for several Mechanical Improvements in the construction of umbrella and parasol frames. One contrivance is to facilitate the opening of a parasol or umbrella. This is effected by means of a pin working in a groove close to the handle. The pin is fastened to a wire (contained in the hollow handle) acting on the ribs, which overhang the joint so as to form short levers, so that by pulling the pin towards the handle the umbrella is opened. The price of the frames with this apparatus is 2s. 9d., one of ordinary construction being 10d.

CAZAL, —, (France, No. 108, p. 1176). Prize Medal. For Parasols and Umbrellas elegant in form and of excellent workmanship. The carved ivory handles evince much taste and are well sculptured; the framing, which is very light, in many cases presents novelties of construction. The self-opening umbrella, for instance, may be cited as a very ingenious contrivance; the desired effect being produced by simply making each stretcher double, and so arranging the parts that a tension is put on one of the sets of stretchers in closing the umbrella, which consequently flies open as soon as a catch is released. A travelling umbrella, so arranged that the stick may be conveniently removed and used as a walking-stick, is also worthy of commendation. The prices of the umbrellas are, however, high; they range between 32s. and 100s. each. M. Cazal likewise exhibits Canes made of rhinoceros-horn, white whalebone, and conglomerated horn.

CHARAGEAT, E., Paris (France, No. 1144, p. 1233). Prize Medal. For Umbrellas and Parasols of first-rate workmanship. The designs and sculpturing of the handles are in all cases of the highest class. The case of this exhibitor likewise contains numerous examples of ingenious mechanical contrivances, among which especially to be commended is an umbrella which closes of itself when a spring near the handle is touched. The specimens, although equal in manufacture, and, at the same time, more moderate in price than those last mentioned, must still be considered as costly; umbrellas, for instance, range from 20s. to 60s., and parasols from 13s. (very plain) up to 80s. for the more elegant class, wholesale.

HOLLAND, HENRY, Birmingham (Class XXIX., No. 131, p. 797). Prize Medal. For Parasol and Umbrella Frames of a novel construction, invented by him; the component parts of which were exhibited in various stages of progress, so as to illustrate the plan of manufacture. This description of frame is distinguished from others chiefly in having ribs formed of rectangular steel-tubing, and is so light that when covered with strong silk to form an umbrella, the whole instrument only weighs 9 ounces. This frame is now in very general use for the better description of umbrellas and parasols, to the cost of which it adds about 2s.

MORLAND, J., and SON, 50 Eastcheap, (Class XXIX., No. 306, p. 818). Prize Medal. For Parasols and Umbrellas of very excellent workmanship and at moderate prices. In the better class of goods Holland's frames are employed. The umbrellas exhibited range in price from 3s. 6d. to 22s. wholesale, and the silk parasols from 1s. 7d. (children's) up to 16s. each.

SANSTON, WILLIAM and JOHN, 140 Regent Street (Class XXIX., No. 136, p. 797). Prize Medal. For Silk Parasols and Umbrellas of excellent quality, and for their application of Alpaca-cloth to the coverings of parasols and umbrellas. Alpaca-cloth is made of the undyed wool

of the Peruvian and Chilian sheep, and is therefore not liable to fade, nor is it acted upon by salt-water; hence Alpaca parasols and umbrellas are much used at watering-places, and are also largely employed as a cheap substitute for those covered with silk. Alpaca parasols sell at 5s. each, and umbrellas at from 6s. to 8s., wholesale.

The consumption of Alpaca-cloth in the umbrella-trade, notwithstanding its recent introduction, is very considerable, for it appears that the production for this purpose amounted, during the last year, to the value of 25,000l.: its price is about 2s. per yard.

WINDOR, M., Berlin (Prussia, No. 257, p. 1063). Honourable Mention. This Exhibitor contributes a great variety of Parasol and Umbrella Handles, manufactured from horn, bone, and ivory, which are deserving of Honourable Mention.

## III. WALKING-STICKS.

Whensoever the heroic period may be supposed to have existed, the staff, as employed for the support of old age, was then well known, since it is referred to in the enigma put forth by the Sphinx, and solved by Oedipus. "There is a Being," said the questioner, "which has four feet, and it has also three feet, with only one voice; but its feet vary, and when it has the most it is the weakest." "This is man," was the hero's answer, "who, when he is an infant, crawls upon his hands and knees; when he is a man, he walks uprightly; and when he is old, he totters with a stick."

The use of a staff for support in walking appears to be so natural and unartificial as not to require any illustration, and yet the Pilgrim's staff of the middle ages, and the *Alpenstock* of the present time, have a certain amount of historical interest. The *Bourdon*, or *Pilgrim's* staff, was a strong and stout stick, apparently about five feet in length, armed at the lower end with an iron spike, and intended to supply a support and balance to the body, when the traveller was climbing up slippery paths or steep acclivities. About a foot from the top of the staff was generally found a large protuberance, either artificially or naturally formed around the staff, on which the pilgrim's hand securely rested, without danger of sliding downwards. The lower part of the staff was altogether solid, but the upper joint was a hollow tube, capable of containing small articles, like a long circular box. It is probable that these articles were originally reliques of saints, or the "signs," as those emblematical figures were usually termed, which were commonly sold at the shrines to which pilgrims travelled, as proofs that they had really visited those sacred spots. In the later ages of pilgrimage, however, this part of the staff was sometimes converted into some kind of pipe or musical-instrument, such as sticks have frequently contained in modern times. Above the tube the staff was surmounted by a small hollow globe, and it was also furnished near the top, or the outside, with a kind of crook, for the purpose of safely sustaining a gourd-bottle of water. After the pilgrim had completed his votive journey, and returned from Palestine, he commonly brought with him a branch of palm, fastened into the top of his staff, as the proof of his travel into Palestine or Egypt. It is, however, unquestionable that the pilgrims' staffs frequently became the receptacle of secular articles. It is recorded by Holinshed, that in the hollow part of a pilgrim's staff the first head of saffron, afterwards so successfully cultivated at Saffron-Walden, was secretly brought over from Greece, at a period when it was death to take the living plant out of the country. The silk-worm also found its way to Europe in the hollow of a pilgrim's staff. So late also as the time of Cervantes, certain Spanish pilgrims existed, who had collected upwards of a hundred crowns in alms, which, being changed into gold, they concealed in the hollow of their staves, or the patches of their clothing. It seems to be a natural observation in this place, that the ancient contrivance of making a repository in the hollow of a walking-stick is not yet obsolete. In the Great Exhibition, Dr. GRAY, of Perth, displayed a medical walking-staff, containing a variety of instruments and medicines; and the same principle has been also frequently employed for the portable conveyance of tele-

scopes, instantaneous-light-apparatus, and many other important articles.

Several varieties of sticks were likewise exhibited enclosing in them swords, dirks, and spring-spears. The principle of construction of the sticks last mentioned being, that they required a heavy blow to be given with the armed end before the strong spring could be overcome which held back the spear-head. Sword-sticks, and dagger, or tuck-sticks, are of a more recent period; but this kind of weapon walking-staves is not of later invention than the last century; though that which contained fire-arms existed in the early part of the reign of Henry VIII.

The *Alpenstock* is another ordinary travelling-staff requiring to be noticed, of modern use, though of great antiquity. It is a stout pole of about six feet in length, provided with an iron spike at the lower end, and surmounted with a chamois' horn as an ornament. It is almost indispensable in mountain journeys, and may be procured for two francs throughout Switzerland.

Another order of walking-sticks comprises those light wands to which the name is now exclusively attributed; and these also are descended from a time of considerable antiquity. The stem of the giant-fennel the *Ferula* of Pliny, is the chief progenitor of this family, and he derives the origin of the name of the plant either from *fero*, from the stalk being employed in walking, or from *ferio*, because schoolmasters used it for striking boys on the hand. It would seem as if the latter interpretation had become established at an early period, since Martial terms the *ferula* *sceptrum pedagogorum*; and even down to the present day the word popularly conveys no other meaning. The tough lightness of the fennel-wood rendered it especially fitted, for a support to aged persons; whilst the imposing length of the staff gave an air of importance to those who carried it. Hence it became the prototype of those lighter wands, which have continued as the sign of seniority or gentility to the present time.

In Oriental countries the substitute for the *ferula* was naturally some kind of native reed; and the employment of such a plant as a support, and also as an emblem of Egypt, is noticed, in probably a proverbial form, by the Assyrian general Rabshakeh, in his speech to the servants of Hezekiah, in the eighth century, B. C. "Now behold," says he, "thou trusteth upon the staff of this bruised reed, even upon Egypt; on which, if a man lean, it will go into his hand and pierce it." (2 Kings, xviii. 21). The supposition that the *ferula* was supplied by some local plant must be also equally true concerning other regions, and especially in those in which the bamboo was indigenous. This was probably the first kind of the cane tribe introduced into Europe; since the word cane in all its original forms appears intended to express a hollow tube or channel, for which purpose the bamboo is still extensively and constantly employed. Although the generic name of cane has long since supplanted all others for ordinary walking-sticks, yet at different periods they have been made of a great variety of materials. A slight glance may be taken at some of the substances employed, and some of the peculiarities of the common walking-sticks of other times.

In the Egyptian sculptures persons of importance or official rank are represented walking with tall slender staves, having the lotus-flower on the top. Several ancient specimens of these sticks have been discovered in Egypt, made of cherry-wood and other substances, measuring from three to four feet in length, some being surmounted by a small knob or a flower, and others having a curved projection, standing out on one side, like the trunk of a box, as if it had been intended for the hand to rest upon.

At a very early period of the Sacred history the distinctive character of the staff carried by an individual is indicated from his immediate recognition simply by the production of it with his signet and his bracelets (*Genesis* xxxviii. 18—25). Homer has commemorated the "sceptre-bearing princes" of the Greeks, and especially the sceptre-staff of Achilles, adorned with golden studs: "I will swear a great oath," says the hero, "even by this

sceptre, which shall never again bear leaves or shoots, nor will bud again from the time it left its trunk upon the mountains, when the axe stripped it of all its leaves and bark." These sceptres, although they were indisputably the insignia of rank and authority, were also evidently the usual walking-sticks of persons of the highest class. Agamemnon, it is stated, never went forth without bearing with him his paternal staff of royalty.

In the portraits of many of the noble personages of English history, painted in the sixteenth century, may be seen instances of the richness of the superior walking-sticks carried at that period, when they appear to have been tall, stout, and mounted and adorned with gold. In 1531 a cane-staff and a stone-bow were brought as a gift to Henry VIII. by a certain fletcher or arrow-maker, whom the king rewarded with forty shillings. Some far more curious instances of canes belonging to the same sovereign are, however, described in the manuscript inventory of the contents of the royal palace at Greenwich, in the following entries:—"A cane garnished with sylver and gilte, with Astronomie upon it. A cane garnished with golde having a perfume in the toppie; under that a diall, with a pair of twitthers and a pair of compasses of golde; and a foot rule of golde, a knife and a file of golde, with a whetstone tipped with golde."

From the middle of the seventeenth century walking-sticks appear to have increased in luxury, both in regard of the mountings and also of the material of which they were manufactured, the improvements being derived principally from France. In the early part of the following century, the most fashionable sorts were made of certain fine marbles and agates, exhibiting either a splendid variety of colour or a rich semi-opaque plain tint, which was most expressively described by the English term "Clouded." These wands were made of the most slender proportions, both on account of their specific gravity and the quality of the persons by whom they were to be carried; and they were often richly mounted with silver, gold, amber, or precious stones. Such were the "clouded canes" of the age of Pope and Gay, which were frequently so greatly valued as to be preserved in cases of shagreen or sheaths of leather. Every reader of the "Rape of the Lock" will remember,—

"Sir Plume, of amber snuff-box justly vain,  
And the nice conduct of a clouded cane,"

as well as Gay's commemoration of the same kind of walking-stick in "The Van":—

"Here clouded canes, 'midst heaps of toys are found,  
And inlaid tweezer-cases strew the ground."

The most curious account of the walking-sticks of this period is, however, contained in the "Tatler," No. 103, written by Addison and Steele, and published on Tuesday, 6th December, 1709. In that paper Isaac Bickerstaff represents himself as issuing licenses and regulations for the beaux of the time, as to the carrying of "cunes, perspective glasses, orange-flower waters, and the like ornaments of life." The first part of the essay is intended to ridicule and abolish the prevailing absurd though fashionable practices connected with walking-sticks; hence the respective parties were licensed to carry them provided they did not walk with them under the arm, nor brandish them in the air, nor hang them on a button. One of the petitioners desires permission to retain his cane, because it had become as indispensable to him "as any other of his limbs," and because "the knocking of it upon his shoe, leaning one leg upon it, or whistling upon it with his mouth, are such great reliefs to him in conversation, that he does not know how he should be good company without it." The cane of this person being produced, it is described to be "very curiously clouded, with a transparent amber-head, and a blue riband to hang it on his wrist."

In the second half of the last century there was one peculiar form of walking-stick prevailing, which was generally used by females who were advanced in life. The

sticks referred to were between five and six feet in height, taper, and slender in substance, turned over at the upper end in the manner of a shepherd's crook, and twisted throughout the whole extent of the wand. The materials were either wood, ivory, or whalebone, mounted with silver or gold, and sometimes they were formed entirely of a clear, pale, green glass. The length of the most fashionable sticks of this period is noticed in a number of *The London Chronicle* published in 1762, wherein the writer says, "Do not some of us strut about with walking-sticks as long as hickory poles, or else with a yard of varnished cane scraped taper, and bound at one end with waxed thread, and the other tipped with a neat ivory head as big as a silver penny." Towards the close of the eighteenth century two peculiar forms of walking-sticks were commonly carried by the most gay of the young men of the period, one being a very short and strong bamboo-cane, bent over at the top, and the other a stout knotted stick, in which the grotesque natural growth of the wood was frequently regarded as its greatest excellence.

Another kind of walking-sticks comprises those grotesque staves which have been devised or adopted by individual fancy or eccentricity. It is possible that this peculiar humour may be of considerable antiquity, since the knotted walking-staff and wallet were the distinctive attributes of the Greek and Roman philosophers, and especially of the cynics. The chief peculiarity of this class of staves, however, consists in an ingenious adaptation of the excrescences of the wood of which they were made into grotesque human heads and faces, of which the Exhibition contained many curious and remarkable instances. The old English form of these staves may perhaps be referred to the baubles carried by the fools and jesters who were retained by sovereigns and noblemen of the sixteenth and seventeenth centuries. The Jester's Bauble consisted of a short stout staff surmounted by the carved figure of a puppet or a fool's head; and the modern practice of carrying sticks decorated with humorous faces appears to have existed early in the eighteenth century. About 1780 *The Universal Spectator* states, that at the court end of the town, instead of swords, many polite young gentlemen "carry large oak sticks, with great heads and ugly faces carved thereon." Perhaps some of the most remarkable instances of these carved sticks ever exhibited were those executed and carried about by James Robertson of Kincairnie, otherwise called "the daft Highland laird," of whom Kay published an etching in 1784. In the latter part of his life he adopted the amusement of carving, for which he had some talent, and sculptured in wood the effigies of such persons as attracted his wayward imagination, whether friends or enemies; the latter, however, being executed in caricature. These small figures he mounted on the upper end of a walking-stick, sometimes one above another; and as it was reported that he produced a new one every day, he was commonly accosted with the inquiry, "Wha hae ye up the day, laird?" to which he would readily answer, by naming the individual and the reason for selecting him.\*

It might be supposed that the manufacture of walking-sticks could not form a large branch of commerce, and yet a vast quantity and great variety of materials are annually consumed in it. There is scarcely a grass or a tree of sufficient elasticity or strength, which has not at times furnished the materials for a staff or a walking-stick. The stick-maker, however, gives a decided preference to some few kinds out of the almost infinite variety offered to him by nature. Amongst European woods the blackthorn, the crab, especially the warted-crab, the maple, the ash, the oak, especially the young or sapling oak—the beech, the orange-tree, the cherry-tree, the furze-bush, the cork-tree, and the Spanish reed (a grass called *Arundo donax*), are those principally used; and these woods are most generally cut towards the latter end of Autumn, especially when it is wished to preserve the

bark. The West Indies furnish a copious supply of the most approved materials for walking-sticks, in supple-jacks (vine-stems), pimentos (from the *Eugenia pimento*, or pepper-tree), cabbage-stalks, orange and lemon-tree sticks, and the coffee-shrub and Indian briars. Numerous canes, the produce of climbing palms, and gigantic grasses, are also largely used by the stick-maker. The principal of these are the following:—ratans, dragons, and Penang-lawyers, which are the stems of a species of calamus or climbing-palm, and are obtained from India, Singapore, Java, and China—white and black bamboos, fluted bamboos, wangees, jumbies,\* and dog-head canes, which are the stems of various species of bambusa or grasses attaining a height of from 50 to 60 feet, and are exported from China; ground-ratans, large ground-ratans, malaccas, and dragons from Singapore. There are also the bamboo and jungle-bamboo imported from Calcutta; and, lastly, canes from Manilla.

It must not be supposed that these various materials, in the unwrought state, present an appearance at all resembling the finished sticks. Indeed the copious examples in the North-east Gallery (XXIX., 440, pp. 797, 798), fully confirm this statement; but the truth is much more strongly impressed on the mind after an inspection of the immense warehouses of Mr. B. Meyers, who contributed them. Those repositories appear at first sight to contain stores of little value above that of firewood; yet many thousands of pounds have thus to be locked up for a time, in order that the various woods may become properly seasoned. It is only, indeed, after having passed about twenty times through the hand, that even the commonest walking-stick assumes a saleable appearance; and the better descriptions require many more operations. The principal processes of this manufacture deserve to be described.

1. *Peeling off the Bark.*—From most of the forest-woods the bark has to be removed before the separated boughs can be made into polished sticks; but in some cases it is left on. One of the most difficult articles to manipulate is the warted-crab, the excrescences of which are produced by an abnormal growth of the tree resulting from the puncture of an insect. As a half-penny is the payment for peeling one of the most complicated kind, it will be readily concluded that there must be some simple means of facilitating this operation; and accordingly the sticks are boiled for a couple of hours; the bark then yields to the incision of the finger-nail and may be stripped off without difficulty.

2. *Forming the Crook and straightening the Stick.*—Few limbs of trees or even canes, are sufficiently straight in their natural condition to answer the purpose of a walking-stick, and very few present those conformations which can be readily fashioned into handles; hence the necessity for these two operations, which claim our admiration from their ingenious simplicity. The handle is formed by softening the wood or cane in hot damp sand, when it becomes pliable and non-elastic, and readily assumes and retains any curvature or bend that may be given to it. Minute attention, however, is required with regard to the temperature for each description of wood; hence the precise degree which is proper for each can only be learned by long experience; and in cases where a new variety of material is imported, some experimenting becomes necessary. The straightening is performed in a similar manner, excepting that the previous softening is effected in dry sand heated on an iron plate, that is in the ordinary sand-bath. When the stick has become sufficiently pliable, it is inserted into a deep notch cut in the edge of a strong plank, and is strained first in one direction and then in another until it has become straight. The stick when softened takes any form much as a piece of red-hot iron would do. The straightening-plank is three inches thick, about six feet long, and one foot wide, and is inclined away from the workman at an angle of

\* Biographical Sketches attached to Kay's *Edinburgh Portraits*. Part I.

\* The relative fashionable value of some of these sorts of cane is satirised in *The Tatler*, No. 142, published on Tuesday, March 7, 1709-10. In that paper, "a plain dragon" is charged at five guineas, and "a true jumbie" at ten.

about 30° from the perpendicular, it being firmly secured to the floor at the lower end.

3. *Fashioning the Stick.*—In this operation some sticks are wrought to assume a twisted or spiral form, and others the knotted appearance of a bamboo or whangee; these characteristics are imparted chiefly by rasping and filing. Heads or hoofs of various animals very commonly adorn stick-heads, and grotesque human heads frequently display proofs of considerable skill and surprising humour in the artisans employed. Examples of this latter description were exhibited in Class XXIX., No. 140; and by most of the German and Austrian exhibitors.

4. *Staining.*—After straightening or carving, the sticks are in many instances brought to a very smooth surface by means of emery or glass-paper, and finished off with fish-skin; and they are then, previously to the varnishing, made to assume so many different hues by means of dyes, that the uninitiated would conclude that each was a perfectly distinct variety. The surface is likewise sometimes charred, and the charred portion scraped off partially here and there, so as to produce a very ornamental appearance. Sticks are also embellished with lithographic-transfers, but not in England, as hand-labour is too expensive. Mulacca-canes, when not sufficiently long between the joints to form a straight stick, are made to appear continuous by reducing the larger part to correspond to the smaller, and tapering it gradually from the point of juncture. It then becomes necessary to colour that portion which has been reduced in size, and this is done with so much skill, that the stained and natural surfaces are not distinguishable.

Hitherto, mention has been chiefly made of sticks of vegetable origin. Of such as are made of animal substances may be instanced whalebone, tortoise-shell, ram's horn, rhinoceros horn and hide, as commonly employed for sticks; and occasionally the real bone of the whale, the spine of the shark, the horn of the narwhal, and ivory. The horns of animals under particular treatment with heat and by mechanical appliances, are drawn out into long cylinders; and tortoise-shell raspings are easily conglomerated by heat and pressure, and in the soft state formed into elongated rods applicable to the manufacture of sticks. The hide of the rhinoceros forms a very transparent horn-like substance, and is very elastic and tough. The feet of fawns, which are frequently used for stick-handles, are made to retain the required form by merely baking them. Ivory, horn, and bone, are also largely used for stick and umbrella handles, and give, in their preparation for these purposes, employment to a considerable number of workmen.

Metals are not much used in the formation of the entire stick, but are restricted chiefly to the handles and ferrules; still, however, iron sticks painted to represent wood and cane are not unusual.

Rattan, or common canes, although used for sticks, are more frequently employed as a substitute for whalebone by milliners, stay-makers, and umbrella-makers. For the first two uses they are merely split by hand to the required size. They are also used for chair-bottoms, and are then previously bleached by the vapours from burning sulphur (sulphurous acid). For umbrella-ribs the canes are first assorted into sizes by lads. They are then cut into various lengths ranging from 10 inches to 30 inches by means of a hand-saw, a gauge-board being used to facilitate the operation. After this, three sides are removed by means of a plane, the cane being held at one end by a vice, and resting throughout its length on a plank. The ribs are subsequently dyed by boiling with logwood and copperas (sulphate of protoxide of iron), and dried thoroughly after this operation in a drying-room heated to a high temperature with a stove. Lastly, the excess of dye, or sort of crust, is removed by rubbing the ribs with a piece of waxed cloth, by which they become polished, and they are then set straight by straining them in a cold state.

Before proceeding with the review of the contributions of the several nations, attention is claimed to the fact that London, Hamburg, Berlin, and Vienna, are the chief seats of the manufacture under consideration, and that by a curious coincidence the principal

makers in three of those cities bears the name of Meyer or Meyers. Two of them, namely, those residing in London and Hamburg, are present by their works in the Great Exhibition; but the third, of Vienna, does not exhibit.

#### AUSTRIA.

The display of walking-sticks in the Austrian Section is very extensive, and has been contributed principally by two stick-makers; and also by a manufacturer of pipe-tubes, who has been rewarded chiefly for the latter article (*see* PIPES). Although the two other exhibitors have not received any Award, their contributions are deserving of favourable mention from their extent, cheapness, and goodness of workmanship. The largest exhibitor is A. TAUTZ (685, p. 1042), who sends a very extensive collection of sticks, from 9d. to several pounds each. They comprise most of the known varieties, and are generally ornamented with ivory handles, which, although not remarkable for any great correctness of form, are very well executed and very elaborate, and many of them are exceedingly humorous. Taking the amount of work into consideration, the goods of this maker are generally low in price. The exhibitor next in importance is T. LUDWIG (679, p. 1042), who has contributed walking-sticks from 1s. each, but not ranging to prices so high as those sent by the maker already mentioned. His contributions are remarkable for their cheapness wherever much hand-carving is displayed.

#### BELGIUM.

The Walking-sticks in the Belgium Department are contributed by one exhibitor from Bruges (4, 6), and consisted entirely of a description ornamented with inlaying, which is well-executed.

#### BRITISH COLONIES.

The exhibitors of Walking-sticks from the various dependencies of Great Britain are very numerous, and their contributions highly interesting from the variety of materials employed in their formation; none, however, can be considered in any way as representing the art of stick-making in a commercial sense. From *Western Africa* is a stick, or rather, staff of honour usually carried before the African chiefs. Beside this, which was sent by Dr. McWILLIAM (5A, pp. 953, 954), are several sticks from the horn of the rhinoceros, contributed by Mr. HAMBURY (28, p. 950), and a stained Quina walking-stick from the Groenkloof Missionary-station. From *South Africa* Mr. BRIDGES (21, p. 950) has sent some sticks of rhinoceros-hide. *British Guiana* is represented by two exhibitors, Mr. BEE (156, p. 987) and Mr. DUGGIN (148A, p. 986); the first of whom has sent a walking-stick made of the outer part or rind of the *Tourou* palm from the River Demerara, and the second one made of a tree called letter-wood. From the *Eastern Archipelago* are rattans and bamboos contributed by P. HAMMOND and Co. (2, p. 988). The *Indian Courts* contain some very interesting specimens of decorated sticks, as they do of most of the ornamental arts, they are contributed by four exhibitors, beside the HONOURABLE EAST INDIA COMPANY (p. 924). The specimens at present to be noticed consist of four bamboo-walking-sticks, richly mounted in gold and silver, sent from the RAJAH of ULWAR; a stick enriched with a painted ornament, and mounted with silver, contributed by the RAJAH of KISNAHUR (p. 924); sandal-wood and carved ivory *Chowrees*, or Whisks, from the RAJAH of HURTFORD (p. 924); an ivory walking-stick, with a gold ring; two Ivory Chowrees, one from Jodhpore, the other from Bhurpore; and two Chowrees, made of the tail of the Yak (*Bos Grunniens*), with silver handles (p. 924). There is also a selection of walking-sticks of various descriptions, made at Calcutta, and in Cochin China; Betel-nut sticks and a Sandal-wood whisk from Calcutta. Most of these beautiful and interesting articles were purchased by the Company for the purpose of the Exhibition. The small collection from the *Island of St. Vincent* (p. 975) consists principally of specimens of Supple-jacks; and from *Trinidad* is a walking-stick sent

by the Governor, Lord HARRIS (pp. 974, 975). From *Van Diemen's Land* are two contributions of walking-sticks, made with the hard portion of the bone of the whale, with heads carved out of the whale's tooth, one being sent by Sir W. T. DENISON (304, p. 998), and the other by Mr. T. SCREEN (305, p. 998): and there is also a stick made of the Oak of Tasmania (*Casuarina quadrivalvis*), contributed by the Venerable Archdeacon Marriott.

## CHINA.

In the Chinese Court is a bamboo walking-stick, curiously carved, which was contributed by Mr. F. S. CARPENTER (33, p. 1425), in addition to which may be mentioned two Chinese sceptres, one from HER MAJESTY'S CONSUL at SHANGHAI (28, p. 1420), and a still more interesting and elaborately carved specimen contributed by Mr. P. P. THOMS (16, pp. 1422, 1423), of Warwick Square, a full description of which will be found in the *Illustrated Catalogue*. It would appear, from Mr. Thom's account, that it dates from 2169 years B.C. These specimens, however, must be regarded as mere curiosities, and in no way representing the commerce of China in this branch of trade, which as regards the raw material is very important, large quantities being annually exported. From Canton alone 1,200,000 sticks of various kinds were exported in 1846, consisting chiefly of different kinds of canes and bamboos, but comprising also laurel-sticks, stems of the tea-plant, and the root of the fig-tree of the Pagodas (*figus indica*).

## FRANCE.

The French Department contains some very elegant examples of walking-sticks, which have been sent principally by an exhibitor noticed in the List of Awards; but specimens were also exhibited by the umbrella-manufacturers, who have been spoken of under the preceding article. Indeed many of the umbrella-manufacturers of France are also makers of walking-sticks and riding-whips. France does not export a very large quantity of walking-sticks, on account of the far less cost of production in London and Hamburg of the ordinary descriptions, and in Vienna of those with elaborately carved handles. The chief specimens sent by the French stick-makers, and also by the umbrella-makers, consist generally of articles made of elongated ram's horn and conglomerated tortoiseshell. In 1847 there were, in Paris, one hundred and sixty-five manufacturers of walking-sticks, and riding and driving-whips, employing nine hundred and sixty-two workpeople, who produced goods valued at 140,320*l*. The journeyman, who in Paris works by the piece, earns from 2*s*. 10*d*. to 4*s*. 10*d*. per day; and a skilful engraver or enchanter about 7*s*. 3*d*. per day. The workwomen earn from 1*s*. 2*d*. to 1*s*. 10*d*. per day. M. Natalis Rondot quotes 12,000*l*. as the annual value of the productions of the largest manufacturer in Paris; but this estimate comprises also riding and driving-whips. About nine-tenths of these articles are exported. The imports of bamboo-canes into France are as follows:—

| Years. | Bamboos and Large Canes. | Ratans and other small Canes. |
|--------|--------------------------|-------------------------------|
|        | Cwts.                    | Cwts.                         |
| 1830   | 146                      | 126                           |
| 1835   | 254                      | 468                           |
| 1840   | 610                      | 1,830                         |
| 1845   | 828                      | 4,120                         |
| 1850   | 950                      | 5,606                         |

## HAMBURG.

The most important display of walking-sticks is undoubtedly that in the Hamburg Department, contributed by H. C. MEYER, jun. (86, p. 1139), who it appears is the most extensive stick-maker in the world. His collection contains about five hundred varieties, comprising most of the known materials. This exhibitor, who in Hamburg employs between two and three hundred workpeople, has also a branch-establishment in New York. There is also a small collection from another exhibitor of Hamburg,

which, being a free port, possesses an almost equal advantage with London in regard to obtaining materials free of duty, and is generally a large purchaser at the Colonial sales in London of all the productions obtained from the British dependencies. Being placed on an equality in this respect, Hamburg has another great advantage in the cheapness of hand-labour over London, and is consequently a most powerful rival in the manufacture of sticks.

## HESSE.

From the Grand Duchy of Hesse is contributed a collection of sticks, ornamented with transfers from paper, printed by lithography, and which are produced at so low a price as to defy the competition of Hamburg or London. Large quantities of these very neat productions, imitative generally of sticks covered with plait, are annually exported to England and America.

## PRUSSIA.

There is one exhibitor who sends good articles from Essen.

## SARDINIA.

There is one exhibitor of beautifully finished plain sticks, which, although comprising few varieties, are very meritorious.

## SWITZERLAND

Sends a gold stick-head with internal mechanism.

## TUSCANY.

The contributions from Tuscany consist of five walking-sticks, composed of numerous pieces of horn, with handles of gilt bronze.

## UNITED KINGDOM.

The manufacture of sticks in England is in an increasing and most flourishing condition; for not only are the goods for home-consumption chiefly made in this country, but Great Britain also possesses a very large export trade in the finished article, and almost exclusively supplies the Continent with the raw material with which her markets are abundantly furnished from all parts of the world. To give some idea of the extent of the trade, it may be stated that the principal London maker prepares annually 80,000 bundles, which are equal to 2,500,000 ratans, principally for parasol and umbrella ribs; and he also sells annually the subjoined quantities of manufactured sticks, viz. :—

|  |           |         |
|--|-----------|---------|
| Partridge canes                                    | - - - - - | 60,000  |
| Bamboo canes                                       | - - - - - | 80,000  |
| Malacca canes                                      | - - - - - | 110,000 |
| Dragon canes                                       | - - - - - | 100,000 |
| Ground ratans                                      | - - - - - | 15,000  |
| English sticks, such as oak, ash, crab, maple, &c. | - - - - - | 144,000 |

Polished ash-sticks are chiefly manufactured at Birmingham, where they are sawn out by machinery, and subsequently turned and polished. At present the English maker is unable to compete with the German manufacturer in producing sticks ornamented with transfers from printed papers, but probably the substitution of letter-press for lithographic-printing would turn the scale in favour of England.

The importation of walking-sticks is, however, very small as will be seen from the following table:—

VALUE OF THE IMPORTS INTO THE UNITED KINGDOM, OF Manufactured Walking-sticks in 1850.

|                         |       |       |
|-------------------------|-------|-------|
| From the Hansatic Towns | - - - | 792   |
| " Holland               | - - - | 430   |
| " France                | - - - | 269   |
| " Other Parts           | - - - | 93    |
| From all Parts          | - - - | 1,604 |

Whale-bone sticks are made better and cheaper in Germany, and the continental makers are also more proficient in making sticks from the hide of the rhinoceros; but as regards those ornamented with silver wire, England is unrivalled, and holds a high position with regard to the

chased silver and gilt handles; indeed the ferrules and metal-work generally are unsurpassed. The same remark which was made with respect to umbrellas, here applies to the carved ivory stick-handles: the fault appears to consist in choosing subjects which cannot be well executed at such prices as can be afforded for the carving.

The following wholesale prices will give some idea of the value of the different kinds of sticks of British manufacture, though not a very accurate one, without at the same time seeing the samples:—

|                            | Per doz.         | Per doz. |
|----------------------------|------------------|----------|
| 'Polished Ash sticks'      | 3s. to 6s.       |          |
| Bamboos                    | 2s. 6d. to 6s.   |          |
| Partridge                  | 6s. to 18s.      |          |
| Whangee                    | 4s. to 48s.      |          |
| Malacca                    | Each. to 40s.    |          |
| Beech, with crutch handles | Per doz. to 18s. |          |
| Canes with loaded heads    | 10s.             |          |
| Sword-sticks               | Each. to 12s.    |          |

Walking-sticks are sent by thirteen exhibitors, whose productions are dispersed in various divisions, as, for example, in Classes VIII., X., XVI., XXII., and XXIX.

These specimens comprise many instances of the employment of walking-sticks for containing various implements, alluded to in the introductory matter. Beside the instances there quoted, are to be found—a walking-stick which serves the purpose of a miniature wine-cellar and larder (Class XVI., 81, p. 522); one which contains a voltaic-battery (Class X., 423, p. 455), which continually subjects the owner to an electric current; one (Class XXIX., 183, p. 800), to contain guide-maps, and two or three others convertible into seats, umbrellas, and other instruments.

#### UNITED STATES.

The United States are represented by one contributor, who exhibits a gold-headed walking-stick, made from the curled-hickory.

#### WURTEMBERG.

Beside one manufacturer, who exhibits sticks to some extent, three contributors send stick and umbrella-handles, with other articles in ivory, one of whom has obtained a Prize Medal, to be alluded to under the article Toys.

Beside those who exhibit walking-sticks, with articles discussed in other portions of this Report, there are forty-six exhibitors of walking-sticks only, or principally; of these, there are:—

|    |                                  |
|----|----------------------------------|
| 5  | Holders of a Prize Medal.        |
| 3  | Who obtained Honourable Mention. |
| 38 | Unrewarded.                      |
| 46 | Total.                           |

The number of Exhibitors from the various countries is as follows:

|                     |    |
|---------------------|----|
| Austria             | 2  |
| Belgium             | 1  |

| Total               | 46 |

#### LIST OF AWARDS.

BAGRE, — (France, 1123, p. 1232). Honourable Mention is accorded for a collection of walking-sticks made of ram's-horn and tortoiseshell.

CIAUDO, JOSEPH (Sardinia, 68, p. 1304). Prize Medal for a collection of well-manufactured walking-sticks, comprising several varieties of wood.

FRANK, J. G., Offenbach, (Grand Duchy of Hesse, 61, p. 1129). Honourable Mention is accorded for a large collection of well-made and very cheap walking-canes, which are ornamented with tartan and other patterns, transferred from lithographic impressions on paper, and then highly varnished; and also for papier-maché snuff-boxes.

HEDINGER, C., Stuttgart, (Wurtemberg, 92, p. 1119). Prize Medal for a collection of Malacca walking-sticks, partridge walking-canes, umbrella and parasol sticks, and some few umbrella-frames. The goods exhibited are well made, and at very reasonable prices.

MEYER, H. C., jun. (Hamburg, 86, p. 1139). Prize Medal for a most extensive assortment of excellent walking-sticks, sword-sticks, and dart-sticks, the mounts of which are, in most cases, tastefully designed and well executed. The collection comprises also split whalebone, plain and fluted, which is used for covering sticks, whips, opera-glasses, and telescopes.

MEYERS, BARNETT, 18 Crutched Friars (Class XXIX., 140, pp. 797, 798). Prize Medal for a very large and interesting collection of canes and sticks of various descriptions, in the raw state, which comprises all the principal varieties. Also parasol and umbrella ribs of dyed rattan; cane-ribs for milliners, cap-makers, whip-makers, and chair-makers, together with an excellent collection of highly-finished walking-canes, sword-sticks, and dart-sticks, the mounts of which are good in design, and of the best class of workmanship.

SCHULZ, C., Essen (Prussia 593, p. 1083). Prize Medal for a collection of well-made walking-sticks, and sword-canes, which are well manufactured, and are sold at reasonable prices.

TONTI, L., Florence (Tuscany 114, p. 1298). Honourable Mention for a collection of walking-canes composed of numerous pieces of horn of different tints.

#### IV. FANS.

Upwards of 3000 years ago the artist of ancient Egypt painted the fan on the walls of the tombs at Thebes. There the Pharaoh sits surrounded by his fan-bearers, each in his due rank; and there is seen an investiture of a fan-bearer, which realises the description in *Genesis* of the honours paid by Pharaoh to Joseph. The office of fan-bearer must have been honourable, and the insignia of office were long slender vividly coloured fans on variegated or twisted handles: in war the same officers acted as generals or marshals, using their fans as standards; and in peace they assisted the Pharaoh in the temple, and waved their variegated fans both to produce a cooling breeze, and to guard the sacred offerings from the contamination of noxious insects.

The fan is mentioned by Euripides, and its origin from "barbarous countries," its use in Greece was similar to that in Egypt, but its forms were far more beautiful. The wings of a bird joined laterally and attached to a slender handle formed the simple yet graceful fan of the Priest of Isis, when Isis became a Grecian deity; but it had not this form alone, for the Greek vases of Sir W. Hamilton show that feathers of different lengths were taken and spread out somewhat in the form of a semi-circle, but pointed at the top; a thread connected the feathers at their base, and another near their summit, and the fan thus made was fixed in a handle. This fan, the precise type of the state-fan of India and China of the present day, was waved by a female slave.

The fan, according to Virgil and Apuleius, was sacred to Bacchus, and the "*mystica Vannus Iacchi*" was carried in procession in the feast of that deity, as well as in the Eleusinian Mysteries. Its appellations multiplied, though its office remained the same, and it was termed indifferently "*Flabellum*" or "*Muscarium*."

The modern Greek church is careful to place a fan in the hands of its deacons to guard the officiating priest and the elements from desecration.

The Roman ladies certainly enjoyed the luxury of the fan, which, gorgeous with peacock's feathers, or delicate with the tinted plumes of the ostrich, could not yet be folded, and rendered the services of an attendant necessary.

In the works of the middle ages references are made to the two forms of the fan, to that employed for winnowing the grain, and that used in the service of the church, alternately to court the breeze or wave away the flies, till we hear of the fan as brought to France by Catherine de Medici, when it was no longer stiff and unyielding, but light and pliable. In the early part of the seventeenth century, it was so constructed that it could be folded in the manner of those used in the present day. Formed of paper and perfumed leather, it became the delight of the French Court; and attracting the attention of artists, fans in the luxurious reigns of Louis XIV. and Louis XV. (in the latter under the name of "Pompadours") shone with gilding and gems, and at length glowed with the pictures of Boucher and Watteau; until at length no toilet was esteemed complete without a fan, the cost of which was frequently in those days as high as from 12*l.* to 15*l.* sterling. In Italy, on the contrary, in the early part of the seventeenth century, even painted fans were of a very moderate price, and of universal use. "The first fans," says Coryat, in his *Travels* in 1608, "that I saw in Italy, I did observe in this space between Pizighiton and Cremona; but afterwards I observed them common in most places where I travelled. These fans both men and women of the country do carry to cool themselves with in the time of heat by often fanning of their faces. Most of them are very elegant and pretty things. For whereas the frame consisteth of a painted piece of paper and a little wooden handle, the paper which is fastened into the tops is on both sides most curiously adorned with excellent pictures, either of amorous things, having some witty Italian verses or fine emblems written under them; or of some notable Italian city, with a brief description thereof added thereto. These fans are of a mean price, for a man may buy one of the fairest of them for so much money as counter-vailth an English groat."

England must have been a great buyer of fans in the last century, as a lady of that period would have felt as awkward without her fan as a gentleman without his sword. Indeed Addison makes the comparison, and in the *Spectator* he describes an academy where the use of the fan is taught. "In the flutter of a fan," he observes, "there is the angry flutter, the modest flutter, the timorous flutter, the confused flutter, the merry flutter, and the amorous flutter." He says, "I have seen a fan so very angry that it would have been dangerous for the absent lover who provoked it to have come within the wind of it."

Gay again gives the fan as a present from Venus to a despairing lover, in order to soften his mistress, and describes in verse the hint which the peacock's tail presents for its construction.

#### CHINA.

In fan-making the Chinese and French are the great rivals, and may be said to monopolise the supply of the whole world. In the lacquered fans the superiority of the natives of China is fully admitted; they are unrivalled especially when price is taken into consideration, in the sculpturing and piercing of the wood, bone, ivory, or mother-of-pearl framework. Even their commonest fans are remarkable for boldness and originality of design, brilliancy of colouring, sharpness of drawing, and solidity and correctness of workmanship. The manufacture of fans is carried on almost exclusively at Canton, Soutchou, Hang-tchou, and Nankin. The fans of ivory and bone and of feathers, are made exclusively for exportation to Europe or America; those used by the Chinese are of bamboo polished or japanned, and covered with paper: they are sold at from 1*sd.* to 1*4s.* 6*d.* per dozen, according

to the quality of the frame and the design of the leaf.\* The examples which are in the Great Exhibition did not, however, come direct from any Chinese maker, but were contributed by three English exhibitors, viz.: Messrs. C. T. BRAINE (p. 1424), J. DANIELL (p. 1424), and HEWETT and Co. (p. 1421). The examples exhibited comprise fans of painted and embroidered feathers; a feather-fan painted with silver outlines, representing groups of Chinese figures, the feathers being alternately blue and white; an ivory-fan elaborately carved and pierced, and considering the amount of work, very cheap, its price being only 20*s.* There are also several very common paper-fans, ornamented either with rude delineations of landscapes, or besprinkled with gold-spangle.

#### FRANCE.

Fan-making has arrived at a high degree of perfection in France, and presents a remarkable instance of the subdivision of labour, as may be gleaned from the statement, that about twenty different operations, performed by as many pairs of hands, are necessary to the production of a fan which sells for less than one halfpenny; and that these various processes are not all carried on in a single manufactory, but on the contrary, form four distinct branches of trade, directed by masters employing the various artisans, who, for the most part, work at their own homes, and who are frequently assisted by their wives and children.

A fan consists of the frame of solid material, called a "Pied," which is composed of the inner ribs or "Bris," and the two outer ribs or "Panaches," and likewise of the flexible leaf or "Feuille." The frame is made of wood, bone, ivory, tortoise-shell, or mother-of-pearl. The first operation is performed by sawing the material into the required form for the inner and outer ribs. These ribs then pass into the hands of another workman, who shapes them with a file, and they are then taken up successively by the polisher, the piercer, the sculptor, the gilder, and the workman who fixes on them the spangles and pins of gold, silver, and steel. The frame is now sent to the manufactory which furnishes the necessary drawings for the series of operations, where it is riveted, the rivet being frequently ornamented with a precious stone.

The leaf or feuille is sometimes single, but more often double; and it is usually made of paper lined with silk or calico, but also of parchment, lamb's-skin, satin, and silk gauze. The richer kinds of feuilles are painted in water-colours on vellum, by artists known as *feuilleuses*; and the highest and most expensive class by artists of celebrity, since Boucher and Watteau, Camille Roqueplan, Gavarni, Clément Boulanger, and Dupré, have affixed their signatures to fans which they have decorated. The devices on the more ordinary descriptions of fans are printed from copper plates, and coloured by hand, and the most common sorts are ornamented by the process of chromo-lithography.

The feuille is folded in a mould of strong paper, and is then mounted on the frame and glued to the prolongations or "Bords" of the inner ribs. The feuille of the best fans is after this painted on the edge with gold-size, and gilt with leaf-gold; but the feuille of the common fans is printed in Dutch metal, previous to its being cemented on the frame. The decorator now ornaments the frame with gold or coloured ornaments, and the fan lastly passes into the hands of the overlooker, who attaches the tassels, and selects the proper sized sheath into which she places it.

The frame or "Pied" is made in the parishes of Andeville, the Deluge, the Boisière, Corbeil-Cerf, and Sainte Geneviève. In the district situated between Méru and Beauvais, in the Department of the Oise, 2,000 work-people, men, women, and children, are employed in the fan-trade. The woods used are the beam-tree, the plum-tree, ebony, sandal, and the lime-tree.\* The dexterity

\* *Etude pratique du Commerce d'exportation de la Chine*, by Natalis Rondot, pp. 92, 93.

and sureness of hand of the peasant workman are said to be quite wonderful. Considering his want of knowledge of the principles of drawing, his facility in engraving, sculpturing, and gilding, is certainly remarkable. The piercing is performed by means of minute saws, which the workman makes for himself with pieces of watch-spring. A remarkable piece of saw-piercing in the shape of a mother-of-pearl fan is exhibited in the French Section, No. 149; it contains no less than 1,600 holes in the square inch: this tour-de-force is the production of one of these peasant artisans, named Désiré Fleury.

The printing, the colouring, and the mounting of the feuille, and the final embellishment of the fan, are usually performed at Paris, under the direction of the fan-maker, called *par excellence* "Eventailiste;" though he has really but little to do with the manufacture of the fan, and must be regarded rather as the collector into one focus, and arranger of the produce of others; yet his labours are not the less essential. The mounting of the feuille, its ornamentation with feathers, and final decoration, are the operations usually performed by a small number of workpeople in his own establishment; besides which he furnishes the drawings to the peasant in the Oise, for the framework to suit the constant changes in fashion, he instructs his feuiliste as to the style of ornament, he groups together the frames and feuilles, and finally he overlooks the whole to see that the workmanship has been well executed. Except the mountings of the feuille and the final adorning of the fan, the other operations are usually performed by workmen at their own homes. The number of fan-makers or *Eventailistes* in Paris in 1827, was 15, who employed 1,010 workmen (344 men, 500 women, and 166 children), and sold about 40,420, worth of fans. According to the "*Statistique sur l'Industrie à Paris*," drawn up by our colleagues M. Natalis Rondot and M. Say, it appears that in 1847, there were 122 fan-makers, comprising chamber-masters as mounters, feuilistes, painters, and colourers. The value of the fans made was 110,000*l*. These masters employed 575 workpeople (262 men, 264 women, 29 youths, and 20 girls). The workmen on the average earn 3*s*., and the women 1*s*. 8*d*. per day. The men were for the most part copper-plate engravers and printers, lithographic draughtsmen and printers, painters, and colourers; the women were mounters, illuminators, painters, colourers, and overlookers. Thus in twenty years, it appears that the produce in fans had increased in value nearly threefold, whilst the number of workpeople had diminished to one half. This change is to be attributed to the employment of machinery; especially of the fly-press in stamping out and embossing the ribs, and the extensive employment of chromo-lithography, an art not practised at the former period. By these means the French have been enabled greatly to increase their exports by the production of cheap fans, to compete with those made by the Chinese. P. DUVELLEBOY (France, 495, p. 1201) exhibited some small fans, the price of which was as low as 5*d*. per dozen.

The collection of fans in the French Department is most complete, and contains several specially decorated in honour of the Exhibition, and of Her Majesty and Prince Albert. Besides these and others, painted by first-rate artists, it comprises most of the descriptions manufactured for exportation, and which possess distinctive characters, according to the market for which they are destined. For instance, some display great differences in the length of the ribs, and the portion of the circle occupied by the fan, when open; other fans, intended for Turkey and Morocco, are composed entirely of feathers, and, in conformity with the Mohamedan doctrine, no living object is painted on them. The principal foreign markets for fans made in France are the South American States. In the decoration of such fans as are intended for Buenos Ayres, Lima and green are carefully omitted, these colours having political significance, and being prohibited from use on pain of death. All the exhibitors are of the class called "*Eventailistes*," as none of the manufacturers of the Department of l'Oise send their productions.

#### BRITISH COLONIES.

The colonial dependencies of Great Britain contribute many examples of Fans, some of which are interesting on account of their simplicity, whilst, on the other hand, those from India present most striking proofs of the luxurious splendour of the Indian princes. *British Guiana*. Mr. W. H. HOLMES (132, p. 986), exhibits fans made of the Ita-palm. *Canada*. A fan of somewhat similar nature, but made of the bark of a tree, is contributed by Miss HELEN ROCHELEAU (175, p. 967). *Ceylon*. There are several rich "Punkahs" or fans, and a richly-painted ivory fan-handle from this island. *India*. The Indian Department contains fans or *Punkahs* in great variety as regards form and decoration and the material employed, some of them being of a very costly description. There are, for example, two fans contributed by H. H. the RAJAH of KOTA (p. 924), one with an ivory handle, the other with a gold handle: but as the names of the various manufacturers were unfortunately not ascertainable at the time the Jury examined these specimens, no prizes were awarded in their favour. The Indian fan differs from that of Europe and China in not closing, and likewise in its form; and it is usually kept in motion by an attendant. Beside the fans affixed to central handles, all of which are most gorgeously enriched with embroidery and jewels; there are exhibited others resembling a curtain suspended from a silver rod, which is held horizontally by the attendant, and waved backwards and forwards over the head of the wealthy Hindu; and there is also the circular standard-fan; the handle being a silver staff, crooked at the top, to which the fan is attached on the side opposite to the crook. The attendant stands by the side of his master, and placing the end of the staff against his foot, inclines it away from his body and slowly swings it to and fro. There is also a beautiful peacock-feather fan from Assam, and a fan or *Punkah*, composed of China beads and pearls, and made in the city of Delhi. The most simple, however, are those made of the entire or the divided leaf of the *Borussia flabelliformis*, manufactured at Calcutta, and commonly used both by natives and Europeans. The other examples comprise, a punkah made of khus-khus grass (*Andropogon muricatus*) which, when wetted, emits a fragrant perfume; fans made of sandal-wood, from Calcutta; a fan made of bamboo from Moorshehabad, and several of similar description from other parts of India; and lastly, from Bengal, large and hand-fans, made of the palmyra-leaf. As far as the Reporters could ascertain the names of the contributors, it appears that, besides the fans from the Rajah of Kota, before named, several of the examples were sent by the RAJAH of PATTIALA (p. 924), the RAJAH of JODHPORE (p. 924), the JUBBULPORE SCHOOL OF INDUSTRY (p. 924), and Captain DALTON (48, p. 791). The inspection of these beautiful productions of Indian workmen, naturally suggests the idea that their skill and remarkable taste might be turned to profitable account, if directed to the production of fans suitable to the European and American markets. *Nova Scotia* (p. 970) sends an example of a very simple Indian fan. *Trinidad*. Lord HARRIS, the Governor (p. 975), sends examples of fans for ladies. And from *Western Africa*, Mr. R. JAMESON, of Liverpool (22, p. 955), exhibits several fans from the banks of the Niger, one of which is made of a species of grass.

#### EGYPT.

A few specimens of fans are exhibited in the collection from Egypt, to which much interest attaches, as coming from a country in which, possibly, the fan was first devised.

#### SPAIN.

There are two exhibitors of fans in the Spanish Court, one of whom contributes painted and also printed "*Fouilles*;" and the other both feuilles and complete fans, some of which are copies from French models. The examples, although they will bear no comparison in point of taste or execution with the splendid fans from France, are good of their kind; and it would appear that the attention of their exhibitors has been directed rather to the manufacture of an article for general sale, than to the production of works of art. But it is remarkable, that no finer specimens

should have been sent from a country in which the use of fans is so prevalent that they are commonly offered for sale outside the arena of the bull-fights and other places of amusement.

## TUNIS.

The fans in the Tunisian Court are ten in number, and are in some cases ornamented with rich embroidery.

## TURKEY.

The only example is an embroidered fan made at Adrianople.

## WURTEMBERG.

Several bone and ivory fans are exhibited by M. C. STOLL of Ulm, they are reasonable in price, but not nearly so good as the ivory-fans contributed by the French makers.

The number of exhibitors of fans is twenty-three; of these, there are:—

- 2 Holders of a Prize Medal.
- 1 Who obtained Honourable Mention.
- 20 Unrewarded.
- 
- 23 Total.

The number from the various countries is as follows:—

|                    |    |
|--------------------|----|
| British Colonies:— |    |
| British Guiana     | 1  |
| Canada             | 1  |
| Ceylon             | 1  |
| India              | 5  |
| Nova Scotia        | 1  |
| Trinidad           | 1  |
| Western Africa     | 1  |
| China              | 3  |
| Egypt              | 1  |
| France             | 3  |

| Wurtemberg         | 1  |
| Total              | 23 |

## LIST OF AWARDS.

DUCROT and PETIT, Paris (France 149, p. 1178), Honourable Mention for a collection of fans in ordinary demand and at reasonable prices, namely, from 5*l.* to 40*s.* each; also excellent examples of pierced and sculptured ivory and mother-of-pearl fans, one of the specimens of which has been before alluded to in the introductory notice. These are of much higher quality, and range in price from 3*l.* to 12*l.* each.

DUVELLÉOR, P., Paris (France, 495, p. 1201), Prize Medal for a display of fans ornamented with artistic paintings, and remarkable for the beauty of the inlaying, and the pierced ivory and mother-of-pearl frames. The most elegant fan in this collection is one painted by Roqueplan; the ribs are of richly-pierced and sculptured mother-of-pearl inlaid with gold, and it is valued at 40*l.* Beside the above, others intended for foreign markets were exhibited, the prices of which vary, from 5*l.* to 40*s.* per dozen.

FÉLIX, ALEXANDRE, Paris (France, 199, p. 1183), Prize Medal for a collection of fans, being for the most part copies of the best examples of ancient fans: these, although not possessing the merit of originality, are such remarkably beautiful specimens of vellum-painting, that they fully entitle this manufacturer to the award, and are moreover the richest of any exhibited.

## V. PIPES AND AMBER MANUFACTURES.

Before discussing the merits of the pipes contributed from all quarters of the globe to adorn the Great Exhibition, it will be proper to notice the materials principally employed in their manufacture.

Clays, of different kinds, are more used than any other substance in the formation of pipes; but as their nature and composition will probably be fully discussed in the

Special Report on the fictile-arts, of which clay pipe-making is comparatively but a small branch, it is needless here to describe them.

Woods of several descriptions are next in importance. The wild cherry-tree, and the jasmine are the principal sorts, and great care is bestowed on their culture to ensure their growing free from knots and blemishes; the young stems of the jasmine being wound round with cloths to effect that object. Lemon-tree and ebony are also in request, the latter being generally used for carved tubes.

Mother-of-pearl, Horn, Ivory, and Bone are extensively used; nor are the precious metals and costly gems excluded from a share in the formation of the pipe. But these have not that intimate connection with the subject under notice, which appertains to two materials—*Meerschaum* and *Amber*, whose names are euphonious to the ear of the genuine smoker. The former substance is devoted exclusively to his use; and the latter though not entirely his own, pays to him a very considerable tribute, in the form of mouth-pieces.

So early as the year 1609, the genuine meerschaum must have been held in estimation in England; since Dekker appears to refer to it in his "*Gull's Horn-hoody*," when he wishes his gallant to be able to discourse "which pipe has the best bore, and which burns black, and which breaks in the burning."

*Meerschaum* (*Eoume de mer*) is a mineral of somewhat rare occurrence. It consists of magnesia, silica, and water, and may be called a hydrated silicate of magnesia ( $MgO, SiO_2 + HO$ ). As the compound is not crystalline, its constituents are variable, and thus silicates of iron and alumina are often found in combination with it. These affect the colour of the meerschaum, which when pure is quite white. Silicate of iron frequently occurs, and gives it a tinge of colour, varying from the palest yellow to a deep brown. Good meerschaum is tolerably soft, it resists the pressure of the hand, but is easily indented by the finger-nail, and, especially after having been wetted, may be easily cut with a knife. The fracture is generally earthy, and rarely conchoidal; still the state of aggregation of even pure meerschaum is very variable, as is proved by the marked differences in its specific gravity. Some kinds sink in water, others float on its surface; these qualities in the estimation of the pipe-maker, are indicative of different values, for he rejects both the very heavy and the very light, and prefers those of medium density. The light varieties are generally very porous, and even contain large cavities, whilst the heavier kinds he suspects to be an artificial product.

Meerschaum is met with in various localities, in Spain, Greece, and Moravia; but by far the largest quantity is derived from Asia Minor, it being dug chiefly in the peninsula of Natolia, near the town of Comiah. Formerly the material was roughly fashioned on the spot into bowls, which were more elegantly carved in Europe. The art was especially cultivated in Pesh and Vienna, where it formed an extensive and important branch of trade. These rough bowls still occur in commerce, but by far the greater part of the meerschaum is exported in the shape of irregular blocks with obtuse angles and edges, requiring careful manipulation with the aid of water, in order to remove irregularities and faulty portions. A beautiful specimen of meerschaum thus cleaned is contributed by LUDWIG HARTMANN (Austria, 675; and there is also a box of meerschaum earth in the Grecian Department, 28). This preliminary treatment still leaves numerous blemishes, and the meerschaum of commerce has defects of various kinds; besides various minerals scattered through its mass, it contains a hard sort of meerschaum, which the manufacturer calls chalk (*Arzelmassen*), and which is the cause of much difficulty in the carving.

Previous to the mechanical treatment of the meerschaum\* for making the bowl, it is subjected to a certain preparation. It is soaked in a liquified unguent composed of wax, oil, and fats. The wax and fats which the sub-

\* This subject is ably discussed under the head "*Meerschaum*" in Frecht's "*Encyclopädie der Gewerbe und Künste*," from which some of the foregoing remarks have been abstracted.

stance absorbs, cause the colours which meerschaum assumes after smoking. Under the influence of the heat produced by the burning tobacco, the wax and fats pass through all the stages of a true process of dry distillation, the substances thus formed become associated with the products of the distillation of the tobacco, and by their diffusion through the meerschaum, all those gradations of colour which are so highly prized by the connoisseur are produced.

Occasionally, though rarely, the bowls are artificially stained by dipping them, before they are soaked in wax, in a solution of copperas (sulphate of iron) either alone, or mixed with one of dragon's blood. This process must manifestly affect, very materially, the shades of colour produced in smoking.

Attempts have not been wanting to imitate meerschaum, the process being rather mechanical than chemical; for although chemists have of late been very successful in the artificial production of minerals, for instance palagonite (Buusen), spinelle (Ebelmen), crystallized carbonates (Scharmont), no one has attempted the production of meerschaum, chemically.

The large quantity of meerschaum parings that are left in roughing out the bowls would entail considerable loss, unless some process had been devised of rendering them available. A species of meerschaum bowl has long been known in commerce under the name of *Massen-köpfe* (massu bowls), which is made from the parings; these are triturated to a fine powder, boiled in water, and moulded into blocks with or without the addition of clay, each of these blocks suffices for one bowl; but before they can be used they must be allowed to dry for some time, as they contract considerably. Specimens of composition pipe-bowls and cigar-tubes are exhibited in the Austrian Section (687). These bowls are distinguished from real meerschaum by their greater specific gravity, but there is no very certain test by which the real meerschaum can be distinguished from the composition, and many suppose that all the heavier descriptions are spurious, though there is no absolute proof of this being the case. A negative test may however be mentioned; the composition bowls never exhibit those little blemishes which result from the presence of foreign bodies in the natural meerschaum, therefore if a blemish occur in a meerschaum bowl, which is very frequently the case, the genuineness of the bowl is rendered most probable; but as these do not show until after the bowl has been used for some time, the test is not of much value.

**Amber.**—The most extensive use of this elegant material is for the manufacture of the mouth-piece, an essential constituent of the genuine meerschaum and Turkish pipe. Up to the present day, amber mouth-pieces continue in great request in the East, where they fetch very high prices, instances of which will be quoted. There is a current belief in Turkey that amber is incapable of transmitting infection, and as it is a great mark of politeness to offer the pipe to a stranger, this supposed negative property of the amber accounts in some measure for the estimation in which it is held. In the Christian countries of Europe, ivory, bone, and horn, have to some extent usurped the place of the more costly material, which is reserved for the higher class of pipes. Amber is also much employed in numerous small fancy articles, especially for beads, necklaces, brooches, and earrings. The Exhibition furnishes also examples of its being worked occasionally into candlesticks, salvers, pipe-tubes, and other larger articles. The coarser descriptions and chips of amber are also employed for the manufacture of varnish, and the preparation of amber-oil and succinic acid, which it yields by distillation at a moderate temperature. Copal, which bears a strong resemblance to, but is much cheaper than amber, is occasionally substituted for it, fraudulently or through ignorance. There is no difficulty in distinguishing the two by a chemical analysis, but this renders the sacrifice of a small piece of the substance necessary; some varieties of amber, especially the dark yellow and transparent descriptions, are scarcely to be distinguished unless by a well-practised eye, from copal. A few words may be said respecting the chemical characters of amber which, however, do not affect its

employment in manufactures. According to an analysis of Berzelius, it contains a volatile oil, succinic acid, two resins soluble in alcohol and ether, and a complex bituminous substance (succinic bitumen) which is not affected by any solvent.

The mode of obtaining amber is peculiarly interesting. The greater part is found on the coast of Prussia Proper, especially between Königsburg and Dantzic; it is distinguished as terrestrial and marine amber; the former is dug in mines, and is generally found in alluvial deposits of sand and clay, associated with fossil wood, iron pyrites, and alum shale. Amber is also found in some other countries, but never to any amount. The marine amber is cast ashore during the autumnal storms on the coast of Pomerania and Prussia Proper. It is then picked up, or fished for with small nets. There are several fine specimens of both descriptions of amber in the Austrian Section (675, p. 1042), and in the Prussian Section (438, 441, 40, and 41, pp. 1075, 1050). In the case bearing the latter number are specimens of land amber, and the fossil wood associated with it which were obtained at a depth of 60 feet by the exhibitor, M. TESSLER (41, p. 1050), who employs about 20 workpeople in his amber-pits. The opinions respecting the origin of amber are very divided, some hold the view expressed by Tacitus in his *Germania*, that it is a resin exuded by certain conifers, traces of which are frequently observed among the amber. Others assume it to be a species of wax or fat, having undergone a slow process of putrefaction; and they base their views upon the fact that chemists are able to convert cerous or fatty substances into succinic acid by inducing oxidation artificially. It is quite certain that at one time amber must have been liquid, for numerous small animals are found enclosed within it; these for the most part are insects belonging to an extinct species of *Arachnide* (40). There are numerous and excellent specimens of amber enclosing insects in the Prussian Section (441), and others in a case which deserves favourable mention from D. T. TESSLER, who has sent one specimen containing the leg of a toad.\* The processes which nature employs for the preservation of the structure of extinct insects, is one which the microscopist successfully imitates by embalming his delicate dissections in Canada balsam between two slips of glass.

There is evidence of the extreme antiquity of amber in the fact that the Phœnicians of old fetched it from Prussia. Since that period it has been obtained there uninterruptedly, and no diminution in the quantity annually collected has been perceived. This would almost induce a belief in the correctness of the putrefaction theory, above alluded to, and we may perhaps assume that a constantly new formation of amber is taking place; this view is somewhat strengthened by the different appearance of the varieties of amber, which seem to exhibit the successive stages of its development and decay: still this conclusion to many will appear strained. The different kinds of amber are distinguished by varieties of colour and degrees of transparency. It is found of all shades of yellow, from the palest primrose to the deepest orange, or even brown. In point of clearness amber varies from vitreous transparency to perfect opacity, specimens being obtained nearly as white as ivory; in this latter case the transformation is assumed to have advanced further than in the ordinary varieties. It is rarely found, and is chiefly used for cameo ornaments, and is mounted on darker amber which forms the back ground. Several examples of its employment are exhibited in the Prussian Section.

An inquiry naturally suggests itself as to which of these varieties of amber is the most valuable. It is self-evident that this must depend, as in the diamond, upon the size and the uniformity of the pieces. Besides, as all the varieties, excepting the white, which has its special uses, are equally applicable for manufacturing purposes, it follows that the value of any particular sort must depend in a great measure upon its rarity. The straw-yellow, slightly cloudy, translucent variety is the most

\* According to M. Natta's Rondot, specimens of amber containing insects are of frequent occurrence in China.

rare, and is that which the Orientals prefer to all others, and which they purchase at extravagant prices. There are few specimens of it in the Exhibition, and it is needless to search for them in the German Department, as every piece that is found in Prussia is exported to Turkey in the raw or manufactured state; and it is in the section occupied by this latter country (1928, 1929) the only specimens in the Exhibition will be found.

Some writers are of opinion that the preference which the orientals show for the pale yellow, slightly clouded variety, has been transmitted to them from the ancients, but their arguments will not bear a close examination.

Having alluded to this matter, it will be as well to advert to the opinions held on the subject by the ancient authors. It appears that the word "electron" (amber) had two significations; one referred to the substance which we call amber, hence the derivation of the word electricity, from its long-known property of attracting, when rubbed, light substances, such as straws, which was the first electric phenomenon ever observed; the other meaning applied to an alloy of gold and silver found in nature, or produced artificially. Pliny\* expresses himself very clearly on this point; he says that gold always contains silver, and that when the silver amounts to one-fifth of the compound it is termed "electrum;" if the proportion is higher, the electrum ceases to be malleable.

It has been assumed that the latter was the original meaning of the term, and that it was subsequently applied to amber on account of its resemblance to the white gold, the variety most closely resembling the alloy possessing the highest value. This view is supported by the circumstance that we find "electron" spoken of by the epic poets Hesiod and Homer as employed in articles for which amber would scarcely be applicable. The application, for instance, of amber for shields might cause some alarm for the safety of the Homeric heroes. But the ancient poets did not always pay minute attention to the natural qualities of the materials which they mentioned in their narrative; this is evident from Hesiod's employing other fragile substances, such as ivory and alabaster in the manufacture of shields. Moreover, the fine carving of these show-pieces was not adapted to resist heavy blows. The learned Buttmann (*Abhandlungen der Berliner Academie*, 1818, 1819), very correctly observes that these works of art are derived by the poet direct from the workshop of Vulcan, and that this at once does away with any protest against the insecurity of ivory, alabaster, or enamel in the manufacture of his shields. The same learned antiquary has compared critically the most important passages in which the word "electron" occurs, and he has demonstrated, incontrovertibly, that the word originally meant amber, and that the second interpretation has only been introduced at a later period, especially by the tragic poets. Thus it follows that the transmission of the predilection for the straw-coloured cloudy amber from the ancients is far from being proved, and that we must content ourselves with the explanation first attempted of its resulting from the greater rarity of this kind of amber. This predilection appears to be confined to the East, as in other countries, *e. g.*, Russia, the orange-yellow transparent variety is decidedly preferred, possibly on account of its cheapness. The Russian peasant girls adorn themselves with double and treble rows of amber beads; though frequently they are supplied with mere copal-beads instead of the genuine article.

Having made these general observations on the character of amber, we pass to the detailed consideration of what has been presented to us in the Exhibition under the head of Pipes and Amber Manufactures.

#### GERMANY.

No one will be surprised that this land of smokers bears off the palm in the manufacture of pipes and amber; nor that her exhibitors outnumber those of all other nations collectively. All the States of Germany, however, have not contributed equally, the pipes being chiefly from Austria, and especially from Vienna, and the amber-manufactures from Prussia. The meerschaum works of the Viennese are unrivalled, as regards taste in design and excellence in execution; the carving of many of the pipe-bowls and cigar-tubes being examples of highly-cultivated art. Most of the fancy pipe-tubes, composed of horn and mother-of-pearl, are more curious than graceful; the cherry-tree tubes are in great variety, and are good examples of this component of the long pipe; besides these, there are large numbers of bone and wood mouth-pieces, and others made of amber, the latter being beautifully worked.

The meerschaum pipes from Prussia are not numerous, nor are they so elaborate as those of Austria. The Prussian Section presents such a series of amber specimens as are not likely to be again collected; the manufactured amber does not, however, evince much feeling for artistic design on the part of their exhibitors, whose merits rest principally on the excellence and difficulties of the workmanship.

The contributions from the other parts of Germany consist of meerschaum and other pipes from Bavaria, which are not remarkable; porcelain pipes from Manburg and clay-pipes from Nassau. Those from Hamburg are of fancy forms, and those from Nassau are chiefly plain descriptions, which are sold at exceedingly low prices.

#### BRITISH COLONIES.

*British Guiana.*—T. B. DUGGIN (146, p. 986) sends a specimen of a pipe, or rather tube, used by the aborigines for smoking tobacco, called a Wiuna; it resembles a cheroot in outward appearance, but is hollow so as to contain the tobacco. It is said to be made from the rind of the fruit of the Manicole-palm (*Areca nemicot*, Lodd.), from the River Berbice. It may be remarked that such tubes, made of paper covered with a leaf of tobacco, are now manufactured in England. *Canada* contributes a collection of well-made clay-pipes. The *Indian* collection contains examples of the costly and beautifully-ornamented cocoa-nut and Jac Hookahs, mounted in silver with their rich tubes or flakes, and the simple pipe composed of two pieces of bamboo, one for the bowl cut close to a knot, and a smaller one for the tube. These primitive pipes are in common use amongst the poorer natives of India, and yet Dr. Royle cites an extemporary pipe sometimes used by the natives, which surpasses even this in simplicity; the amateur makes two holes, one longer than the other, with a piece of stick, in a clay soil, inclining the stick so that they may meet; into the shorter hole he places the tobacco, and applies his mouth to the other, and thus luxuriates in the fumes of the narcotic herb. There is, likewise, a specimen of the Singoo opium-pipe which is of very small dimensions, the tube not being larger than a thimble. The opium is placed in the bowl, and ignited by placing a piece of charcoal on it, which is effected with a small pair of tweezers, which find a place in this interesting and well-arranged collection.

#### CHINA.

The habit of smoking is very general in China, being common to both sexes in all classes of society, and at all ages. In every part of this vast empire the tobacco plant is cultivated, and consumed both as snuff and for smoking. So prevalent is the habit that little girls and boys are commonly seen smoking, and from this early period it is persevered in by its votaries through life. It is always customary to offer visitors a cup of tea and a pipe. M. Natalis Rondot estimates the number of smokers in China as at least 100 millions, and states that pipes are made in enormous numbers, and in an almost infinite variety of forms; they are of three classes, the water-pipe, the straight-pipe, and the opium-pipe. The Chinese

\* *Historia Naturalis*, xxiii., c. 4. Omni auro inest argentum vario pondere, alibi densa, alibi nona, alibi octava parte. Ubique quinta argenti portio est, electrum vocatur. Fit et cura electrum argento addito; quod si quintam partionem excessit, incudibus non resistit. Et electro auctoritas Homero teste, qui Menelai regiam auro, electro, argento, ebori fulgere tradit.

*Id.* Page 469, vol. ii., of Holland's Translation.

pipes are generally very long, and the bowl very small, it being usually made of nickel-copper (white metal). The only contribution however is from Dr. Berncastle, who sends an opium-pipe and appurtenances.

#### EGYPT.

The specimens in the Egyptian Court comprise two Narguilles or water-pipes, one of zinc and one much richer, mounted in silver; also several pipe-bowls of Assouam and Assiout.

#### FRANCE.

The examples consist of clay-pipes only from two exhibitors; they are very numerous, and are exceedingly well manufactured, but their forms are not such as to sustain that high reputation for graceful design which this country enjoys. This is to be attributed to the class of persons for whom the pipes are intended, and who prefer a pipe-bowl moulded into the form of some grotesque head with staring eyes, to the most elegant figures which could be devised. Very large quantities of these pipes are exported to England, Germany, Italy, the United States, and other countries, and are much esteemed on account of the very excellent quality of the earthenware of which they are formed. Their superior texture, it appears, is due in some measure to the clay of which they are chiefly composed, but principally to the great skill of the manufacturers in compounding it with other materials. To give some idea of the extent of the pipe-manufacture at St. Omer, it may be stated that one of the exhibiting manufactories—that of DUMERIL, Sons, and Co. (p. 481)—employs 450 workpeople, and produces annually 100,000 gross, or nearly fifteen million pipes, varying in price from 1d. per dozen to 3d. each; and that the other—that of L. FIOLET (p. 1184)—employs 850 workpeople, and produces 200,000 gross, or nearly thirty million pipes, consuming 7,874 tons of clay in their manufacture.

#### PERSIA.

Mr. J. B. THOMSON (3, p. 1426) contributes a Narghili or Narguile, and a lady's amber mouth-piece, and Mr. J. HUDSON (10, p. 1427) several specimens of pipes, which illustrate the luxurious habits of the Persians in smoking.

#### SARDINIA.

The contributions from this country consist of beautiful examples of carved meerschaum pipe-bowls, which equal those of Austria, but are insignificant in point of number, having been contributed by only one exhibitor.

#### TURKEY.

In the Turkish collection are numerous rich examples of the Narguile, or water-pipe, in some cases composed of silver, and ornamented with precious stones; the flexible tube, or Marpitch, used with the Narguile, is formed of a spiral wire covered with leather, over which another wire is coiled, so as to fall between the interstices of the inner spiral. The Turks, in smoking the Narguile, inhale the fumes into the lungs, and never consume the last portions of the tobacco, as the smoke becomes too pungent. There are numerous examples of the long-pipe, or Kablioun, and the short-pipe, or Chihouque, with the cherry-tree, jasmine, wild-plum, and ebony tubes; and likewise the crude gimblets, with which these tubes, five feet or more in length, are bored. In boring the tube, the Turk places it above the gimblet and thus gets quit of the chips, after boring the hole half way he meets it from the other end of the stick. The wild cherry-tree, which is principally used, seldom occurs free from defects in the bark, to repair which, so that the reparation cannot be discovered, is the chief difficulty. There are examples of Lyles or pipe-bowls piced with these tubes, they are composed of the red-clay of Nish, mixed with the white-earth of Bousthouck. They are very graceful in form, and are, in some cases, ornamented with gilding, but the Turk prefers a fresh bowl each time, the plain ones are chiefly employed on the score of economy. It is not unusual in Turkey to compute dis-

tances, or rather the duration of a journey, by the number of pipes which might be smoked in the time necessary to accomplish it. The Imames or amber mouth-pieces exhibited in the Turkish section surpass those of any other in splendour. One exhibitor sends four of choice amber, which are worth together, 1,000l.; besides these, there are three groups from distinct exhibitors; in the case of one was noticed an amber cigar-tube, which is one of numerous instances of the innovations upon Turkish customs by the introduction of European ideas. If more awards have not been made for Turkey than those cited in the list, it does not arise from want of meritorious examples, but simply because it was quite impossible to obtain a correct catalogue of exhibitors at the time the Jury examined the articles contributed from this country.

#### TUNIS.

Weeds for pipes, and two embroidered pipe-guards, are the only contributions.

#### TUSCANY.

The only example in the Tuscan Section is a beautifully-carved ebony pipe-tube.

#### UNITED KINGDOM.

The pipes in the British side of the Exhibition are unimportant; two consist of steel, one is a contrivance for condensing the fumes of the tobacco, and the other two are of meerschaum. No common clay-pipes are exhibited; their manufacture forms a distinct branch of the fictile-art, and is usually practised by small makers; the processes employed being very simple and performed with wonderful celerity. The stem of the pipe is first formed by rolling a piece of clay with the hand on a slab until it forms a cylinder slightly tapered; a ball of clay is then attached to the thickest end and placed in a mould formed of two halves hinged together, by merely closing the mould the clay assumes the form of the outside of the bowl; a plunger corresponding to the intended cavity is then forced in, and the excess of clay which exudes is pared off. The pipe is completed by threading the stem on to a wire, which thus forms the bore, and after drying it is baked in a furnace of peculiar construction.

The number of exhibitors of pipes and amber is forty-nine, of these there are:—

- 10 Holders of a Prize Medal.
- 18 Who obtained Honourable Mention.
- 21 Unrewarded.

49

The number of exhibitors from the various countries is as follows:—

|                    |    |
|--------------------|----|
| Germany:—          |    |
| Austria            | 13 |
| Bavaria            | 1  |
| Hamburg            | 1  |
| Nassau             | 2  |
| Prussia            | 11 |
| British Colonies:— |    |
| British Guiana     | 1  |
| Canada             | 1  |
| India              | 1  |
| China              | 1  |
| Egypt              | 1  |
| France             | 2  |
| Persia             | 2  |
| Sardinia           | 1  |
| Turkey             | 5  |
| Tuscany            | 1  |
| United Kingdom     | 5  |

49.

#### LIST OF AWARDS.

ALBA, SAMUEL, Vienna (Austria, 664, p. 1041).—Honourable Mention is accorded to this exhibitor, for a very large collection of meerschaum pipe-bowls, cigar-tubes, and amber mouth-pieces. The plain bowls and cigar-tubes, and those ornamented with foliage are very

creditable productions,\* but where human figures are introduced, they are not so well executed.

**ASTRATH, CARL**, Vienna (Austria, 666, p. 1041).—Prize Medal, for an assortment of most exquisite specimens of meerschaum pipe-bowls and cigar-tubes; the sculpturing of the figures displaying remarkable artistic skill, and the execution of leafage being bold and sharp. Considering the excellence of the work, the prices are very moderate (10,243, 30s.; 10,208, 45s.; cigar-tube with figure of Venus, 45s.; another with that of Hercules, 53s.) Besides the above, the collection comprises several of the richest amber mouth-pieces, one of which is valued at 33l.; some of the mouth-pieces are flat, such as are used in Germany; others round, such as are used in the East.

**HEISTEGEL, PHILIP**, Vienna (Austria, 667, p. 1042).—Honourable Mention. For meerschaum pipes with silver mounts and amber mouth-pieces; meerschaum pipe-bowls and cigar-tubes; cherry-tree and ebony pipe-tubes, and plain amber mouth-pieces, which are all very well manufactured, and of good design.

**DUMERIL, SONS, and Co.**, St. Omer, Pas-de-Calais (France, 176, p. 1181).—Honourable Mention. For a great variety of clay-pipes, such as are used by the working classes, and more particularly by the peasantry. These pipes are more remarkable for their cheapness and very excellent manufacture, than for any beauty of design.

**FIOLET, LOUIS**, St. Omer, Pas-de-Calais (France, 211, p. 1184).—Honourable Mention. For a large assortment of clay-pipes exceedingly well-made. The bowls are mostly in the form of heads, some intentionally grotesque, and others intended to represent eminent personages, scarcely less so, on account of the eyes being picked with two dabs of black. These pipes are not remarkable for any of that excellent taste usually displayed by the French.

**FLÖGE, GERHARD**, Vienna (Austria, 670, p. 1042).—Prize Medal. Carved meerschaum pipe-bowls and cigar-tubes in great variety, and of excellent designs and execution; also a large collection of amber for smoking purposes, including the round mouth-piece used in Turkey.

**FRIEDRICH, JOHANN**, Vienna (Austria, 671, p. 1042).—Prize Medal. A very large assortment of meerschaum pipe-bowls and cigar-tubes, with amber mouth-pieces of beautiful designs, frequently containing several figures, which are exquisitely and boldly sculptured. The pipes, which vary from 17s. 6d. to 7l. 10s. each, are reasonable.

**GRÜNHUT, J., jun.**, Prague (Austria, 673, p. 1042).—Honourable Mention is accorded for a meerschaum pipe-bowl and two cigar-tubes, the carving of which is very sharp and spirited.

**HADJI, MIHRAN DUZOGLU** (Turkey, 1928, 1929, p. 1398).—Prize Medal. For four most splendid imanes or round amber mouth-pieces, richly ornamented with brilliants; the two shortest, which in smoking are pressed against the lips, are each worth 305l., and are of that peculiar colour and degree of transparency which approaches nearest to the Turkish ideal of beauty; the two longer mouth-pieces are of a different form, and although not of so good a colour, nor enriched with as many diamonds, are yet worth 200l. each.

**HARTMANN, LUDWIG**, Vienna (Austria, 675, p. 1042).—Prize Medal. For a very large collection of well-made mouth-pieces of amber, mother-of-pearl, bone, and wood; cherry-tree, and other pipe-tubes; hard-wood cigar tubes from 1d. to 2½d. each; walking-sticks from 9d. to 7s. 6d. each; meerschaum pipe-bowls and cigar-tubes; the foregoing articles are those in general use in Germany, and consequently they are not elaborately ornamented.

**HENDERSON, —**, Montreal (Canada, 187, p. 966).—Honourable Mention is accorded for a case of well-made clay-pipes.

**HOFFMANN, C. W.**, Dantzic (Prussia, 439, p. 1075).—Prize Medal. A large assortment of amber-manufactures, amongst them a pair of candlesticks of smoky amber, 22l. 10s.; a letter-weight of a single piece, 9l.; a snuff-box set in gold; and other articles which are well manufactured, but are not remarkable for beauty of design.

**HOFFMANN, G. J.**, Dantzic (Prussia, 440, p. 1075).—Honourable Mention (the same Award by the Jury of Class XXIII.). For a very large collection of amber-beads, some of which are of large size.

**JANTZEN, G. E.**, Stolpe (Prussia, 205, p. 1059).—Honourable Mention (the same Award by the Jury of Class XXIII.). For an assortment of amber-manufactures, comprising necklaces made of strings of very beautiful pearl-like beads, which are very rare; a ladies' companion, the handles of the various instruments it contains, and also the needle-case and crochet-needle-holder being of amber; besides which the Collection comprises several miniature ornaments of amber.

**LUX BROTHERS**, Rhula, Saxe Gotha (Prussia, 796, p. 1094).—Honourable Mention. For a great variety of plain meerschaum pipe-bowls, imitation meerschaum bowls, painted porcelain bowls, and carved wood pipes.

**MANNHEIMER, WOLFF**, Königsberg (Prussia, 438, p. 1075).—Honourable Mention (the same Award by the Jury of Class I.) For the exhibition of two unusually large pieces of amber; one of which is a specimen of that sort obtained in the amber pits, and has a rough exterior; it weighs 6 lbs.; the other is marine amber, and is water-worn; it weighs 4½ lbs.

**MÜLLENBACH and THKWALD**, Hoehr (Nassau, 10, p. 1132).—Honourable Mention. For remarkably cheap clay-pipes, varying in price from 6d. to 2s. per hundred.

**NAIM EFFENDI**, Constantinople (Turkey, 1441, 1447, p. 1396).—Prize Medal for a valuable collection of round amber mouth-pieces, for the chibouque or long pipe, ornamented with rings of artificial aventurine and with jewels; the prices of these vary, according to the size and colour of the mouth-piece, the lowest being 37s. 6d., and the highest 35l.; and also for a collection of jasmine pipe-tubes.

**PARTSCH, A., jun.**, Theresienfeld (Austria, 611, p. 1038).—Honourable Mention. For an assortment of cheap clay-pipe-bowls, coloured and glazed.

**ROMOLI, LUIGI**, York Terrace, Chelsea (Tuscany, 124, 125, p. 1300).—Honourable Mention. For an ebony pipe-tube, wrought in pierced carved work.

**ROY, W. von**, Dantzic (Prussia, 441, p. 1075).—Honourable Mention. For a most interesting collection of all the known varieties of amber, systematically arranged in four cases, which contain likewise succinic acid, crude and pure, obtained from amber. Also for various manufactured articles, amongst which the most remarkable is an oblong salver, composed of separate pieces of amber arranged to form a mosaic pattern, the Royal Arms of England being engraved in the centre.

**SAID AGA** (Turkey, 3369, 3372, p. 1399).—Honourable Mention. For an assortment of those amber mouth-pieces which are in most general use in Turkey, and which vary in price from 10s. to 30s.; and also amber cigar-tubes; and a large collection of pipe-tubes, and wood mouth-pieces.

**STRAUSS, J.**, Turin (Sardinia, 80, p. 1305).—Prize Medal. For several elaborately-carved meerschaum pipe-bowls, the sculpturing of which is very exquisite.

**TESLER, C. L.**, Stolpe (Prussia, 41, p. 1050).—Honourable Mention is accorded for various manufactures in amber, amongst which are strings of well-formed spherical beads, a cigar-tube, a ring-stand composed of different coloured ambers, the ornament and workmanship of which are very good. This exhibitor has likewise sent a specimen of land amber, together with the fossil wood with which it is generally associated.

**WINGENDER BROTHERS**, Hoehr (Nassau, 9, p. 1132).—Honourable Mention is accorded for an assortment of various descriptions of clay-pipes, intended chiefly for exportation, and which are remarkable for their low price, 5s. 6d. per thousand.

**WINTERFELD, J. A.**, Breslau (Prussia, 204, p. 1059).—Prize Medal. For the largest collection of amber-manufactures, the workmanship of which is exceedingly good; also a collection of most of the varieties of raw amber. The manufactures comprise amber mouth-pieces; large pipe-tubes, composed entirely of amber; amber cigar-tubes; ear-rings; necklaces; cameo-brooches, the white opaque amber forming the figure or head; a set of chess-men; and numerous other articles.

WÖBECKE, H. (Hamburg, 89, p. 1139).—Honourable Mention. For a collection of well-made pipes manufactured with Turkish clay.

ZETTLER, JOSEPH, Vienna (Austria, 687, p. 1042).—Prize Medal. Massa pipe-bowls and cigar-tubes, which are manufactured from meerschaum dust. The forms of these articles are elegant, and the execution so good that they are distinguished only with difficulty from the real meerschaum. The price of massa pipe-bowls is much lower than those of the real meerschaum, and they are usually mounted with plated instead of real silver tops.

## VI. SNUFF-BOXES.

The boxes, which are known under this very general name, have exhibited equally the extremes of coarseness and of elegance. Under the former condition, they will be remembered in the box of horn, brass, or japanned-iron—the last, however, being known rather as a common receptacle for tobacco; and in the latter state, they will be recognised in the countless portable depositories for snuff, for which all the most costly productions of nature have supplied the materials.

The word snuff is an infection of the old northern verb *suff*; and it existed as a term expressive of strong inhalation through the nostrils, or of angry impatience, long before the invention of the substance to which it now gives a name. Out of the latter signification originated the colloquial expression of the sixteenth and seventeenth centuries to "snuff pepper," or to "take in snuff." It will be remembered that this last phrase occurs in Shakespeare's *Henry IV.* (Part I., Act I., scene 3), in immediate connection with a small box containing perfume, as displayed by the courtier who enraged Hotspur:—

"He was perfumed like a milliner;  
And, 'twixt his finger and his thumb, he held  
A Pounceet-box, which ever and anon  
He gave his nose, and took 't away again;  
Who, therewith angry, when it next came there  
Took it in snuff."

The word pounce, out of which is formed pounceet-box, is supposed to have been remotely derived from *poinsonner*, to prick or pierce, and hence the claws of a hawk were called his pounces; and pouncings, as a term relating to costume, were regarded as ornaments executed by a roll of points, or in open-work. A pounceet-box, therefore, signifies a small box having a perforated cover, containing perfumes, the scent of which escaping through the open flower-work of the top, was regarded, in the sixteenth and seventeenth centuries, as a preservative against contagion or poison. From the pounceet-box the perfumes, whether moist or dry, were inhaled into the nostrils; but it was probably not until a century after the general encouragement of tobacco in England that the finely-granulated leaf became commonly established as a pungent perfume, and at length introduced the costly and elegant snuff-box.

So early, however, as the beginning of the reign of James I., a "taker of tobacco" was to be furnished with an apparatus greatly resembling that of a modern Scotch mull, when supplied with all its accustomed instruments, like the ram's-head boxes mounted in gilt silver, and displayed in several parts of the Great Exhibition; as that, for instance, in Class I., No. 25; Class XXIII., No. 46; or the still finer example, No. 26, which was considered worthy of Honourable Mention by the Jury of that Class. "Before the meat come smoking to the board," says Dekker, in his *Gull's Horn-book*, in 1609, "our gallant must draw out his tobacco-box, the ladle for the cold snuff into the nostril, the tongs and pricking-iron, all which artillery may be of gold or silver, if he can reach the price of it." Both the practice and apparatus of taking snuff are described by Howell, in 1646, as quite common in other countries; since he says, "The Spaniards and Irish take tobacco most in powder or smutchin, and it mightily refreshes the brain; and I believe there's as much taken this way in Ireland as there is in pipes in England. One shall commonly see the serving-maid upon the washing-block, and the swain upon the plough-share, when they are tired with labour, take out their

boxes of smutchin, and draw it into their nostrils with a quill; and it will beget new spirits in them, with a fresh vigour to fall to their work again."

There is very little information extant concerning the older receptacles for snuff. In the Appendix to Volume XIII. of the *Archæologia*, published by the Society of Antiquaries (p. 395, plate xxiv.), is an engraving of two small carved cruetes, found under a staircase in the Tower of London, which were exhibited to that Society in November, 1797. In their general form they very much resembled powder-flasks, and were about 2½ inches in length and 2 inches in width; but they were provided with screw-stoppers, to one of which was attached a small spoon. On the exterior they were ornamented with designs representing shooting of birds, stag-hunting, and bull-baiting, and also French mottoes, evidently stamped from a mould, as if they had been formed of leather softened in hot water; but the materials of which these bottles were made is not stated.

In the extract already given from Howell's *Letters*, it is stated, that so early as 1646 even the peasants in Scotland were accustomed to "take out their boxes of smutchin, and draw it into their nostrils with a quill;" which explains the intention of the spoon attached to the cruetes referred to, the manufacture of which probably belongs to the early part of the seventeenth century. The word erroneously printed "smutchin" by Howell, is accurately *sneeshin*, a vulgar name for snuff, which causes sneezing: and hence sneeshin-mill (sometimes corrupted into *mull*) is the Scottish name for snuff-box. Dr. Jamieson,\* from whom these illustrations are derived, adds, that the word mill "is the vulgar name for a snuff-box, especially one of a cylindrical form, or resembling an inverted cone." No other name, he continues, was formerly in use; and the reason assigned for it is, that when tobacco was first introduced into this country, those who wished to have snuff were accustomed to toast the tobacco-leaves before the fire, and then bruise them with a piece of wood in the box, which was thence called a mill, because the snuff was ground in it. From these notices it is easy to perceive how a ram's horn, from its conical shape, became one of the primitive forms of the Scotch snuff-box; although at the present time it is frequently one of the most costly and luxurious. Down to the middle of the eighteenth century, the "sneeshin-horn," with the spoon and hare's-foot attached to it by chains, appears to have been regarded as so completely a national characteristic, that when Baddeley played Gibby in *The Wonder*, with Garrick and Mrs. Barry, he came on the stage with such an apparatus.†

In the early part of the eighteenth century in England, fashionable snuff-boxes had probably reached the highest degree of variety and luxury. In *The Tatler*, published on Tuesday, March 7, 1710, several gold snuff-boxes are noticed, which came out last term; but that a new edition would be put out on Saturday next, which would be the only one in fashion until after Easter. "The gentleman," continues the notice, "that gave fifty pounds for the box set with diamonds, may show it till Sunday, provided he goes to church, but not after that time, there being one to be published on Monday, which will cost fourscore guineas." These costly articles, so happily satirized by Steele, are represented as the productions of a fashionable toy-man, named Charles Mather, popularly known under the name of "Bubble Boy."

Every species, however, of metal boxes, together with the "amber snuff-box" of which Sir Plume, in *The Rape of the Lock*, was "justly vain" in 1711, and the boxes made of shells mounted in gold or silver, noticed by Dodaley in 1783, are all belonging to the Reports on the other Classes of the Exhibition. To describe the manufacture of the snuff-box in all its ramifications, would require that most of the known arts should be passed in review, as the greater number, not excepting even that of glass-making, have from time to time been subservient to its production. The discussion of these subjects is clearly

\* An *Etymological Dictionary of the Scottish Language*.

† *The Gull's Horn-book*, by T. Dekker; edited by the Rev. J. Nott, 1812, p. 119.

beyond the province of the Reporters for Class XXIX., the Jurors for which were called upon to judge of such snuff-boxes only as are composed of papier-maché, wood, ivory, tortoise-shell, or horn: those made of glass and the various metals belonging to other Classes. Notwithstanding this limitation, the Reporters have endeavoured to ascertain the number of exhibitors who have contributed snuff-boxes in other Classes; but there may be some examples which have escaped their observation.

The manufacture of papier-maché snuff-boxes does not call for any special notice in this place; for although it forms a distinct branch of papier-maché work, its various processes scarcely differ in their details from those universally employed in the making of other articles. It may be remarked that the production of snuff-boxes of this material is chiefly carried on in Germany and France, whence they are exported to most parts of the civilised world.

The manufacture of those very beautiful articles, called Scotch boxes, is the only one calling for special notice in the present report. These ingenious productions were originally made in the village of Laurencekirk, by Mr. Steven,\* whose son and successor is present by his works in the Great Exhibition. The art, however, appears soon to have spread to other parts of Scotland; for we are informed that in 1832, in the parish of Old Cumnock in Ayrshire, upwards of a hundred persons, comprising men, women, and children, were employed in the practice of it, and in 1845 there was also an extensive manufacture of wooden snuff-boxes in the town of Mauchline.† In this work, about sixty persons were at that period employed. Judging only by the importance of the contributions to the Great Exhibition from Laurencekirk and Mauchline, it might be inferred that the latter town is at present the principal seat of the manufacture of Scotch wares; which now includes the production of numerous other articles beside snuff-boxes.

In Classes XVII. and XXIX. are examples of covers for books and memorandum-books; paper-knives and book-markers; card-cases and card-trays; spectacle-cases; needle-books, thread-reels, crochet-cases, knitting-cases and work-boxes; razor-cases, sheaths for razor-strops, pomatum-boxes, scent-boxes and dressing-cases; egg-cups, tea-caddies; and even candlesticks. To give an idea of the wholesale prices of some of these articles, the following quotations are cited:—Cigar-cases are sold at 42s. per dozen; paper-knives from 10s. to 17s. per dozen, according to size; snuff-boxes from 22s. to 168s. per dozen; and netting-cases at from 5s. per dozen.

The Scotch Snuff-box, which has long been renowned for the perfection of its hinge and the close fitting of the cover, is cut out of the solid wood, the description chiefly employed being the sycamore or plane-tree. Mr. W. Chambers states that this is the timber used at Old Cumnock; and that a piece of rough wood which costs 25s. will make snuff-boxes to the value of 3,000l.‡ The first operation consists in making a number of circular excavations in close contiguity to each other, by means of a centre-bit, or a drill running in a lathe; the interior is then squared out by means of gouges and chisels, and is afterwards smoothed with files and glass-paper. The celebrated hinge is formed partly out of the substance of the box and partly out of that of the lid, the greatest attention being paid in its construction to the accurate fitting of the various parts one into the other. The box is lined in the inside with stout tin-foil, and is painted on the outside with several coats of colour, each of which is rubbed down smooth with glass-paper before the succeeding coat is applied. It is then ready to receive the various styles of ornament, which, in some cases, are produced by the hand of the artist, and, in others, by mechanical means. The most usual decoration consists of the tartan-patterns, the component lines of which are drawn separately by pens fixed in a ruling-machine on to

the box itself, if bounded by planes or slightly-curved surfaces: although such lines were also formerly drawn by means of a rose-engine on circular boxes, it is now found a more convenient practice to rule the lines on paper, and then to attach the paper to the boxes. Another style of ornamentation, known by the name of "Scoto-Russian," is of more recent introduction, and imitates, in a remote degree, the beautiful enamelled silver snuff-boxes, for which Russia has long been famous. In these, the outside of the box is first covered with stout tin-foil, then completely painted all over the surface, and afterwards placed in the ruling-machine, which traces upon it an intricate pattern of curved and straight lines, by means of a sharp, flat tool. This instrument penetrates completely through the paint, but only scrapes the tin-foil, which is left very bright and resembles inlaid silver. Several coats of copal varnish, each of which is successively polished down, are then applied to complete the snuff-box.

In the manufactory of the Messrs. Smith, of Mauchline, which is said to be one of the largest, about eighty artisans are employed, who have been instructed in the works. The workmen earn from 16s. to 24s. per week, according to their skill and the department in which they are engaged; and the women from 7s. to 9s. per week. An artist capable of making a copy of an oil-painting earns 30s. per week.

#### AUSTRIA.

There are two exhibitors of snuff-boxes in the Austrian Section, one of whom, P. BIGACHIA, (600), has contributed some beautiful specimens composed of a sparkling glass, called Artificial Aventurin; which is a silicate of oxide of copper, wherein part of the oxide of copper has been reduced to the metallic state by processes which are kept secret. The reduced copper exists in the form of minute crystals, which, under the microscope, present a most splendid appearance. Although mention is here made of these articles, they really belong to Class XXIV. The other exhibitor has sent examples of papier-maché snuff-boxes, glove-boxes, work-boxes, cigar-boxes, spice-boxes, and buttons, which are creditable productions of their class, and remarkable for their cheapness.

#### CHINA.

In the Chinese Court there is a beautifully carved snuff-box, sculptured out of English cannel-coal, which was taken to China for that purpose by the exhibitor, Captain SHEA, p. 1420. The carving, which it appears occupied the Chinese artist a fortnight, cost the exhibitor only 2l. sterling. This specimen, however, does not strictly belong to Class XXIX., nor does it represent the snuff-box used by the Chinese. The snuff-box, or rather snuff-flask of China, is in form and size like a smelling-bottle, and is made of rock-crystal, coloured glass, porcelain, wood, and other materials. To the stopper is attached a small spatula, for the purpose of taking out the snuff, a contrivance which has already been described as formerly in use in England.

#### BAVARIA.

The contributions from Bavaria, sent by two exhibitors, consist of papier-maché small-ware, including snuff-boxes, which are produced at remarkably low prices, and are exported in very considerable quantities.

#### BRITISH COLONIES.

The Indian Courts contain several examples of snuff-boxes, the most curious being—the gourd snuff-boxes, mounted in gold and silver, from Soonde; a snuff-box made from a cocoa-nut, highly polished; another from the bilva fruit; and a beautiful specimen made of buffalo-horn plaid with metal (p. 420). St. Helena contributes snuff-boxes made from the willow-tree under which the remains of the great Napoleon reposed until their removal to France, and also from a willow-tree which he planted behind the library at Longwood. From Van Diemen's Land, J. MILLIGAN (201-203, p. 996) exhibits several specimens, interesting from the variety

\* *The New Statistical Account of Scotland*, Vol. XI. p. 144.

† *Ibid.*, Vol. V. p. 164. Chambers' *Gazetteer of Scotland*, p. 175.

‡ *Gazetteer of Scotland*, p. 175.

of the materials of which they are made; comprising a globular snuff-box turned out of the tooth of the sperm-whale, which is employed in the colony for stick-heads and similar purposes; a turned snuff-box of iron-wood (*Olea apetalu*); one of the huron-piné; and one of the snuff-wood of Tasmania (*Eurebia argophyllum*).

#### FRANCE.

The beautiful examples of snuff-boxes in the French Department are as peculiar in their style as the Laurence-kirk snuff-boxes in their's, and the manufacture of them appears to be confined to France, if not to Paris. These boxes, which are quite remarkable for the accuracy with which the hinge is made, and the close fittings of the lid, are usually lined with a veneer of tortoiseshell very highly polished. The outside or body of the box is composed of various materials, as ivory, tortoiseshell, and rhinoceros-horn, and also of petrified wood and other woods, as the maple, the olive, rosewood, and several sorts of palms cut across the grain. Some examples are very tastefully, not showily, ornamented with neat gold and silver mounts, but none, perhaps, are more elegant than those made of the palm-tree cut across the grain. These contributions are from two manufacturers, in the excellence of whose work only a very trifling difference was discernible.

#### GRAND DUCHY OF HESSE.

The examples from Hesse consist of papier-maché snuff-boxes, very singular in character to, but not so numerous or various as those of Austria and Bavaria. They were sent by one exhibitor (61), who has been rewarded for walking-sticks, and is mentioned in the section relating to them in the present Report.

#### PRUSSIA.

The snuff-boxes and other articles of small wares sent from Prussia are also entirely of papier-maché, and are principally imitations of the various descriptions of Scotch, of tortoiseshell, and Russian boxes. They deserve commendation for the workmanship, but they are higher in price than similar goods sent from Austria and Bavaria. The following are some of the prices which were quoted as those at which the goods are sold wholesale; but judging from the examples from other parts of Germany, they seem rather to be the retail prices:—Snuff-boxes, plain, 15s. per doz.; mottled boxes, 15s. per doz.; Scotch boxes, 15s. per doz.; damasked, or engine-turned boxes, similar to the "Scoto-Russian," 15s. per doz.

#### RUSSIA.

The contribution from Russia is the produce of one manufacturer, and consists of papier-maché snuff-boxes, creditably made, but exceedingly high in price. The most common snuff-boxes sell at 2s. 10d., and the dearest at 38s. each; and the cigar-boxes range from 22s. 2d. to 38s. each. In 1842 the government of Moscow possessed five manufactories of papier-maché snuff-boxes, which employed eighty workpeople, and produced goods valued at 3,000*l*.

#### SAXONY.

From Saxony there is also a contribution of papier-maché snuff-boxes, ranging in price from 1s. 10d. each to 2s. 6d., the latter being an imitation of the Scotch box. There are likewise some boxes of buffalo-horn, lined with tortoiseshell, all which productions are commendable for their finish.

#### TURKEY.

The snuff-boxes in the Turkish Court consist of three examples:—One of the bituminous-shale, a well-carved mother-of-pearl snuff-box from Bethlehem, and a box made of enamelled silver, the latter of which does not, however, belong to this Class.

#### UNITED KINGDOM.

Independently of the manufacturers who sent the ram's-head mull, before alluded to as not belonging to

Class XXIX., the exhibitors of snuff-boxes are only four in number, and those deserving of especial mention are contributors of Scotch snuff-boxes. The most important display is that to be hereafter noticed in the list of awards. The other principal collections are that of Messrs. CLARKE and DAVIDSON (p. 545), of Class XVII., No. 135, and that of Mr. STIVEN (Class XXIX., 35, p. 79), which are both deserving of favourable notice.

#### WURTEMBERG.

The snuff-boxes from Wurtemberg are of two kinds, and were contributed by two exhibitors. One of them has sent papier-maché snuff-boxes inlaid with mother-of-pearl and imitation gold and silver, which are very commendable as of the better description of papier-maché work; and the second has supplied some carved ivory snuff-boxes inlaid with mother-of-pearl, which are also deserving of praise.

The number of exhibitors of all nations in this division is twenty-one; of these, there are:—

#### LIST OF AWARDS.

ADT BROTHERS, Ensheim (Bavaria, 66, p. 1101), Prize Medal, for an assortment of very cheap papier-maché small wares, comprising cigar-boxes, glove-boxes, cigar-cases, snuff-boxes, and memorandum-book-covers, which are well manufactured; and although artistic merit is not aimed at, the less elaborate are creditably ornamented.

COLETTA-LEFEBVRE, Paris (France, 458, p. 1200), Prize Medal, for beautifully-finished snuff-boxes, made of wood or ivory, and lined with tortoiseshell, and remarkable for the close fitting of the hinge and joint.

HOFRICHTER, C., Reichenau (Austria, 644, p. 1040), Prize Medal, for a very large assortment of Papier-maché snuff-boxes and other papier-maché small-wares, comprising 167 varieties, which, taking the price into consideration, are remarkable for their cheapness and goodness of manufacture. As an example of cheapness may be cited the imitation Scotch snuff-boxes, which vary in price from 4d. to 7d. each.

MERCIER, C. V., Paris (France, 1656, p. 1256), Prize Medal, for tortoiseshell, palm-tree lined with tortoiseshell, and other kinds of snuff-boxes, in all of which the workmanship is most excellent; the accuracy of the hinge, and the close fitting of the joint being points particularly commendable.

SMITH, WILLIAM and ANDREW, Mauchline, Ayrshire, Scotland (Class XXIX., 280, p. 816), Prize Medal, for a great variety of articles ornamented with Tartan patterns, engine-turned patterns ("Scoto-Russian"), and paintings, and comprising snuff-boxes, blotting-cases, cigar-cases

and several other descriptions of Scotch small-ware, which are remarkable for the great accuracy of the workmanship, high degree of finish, and the beauty of the varnish.

## E. MANUFACTURES RELATING TO AMUSEMENTS.

### I. MANLY GAMES.

Cricket and Archery are the only games of skill and strength which are represented to an extent worthy of notice.

#### Cricket.

##### UNITED KINGDOM.

The exhibitors of bats and other implements used in cricket are nine in number, and, as might be expected, they are all British; indeed the articles they contribute are scarcely intelligible to any but Englishmen.

The implements and appliances in the nature of gloves, guards, &c., which the present mode of playing the game, and especially the practice of swift overhand bowling, has brought into use are so various, that there is more room for ingenuity in the manufacture of them than might at first sight appear.

The articles contributed by DANK and SONS (197, p. 800) have great merit. The gauntlets which they exhibit as designed to guard the wrist from the blow of the ball, are lined with slips of cane, and are thereby lighter than those which are thickly wadded or lined with Indian rubber, whilst they furnish a stiffer and more effectual defence against the ball.

So also in regard to the gloves which protect the fingers of the hand that holds the bat: by a tube of Indian rubber fixed along the back of each finger, an improvement is apparent in those exhibited by Messrs. DANK and SONS, inasmuch as a second and smaller tube is fixed within the first, thereby materially increasing the resistance to a blow from the ball without sensibly adding to the weight or diminishing the pliancy of the glove. The bats exhibited by R. DANK (198) are of excellent wood and very well balanced.

DUKE and SON (191, p. 800), contributed a collection of all the implements used in cricket, remarkable for the excellent workmanship and finish which they display.

The number of exhibitors is nine; of these, there are—

- 3 Holders of a Prize Medal.
- 6 Unrewarded.

9

#### LIST OF AWARDS.

DANK, MATILDA, and SONS, Lord's Cricket Ground (Class XXIX., 197, p. 800), Prize Medal for a collection of bats and wickets.

DANK, ROBERT, Lord's Cricket Ground (Class XXIX., 198, p. 801), Prize Medal for gauntlets, leg guards, spiked-soles, balls, and other implements, used in the game of cricket.

DUKE and SON, Penshurst (Class XXIX., 191, p. 800), Prize Medal for implements used in the game of cricket.

#### Archery.

##### UNITED KINGDOM.

In archery the British exhibitors are five in number.

P. MUIR and AINGE and ALDRED exhibit articles of excellent workmanship. The bows are well balanced, and the materials from which they are made well selected, some of the woods being of great value and rarity. A bow of Spanish yew, exhibited by the last-named firm, is valued by them at 35 guineas. The arrows also of both exhibitors are beautiful specimens of inlaid wood.

##### BRITISH COLONIES.

There are several contributions of bows and arrows from the dependencies of Great Britain, but as they are really used as weapons, they do not belong to Class

XXIX. The reader is, however, referred to the following:—*British Guiana* (144, 145, and 145A); the *Indian Court*, which contains specimens of bows and arrows from Assam; bows and arrows from *South Africa*; and several contributions from *Western Africa*.

##### SWITZERLAND.

One exhibitor sends a variety of bows; and a case of arrows remarkable chiefly for the number of separate pieces of wood of which they are framed. One arrow is stated to be composed of no less than a thousand pieces.

The number of exhibitors is six; of these there are—

- 2 Holders of a Prize Medal.
- 4 Unrewarded.

6

The classification according to the various countries is as follows:—

|                |   |   |   |   |
|----------------|---|---|---|---|
| Switzerland    | - | - | - | 1 |
| United Kingdom | - | - | - | 5 |
|                |   |   |   | 6 |

#### LIST OF AWARDS.

AINGE and ALDRED, 126 Oxford Street (Class XXIX., 180), Prize Medal for bows, arrows, and archery-accountrements, and also for fishing-tackle.

MUIR, P., Edinburgh (Class XXIX., 180, p. 798), Prize Medal for bows, arrows, and archery-implements.

#### Rackets.

##### UNITED KINGDOM.

A small selection of Rackets is contributed by one exhibitor to Class XXIX. The manufacture of these, especially of the heavier and stronger, such as are used in the game of tennis, is better understood in France than in England; indeed the rackets used in the few tennis-courts which still exist in England are mostly imported from France.

##### AWARD.

JEFFERIES, ISAAC, Woolwich (Class XXIX., 184, p. 800). Honourable Mention for a selection of rackets which deserve to be mentioned as promising to compete successfully with those of French manufacture.

## II. FISHING-TACKLE.

##### UNITED KINGDOM.

The articles exhibited under this head are, as might be expected, almost entirely of British manufacture, the sport of angling being but little pursued in other countries, and nowhere with the same study and scientific skill as in the United Kingdom. Probably there is no other country in which the manufacturers of fishing-tackle constitute a trade in themselves, certainly none in which so much money is annually spent upon the implements which they produce. The British exhibitors are twenty-five in number.

The merits of many of their articles, especially of the rods, could not be completely tested within the limits of the Exhibition. The most valuable properties of a rod consisting in the thorough seasoning of the wood, its capability to resist weather and wear, without warping or twisting, and its retention of an even spring and pliability under constant use, can be ascertained only after prolonged trial; a test which it has not been in the power of the jurors to apply. The same may, to a great extent, be said of lines, artificial flies, and baits, the durability of which, one of their most valuable and rarest merits, must be proved by experience.

The articles exhibited by C. FARLOW (176, p. 800), AINGE and ALDRED (180, p. 800), J. K. FARLOW (181, p. 800); and JAMES JONES (181, p. 800), may all claim much credit for execution and high finish. In this respect the only distinction between their work appears to be in the amount and character of the ornaments attached to

it. But it should be observed that a profuse expenditure of silver and gilding in the metal-work of a fishing-rod, the application of precious stones to the reels and joints, the inlaying of the butts with ivory and rare woods, and the use of velvet or silk, embossed and gilt, in the place of leather or other more appropriate materials, of which the books and cases for containing fishing-tackle are more usually and properly made, cannot be considered as improvements of the articles in question.

LITTLE and Co. (174, p. 800), exhibit some improvements which combine practical utility with excellent workmanship. A multiplying reel, in which, by an ingenious arrangement of the cog-wheels (the teeth of the driving-wheel being internal), the handle of the reel retains its place in the centre instead of being fixed, as is usually the case in multiplying reels, at the edge of the side-plate, thereby being more convenient to wind, and less liable to entangle the loose line. Also an application of sliding rings to the outer ferrules of the joints, which are slightly split, and, by the pressure of the rings, made to gripe the inserted joint more closely, whilst the inconvenience of the joints becoming fixed when swollen by wet, is obviated. Also a mode of forming and fixing the ferrule on the joints, whereby the sudden transition from *pliant* wood to *stiff* metal, which renders a rod, when strained, apt to give way in those parts, is in great measure avoided.

AINCE and ALDRERD (180, p. 800) exhibit some spliced rods of excellent construction, each joint being composed of three pieces, bound together longitudinally, and thereby less liable to twist or warp, whilst it retains an even spring and elasticity throughout.

J. BERNARD (177, p. 800) and J. K. FARLOW (181, p. 800) exhibit articles of considerable merit. Rods of similar construction to those last mentioned, and an improvement in the construction of ferrules; the lower and larger joints being fitted into the upper, instead of the upper into the lower. This mode has the advantage that water is less likely to find its way between the joints and make them swell.

#### FRANCE.

With the exception of some lines for float-fishing, of very fine and even texture, which are exhibited in the Department of France (141), there is no contribution from foreign manufacturers.

The number of exhibitors is twenty-six; of these, there are—

|    |                                  |
|----|----------------------------------|
| 2  | Holders of a Prize Medal         |
| 4  | Who obtained Honourable Mention. |
| 20 | Unrewarded.                      |
| 26 |                                  |

The classification, according to the various countries, is as follows:—

|                |   |   |   |    |
|----------------|---|---|---|----|
| France         | - | - | - | 1  |
| United Kingdom | - | - | - | 25 |
|                |   |   |   | 26 |

#### LIST OF AWARDS.

AINCE and ALDRERD, 126 Oxford Street (Class XXIX., 180, p. 800). Prize Medal for fishing-tackle and also for archery implements.

DELAGÉ-MONTIGNAC, F., Paris (France, 141, p. 1178). Honourable Mention for fishing-lines.

FARLOW, O., Strand (Class XXIX., 176, p. 800). Honourable Mentions for fishing-rods, fishing-tackle, and artificial baits.

FARLOW, J. K., Crooked Lane (Class XXIX., 181, p. 800). Honourable Mention for fishing-rods and fishing-tackle.

ONES, J., Jermyn Street (Class XXIX., 182, p. 800). Honourable Mention for fishing-rods and fishing-tackle.

LITTLE, G., and Co., Fetter Lane (Class XXIX., 174, p. 800). Prize Medal for fishing-rods, fishing-tackle, artificial baits, and an improved winch.

#### III. TOYS.

One of the most eminent of modern physicists† has remarked that “boys’ toys are the most philosophical things in the world;” and a renowned statesman,† taking another view of their importance, affirms that they are an index to the character of a nation.

In illustration of the first position, a few examples may be cited. A child’s kite, in the hands of a Franklin and a Romas, has served to identify lightning with electricity; and conveys an instructive lesson on the composition of mechanical forces. The pea-shooter not only affords evidence of the elastic force of gases, but also of their economical employment when used expansively. The sucker illustrates the weight of the atmosphere, and its equal pressure in all directions; and the sling, the hoop, and the top show the property of centrifugal force: when the top is in rapid motion, it converts for the moment, every spot and bruise on its surface into an elegant zone; and thus also imparts a good lesson in physiological optics. To a reflecting mind toys afford ample food for thought; and they might, perhaps, be made to yield much solid instruction to the child, were it not generally far more wise, for a certain period, at least, to limit its inquiries rather to the discovery of the weakest parts of its plaything.

With regard to the assertion that toys indicate the genius of a nation, it is evident that, as the natural tendency of children is to imitate the employments of their elders, they will always take the most interest in such toys as will assist them in this propensity, and lead them in their sports to do that which they see those around them doing in earnest. Hence, in countries which are of a military disposition, flags, drums, trumpets, guns, swords, and the accoutrements of soldiers, are much in demand for the pastime of even the youngest boys. In a maritime nation toy-ships will be esteemed: and thus the very pastimes of childhood might be made available in promoting the welfare of such services as the particular state most requires.

The Exhibition might, therefore, have afforded an interesting opportunity to statesmen and philanthropists for studying the diversity of character exemplified by the contributing nations, had they been all as well represented in their toys as they were in their other manufactures. This, however, was far from being the case, as will be seen from the subsequent detailed Report.

#### AMERICA.

The only contributions from the United States consisted of India-rubber toys, which belong to Class XXVIII.

#### AUSTRIA.

The toy-trade of Austria is exceedingly well and very copiously represented in the Great Exhibition. From Vienna there are two exhibitors, one of whom sends a great variety of automaton-toys; and the other a general collection of ordinary toys, military-accountrements, guns, and swords, holding a very prominent position among them. From Bohemia are sent excellent and very numerous examples of those very beautiful boxes of toys for which it is famous, and which form a large item in the export-trade of the country. From the mountains of Tyrol, J. B. PURGER (655, p. 1041), contributes numerous specimens of carved white-wood toys, which are deserving of favourable mention, both on account of their cheapness and the goodness of the workmanship. The specimens supplied by the other three exhibitors will be found noticed in the List of Awards.

#### BAVARIA.

The chief contributions from Bavaria consist of mechanical toys, which will be noticed in the List of Awards; and also of numerous magnetic toys, exhibited by J. M. ISMAYER (26, p. 1099) which are deserving of commendation for their ingenuity and variety. Both collections are from Nürnberg, in which city large quantities

\* Dr. Michael Faraday.

† Mr. Richard Cobden.

of these descriptions of toys are made for exportation. Besides the exhibitors of the foregoing specimens are two others, one of whom sends dressed dolls, and the other carved toys, which do not call for any particular comment.

#### BRITISH COLONIES.

*British Guiana* sends only a single example.

*India*.—The Indian Court contains a very large collection of toys, chiefly from Bengal and Madras. Highly coloured and rude representations of birds form the greater part of the display; but there are also some instances of toys which are familiar in England, as the humming-top, the merry-go-round, balancing-figures, &c. The collection comprises also several ingenious Malay puzzles, two of which are enclosed in narrow-necked bottles. Figures made in pith are likewise numerous, and are very clever productions. These toys are all such as are in common use in India, on which account they form a most valuable contribution to the Great Exhibition; but they are not nearly so well made as those of Europe. Their selection affords one striking proof, amongst numerous others, of the full appreciation, on the part of the East India Company and its numerous officials, of the objects of the Great Exhibition, and of the great energy and industry displayed by the latter, in collecting even the most trivial objects of interest.

#### FRANCE.

One of the French Exhibitors sends two ingenious drawing-room ornaments, containing automata birds, which are toys rather for adults than children. Another exhibitor contributes some excellent wax-figures for hair-dressers, which are made by processes similar to those employed for producing the best description of dolls; and they are, therefore, enumerated with toys. But although France manufactures enormous quantities of toys of many kinds, only one description of them has been sent, and that by a single exhibitor from Paris, who exhibits dressed dolls only. "In that capital alone," according to the *Statistique de l'Industrie à Paris*, says M. Natalis Rondot, "there were, in 1847, no less than 371 manufacturers of children's toys, employing 2,099 workpeople (641 men, 1,345 women, 80 boys, 33 girls), who, in that year, produced 172,800*l.* worth of goods." The men earn, on the average, 2*s.* 8*d.* per day, and the women 1*s.* 3*d.* per day; but some of the men earn 2*s.* 9*d.*, 3*s.* 2*d.*, 4*s.* 9*d.*, according to their skill, or the description of work they are employed on. Many of the masters employ only a single assistant, or work alone, and very few employ more than ten assistants. Thus, of the 371 manufacturers only 62 employed more than 10; 142 employed from 2 to 10; 77 employed 1; and 90 employed no assistant, but did all the work with their own hands. Competition has, it appears, brought down prices so low, that dressed-dolls, including a bonnet, are to be bought for eight pence per dozen; and undressed composition dolls at two-pence half-penny per dozen. It is to be regretted that none of the very excellent automaton toys, boxes of games, of kitchen utensils, &c., find a place in the French Department, as they are exported from France to a considerable extent. Swords, guns, helmets, and other military accoutrements, are also, as might be expected, produced in large quantities in that country; but are disposed of chiefly for the home trade. Most of the toy-guns are beautifully made, and are generally furnished with percussion locks, which will fire off a cap. Conjuring-toys, for adults as well as children, ought most certainly to have been exhibited, as in the manufacture of these articles Paris has no rival. The nature of the toy-trade in Paris is thus given by M. Natalis Rondot:—

\* It would appear from the admired Indian drama of *Sacountala*, written by the poet Calidás in the first century B.C., that this kind of toy was even then known, and popular. "Go, I pray," says an attendant, in Act vii., "to my cottage, where thou wilt find a plaything made for the hermit's child Sancara: it is a peacock of earthen-ware, painted with rich colours."—*Works of Sir William Jones*, vol. vi. p. 302.

| Number of Masters. | Number of Work-people employed. | Nature of Goods manufactured.                              | Value.    |

| 371                | 2,099                           |  | 172,800   |

#### Toys Exported from France.

| Years. | To England. | All parts. | Valued at |
|--------|-------------|------------|-----------|
| 1830   | Cwt. 197    | Cwt. 1,583 | £. 12,861 |
| 1835   | 174         | 2,562      | 20,822    |
| 1840   | 494         | 3,018      | 24,525    |
| 1845   | 697         | 5,199      | 40,250    |
| 1850   | 2,269       | 8,581      | 75,652    |

#### FRANKFORT.

J. V. ALBERT (p. 1122) exhibits, amongst philosophical apparatus, Dolls and the Moor's-head conjuring-toy, which admits of a knife traversing the neck without severing the head. The mechanism by which this is effected, though simple, could not be made clear without a diagram.

#### HAMBURG.

The only contribution, consists of Heads for dolls made of papier-maché and wax, which call for no comment farther than that they are largely exported to England and other countries.

#### PRUSSIA.

The principal Toys in the Prussian Department are those of Pewter from Berlin, which are noticed in the List of Awards. Besides these there are specimens of dressed and undressed dolls (No. 250); also a toy-goat, and a horse, of large size, both being covered with the natural skin of these animals (No. 253). A. FLEISCHMANN, of Sonnenberg (who made the Model of Gulliver, exhibited in Class XXIX., No. 126, p. 797), sends a "Philharmonic chandelier." This very humorous production represents M. Jullien, in the centre at the top, with the performers of his band seated round the circles of the candelabrum, in a great variety of quaint and expressive attitudes; their features and varied action being portrayed with much skill and humour.

#### SAXONY.

The contribution consists of a few Toys and busts made in pewter. Yet in 1846 there were six hundred and ninety-seven manufactories of wooden toys, which employed fifteen hundred and twenty workpeople.

#### SWITZERLAND.

There are not any carved white-wood toys exhibited in the Swiss Department, excepting some beautiful small models of cottages, which cannot properly be classed under this category; and which, indeed, were not brought under the notice of the Jury for Class XXIX. And as the two examples about to be mentioned are not really children's toys, Switzerland must be deemed to be quite unrepresented in this branch of manufacture. L. AUDEMARS (No. 22, p. 1267) sends a beautiful little Pistol weighing only half a grain, and consequently, so small that it requires a microscope to bring out its details.

When it is magnified about twenty times linear, all the various parts may be distinctly seen, and they then appear beautifully formed and perfect in their polish. Every part is, indeed, as complete and perfect as it is to be found in an ordinary percussion-pistol, so that the lock acts when the trigger is pulled. The second contribution is a Mechanical singing-bird from another Exhibitor, and will be found noticed in the List of Awards.

#### UNITED KINGDOM.

Although the number of Exhibitors of toys in Classes XXIX. and XXX., whose contributions have been examined by this Jury, is Twenty-one; yet, as the greater part of their productions consists of large models and other special objects, the United Kingdom is scarcely represented in Toys properly so called. Even of Wax-dolls, which are made in this country in considerable numbers, there is only one contribution (Class XXIX., No. 122, p. 797) worthy of notice; and this will be found described in the List of Awards. Rocking-horses are exhibited by J. C. DEAR (Class XXIX., No. 128, p. 797); and H. LUCAS (No. 127, p. 797) sends an improvement on the Garden-horse, which is made to rock by means of the motion of one of the wheel-axes as the horse is dragged along. A few Compressible-toys are exhibited (No. 216, p. 801); and a variety of Automaton and other toys, chiefly foreign, are displayed by A. BOUCHET (No. 124, p. 797). With respect to the models already referred to, those exhibited at (No. 126, p. 797), will be noticed in the List of Awards. The others, which are worthy of favourable mention, are:—a landscape, with clockwork giving motion to a railway train, &c., contributed by J. T. CARR (Class XXX., No. 146, p. 829); another mechanical landscape-picture, by J. L. HARRITT (Class XXX., No. 339, p. 842); and the model of an English villa (Class XXX., No. 213, p. 832), exhibited by M. A. SMITH. None of the ordinary strong toys of English manufacture are contributed, probably on account of the makers of these sorts being generally very poor. For most of the English wooden-toys are constructed by chamber-masters, who seldom manufacture goods to order; but, on the contrary, when they have produced a small number, hawk them about from shop to shop, or vend them in the streets. Without capital, and compelled to work almost literally from hand to mouth, they continue to exist only, without any material advance, but making much the same kinds having the same general degree of merit one year after another. That this is no exaggeration, must be conceded by every one who will recall to mind the toys of twenty years since, and mentally contrast them with those of the present day. That the progress has been slow, and requires long intervals for comparison to make it apparent, arises from the fact that all the improvements must be made in the few leisure moments of the workmen, who are compelled to labour many hours each day to gain a livelihood, and who, probably, cannot even afford the time to carry out any suggestions which may be made to them. That the poor workman does, nevertheless, endeavour to improve in his productions, is shown by Mr. Dickens, with touching humour, in *The Cricket on the Hearth*, when Caleb is made to say, "You couldn't have the goodness to let me pinch Boxer's tail, mum, for half a moment, could you?" When surprise is expressed at the question, he thus explains his meaning: "Oh, never mind, mum; he mightn't like it, perhaps. There's a small order just come in for barking-dogs; and I should wish to go as close to natur' as I could, for sixpence. That's all. Never mind, mum." Dolls'-houses, shops, brewers'-drays, waggonets, common horses, the body formed of a sort of skittle with a slice cut off on the under side, and four round pins for the legs, are made in large quantities in England. Spades, wheelbarrows, garden-rollers, garden-rakes, skipping-ropes, cat-o'-thunder-balls, tops, kites, and similar toys, are also made in great numbers. Wax or composition dolls are made entirely in England, but wooden-dolls are imported, as are also papier-mâché dolls'-heads, the bodies only being made in this country.

That very large quantities of boys' Marbles are also annually imported, we learn from the Hull collection (No. 290, pp. 816, 817), in reference to which it is stated,

that 1,600 cwt. of these articles were entered at that port during the year 1850.

As toys are among those foreign productions which come under the category of "Goods Non-enumerated," the Reporters are unable to give a detailed account of the various kinds which are brought into England; but the following list will show the extent of this trade, with respect to the various countries which send their toys hither. The Hanseatic Towns, it must be remembered, represent Wurtemberg, Bavaria, and other parts of Germany.

Value of Toys of all sorts Imported into the United Kingdom, in the year 1850:—

| From                      | £.     |
|---------------------------|--------|
| Denmark - - - - -         | 323    |
| Hanseatic Towns - - - - - | 33,828 |
| Holland - - - - -         | 6,201  |
| Belgium - - - - -         | 1,056  |
| France - - - - -          | 4,209  |
| Other parts - - - - -     | 513    |
| From all parts - - - - -  | 46,130 |

#### WURTEMBERG.

Immense quantities of Toys are manufactured in Wurtemberg, more particularly on the borders of the Black Forest, and are exported to England, America, and other countries. The contributions in the Exhibition comprise most of the kinds which are manufactured in that country; as, for example, Mechanical-toys (No. 98, p. 1119), which are noticed in the List of Awards; Boxes of miniature-tools, kitchen-utensils, &c., made of copper, most beautifully finished, the latter being exhibited by F. BUEHNER (No. 59, p. 1117), with other things not belonging to this class. There are also kitchen, stable, and garden-implements (No. 96, p. 1119); pewter and glass toys (Nos. 94 and 95, p. 1119); dolls' houses (No. 97, p. 1119); and lastly, two collections of very beautiful miniature ivory-work. One of these is exhibited by F. SCHMIDT (No. 83, p. 1119), and although less important than a similar display (No. 82, p. 1149), to be noticed in the list of Awards, is deserving of commendation for the excellence of the workmanship.

The number of Exhibitors from all parts is Fifty-one; of these, there are—

| Wurtemberg - - - - -   | 8  |
| Total - - - - -  | 51 |

#### LIST OF AWARDS.

ALLIX, A. J., Paris (France, No. 6, p. 1169), Prize Medal, for Hair-dressers' Wax-figures. These are modelled with considerable skill, and present a very life-like appearance; the hair, eyelids, and eyelashes being inserted singly in the wax in such a manner as very faithfully to represent nature. Although these models cannot be strictly considered as belonging to toys, yet their manufacture so closely resembles that of doll-making, that they are noticed in this place.

BAUTTA, T. F. Geneva (Switzerland, No. 236, p. 1281), Prize Medal (*Honourable Mention* accorded by the Jury of

*Class XXIII.*), for a Paper-weight of gold, the base being ornamented with scenery painted in enamel. From this a stem ascends, and is surmounted with a small casket which opens and closes by means of clock-work. When the cover is turned back a most beautiful and perfect little bird is discovered, which is apparently singing, and at the same time fluttering its minute wings and twirling about in different directions. As soon as the song is finished the box closes. The bird is scarcely three-quarters of an inch long, yet is most life-like in the details of its construction and its movements; and its warble is perfectly suited in compass to its size. The manufacture of such minute pieces of mechanism is most valuable training for the watch-maker, and they are therefore deserving of encouragement.

**BONTEMPS**, —, Paris (France, No. 430, p. 1199), Prize Medal. The articles exhibited are of the same class as that just noticed, but considerably larger, the objects being of the size of nature. They consist of two groups of Humming-birds, with clock-work movements, by which the birds are made to hop from one twig to another, at the same time opening their wings; after which they twirl suddenly round, and hop back again, exactly in the manner of real birds confined in a cage. There is also a continual chirping, apparently kept up by the birds, their beaks being made to move. The levers which carry them backwards and forwards are ingeniously concealed in slits formed in the artificial branches. Other birds are represented continually pecking at beetles. The price of one of these groups of automata is 12*l.*, and of the other with the clock, 18*l.* Both groups are under glass shades, and form singularly pleasing drawing-room ornaments.

**BOUCHET**, A., Baker Street (Class XXIX., No. 124, p. 797), Honourable Mention. The Toys exhibited consist of children's Armour, French boxes of Games, a representation of the Great Exhibition, with moving figures, Shops, and various Dolls.

**PICKNER**, G., Nuremberg (Bavaria, No. 80, p. 1102), Prize Medal for Twenty Mechanical toys. These articles, which are made of tinned iron-plate and painted, are quite remarkable for the neatness with which they are finished. They consist chiefly of Carriages with horses, the latter being moved by cranks and levers connected with the wheels. The following specimens are deserving of especial notice:—A Carriage with a pair of horses, 24*s.*; a Carriage with four horses, the carriage containing figures representing Her Majesty and Prince Albert, 40*s.*; a State-carriage, 48*s.*; a Sportsman's-carriage, 6*s.* 6*d.*; and another similar specimen, 4*s.*

**HALLER**, J., WIDOW, and SON-IN-LAW, Vienna (Austria, No. 652, p. 1041), Prize Medal for a collection of upwards of Three hundred Children's Toys, comprising Dolls, dressed and undressed, miniature Furniture, Shops, Drums, Flags, Swords, Guns, Lances, Shakos, Helmets, and other military accoutrements for children, the commoner descriptions of Mechanical-toys, many of which display much ingenuity. There are also numerous other sorts of toys in this collection, which are arranged in the manner of a trophy, and form the largest group in the Exhibition.

**JUNEAU**, P., Paris (France), Prize Medal for Dolls' dresses. The dolls on which these dresses are displayed present no point worthy of commendation, but the dresses themselves are very beautiful productions. Not only are the outer robes accurate representations of the prevailing fashions in ladies' dresses, but the under garments are also in many cases complete fac-similes of those articles of wearing-apparel. They might serve as excellent patterns for children to imitate, and thus to acquire the use of the needle, with a knowledge of the arrangement of colours and material; in the latter respects they might indeed afford valuable instruction to adults.

**KRIEGLER**, F., Vienna (Austria, No. 653, p. 1041), Prize Medal for a collection of Thirty-nine Automaton-toys. These toys, which are all moved by good metallic clock-work, are most ingenious productions, but they appear to be more expensive than similar manufactures produced in France, with which, unfortunately, the Exhibition afforded no opportunity of comparison. The following

are among those deserving of especial notice:—Male and female figures waltzing, 12*s.*, the contrivance for effecting the occasional rapid rotation of the German waltz being very ingenious; a Pianiste, (51*s.*) who plays, or rather appears to play, "God save the Queen," and "Kuk Bri-tannia;" an Elephant carrying a Howdah; and four walking Indians carrying a Palanquin. This collection is the only one of detached locomotive-figures.

**MONTANARI**, AUGUSTA, Upper Charlotte Street, Fitzroy Square (Class XXIX., No. 122, p. 797), Prize Medal. The display of this Exhibitor is the most remarkable and beautiful collection of Toys in the Great Exhibition. It consists of a series of Dolls, representing all ages from infancy to womanhood, arranged in several family groups, with suitable and elegant model-furniture. These dolls have the hair, eye-lashes, and eye-lids separately inserted in the wax, and are, in other respects, modelled with life-like truthfulness. Much skill is also evinced in the variety of expression which is given to these figures in regard of the ages and stations which they are intended to represent. From the prices of these dolls, however, they are adapted rather for the children of the wealthy than for general sale; since the prices of the undressed dolls are from 10*s.* to 10*5s.* each; the dressed-dolls, which are attired with much taste, are much more expensive, and vary in price according to the richness of the material of which the robes are made. In a small case adjoining that which contains the toys just enumerated, are displayed several Rag-dolls, which are very remarkable productions, considering the materials of which they are made. They consist entirely of textile-fabrics, and the dolls which are intended, and are well adapted for the nursery, are reasonable in price, varying from 6*s.* 6*d.* to 30*s.* per doll, including the dresses.

**MÜLLER**, C. A., and Co., Oberlentendorf, Bohemia (Austria, No. 654, p. 1041), Honourable Mention for nearly Two hundred Boxes of Toys. These boxes are filled with excellent figures representing men and animals, which are modelled in a sort of papier-maché, with trees and rocks, the former being made of wood and the latter of paper. The different series represent Hunting-scenes, Zoological-gardens, Herds of cattle, and numerous other groups illustrative of rural domestic life. The truthful delineation of the various animals is a feature deserving of great commendation, as it renders the toys well adapted to afford instruction as well as amusement. The wholesale prices quoted were, 12*l.*, 1*s.* 0*d.*, 7*s.* 10*d.*, and 10*s.* 6*d.* per box, according to the number and size of the objects contained in it. For instance, the box for 10*s.* 6*d.* contained the following objects representing stag-shooting:—3 rocks, 12 large trees, 25 small trees, 17 stags in various positions, 3 huntsmen, and 3 dogs.

**ROCK** and **GRANER**, Biberach (Württemberg, No. 98, p. 1119), Prize Medal, for a large collection of mechanical and other toys, some made of tinned iron-plate, and others in papier-maché. It comprises: Carriages with horses, which are moved by the revolving-parts by means of cranks and links; a Water-mill, to be acted upon by real water; a Cascade and fountain, in which, also, real water is to be used; a working-model of a pump; collections of Kitchen-utensils, a complete set containing many pieces being charged 6*s.* 8*d.*; and numerous other articles.

**SÖHLKE**, G., Berlin (Prussia, No. 265, p. 1063), Prize Medal, for a collection of Pewter-toys; the principal example being a representation of the review at Windsor, on the occasion of the visit to England of the Emperor of Russia, who is portrayed among the numerous figures which this well-executed model contains. Besides this specimen, there are several miniature Dinner and Tea services, also cast in pewter.

**SPURIN**, E. C., New Bond Street (Class XXIX., No. 126, p. 797), Prize Medal, for two Models, one representing an English farm-yard, and the other Gulliver in Lilliput. The Farm-yard is an ingenious model, representing with fidelity the various buildings and the everyday business of such a place; as the feeding of poultry, pumping of water for cattle, thrashing of corn by horse-power, winnowing of grain, &c.; the various figures being moved by clock-work.

The second model was executed by A. FLEISCHMANN,

of Sonnenberg, who also exhibits a comic chandelier in the Prussian Département. It represents one of the incidents in Swift's well-known romance, when Gulliver wakes in the country of Lilliput, and finds himself "unable to stir." "As I happened," he continues, "to lie on my back, I found my arms and legs were strongly fastened on each side to the ground, and my hair, which was long and thick, tied down in the same manner. I likewise felt several slender ligatures across my body, from my arm-pits to my thighs." Such an incident affords ample scope for the imagination of the artist, and he has proved himself quite equal to the undertaking. There is much humour evinced in the physiognomy and expression and action of the Lilliputians, some of whom are bold enough to push their inquiries so far as to pry into Gulliver's waistcoat-pockets, a piece of temerity which is high costing one philosopher-looking individual his life. Others of the natives, however, are far more cautious, and mounted, in fancied security, upon the branches of trees which Gulliver might blow down with a breath, they content themselves with a more distant view of him! others again prefer trusting to the ground and their own legs, and some of them are already on the start at the first signs of waking on the part of the man-monster; some slow, dull-headed individuals, not knowing what is taking place, are eagerly climbing up on his body, whilst others are precipitately sliding down; and even the Lilliputian horses seem to have their presentiment of danger, and are becoming unmanageable.

WITTICH, KEMMEL, and Co., Geislingen (Wurtemberg, No. 82, p. 1119), Prize Medal, for upwards of two hundred Bone and Ivory small-ware. The chief part of this collection consists of very small and exquisite Models of furniture, in which there is much minute piercing and carving which, in this respect, exhibit great skill on the part of the workman: these miniature works are much used as chimney-ornaments in Germany. There are also numerous children's Toys; as, rattles, 6 $\frac{1}{2}$ d. each; spell-cants, 2s. the set, in which those with figures are fairly carved, considering the nature of the goods and their prices. Umbrella and stick-handles form also an item of these productions, and present several examples of good carving, as, for instance, one representing bears climbing a pole, valued at 22s. Lastly, there are several small articles, such as ladies' brooches, and ladies' companions or cases, containing bodkins, crochet-needles, &c., which are sold for 1s. each. The whole of the productions are well manufactured, and reasonable in price.

#### F.—MISCELLANEOUS.

In addition to the various manufactures already noticed in the previous remarks, there are productions from no less than Eighty Exhibitors, of so miscellaneous a character that they do not admit of being classified under any one of the numerous subdivisions already specified. Of these, however, it must be remarked that braid, sewing-cotton, felt, wire-buttons, bone buttons, pins, needles, fish-hooks, printers' type-cases, black-lead pencils, pencil-tips, large fishing-tackle (including large nets), oaks and models of vats, shoemaker's lasts, gig-whips, hot-water and steam-apparatus, sash-line, sheets of woven-wool, cotton and worsted bobbins, and the covering for

stacks, do not belong to this Class, and were, therefore, not examined by this Jury. Of these various manufactures there are Twenty-one exhibitors, leaving still Fifty-nine belonging to the present Class XXIX. Of these, there are:—

|          |   |   |   |   |    |
|----------|---|---|---|---|----|
| Prussian | - | - | - | - | 2  |
| British  | - | - | - | - | 57 |
| Total    | - | - | - | - | 59 |

The contributions of these Exhibitors were carefully examined, but no Awards were made in their favour. The following, in Class XXIX., are nevertheless worthy of notice.

#### Burnishing-Stones.

T. CHAMBERLAIN (231, p. 802) exhibits specimens of Burnishing-stones for the use of silversmiths, of which both the rough and the finished stones are displayed.

#### Confectioners' Moulds.

LEALE and ALFRIGHT (108, p. 796) exhibit several well-made jelly and cake moulds.

#### Letters for Sticking on Glass and Door-Plates.

H. FLETCHER (240, p. 802) exhibits Letters to be fixed on glass; and, also, Engraved door-plates filled with a composition said not to be liable to crack in the sun, a very valuable improvement which, however, can be only tested by time.

G. LUCAS (277, p. 816) exhibits brass and zinc door-plates engraved by machinery, and also filled with a composition said to be not liable to crack in the sun, nor to be acted upon by the atmosphere.

#### Glass and Emery Paper, and Cloth.

BARNHAM, SON, and Co. (213, p. 801), and R. and H. ROBERTS (215, p. 801), exhibit excellent specimens of Glass and Emery cloth, and glass and emery paper; and also of the powdered glass and emery of different degrees of fineness, which are used in their manufacture.

#### Ornamental Paper-Work.

There are several examples of Cut-paper ornaments both in Class XXIX. and Class XXX. The only contribution, however, which need be noticed, is a very beautiful Paper Transparency, representing Chepstow Castle, Monmouthshire, by moonlight, which is exhibited by S. HERBERT (Class XXIX., 301, p. 817). The effect, which resembles very closely that of the porcelain pictures, is produced by many over-laying sheets of tissue-paper, cut out in the proper form with scissors, a work requiring much patience as well as skill.

#### Wafers.

H. THOMPSON (209, p. 801) exhibits very beautiful specimens of Cameo-wafers, a manufacture, to a great extent, superseded by the very general employment of envelopes having their seal-flaps gummed and embossed.

The remaining contributions are too unimportant to require enumeration in this Report, especially as they are amply described in the *Illustrated Catalogue*.

WARREN DE LA RUE, PR. D., REPORTER.

A. W. HOFMANN, PR. D., JOINT REPORTER.

London, March 1852.

## CLASS XXX.

## REPORT ON SCULPTURE, MODELS, AND PLASTIC ART.

[The Figures after the Names (between parentheses) refer to the Exhibitors' Numbers and to the Pages in the OFFICIAL DESCRIPTIVE AND ILLUSTRATED CATALOGUE]

## Jury.

G. VON VIEBACH, *Chairman*, Zollverein; Privy Councillor in the Department of Commerce at Berlin.  
 Lord COLBORNE, *Deputy Chairman*, 19 Mill Street, Berkeley Square.  
 ANTONIO PANIZZI, *Reporter* (Tuscany), British Museum; Keeper of the Printed Books at the British Museum.  
 C. R. COCKERELL, R.A., Bank of England; Architect.  
 J. GIBSON, R.A., 7 Tilney Street, Park Lane; Sculptor.  
 Lord HOLLAND (Tuscany); Minister at the Court of Turin.  
 Count LEON DE LABORDE, France; Member of Institute, &c.  
 General GEORGE MANLEY, 19 Rutland Gate; formerly Adjutant-General in Rome.  
 C. T. NEWTON, British Museum; Assistant in the Antiquarian Department of the British Museum.  
 A. W. PUGIN, St. Augustine, West Cliff, Ramsgate; Architect.  
 LAMBERT A. J. QUEFRET, Belgium; Secretary of the Academy of Fine Arts, and President of the Circle Artistique, Brussels.  
 RICHARD REINHARDT, R.A., 18 Hyde Park Gate South, Kensington Gore; Artist.  
 Y. D. C. SEURMONT, Holland; late Master of the Mint at Utrecht.  
 Dr. C. WAGEN, Zollverein; Director of the Museum of Fine Arts at Berlin.  
 W. WYON, R.A., Her Majesty's Mint; Medallist.

THE Jury of Class XXX. assembled for the first time on Monday the 12th of May 1851. In compliance with the instructions received from the Council of Chairmen, the Jury proceeded to elect a Deputy-Chairman, to make arrangements as to the time and place of their future meetings, and to nominate Sub-Committees, who should lay before the Jury detailed reports upon the several points of inquiry specially assigned to them. Lord Colborne was elected Deputy-Chairman; and at a subsequent meeting the undersigned had the honour to be appointed Reporter.

The Sub-Committees having brought their investigations to a close with the utmost dispatch consistent with the due performance of the arduous duties entrusted to them, severally laid their reports before the Jury, who, after the most mature and anxious consideration, have agreed upon their awards now submitted to the Royal Commissioners through the Council of Chairmen. As the Jury of Class XXX. forms a group by itself, and is not part of any other group of Juries, its awards have not been submitted to any other Jury or Juries for confirmation, as would otherwise have been the case, according to the 12th Instruction from the Council of Chairmen. The Jury, however, considered it expedient to hold a special meeting as a group, and at that meeting the awards previously made were reconsidered and finally settled by the Jurors. It is therefore upon the Jury of Class XXX. alone that the whole responsibility of the awards in the Class of Fine Arts rests.

In making these awards the Jury have acted strictly in accordance with the principle laid down by the Council of Chairmen in their 15th Instruction. They have been guided solely by the merit which they have recognized in the individual works exhibited, without reference to countries, and considering the Exhibition as a whole. And in compliance with the 20th Instruction, the Jury of Class XXX. have made the proportion of the Council to the Prize Medal, a very small one. Even had this instruction not been laid down in such precise terms by the Council of Chairmen, the Jury of Class XXX. would have felt it their duty to exercise great reserve in awarding Council Medals, knowing, on the one hand, that superior excellence is but very rarely attained, particularly in such works as fell within their jurisdiction, and

being aware, on the other, that it was only "for very pre-eminent merit" that the Great Medal was intended.

It having already been explicitly stated that the Jury in making their awards were guided solely by the merit which they have recognized in the works exhibited, it might be deemed superfluous to add more on this point; there are, however, one or two facts, obvious indeed, but yet of sufficient importance to be recalled to the minds of such persons as might be led by the decisions of the Jury to draw invidious comparisons between one country and another. It is an obvious but most important fact to be borne in mind, that with respect to the principal branch of the subjects falling under Class XXX. (Sculpture), foreigners have laboured under peculiar difficulties in having had to bring over from distant parts, and at considerable expense and risk, statues in marble or bronze for the Exhibition. Again, all foreign artists have not enjoyed the same means of overcoming these difficulties. In many cases their Governments have given facilities and assistance towards this object, but, even then, this assistance and these facilities have varied in extent. The Jury could not moreover but feel and regret the absence from the list of exhibitors of the names of some of the most distinguished artists in Europe. It might be invidious to mention individuals, but it would be unjust to pass over the fact unnoticed. Among the works, however, by natives of the United Kingdom, to which Medals have been awarded, there are two deserving notice on account of their being exhibited among the Roman sculptures—a graceful acknowledgment of the advantages derived by the artists from that school on which their eminent success reflects so much credit.

The scope and nature of the works to which the Jury of Class XXX. were called upon to adjudicate, gave to their position and duties a special character, and must necessarily impose a peculiar line of conduct upon the Reporter.

There is no doubt, for instance, that a history, however rapid, of the rise, progress, and present state of most classes of industry represented in the Exhibition, will, in the majority of cases, form a part of, and add considerably to, the value of the several Reports, but to attempt such an historical sketch with reference to the Fine Arts must, of necessity, prove unsatisfactory and worse than

useless. The Jury believe, however, that their awards will give a just idea of the present state of the Fine Arts as shown in this Exhibition; and they here wish to express their gratification in observing the universally growing taste for objects of art, and the increasing estimation in which they are held. They have noticed with equal pleasure, that industry directed by science fosters this popular tendency. By the novel and successful adaptation of cheap materials and of economical processes to the multiplication of works of art, the best models are daily brought more and more within the reach of all classes. New and pure sources of enjoyment, hitherto the privilege of the few, are thus opened to all the members of civilized society. Again, the diffusion of good taste in the Fine Arts cannot but beneficially affect the productions of industry generally, so that what has hitherto been valued merely for its usefulness may, in many cases, be rendered an object of attraction to a cultivated eye and a refined mind.

The Jury of Class XXX. have been most anxious not to pass over any of the numerous objects in the Exhibition, which it might properly be considered to be their duty to examine. They think it unlikely that any article deserving notice should have escaped their repeated, minute, and diligent inquiries. On the other hand, this Jury have occasionally abstained from examining objects, respecting which, owing to the necessarily uncertain limits of the several classes, doubt might be entertained whether they strictly belonged to Fine Arts or not. Should the Jury of Class XXX. have been led, in some few instances, to limit their jurisdiction too much, they have the satisfaction of feeling that ample justice has been rendered to exhibitors by those Juries, to whose judgment such objects as have not been considered to belong to this Class have been finally submitted. Thus the Jury of Class XXX. have purposely abstained from judging of such metal-casts as they conceived to have been exhibited merely for the purpose of showing either the successful result of a new process, or the novel use of a particular metal. In this case they were aware that another Jury were about to take these points into their consideration, and judge of these objects as specimens of mechanical industry. In some few exceptional cases, such, for instance, as those of Messrs. PEREZ, WEISHAUFF, &c., certain objects have appeared to possess so strong a claim to be noticed in this Class, that the Jury have not hesitated to distinguish them by an award, although aware that they had been rewarded by other Juries; but whenever such instances of double awards have been made known to this Jury, the fact has been noticed in this Report.

The Jury would willingly have endeavoured to state, as directed by the 20th instruction of the Council of Chairmen, the several grounds upon which four of the Great Medals have been recommended by them; but it has been found impossible to comply with such an instruction with respect to objects of sculpture, although the Jury felt how desirable it was that such an instruction should be observed in those cases in which the elements out of which the Juries were to form their judgment, were of a more definite and more uniformly appreciable nature.

At a meeting held on the 5th of June, long before the question of individual awards came under consideration, the Jury agreed upon the following resolution:—

"That it is not desirable to assign the Council Medal to every object of art pre-eminently beautiful or excellent in its kind, whether it be executed in an inferior section of the Class or not; but that it should be rather limited to the highest works of the highest class." This resolution, consistent with the view of the Fine Arts taken throughout by this Jury, precluded them from awarding the highest honours to any but works of art of the highest class. Their awards must not, therefore, be compared with those of other Juries guided by different principles, but must be tested only by the rules which the Jurors of Class XXX. have laid down for their own guidance. The holders of the several marks of approbation by which this Jury have distinguished merit ought to appreciate them according to the high value set upon these several marks of approbation by those who conferred them.

In forming their judgment upon works in the highest

branch of art coming within their jurisdiction, the Jury have principally looked for the embodiment of ideas, thought, feeling, and passion; not for the mere imitation of nature, however true in detail, or admirable in execution. They have looked for originality of invention, less or more happily expressed in that style which has for twenty-three centuries been the wonder of every civilized people, and the standard of excellence to which artists of the highest order have endeavoured to attain. Wherever indications of originality, chastened by a successful adaptation of this style, have been met with, the Jury have acknowledged a corresponding amount of merit; and it is this originality of conception, improved by such style, which the Jury have recognized by the honours placed at their disposal. They have endeavoured to record, in the most emphatic manner, their anxious wish that artists should study to give their ideas that form and life which spiritualizes every-day nature, and elevates the work of art to the place of a type of nature itself. The Jury of Class XXX. would point to the remains of the Parthenon as embodying the result of the great principles which they have been anxious to inculcate, and which they desire to see universally adopted. The limited number of Council Medals awarded must not, therefore, be regarded as a proof of deficiency of talent in the bulk of the works exhibited, but as evidence of the severity with which the principles adopted by the Jury have been applied.

It was agreed to recommend that Council Medals should be awarded to the following works:—

To Professor A. KISS, of Berlin, for his group cast in zinc, and bronzed by M. GEISS, representing an Amazon on horseback attacked by a Tiger. (Prussia, No. 279, p. 1065.)

To Baron MAROCHETTI, of Turin, now of London, for his colossal equestrian statue in plaster of Richard Cœur de Lion. (Outside West, No. 76, p. 118.)

To M. J. PRADIER, of Paris, Member of the Institute, for his marble statue of Phryne. (France, No. 1407, p. 1343.)

To the representatives of the late Mr. RICHARD J. WYATT, for his marble statue of Glycera. Exhibited by Captain LEYLAND. (Main Avenue East, No. 103, p. 1286.)

It was the unanimous impulse of the Jury on the awards being taken into consideration, to recommend that the same high distinction should be conferred on Mr. GIBSON (p. 846), for his marble group of a Hunter and Dog, exhibited by the Earl of YARBOROUGH. Their intention was defeated by Mr. Gibson himself, who, well knowing that should he accept the office of a Juror of Class XXX., he could no longer receive a prize from that Jury, preferred serving his brother artists to his own individual gratification, and thus disqualified himself for receiving the honour which he had so well deserved.

#### DIVISION A.—SCULPTURE AS A FINE ART.\*

Section A.—1. In Metals simple, as Gold, Silver, Copper, Iron, Zinc, Lead, &c.

In this section of the works submitted to their judgment, the Jury awarded the Prize Medal to the following works, it being, however, understood that for this class or reward, when more than one article was exhibited by the same artist, the Jury might, if they thought it expedient, cumulate in their judgment the various species of merit which they recognized in the several productions.

To Messrs. C. M. WEISHAUFF SONS, of Hanau (p. 1073), for a Set of Chess-men and Board, in silver and gold, ornamented with enamel. Although aware that the merit of these articles has been acknowledged by another Jury, the Jury of Class XXX. wished to record their opinion of them as objects of art. (Prussia, No. 412.)

The Jury were of opinion that the following artists were deserving of Honourable Mention:—

Mr. A. VECSTE, of London (No. 97, pp. 686-690), for his designs for silver works executed by him for the exhibitors, Messrs. HUNT and ROSEKILL. Although a

\* The classification of awards is according to that adopted in the "Head Juries."

Council Medal has been awarded to the exhibitors by another Jury, the Jury of Class XXX. considered it just to record their opinion of the merits of this artist. (Class XXIII., No. 97.)

The Jury of Class XXX. have heard with great satisfaction that another Jury have suitably acknowledged the excellent workmanship of the Shield presented by His Majesty the King of Prussia to H. R. H. the Prince of Wales, on whose behalf it has been exhibited by H. R. H. PRINCE ALBERT. They think it, however, their duty to add that the several eminent artists who have contributed to the execution of the design of Director Cornelius (p. 110), deserve the special praise of the Jury of Class XXX., for the taste and skill which they have respectively displayed in this work. (Main Avenue East, No. 98.)

**Section A.—2. In Metals compound, as Bronze, Electrum, &c.**

The following Prize Medals were awarded in this section:—

To Mr. JOHN BELL, of London, for his Eagle Slayer, cast in bronze by the Coalbrook Dale Company. (Main Avenue West, No. 53, p. 659.)

To M. JEAN DEBAY, of Paris, for his bronze group representing the Death of the Stag. (Main Avenue East.)

To M. FRATIN, of Paris, for a group of Eagles in bronze. (France, No. 1235, p. 1236.)

To M. E. L. LEQUESNE, of Paris (?), for his bronze statue of a Dancing Faun. (Main Avenue East.)

The Jury were of opinion that the following artists were deserving of Honourable Mention:—

M. — BONNASSIEUX, of Paris, for a bronze figure representing Cupid cutting his wings. (France, No. 64, p. 1174.)

M. C. CORDIER, of Paris, for his Head of a Negro in bronze. (France, No. 460, p. 1200.)

M. T. KALIDE, of Berlin, for his group in bronze of a Boy with a Swan. (Prussia, No. 285, p. 1064. Prize Medal awarded, Class XXII.)

M. P. J. MENK, of Paris, for his several Animals in bronze. (France, No. 640, p. 1208. Prize Medal awarded, Class XXII.)

M. C. MOELLER, of Berlin, for two bronze groups representing a Boy with a Newfoundland Dog, and a Girl with a Bulldog. (Prussia, No. 292, p. 1066.)

**Section A.—3. In Minerals simple, as Marble, Stone, Gems, Clay, &c.**

The following Prize Medals were awarded in this section:—

To Mr. E. H. BAILY, of London, for his two plaster statues of a Nymph preparing for bathing, and of a Youth resting after the Chase. (South Transept, Nos. 6 and 7, p. 847.)

To Mr. JOHN BELL, of London, for his plaster statue of Viscount Falkland, no Prize Medal was specially awarded, as he had already received one for his "Eagle Slayer," in bronze. (North Transept, No. 28, p. 847.)

To M. GIO. MARIO BENZONI, of Rome, for his statue in marble representing Gratitude. (Rome, No. 16, p. 1286.)

To M. AUGUSTE DEBAY, of Paris, for his group in marble representing Eve, with Cain and Abel asleep in her arms, and designated as the "Premier Berceau." (France, No. 45, p. 1173.)

To Professor F. DRAKE, of Berlin, for a reduced cast in plaster of part of the marble pedestal to the monument of Frederic William III. of Prussia. (Prussia, No. 273, p. 1065.)

To M. A. ETIX, of Paris, for his various works of sculpture in plaster and marble. (France, No. 1215, p. 1236.)

To Mr. J. H. FOLEY, of London, for his plaster statue of a Youth at a Stream; also for his plaster group representing Ino and Bacchus. (North Transept, No. 47, Sculpture Court, No. 19, pp. 848 and 844.)

To M. I. FRACCAOLI, of Verona, for his two statues in marble, representing Achilles wounded, and David slinging the stone. (Austria, No. 710, p. 1043.)

To M. C. A. FRAIKIN, of Schaerbeck, near Brussels, for

a plaster group of Psyche carrying off Cupid. (Belgium, No. 435, p. 1166.)

To M. A. GALLI, of Milan, for his marble statue of Susannah. (Austria, No. 711, p. 1043.)

To M. G. GIEFFS, of Schaerbeck, near Brussels, for a plaster group representing a Lion in love. (Belgium, No. 466, p. 1066.)

To Mr. J. HOGAN, of London, for his reclining figure in plaster representing a Drunken Faun. (Sculpture Court, No. 14, p. 843.)

To Mr. B. JENNINGS, of London, for his marble statue of Cupid. (Sculpture Court, No. 81, p. 846.)

To M. J. A. JERICHAU, of Copenhagen, for a group in plaster representing a Hunter carrying off the Cub of a Panther. (Denmark, No. 39, p. 1359.)

To Mr. J. LAWTON, of London, for a statue in plaster representing a Bather. (Sculpture Court, No. 22, p. 844.)

To M. A. LECHESNE, of Paris, for his two casts in plaster representing two groups of a Child protected from a Snake by a Dog. (Main Avenue East, No. 573, p. 1205.)

To Mr. LAWRENCE MACDONALD, now at Rome, for an Ironic statue in marble. (Rome, No. 18, p. 1286.)

To Mr. P. MACDOWELL, of London, for his plaster statue of Eve; also for his statues of Cupid, and of a Girl at Prayer, in marble. (South Transept, Nos. 22, 23, 24, p. 850.)

To Mr. WILLIAM C. MARSHALL, of London, for his plaster figure of Sabrina. (Sculpture Court, No. 15, p. 844.)

To M. RAFFAELLE MONTI, of Milan, for his marble statue of Eve after the Fall. (Austria, No. 746, p. 1044.)

To Mr. HIRAM POWERS, from the United States of America, for a statue in marble representing a Greek Slave. (No. 522, p. 1467.)

To M. J. M. RAMUS, of Paris, for his marble group representing Cephalus and Procris. (France, No. 1419, p. 1244.)

To Professor ERNST RIETSCHEL, of Dresden, for his plaster group designated as "La Pieth," representing Mary kneeling at the Dead Body of our Saviour; and for his bas-reliefs in marble. (Saxony, No. 186, p. 1113.)

To Mr. T. SHARP, of London, for his marble figure representing a Boy frightened by a Lizard. (Sculpture Court, No. 20, p. 844.)

To M. E. SIMONIS, of Brussels, for his equestrian statue of Godfrey of Bouillon, in plaster; and for other works. (Belgium, No. 464, p. 1166.)

To M. G. STRAZZA, of Milan, for his reclining figure, in marble, representing Ishmael. (Austria, No. 713, p. 1043.)

To Mr. E. THURP, of London, for his marble statue of a Boy catching a Butterfly; also for a marble figure representing Arethusa. (Sculpture Court, Nos. 56 and 58, p. 845.)

To M. J. TURPINCKX, of Malines, for a statue in marble representing Giotto. (Belgium, No. 456, p. 1165.)

To the REPRESENTATIVES of the late Mr. M. L. WATSON, of London, for his marble statue of the sculptor Flaxman, exhibited by Mr. Franks; and for his two statues, likewise in marble, of the first Earl of Eldon, and of his brother Lord Stowell, exhibited by the present Earl of Eldon. (Sculpture Court, No. 60, and Main Avenue West, No. 81, p. 848.)

To M. ALBERT WOLFF, of Berlin, for his marble group of a Girl with a Lamb, representing "Innocence." (Prussia, No. 307, p. 1067.)

The Jury were of opinion that the following artists were deserving of Honourable Mention:—

Mr. WILLIAM BEHNER, of London, for his marble statue representing a Startled Nymph. (Sculpture Court, No. 54, p. 845.)

M. H. W. HISEN, of Copenhagen, for his plaster statue of Orestes, and for other sculptures. (Denmark, No. 38, p. 1358.)

M. T. CLESINGER, of Besançon, for his marble figure of a Bacchanter. The Jury, for reasons totally independent of the acknowledged merits of this young artist, abstained, with regret, from awarding a high mark of approbation to this work. (France, No. 415, p. 1198.)

Professor A. CORIOLI, of Florence, for a marble statue of a Dying Gladiator, exhibited by the Rev. John Sand-

ford.\* The work by the same artist described under Tuscany, No. 106 of the General Catalogue, was not exhibited.

\* Mr. J. ENGEL, from Hungary, for his marble group representing an episode in the history of the war between the Amazons and the Argonauts. (South Transept, No. 15, p. 848.)

Mr. P. FRECCIA, of Florence, for his marble statue of Psyche. (Tuscany, No. 110, p. 1299.)

Mr. J. GLAER, of Antwerp, for his plaster statue, "The Faithful Messenger." (Belgium, No. 451, p. 1165.)

Mr. JOSEPH JAQUET, of Schuerbeek, near Brussels, for his plaster statue representing Cupid disarmed. (Belgium, No. 451, p. 1165.)

Mr. J. LEEN, of Munich, for his marble statue of a Girl carrying a Nest of Cupids. (Bavaria, No. 89, p. 1102.)

Mr. L. MARCHESI, of Milan, for his statue in marble representing Furdydice. (Austria, No. 716, p. 1043.)

Mr. F. M. MILLER, of London, for his marble group, "The Orphans." (No. 98A, Main Avenue East, p. 850.)

Professor L. NENCINI, of Florence, for his refining marble figure of Bacchus. (Tuscany, No. 108, p. 1298.)

M. MICHEL PASCAL, of Paris, for his model in marble of a Friar presenting the Crucifix to two Children. (France, No. 1660, p. 1256.)

Mr. A. SANGIORGIO, of Milan, for his marble bust of the poet Vincenzo Monti. (Austria, No. 722, p. 1043.)

Mr. E. B. STEPHENS, of London, for his plaster group representing a Deer-stalker and Dog. (North Transept, No. 29, p. 843.)

Mr. W. THEED, of London, for his sculptures in marble and plaster. (Sculpture Court, Nos. 13, 49, and 79, pp. 843, 845, 846.)

Mr. and Mrs. T. THORNYCROFT, of London, for their statues in plaster of the Royal Children, represented as the Seasons. (Sculpture Court, No. 34, p. 844.)

M. T. WAGNER, of Stuttgart, for a figure in marble representing Mary Magdalen. (Wurtemberg, No. 118, p. 1130.)

Mr. H. WEEKER, of London, for his marble group, representing a Sleeping Child and Dog. (South Transept, No. 21, p. 858.)

#### Section A.—4. *Inelaborate Mineral Materials, as Glass, Porcelain, &c.*

The Jury made no award in this section.

#### Section A.—5. *In Woods and other Vegetable Substances.*

The following Prize Medals were awarded in this section:—

To Mr. C. GEERTS, of Louvain, for his high relief in wood, representing the Conception of the Virgin Mary. (Belgium, No. 450, p. 1165.)

To M. J. LIÉNARD, of Paris, for his carvings in wood. (France, No. 1326, p. 1239.) The Jury were aware that the merits of M. Liénard had been acknowledged by another Jury. (Council Medal, Class XXVI.)

To Mr. W. G. ROGERS, of London, for his cradle, carved in Turkey boxwood. (No. 353, p. 842.)

To Mr. T. W. WALLIS, of Louth, for his carvings in wood. (No. 89, p. 825.)

#### Section A.—6. *In Animal Substances, as Ivory, Bone, Shells.*

The Jury were of opinion that the following artists were deserving of Honourable Mention:—

M. L. BIGOTTI, of Lucca, for his bas-reliefs in ivory. (Tuscany, No. 95, p. 1298.)

M. M. HAGEN, of Munich, for his goblet of carved ivory. (Bavaria, No. 83, p. 1102.)

M. C. W. HEIN, of Darmstadt, for his goblet of carved ivory. (Hesse, No. 75, p. 1129.)

M. C. G. KJØNGEY, of Copenhagen, for his ivory jewel-casket, ornamented with bas-reliefs. (Denmark, No. 34, p. 4358.)

M. L. LAURE, of Paris, for his ivory carving, representing the victory of Charlemagne over the Saxons. (France, No. 234, p. 1191.)

Mr. R. C. LUCAS, of the Firs, near Winchester, for his ivory carvings. (No. 206, p. 840.)

\* This object is not in the Catalogue.

#### DIVISION B.—WORKS IN DIE-SINKING, INTAGLIOS.

##### Section B.—1. *Coins, Medals, and Models of a Medallion character in any material.*

The following Prize Medals were awarded in this section:—

To M. K. FISCHER, of Berlin, for medals. (Prussia, No. 281, p. 1065.)

To Mr. L. C. WYON, of London, for his medals and medallion portraits of the Royal Children, modelled by command of Her Majesty. (No. 286, p. 838.)

The Jury were of opinion that the following artists were deserving of Honourable Mention:—

M. BERNARD AFINGER, of Berlin, for his medallions. (Prussia, No. 309, p. 1067.)

M. L. J. HART, of Brussels, for his medals. (Belgium, No. 441, p. 1165.)

M. C. JEROTTE, of Liège, for his medals. (Belgium, No. 447, p. 1165.)

M. C. PFEUFFER, of Berlin, for his medals. (Prussia, No. 286, p. 1066.)

Count T. TOLSTOY, of St. Petersburg, for his medallions. (Russia, No. 328, p. 1381.)

The Jury having the honour to number Mr. W. Wyon, of London, among their members, were prevented from expressing, by their award, the opinion which they entertain of the works exhibited by this distinguished artist.

##### Section B.—2. *Impressions struck from Dies for Ornamental purposes.*

The Jury made no award in this section.

##### Section B.—3. *Gems, either in Cameo or in Intaglio, Shell Cameos.*

The Jury were of opinion that the following artist was deserving of Honourable Mention:—

M. THOMAS SAULINI, of Rome, for his shell cameos. (Rome, No. 24, pp. 1286, 1287.)

##### Section B.—4. *Seals, &c.*

The Jury made no award in this section.

#### DIVISION C.—ARCHITECTURAL DECORATIONS.

##### Section C.—1. *Integral, in Relief, Colour, &c.*

The Jury were of opinion that the following artist was deserving of Honourable Mention:—

Mr. N. J. COTTINGHAM, of London, for his model of a spandril for Hereford Cathedral. (Main Avenue West, No. 63, p. 852.)

##### Section C.—2. *Adventitious, as Stained Glass, Tapestry, &c.*

The following Prize Medals were awarded in this section:—

To M. G. BERTINI, of Milan, for a painted glass window, representing Dante and some of his ideas. (Austria, No. 737, p. 1044.)

To M. A. GÉRENTE, of Paris, for his painting on glass of the history of Samson. (France, No. 231, p. 1187.)

To Messrs. J. HARDMAN and Co., of Birmingham, for their painted glass windows. (Class XXVI., No. 532, p. 781.)

To M. S. KELLNER, of Nuremberg, for a copy in painted glass of a window by Volkamer, in St. Lawrence's Church in that city. (Bavaria, No. 86, p. 1102.)

To Messrs. MARECHAL and GUYON, of Metz, for their painting on glass, representing St. Charles administering the Communion to the Plague-stricken. (France, No. 329, p. 1183.)

The Jury were of opinion that the following artists were deserving of Honourable Mention:—

M. P. BAGATTI-VALESCCHI, of Milan, for his painting on glass. (Austria, No. 616, p. 616.)

Messrs. CHANCE BROTHERS and Co., of Birmingham, for their painted window-glass. (Class XXIV., No. 60, p. 706.)

Messrs. HOLLAND and SON, of Warwick, for their life of Christ, painted on glass. (Class XXIV., No. 63, pp. 706, 707.)

Mr. J. G. HOWE, of London, for his imitation of ancient painted window-glass. (Class XXIV., No. 67, p. 707.)

M. A. LUSON, of Paris, for his painted glass window. (France, No. 565, p. 1205.)

Mr. GEORGE MYERS, of London, for the tomb in stone of Bishop Walsh. (Class XXVI., No. 533, p. 761.) (Prize Medal, Class XXVII.)

Messrs. M. and A. O'CONNOR, of London, for their painted glass. (Class XXIV., No. 65, p. 707.)

The Jury gladly seize the opportunity which now offers itself of rendering justice to the taste displayed by their colleague, Mr. Pugin, in the arrangement of the Medieval Court in the Exhibition. (p. 761.)

Mr. W. WAILES, of Newcastle-upon-Tyne, for his painted glass for York Cathedral. (Class XXIV., No. 73, p. 707.)

To the GOVERNMENT MANUFACTORY OF GOBELIN AND BEAUVAIS TAPESTRY (No. 1367, p. 1241) the Jury award a Council Medal jointly with Class XIX.

#### DIVISION D.—MOAICS AND INLAID WORKS.

##### Section D.—1. In Stone.

The following Prize Medals were awarded in this section:—

To the CAVALLIERE BARRERI, of Rome, for a mosaic table, designed and executed by him, representing views of celebrated cities in Italy. (Rome, No. 15, p. 1286.) (Council Medal, Class XXVII.)

To Mr. G. BIANCHINI, of Florence, for his tables in pietra dura, one of them exhibited by R. S. Holford, Esq., and not entered in the Catalogue, the other entered (Tuscany, No. 113, p. 1299). The Jury were much pleased to learn that the merits of this distinguished artist, with respect to the second table, had been suitably acknowledged by another Jury. The table described under No. 111, in the same page of the Catalogue, has not been exhibited.

To M. RAFFAELLE CASTELLINI, Royal Manufactory of St. Peter's, Rome, for his copies in mosaic of a medallion portrait of Boniface VIII. by Bompiani, and of the head of St. John the Baptist, by Guercino. (Rome, No. 23, p. 1286.)

The Jury were of opinion that the following artists were deserving of Honourable Mention:—

M. BENEDETTO ROSCHETTI, of Rome, for two mosaic tables. (Rome, No. 17, p. 1286. Prize Medal, Class XXVII.)

M. DOMENICO MOGLIA, of Rome, for his mosaics. (Rome, No. 21, p. 1286. Honourable Mention, Class XXVII.)

The CAVALLIERE LUIGI MOGLIA, of Rome, for his mosaic view of the Temples of Paestum. (Rome, No. 20, p. 1286.) Prize Medal, Class XXVII.)

M. ANTONIO REACCHIGIANI, of Rome, for his mosaic view of the Temples of Paestum. (Rome, No. 22, p. 1286.)

##### Section D.—2. In Tiles.

The Jury made no award in this section.

##### Section D.—3. In Vitrified Materials.

The Jury made no award in this section.

##### Section D.—4. In Wood.

The following Prize Medal was awarded in this Section:—

To MM. PEREZ and Co., of Barcelona, for an octagonal table of inlaid wood. The Jury have heard with pleasure, that the distinguished merits of this work have been suitably acknowledged by another Jury. (Spain, No. 271A, p. 1346.)

##### Section D.—5. In Metal.

The following Prize Medals were awarded in this Section:—

To M. J. FALLOUX, of Liège, for various inlaid objects. (Belgium, No. 384, p. 1163.) Prize Medal, Class XXIII.)

To M. J. BOUCOU, of Paris, for his inlaid work. (France, No. 1689, p. 1257.)

The Jury were of opinion that the following artists were deserving of Honourable Mention:—

Messrs. S. H. and D. GASS, of London, for a niello bracelet, designed by Mr. Maclise. (Class XXIII., No. 83, p. 683.)

The ROYAL ORDNANCE MANUFACTORY, of Toledo, for various inlaid arms. (Spain, No. 266, p. 1346.)

M. E. ZULOAGA, of Eibar, for his inlaid ornaments on pistols and other arms. (Spain, No. 264A, p. 1346.) Prize Medal, Class XXIII.)

#### DIVISION E.—ENAMELS.

##### Section E.—1. On Metals.

The following Prize Medals were awarded in this Section:—

To M. — BONNET (of Paris?), for the head of St. John, in enamel. (France, 1369, p. 1241.)

To Mr. W. ESSEX, of London, for his enamel paintings. (No. 241, pp. 435, 436, Class XXX.)

To M. — HAMON, of Paris, for an enamelled casket. (No. 1369, p. 1241.)

To Madame PAULINE LAURENT, of Paris, for her three enamels in copper, two after Raphael, and one representing Venus. (France, No. 1369, p. 1241.)

The Jury were of opinion that the following artists were deserving of Honourable Mention:—

Mr. W. C. BELL, of London, for his enamel painting of the "Ecce Homo," after Correggio. (No. 249, p. 836, Class XXX.)

Mr. H. P. BONE, of London, for his enamel paintings on gold. (No. 238, p. 835, Class XXX.)

Mr. J. HASLEW, of London, for his enamel paintings on gold. (No. 237, p. 835, Class XXX.)

##### Section E.—2. On China.

The following Prize Medals were awarded in this Section:—

To M. ANTOINE BÉRANGER, of Paris, for his portrait of Prince Albert, life-size, painted on china, after Winterhalter. (Main Avenue East, No. 97, p. 109.) Also for a Head, painted by him on china, after Rubens. (France, No. 1369, p. 1241.)

To M. H. BUCKER, of Dresden, for his paintings on china. (Saxony, No. 176, p. 1112.)

To M. J. DIETERLE, of Paris, for the general good taste displayed in the painting of china in the Manufactory of Sevres, of which he is co-director. (France, No. 1369, p. 1241.)

To Mme. A. DUCLOSZEAU (of Paris?), for her portrait of Her Majesty, life-size, painted on china, after Winterhalter. (Main Avenue East, No. 96, p. 109.) Also for her painting of a Holy Family, on china. (France, No. 1369, p. 1241.)

To M. JACOBBER, of Paris, for his paintings of flowers on china, after Van Huysum. (France, No. 271, p. 1189.)

To Mme. JACOBOT, of Paris, for the Head of Raphael, painted by her on china. (France, No. 1369, p. 1241.)

To M. N. KORNILOFF, of St. Petersburg, for a landscape after Berghem, on china; executed at the Imperial China Manufactory, St. Petersburg. (Russia, No. 318, p. 1376.)

To M. — SCHILT, of Paris, for his painting on a china vase. (France, No. 1369, p. 1241.)

To M. O. WUSTLICH, of Bamberg, for his portrait of Charles IX. on china. Exhibited by Mr. Schmidt. (Bavaria, No. 92, p. 1102.)

The Jury were of opinion that the following artists were deserving of Honourable Mention:—

Mr. — BRADLEY, of Stoke-upon-Trent, for his painting of Ducks on china, exhibited by Mr. COPELAND. (Class XXV., No. 2, p. 711.)

Mr. S. CHESTERS, of London, for his specimen of painting on china, after Murillo. (No. 246, p. 836.)

MM. ECKELMANN and WUSTIAN, for their portraits of the Queen with the Prince of Wales, and of Prince Albert, painted on china from miniatures after Thorburn. (Main Avenue West, No. 140, p. 109.)

MM. F. E. HENNEBERG and Co., of Götting, for their paintings on china. (Prussia, No. 772, p. 1093.)

M. MARINETTE DE CHASSAGNE, for a painting on china

after Horace Vernet, exhibited by M. Boyer, of Paris. (France, No. 1854, p. 1251.)

M. — NIGG, for a Flower-piece and Holy Family, on china, from the Imperial China Manufactory at Vienna. (Austria, No. 616, p. 1038.)

Mme. TURGAN, of Paris, for her painting on china. (France, No. 1504A, p. 1248.)

Mr. G. WALTHER, of Dresden, for his paintings on china. (Saxony, No. 177, p. 1112.)

Section E.—3. On Glass.

The Jury made no award in this Section.

DIVISION F.

MATERIALS AND PROCESSES APPLICABLE TO THE FINE ARTS GENERALLY, INCLUDING FINE-ART PRINTING, PRINTING IN COLOUR, &c.

Section F.—1. Encaustic Painting and Fresco.

The following Prize Medals were awarded in this Section:—

To M. J. DEYERS, of Paris, for a Holy Family in enamel paste, painted on lava. (France, No. 818, p. 1219.)

To M. J. N. VON FUCHS, of Munich, for his specimen of a stereo-chromic method of producing indestructible paintings on walls, exhibited by Mr. Muhr. (Bavaria, No. 91, p. 1102.)

Section F.—2. Ornamental Printing, Chromo-Typography, Gold-illuminated Typography, Typography combined or uncombined with Embossing.

The following Prize Medal was awarded in this Section:—

To M. G. SILBERMANN, of Strasburg, for his chromo-typography. (France, No. 374, p. 1194.)

The Jury were of opinion that the following artist was deserving of Honourable Mention:—

Mrs. J. HARRIS, of London, for his imitations of ancient typography. (No. 244, p. 836.)

Section F.—3. Lithography (Black), Chromo-Lithography, Gold-illuminated Lithography, Lithography combined or uncombined with Embossing.

The following Prize Medals were awarded in this Section:—

To Messrs DAY and SON, of London, for their specimens of tinted lithography and chromo-lithography. (Fine Arts Court, No. 80, p. 825.)

To Messrs. M. and N. HANHART, of London, for their chromo-lithography in graduated tints. (Fine Arts Court, No. 64, p. 823.)

To Messrs. HULLMANDEL and WALTON, of London, for their drawings on stone with the stump, and for their lithotints. (Fine Arts Court, No. 71, p. 824.)

To the IMPERIAL PRINTING OFFICE OF VIENNA, for the "Paradisus Vindobonensis" in chromo-lithography. (Austria, No. 362, pp. 1025-1028.)

To Mr. OWEN JONES, of London, for his chromo-lithography. (Fine Arts Court, No. 54, p. 823.)

To M. B. J. LEMERCIER, of Paris, for his lithography and chromo-lithography. (France, Nos. 587 and 588, pp. 1205, 1206.)

To MM. WINCKELMANN and SONS, of Berlin, for their coloured lithography. (Prussia, No. 306, p. 1067.)

The Jury were of opinion that the following artists were deserving of Honourable Mention:—

The fac-similes of ancient MSS. and illuminations by Comte AUGUSTE DE BASTARD, of Paris, have been duly appreciated by the Jury. As it appears, however, that the most important parts of the several objects exhibited are finished by the hand, the Jury abstained from a more special inquiry into their merits. (France, No. 1717, p. 1258.)

Mr. G. BAXTER, of London, for his printing in colours. (No. 415, p. 838.)

M. F. DRAGER, of Moscow, for his chromo-lithography. (Russia, No. 362, p. 1383.)

Mr. T. UDDENWOOD, of Birmingham, for a new process of lithography. (Fine Arts Court, No. 77, p. 825.)

Section F.—4. Zincography, or other modes of Printing.

The following Prize Medal was awarded in this Section:—

To Mr. R. APPEL, of London, for his anastatic printing. (No. 274, p. 838.)

The Jury were of opinion that the following artist was deserving of Honourable Mention:—

Mr. J. HANSTÄNGEL, of Munich, for his galvanography. (Bavaria, No. 85, p. 1102.)

To the processes applicable to the Fine Arts generally, belong those employed by the next three Exhibitors, whose claims the Jury of Class XXX. have acknowledged in the following manner:—

Prize Medals were awarded:—

To Mr. B. CHEVERTON, of London, for his process of reducing sculpture by machinery, as exemplified in the Theseus. (No. 194, p. 832.)

To M. A. COLLAR, of Paris, for his process of reducing sculpture by machinery, as exemplified in the Gates of the Battistero at Florence, and other works. (France, No. 1709, p. 1258.)

The Jury were of opinion that the following artist was deserving of Honourable Mention:—

Mr. B. E. DURRA, of London, for specimens of a new process of executing fine-art designs on detached tiles; the design being burnt in on the separate pieces, and then put together. Exhibited by Messrs. H. MINTON and Co. (Class XXVII., No. 51, p. 767.)

DIVISION G.—MODELS.

Section G.—1. In Architecture.

The Jury having been directed to include architectural models in the range of their inquiries, were naturally led to reflect upon, and then to feel it a most agreeable duty to acknowledge publicly, the merit of the Building in which they met. The originality of the construction, and the rapidity with which it has been carried to completion would, in comparatively recent times, have induced popular enthusiasm to ascribe to fairy agency the power of overcoming obstacles hitherto considered to be insurmountable by human ingenuity. The noble simplicity of the whole edifice, the striking grandeur of its proportions, the novel and ingenious application of the materials of which it is constructed, and the admirable adaptation of all its parts to their multifarious purposes, gave to the person who conceived it, as well as to those who, with so much zeal and success, carried out the constructor's design, a right to the highest award in the power of the Jury to recommend. The Jury had, therefore, the honour to propose that a Council Medal be awarded to Mr. JOSEPH PAXTON, and a similar Medal to Messrs. FOX and HENDERSON. And although the Jury had already rendered justice to the claims of Mr. OWEN JONES, by awarding him a Prize Medal for his chromo-lithography, they felt it to be their duty to record here their opinion of the advantages resulting to the Building from the simple and tasteful style of decoration which Mr. Owen Jones has so skilfully suggested and so successfully applied.

The following Prize Medals were awarded in this section:—

To Mr. J. C. BOESCHKE, of Magdeburg, for his models of Magdeburg Cathedral and of the Nuremberg Fountain, executed in limewood. To this artist the Jury have also made a money award of 30l. sterling. (Prussia, No. 785, p. 1094.)

To Mr. Jabez JAMES, of London, for his model in various materials of the Britannia Suspension Bridge. (Class VII., No. 106, p. 321. Prize Medal, Class VII.)

To Mr. S. SALTER, of London, for his model executed in card of St. Nicholas' Church, now being rebuilt at Hamburg. (Class VII., No. 221, p. 331.)

The Jury were of opinion that the following artists were deserving of Honourable Mention:—

Mr. J. H. CASSEBOHM, of Oldenburg, for his model of

\* Since the Award Book was closed, it has been ascertained that the two entries No. 257 and 258 refer to the same person.

Heidelberg Castle, carved in cork.\* (Oldenburg, No. 1, p. 1135.)

Mr. S. CONDY, of London, for his restoration of the Monument of Philippa of Hainault, in English alabaster, from drawings by Mr. G. C. Scott. (Main Avenue West, No. 60, p. 243. Prize Medal, Class XXVII.)

Mr. T. DUNHILL, of London, for his model in plaster, and other materials, of a Metropolitan Cattle Market, with abattoirs, &c. (Class VII., No. 90, p. 318.)

M. J. LEEHAN, of Berne, for his model of the Nuremberg Fountain, carved in wood. (Switzerland, No. 258, p. 1283.)\*

M. J. LEEHAN, of Zürich, for his model of the Cathedral of Strasburg, executed in card. (Switzerland, No. 257, p. 1282. Prize Medal, Class VII.)\*

Mr. W. STUART, of Plymouth, for a model of the Plymouth Breakwater, executed in limestone (Class VII., No. 28, pp. 311, 312.)

#### Section G. 2.—In Topography.

The following Prize Medal was awarded in this section:—

To Mr. JOHN GRANTHAM, secretary of the Liverpool Local Committee, for a model of the Docks and commercial portion of the Town of Liverpool, in various materials. (Main Avenue West, No. 95, p. 851.)

#### Section G. 3.—In Anatomy.

The Jury of Class XXX abstained from examining models in Anatomy, as such objects were transferred to another Class. (Minute of May 26th, 1851.)

#### DESIGNS.

The various designs for decoration, tapestry, embroidery, mixed fabrics, &c., not having been submitted to the examination of any other Jury, the Jury of Class XXX, appointed a Committee of their own body, which, together with members of Juries of other Classes, were instructed by the Royal Commissioners to report on the articles thus overlooked. This mixed Committee having reported accordingly, the Jury of Class XXX proceeded to award the following Prize Medals:—

To MM. BEHRUN BROTHERS, of Paris, for their general ability in designs for shawls. The Jury wished, however, to guard themselves from being supposed to approve of the introduction of landscapes in such designs, as exhibited in frames Nos. 1 and 2. (France, No. 55, p. 1194.)

To M. J. CHEBREAUX, of Paris, for his cotton and calico prints, apart from their taste. (France, No. 1146, p. 1233.)

To M. C. E. CLERGIT, of Paris, for his designs generally, and his exhibited works in ornament. (France, No. 799, p. 1219.)

To M. A. COUDER, of Paris, for his Shawl Designs, and for his skillful execution of his Designs generally, apart from their taste. (France, No. 1566, p. 1251.)

To the GOVERNMENT HEAD SCHOOL OF DESIGN, established in London. (Fine Arts Court, No. 10, p. 821.)

The mixed Sub-Committee examined the Designs intended for Manufactures, exhibited by this School, directed by Messrs. J. K. Herbert, R. Redgrave, and H. J. Townsend; the female department being superintended by Mrs. M'lan. The Sub-Committee reported that in these designs they had observed a purity of taste, a propriety and chasteness of invention, and a well-understood adaptation of style for the several objects, which do great credit to the directors and to their scholars. The Sub-Committee, therefore (Mr. Redgrave, one of its members and a Juror of Class XXX, having withdrawn), felt it to be their duty to propose to this Jury that a Prize Medal should be awarded to the Institution. They moreover recommended that Honourable Mention should be made of three of the pupils, and that six other pupils, viz., S. ASHWORTH (No. 87, Class XVIII., p. 558), FLORENCE COLLINS (No. 86, Class XVIII., p. 558), J. S. CURNUTT (No. 10, Class XXX., p. 821), A. TOWN (No. 10, Class XXX., p.

821), J. KYN (No. 10, Class XXX., p. 821), and J. RAWLINSON (No. 10, Class XXX., p. 821), should be mentioned with much approbation. The Jury of Class XXX, after due inquiry and mature deliberation, approved unanimously of these suggestions, and adopted the whole of these recommendations. The names of the three pupils, to whom an Honourable Mention has been awarded will be severally found in their proper place.

To M. E. LAROCHE, of Paris, for his Manufacture of Designs. (France, No. 291, p. 1190.)

To LUKE LIMNER (Mr. Leighton), for a variety of Designs. (Class XVII., No. 34, p. 538.)

To Mr. DIGHT WYATT, of London, for good taste generally in his Designs. (Fine Arts Court, No. 30, p. 822.)

The Jury were, moreover, of opinion that the following artists were deserving of Honourable Mention:—

Mr. W. ALDRIDGE, a pupil of the Government Head School of Design, for his Designs. (Fine Arts Court, No. 10, p. 821.)

M. C. BRAUN, of Paris, for his Designs for Calico Prints. (France, No. 72, p. 1175.)

Mr. JOHN CARTER, of Crayford in Kent, for his Designs unapplied. (P. 821.)

M. F. DIDIER, of Paris, for his Designs for Shawls. (France, No. 820, p. 1219.)

M. N. A. GALLIARD, of Paris, for his Designs for Painted Glass. (France, No. 228, p. 1187.)

M. GRUNTHAL, of Berlin, for his Patterns for Berlin Wool. (Prussia, No. 166, p. 1057.)

Mr. J. K. HARVEY, of London, for his Designs for Carpets. (Class XIX., No. 197, p. 567.)

Mr. B. HEALD (Class XIX., No. 269), of the Government School of Design at Nottingham, for his Lace Designs. (Prize Medal, Class XIX., p. 570.)

Mr. EDWIN IRELAND, a pupil of the Government Head School of Design, for his Designs. (Fine Arts Court, No. 10, p. 821.)

Mr. J. H. MÉRÉAUX, of Paris, for his Designs for Lace Manufacturers. (France, No. 631. Prize Medal, Class XIX., p. 1208.)

M. MEYNIER, of Paris, for his Designs for Shawls. (France, No. 638, p. 1208.)

MM. NAZE and Co., of Paris, for their Designs for Cotton Prints. (France, No. 625, p. 1207.)

M. E. PICARD, of Rouen, for his Designs for Woollen, Cotton, and other Printing. (France, No. 347, p. 1194.)

Mr. C. P. STACOMME, a pupil of the Government Head School of Design, for his Designs. (Fine Arts Court, No. 10, p. 821.)

Mr. G. TRUFFITT, of London, for his Designs of wrought-iron canopied Tones. (Fine Arts Court, No. 75, p. 824.)

The Jury of Class XXX., having brought their labours to a conclusion, cannot refrain from expressing their hope that steps may be taken for rendering the Great Exhibition as useful after it has ceased to be, as it has proved gratifying and instructive in the course of its short existence. It is the wish to see these hopes realized, that impels the Jury, even at the risk of overstepping the strict limits of their functions, to submit, with great deference, their views on this point to the Royal Commissioners.

The foundation of a permanent industrial Museum in the heart of the metropolis of trade and industry, seems to the Jury the logical and practical consequence of this Exhibition. It is in the "Crystal Palace" that the great truth has been impressed upon us, that art and taste are henceforth to be considered as elements of industry and trade, of scarcely less importance than the most powerful machinery. It seems also natural that this Museum should in the first instance consist of the objects to which the several Juries have called public attention as happy types and models for imitation. While such a Museum, on the one hand, would be a lasting depository of industry and of the arts; it would, on the other, serve as the best and easiest standard of comparison by which human ingenuity might mark its progress, on the opening, ten years hence, of a new Great Exhibition;—it would serve alike as a guide and as a beacon.

\* Since the Award Book was closed, it has been ascertained that the two entries, Nos. 257 and 258, refer to the same person.

Thus the Great Exhibition of 1851, which already stands out so prominently in the past, would bear fruitful and lasting consequences for the future, and would acquire an additional claim to a grateful record in the annals of mankind.

The Greeks, our masters in the nobler arts, did not trust to the historian and the poet alone for the record of their achievements, but committed to the greatest artists the task of immortalizing their military triumphs. The Great Exhibition deserves to be celebrated as the triumph of industry and invention over commercial routine and international jealousies. Whether the "Crystal Palace" shall be removed or not, posterity will look for some

mark of gratitude to the illustrious Prince to whom the present generation owe the realization of a gigantic thought; a thought which may have floated in the minds of others, but which received consistency and was brought to maturity by his energy and perseverance.

The Jury of Class XXX., therefore, hope that on the site of the Exhibition Building a statue will be erected to Prince Albert. On its base should be recorded the share which statesmen and others have borne in bringing such an undertaking to completion. The Fine Arts would thus be called upon to perpetuate the memory of the Great Exhibition, to the attractions of which they have so variously and so powerfully contributed.

A. PANIZZI, REPORTER.

*London, September 1851.*

## CLASS XXX.

### SUPPLEMENTARY REPORT.

[The figures after the Names (between parentheses) refer to the Exhibitors' Numbers and to the Pages in the OFFICIAL DESCRIPTIVE AND ILLUSTRATED CATALOGUE.]

The Exhibition of the Works of all Nations in the Crystal Palace had for its primary and essential object the display of whatever could be characterized as a production of Industry. It comprehended every kind of unwrought material, no less than the most ingenious results of machinery, or the most exquisite examples of handicraft. But this complete and absolute recognition of industry as the purpose of the Exhibition did not, in the view of the Royal Commissioners, preclude from admission the productions of the Fine Arts. Painting alone being excepted, because, being but little affected by material conditions, it seemed to rank as an independent art. It was not without reason that such a course was adopted, when we consider how greatly, on the one hand, Architecture and Sculpture depend in the execution of their details on mechanical dexterity, and, on the other, how intimately the Fine Arts are connected with many branches of manufacture. So closely, indeed, do their provinces border on those of certain other arts, that it is often difficult to decide in what rank or class objects should be distributed, in the production of which industry and taste have been jointly employed.

This is most strikingly apparent in the case of jewellery and other works in the precious metals, works in bronze, iron, zinc, porcelain, glass, terra-cotta, and also in every description of furniture; but it is not less true of carpets, tapestries, and embroidered and coloured stuffs, in all which the taste and beauty of the design depend upon the manner in which the material has been treated and its special conditions observed.

In the great markets of the world the preference will invariably be at once given to those productions which combine, with other indispensable requisites, the recommendation of good taste in their design and treatment.

Among the many good results which we may venture to anticipate from this Exhibition, it may not be too much to hope for a fuller revival of that happy alliance between the Fine Arts and Industry which subsisted in the middle ages, when the artist was more of a craftsman—the craftsman more of an artist—than is the case at present.

Indeed, even in our own day, such a system of co-operation has been established with regard to one object, the technical application of materials; and of the signal results thus obtained many striking examples may be cited from the Exhibition.

Among these may be mentioned the wonderful specimens of casting in bronze, iron, and zinc; an art which, as regards the two latter metals, has only been brought to perfection in a recent period.

To the present age are also due two most valuable and original inventions, by which works of sculpture may be reproduced, in the one case by means of Galvanoplastic deposit, in the other by the mechanical processes of M. Collas, in France, and of Mr. Cheverton, in England. The cheapness with which the noblest works of art can be multiplied by means of these inventions cannot but tend to the more general development of a feeling for the beautiful. Such then are some of the results of the connexion between Industry and the Fine Arts.

But it was not only on account of their intimate association with the interests of Industry that the Fine Arts

had a claim to be admitted into the Exhibition; their presence there, as was anticipated by the enlightened views of the Royal Commissioners, contributed essentially to the impressiveness of the general spectacle. It was the variety and beauty of the works of art that lent to the scene its peculiar grace and charm.

In this Report the objects contributed by the several nations will be considered in succession, commencing with Great Britain.

In the survey of each nation, its productions will be noticed in the following order:—

#### A. SCULPTURE AND WORKS OF PLASTIC ART—

1. Sculpture on a large scale, and in various materials, whether marble, metal, or wood.
2. Sculpture and its varieties on a small scale, in metal, "biscuit," ivory, wood, precious stones, shells.

#### B. GRAPHIC REPRESENTATIONS ON PLANE SURFACES—

1. New processes of painting.
2. Enamels on porcelain or metal.
3. Painting on glass.
4. Mosaics.
5. Designs for woven and printed stuffs.
6. Various processes of printing, such as lithography, lithochromy, zincography.

#### C. ARCHITECTURAL DESIGNS—

1. The Exhibition Building.
2. Architectural and other models.

### THE UNITED KINGDOM.

From the first introduction of the Fine Arts in this country to the present day they have received little or no notice from the Government as such: their encouragement, like that of many other important objects, has been left to the public. The foundation of the Royal Academy itself is of comparatively recent date, and the institution is self-supported. The collection of sculpture and antiquities in the British Museum, and that of painting at the National Gallery, have been formed only within the last half century, and many of their most valuable treasures are donations or bequests of private individuals. Before the building of the New Houses of Parliament the distinguished artists of this country had rarely been employed by the Government on works of a Monumental character, and such commissions were, from their nature, not the objects of private munificence. This is one principal cause why, in the English school of painting and sculpture, no true Monumental style has been as yet formed.

Again, it was only in the year 1836 that the Schools of Design were formed; institutions by means of which the Fine Arts have exercised a most beneficial influence on the vast productive energy of Great Britain. Much improvement in every branch of industry has been accomplished by means of these schools, but it must be acknowledged that in many kinds of manufacture the English productions, both in regard to their form and colour, show far less taste than those of other nations.

Both the Government and the nation, however, are now becoming conscious of the great importance of Art, not only in its Monumental character, but in its relation to Industry.

The vast range of comparison which the Exhibition has afforded, by the juxtaposition of the products of so many nations, has directed the English mind to more enlightened views; and, from the energy of the national character, and institutions, these newly-awakened ideas may ultimately prove of the greatest benefit in regard both to the Fine Arts and the Manufactures of the country.

#### A. SCULPTURE AND WORKS OF PLASTIC ART.

##### 1. Sculpture on a large Scale.

No other nation has exhibited so many works of this class as Great Britain. This may be partly accounted for by the fact that the English sculptors have not been embarrassed, like those of other countries, by the cost of transporting their works from a distance; but the far greater wealth of the English, as compared with other nations, is another cause of this numerical superiority.

With regard to the quality of their sculpture, it must be confessed that the productions of the modern English school, till within a comparatively recent date, have not been such as to command the approbation of the most competent judges.

In the earlier periods of English art the name of Flaxman stands alone; and, fertile as this great genius was in invention, the execution of his works hardly equals the beauty of their conception.

His influence seems to have been scarcely felt for a considerable period: the strong tendency to Realism\* in the English school of sculpture found its natural expression in portraiture. Chantrey, long pre-eminent among his contemporaries, produced a great number of admirable busts; but in all the works of this period which have a higher pretension, and claim to rank as Ideal sculpture, there is a striking deficiency, not only in scientific knowledge, but in taste and in genuine Plastic style.†

\* A work is called Realistic when the artist restricts himself to the task of rendering an individual model in all its parts, form, character, and the like, just as they appear before him. On the other hand a work of art is called Ideal when the artist modifies the figure in these same respects, according to his own feeling for its inner significance and outward beauty of form—attributes which necessarily vary in each case.

† When we say of a work of sculpture that it possesses "style," the following qualities ought to be implied. The sculptor must have so treated the solid material, such as stone, metal, wood, with which he has to deal, as not to remind the spectator of the nature of the substance employed, but so as rather to suggest to the eye the character of the object imitated, flesh, drapery, or whatever it may be.

Further, as we learn from the antique sculpture, in the treatment of naked surfaces, the muscles should not be represented by prominences so isolated and abrupt as to impair the general breadth, but should be rather indicated by moderate depressions in broad surfaces.

In drapery, again, to attain the same general breadth of effect in the larger surfaces, which are supposed to be defined by the forms and action of the body, the details of the folds should be represented not by big, heavy projections, but by numerous contiguous channellings or markings.

The sculptor must, moreover, take care not to attempt, in every part of his work, as perfect an imitation as the nature of the solid material he employs would admit, but he should adopt a treatment more and more conventional in proportion as the object he has to represent is less and less important, flesh being the most important; for otherwise the degree of illusion sought for in the imitation of flesh cannot be attained, because the imitation of many subordinate objects can be carried much farther in the solid material with which the artist has to work. In sculpture "in the round," it is also necessary that the centre of gravity be so placed as to suggest to the spectator the idea of security. In reliefs, lastly, this rule is to be applied, whether the work be in high, middle, or low relief, that no single portion should project beyond the general relief in each case intended, but

To this general criticism E. H. Baily (p. 847), in his best works, forms a distinguished exception. Among these, however, we can hardly reckon the three statues in the Exhibition, of a Hunter, a Young Girl, and Eve; of the latter a cast in zinc only was exhibited. But the merit of these works was not overlooked by the Jury, who have awarded them a Prize Medal. (P. 8, 6 and 7.)

Since the period referred to a new race of sculptors has arisen in England, who possess in a remarkable degree the qualities in which their predecessors were deficient. Among the chief causes which have combined to produce this school may be reckoned the influence of the genius of Flaxman, the study of the noblest examples of Greek art preserved to us in the Elgin marbles, and the example of the great Thorwaldsen, with whom many of the English sculptors at Rome had constant intercourse.

Among the most distinguished of contemporary sculptors we may specially mention the name of Gibson. In his Hunter and Dog a lively and imaginative conception is combined with an exquisite feeling for harmony of lines, and with thorough knowledge. The treatment is strictly Plastic; the details carefully and conscientiously wrought out. The unanimous award of the Jury would have bestowed the Council Medal on this work had not the artist been disqualified from receiving a prize by filling the office of a Juror in this Class.

Next should be mentioned the name of Mr. RICHARD J. WYATT (Main Avenue, East, 120, p. 1286, and Illustration), whose death, in the full maturity of his powers, we have to deplore.

His statue of Glycera represents a girlish figure, slight and full of simple grace; the characteristics of feminine beauty are indicated in the modelling with great delicacy; the drapery is treated with good taste, and with a due regard for style. One feeling pervades the whole design, and imparts to it a peculiar charm. This work, therefore, united all those qualities which entitled it to receive a Council Medal (103, p. 11, second improved edition).

The following sculptors are well worthy to rank next to the distinguished names already noticed:—

J. H. FOLEY, of London (p. 848, and Illustration), A Youth at a Stream: of this a cast in plaster, and another in bronze, were exhibited. The figure is about to plunge into a river; he still clings to the branch of a tree rising over his head, whilst he advances one foot somewhat timidly. The motive is remarkable for originality and grace, and the conception is well sustained by the whole treatment; in the slender proportions and finely modelled well-turned limbs the artist has admirably expressed the attributes of youthful beauty. Another of his works represents a group of Ino and the infant Bacchus, in plaster (Class XXV., 2, p. 711). Ino, reclining at her ease, holds up to the infant god a bunch of grapes, towards which he eagerly stretches his hands. There is a sprightly grace in the attitude of Ino, and much refinement of form; but on the whole this group is not so simple in conception as the Youth at the Stream; the Prize Medal has therefore been awarded to the two works conjointly. In his statue of Hampden, in plaster (p. 848, and see Illustration), executed for the new Houses of Parliament, the same artist has shown that he can unite the peculiarities of individual life, and the details of costume necessary in an historical portrait, with a true Plastic style.

J. BELL, of London (Class XXII. 641, p. 661). The Eagle-slayer, cast in bronze, and also in iron. This figure represents a powerful man in very strong action, at the moment after shooting an arrow into the air. The violence of the exertion has brought the muscles into full play. The artist has admirably succeeded in expressing the momentary and transient character of the action, and

that the whole profile of the relief should be restricted within a given scale; that, again, there should not be more than two distances in the composition, so that two figures at the most can stand, one behind the other; to attempt greater depth is to invade the province of picturesque composition, and by destroying the idea of relief from an actual plane, to cause indistinctness of outline.

the form is modelled with a knowledge and truth of detail which are seldom found in the English school. His work has, therefore, obtained the Prize Medal.

In the statue of Falkland (in plaster, p. 847), executed for the new Houses of Parliament, the same sculptor has displayed a mastery rarely attained in portraiture; the conception is very spirited, the treatment throughout strictly Plastic; the figure is remarkable for its noble presence, and its attitude of calm and dignified repose.

The following artists also exhibit, in their styles, the application of just principles of art:—

P. MACDOWELL, of London. The most remarkable work of this sculptor is his Eve (in plaster, p. 850). This figure is modelled with great knowledge, the attitude is graceful, and the expression of longing curiosity well rendered. We may also mention his Girl at Prayer (in marble, *ibid.*), a figure treated with simplicity and depth of feeling, and very carefully executed. His marble figure of Cupid (*ibid.*) has also considerable merit. Prize Medal.

W. CALDER MARSHALL (5, p. 844, Sculpture Court). The Sabrina of this artist is remarkable for the feminine grace of the motive, the head has a fine character of individuality, and there is great beauty in the form and in the general expression: in marble. Prize Medal.

T. SHARP, of London (20, p. 844). A Boy stretched on the ground, looking round in alarm, as if startled at a lizard. This is a remarkable work—quite unlike, in choice and treatment of subject, any which has been as yet noticed in this Report. The artist has not hesitated to express that dryness and meagreness of form which characterizes the particular stage of boyhood here selected for representation; but these details are rendered with the utmost accuracy, and with an admirable feeling for nature. The eye of the ordinary observer, habitually accustomed to the specious effect of mere smoothness of surface, may, in some degree, be repelled by this truthfulness of representation; but, like all other truth, it will not the less be ultimately appreciated, and we may regard this figure as in itself a proof how great an effort the English school of sculpture is making in the right direction. Prize Medal.

J. HOGAN, of Ireland (14, p. 843). A drunken Satyr, gorged with new wine, which has distended all his veins and muscles, makes a last effort to save himself from falling. This work contains evidence of careful study, but the attitude has something violent and ungraceful: in plaster. Prize Medal.

B. JENNINGS, of London (81, p. 846). In his marble figure of Cupid this artist has been very happy in the representation of youthful form.

The same may be said of the Arethusa of E. THORPE, of London (58, p. 845), a recumbent figure leaning on one elbow though there is rather a want of life and individuality in the features. A Boy catching a Butterfly (56, p. 845), by the same artist, is a carefully executed and attractive work: in marble.

A Nymph bathing, by J. LAWLOR, of London (22, p. 844), also deserves notice here: in marble. All the three last-mentioned works have obtained Prize Medals.

The portrait statue of Flaxman, by the late M. L. WATSON, of London (60, p. 845), shows how greatly this artist excelled in Ionic sculpture. The figure, which is executed out of a very beautiful block of marble, is seated; the general attitude is remarkably true to nature, the head full of intelligence, and the whole design is worked out with great spirit, and with conscientious labour. The colossal seated figures of Lord Eldon and Lord Stowell (p. 848), by the same artist, are also remarkable specimens of the same class of sculpture, though not equal in merit to the statue of Flaxman. The hands appear too large: in marble. Prize Medal.

L. MACDONALD, of Rome (Rome, 18, p. 1286). The Ionic figure by this sculptor, executed in the manner and costume of classical antiquity, shows that the artist has a just perception of style and sound knowledge: in marble. Prize Medal.

In conclusion may be noticed the following artists, as deserving the Honourable Mention bestowed on them by the Jury:—

W. BEHNE, of London, for his Nymph startled, by a Lizard: in marble (54, p. 845).

W. THEED, of London, for his marble group of the Prodigal Son (59, p. 845) embraced by his Father, and for his Narcissus (79, p. 846), also in marble.

H. WEEKES, of London, for his Sleeping Child with a Dog: in marble (p. 853).

E. B. STEPHENS, of London (p. 853), for his Deer Stalker and Dog.

F. M. MILLER, of London, for Two Orphan Children at Prayer: marble (p. 850).

Mr. and Mrs. T. THORNYCROFT, of London, for the Royal Children, in the characters of the Four Seasons: in plaster (34, p. 844).

G. MYERS, of London, for the Tomb of Bishop Walsh, in stone; a monument in which the ecclesiastical style of the middle ages is well sustained, not only in the principal figure, but also in the accessories. Prize Medal. (Class XXVI. p. 761.)

To this list the name of HANCOCK (p. 849) deserves, in my opinion, to be added, for his statue in plaster of the Beatrice of Dante, in her beatified state. The figure is distinguished by a pure and noble expression of the head, although many defects may be remarked in the drapery.

In concluding this notice of English sculpture, it is right to mention that several highly distinguished artists have not contributed any works to the Exhibition.

## 2. Sculpture on a small Scale.

To this branch of English art the remarks already made on sculpture on a large scale are generally applicable. Even at the present day many of the most distinguished artists who have executed and exhibited works of this class are foreigners.

### 1. Works in Metal.

#### (a.) Embossed (Repoussé) Work.

A. VECHTE, of France (p. 686-87), at present settled in England. The works of this artist in strictness belong to Class XXIII. (Jewellery and Goldsmiths' Work), but they are so essentially and exclusively productions of Fine Art, that it is impossible to pass them over without mention in this Report. They consist of a shield as yet unfinished, and a vase representing the contest between Jupiter and the Giants, executed in silver for the great establishment of Messrs. Hunt and Roskell at Birmingham. These works show that no living artist has so fully entered into the spirit of the Italian style of the sixteenth century, commonly called the *Cinque Cento*, as Vechte. He has also exhibited a shield, which, having been executed in France, is therefore in the French Department. In its design the artist has harmonized with great skill two celebrated compositions of the Murder of the Innocents, that by Raphael—preserved to us in the engraving by Marc Antonio, and in the tapestry of the Vatican—and that known to us in the picture by Nicolas Poussin. Honourable Mention (Class XXIII. 97.)

J. V. MOGEL and Co., of Paris, now settled in London (p. 693). This firm exhibit a set of cups, made of different kinds of precious stones, decorated with small figures, animals, masks, and other ornaments, exquisitely wrought in gold and silver, and in enamel, the whole executed in the feeling of Benvenuto Cellini, and with the same refined taste. In the expression of the heads only there appears a somewhat too modern sentiment. The talent displayed in these works is so remarkable, that though they belong strictly to Class XXIII, where they have been rewarded with a Council Medal, they cannot be passed in silence here. (Class XXIII. No. 117.)

#### (b.) Medals and Coins.

W. WYON, of London, Chief Engraver of the Mint\* (p. 838). This artist is certainly one of the most distinguished of his class in the present day. He is endowed with a just perception of nature, and a refined sense of beauty in form and movement. His works are executed

\* This notice was written a few days before the death of the distinguished artist to whom it relates.

in mezzo-relievo, in that style which alone is admissible in Numismatic Art, and which he has brought to great perfection. Both the Medals, and the enlarged models of Medals, which he has exhibited, fully bear out these remarks. But I would particularly call attention to his models of the heads of Her Majesty and His Royal Highness the Prince Albert, for the obverse of the Prize Medal of the Exhibition. His office of Juror alone disqualified him from receiving a prize. (Class XXX. No. 284.)

L. C. WYON, of London (p. 838). This young artist is a worthy inheritor of his father's talent. His portraits of the children of Her Majesty and that of His Royal Highness Prince Albert, as well as his model for the reverse of the Prize Medal, are executed in a very good style, and the whole is wrought out with the earnestness of a labour of love, as well as with great simplicity and feeling for nature. Prize Medal. (Class XXX. 286.)

#### 2. Works in Ivory.

R. C. LUCAS, of the Firs, Winchester (306, *ibid.* p. 840). This artist has executed with great fidelity copies of several of the most celebrated antique works in the British Museum, such as the bronzes of Siris, the supposed head of Proserpine on the medallions of Syracuse, and the admirable carving in hone-stone by Albert Durer, representing the Birth of Saint John the Baptist, also in the British Museum. Honourable Mention.

#### 3. Works in "Biscuit."

MINTON and Co. (Class XXV. 1, p. 709-11). The productions of this great porcelain manufactory properly belong to Class XXV., and have there been rewarded with a Council Medal; but so many of them deserve to rank as examples of Fine Art, that I think it right to mention them here. I would particularly notice the copies of the celebrated silver cups in the Museo Borbonico at Naples, with groups of centaurs in relief, the copy of the Farnese Flora, and also two friezes. The establishment deserves the greatest praise for these productions, by means of which the finest models of Art are circulated, and a correct taste more widely diffused.

The same laudable endeavour to spread the knowledge of Art is apparent in the manufactures of COPELAND (p. 711-14), CHARLES MEIGH and SON (p. 720-22), and JOSIAH WEDGWOOD and SON (p. 717-19). The manufactory of BELL and Co., at Glasgow (p. 724-25), deserves especial notice, on account of the judgment generally displayed in their choice of forms from the antique. The most sparing use of gold as an ornament distinguishes these works from those of most other English manufactories.

#### 4. Carvings in Wood.

Wood carving was from a very early period much esteemed by the English, and has been diligently cultivated among them. An extraordinary number of specimens, not only in the Gothic and Renaissance styles, but in the "Rococo taste" of the last century, have been contributed to the Exhibition, and many of them are of the greatest merit. Though the greatest part of these specimens are articles of furniture, and therefore belong to Class XXVI., yet among them are two of such high artistic merit, that I cannot omit a passing notice of them here. These are—(1.) A large sideboard, exhibited by COOKE and SONS, of Warwick (p. 827). (2.) A bookcase in the style of the Renaissance, by HOLLAND and SONS, of London (161, p. 745, see Illustration).

Among the wood carvings which may be considered purely as works of Fine Art, are—(1.) Those of T. W. WALLIS, of Louth, in Lincolnshire (85, p. 925, see Illustration). This artist has represented various kinds of dead game with a true feeling for nature, and with an extraordinary mastery in every kind of detail. He is also entitled to the greatest praise for his carving of a mass of vine-leaves, which is executed with the most minute and scrupulous imitation of nature, without losing the characteristics of a true Plastic style. Prize Medal. (Class XXX. 4, p. 825.)

G. ROOPE, of London (353, p. 842). A cradle executed in box-wood for Her Majesty the Queen Vic-

tor, and richly ornamented with carved reliefs; also, a group of musical instruments, among which may be especially noticed a violin. These works show an extraordinary dexterity in the treatment of the material, and the ornaments of the cradle are in excellent taste. Prize Medal.

In concluding this notice of works of sculpture of the United Kingdom, I must mention the machine invented by Mr. B. CAPERTON, of London (194, p. 832), for the reproduction, either on the same or on a smaller scale, of works of sculpture. The figure commonly known as the Theseus, in the Elgin collection of the British Museum, has been reduced by this process in alabaster, for the purpose of casting in plaster, with an accuracy which leaves the most fastidious critic nothing to desire.

The benefit which all lovers of Art, and more particularly artists themselves, will derive from this discovery, are so obvious, that I need not further insist on them here. Prize Medal.

### B. GRAPHIC REPRESENTATIONS ON PLANE SURFACES.

#### 1. New processes of Painting.

B. E. DUFFA, of London (Class XXVII. 51, p. 767), the inventor of a new mode of monochrome painting on tiles. The painting has all the appearance of a chalk drawing, and is so united with the tile by the action of fire, as to bear any amount of exposure to the weather. Among the specimens exhibited of this process is a head which appears exactly like a drawing in red chalk. Honourable Mention.

#### 2. Enamels on Porcelain or Metal.

W. ESSEX, of London (241, p. 835-36), exhibits a number of copies of celebrated pictures, such as the so-called "Gevartius" of Vandyke; Joseph and Mary with our Saviour, by Murillo—both in the National Gallery; and a Young Girl, after Sir Joshua Reynolds. In all these copies the drawing, colouring, and general character of the originals are rendered with the utmost fidelity. Other specimens, however, such as the Portrait of Shakspeare, and that of Her Majesty Queen Victoria, are somewhat hard, patchy, and deficient in modelling. These enamels are on metal. Prize Medal.

S. CHESTERS, of London (246, p. 836). The picture by Murillo in the National Gallery, mentioned in the preceding notice, has been admirably copied by this artist on porcelain. Every trait in the original is rendered with the utmost delicacy; this work reflects the highest credit on its author. Honourable Mention.

Lastly, the following artists may be noticed as fully deserving the Honourable Mention they have obtained: ECKELMANN and WÜSTIAN (Class XXIII., 140, p. 695), for the portraits of the Queen, the Prince of Wales, and of H.R.H. Prince Albert, on a jewel-case belonging to Her Majesty Queen Victoria; HASLEM (Class XXX., 237, p. 835), for his St. John, after Murillo, and also for his Ecce Homo, after Corregio, both which pictures are in the National Gallery; BELL (249, *ibid.*, p. 836), W. C. BONE (223, p. 835), and lastly, BRADLEY, of Stoke-upon-Trent (Class XXV., 2, p. 711), for a duck enamelled on china, and exhibited by Copeland.

#### 3. Painting on Glass.

In this branch of painting there are two very distinct styles. The one has been principally employed for the decoration of church windows, and being thus intimately associated with architecture, must rigidly conform to its laws. Thus, in this style the general character of the ornament should be Architectonic, the patterns should be very distinct, combining beauty of form with harmony of colouring; there should be great repose in the attitudes of the figures, and the draperies should be in simple masses. The other style of glass-painting attempts to give all the effect of an actual picture, strictly so called, and to heighten this effect by the gorgeousness and transparency of the colours. The former of these kinds of glass-painting is to be regarded as of higher importance, and has more claims to rank as an original art than the latter, which, however, is capable of being made very

attractive. But it is of the greatest importance not to mix the two styles. This has been done in many windows executed in the 15th and 16th centuries, in which the artist, abandoning the Architectonic laws, which ought to be his guide, has attempted those higher artistic effects, which are only to be achieved in other materials, such as oil or fresco and has consequently fallen very far short of his aim.

Very good works in both kinds of glass-painting were to be seen in the Exhibition, but these must by no means be taken as the best specimens which the art of our age is capable of producing. It is much to be regretted that the Exhibition did not contain any examples either of the ecclesiastical glass-paintings of the Royal Manufactory at Munich, or of the imitation of pictures by Messrs. Boissacré, of Bonn; in both of which establishments works have been executed which have hardly been surpassed in the present age. It is right to add, that the latter manufactory has judiciously availed itself of artists trained in the establishment at Munich.

It is of the greatest importance in the imitation of ancient glass, which is now so generally attempted, that the characteristics of different periods should be faithfully rendered. The number of churches now built in the Gothic style makes this discrimination of styles all the more necessary. But the study of ancient examples may lead to the perversion of taste, if the artist persists in adhering to the conventional forms of the mediæval styles, and choose to ignore the superior knowledge of drawing of his own day. If, however, the laws above stated be observed, they will be found perfectly compatible with natural forms.

(a.) Ecclesiastical Style.\*

J. HARDMAN and Co., of Birmingham (Class XXVI., 532, p. 761). In the window-glass exhibited by this establishment in the Mediæval Court, the true principles of the style have been faithfully observed; and the execution of the work is very careful. It may be noticed, however, as a defect in these windows, that the glass of the backgrounds between the figures is too transparent; they are consequently inferior in repose and harmony of colouring to the mediæval windows of the best time. Prize Medal.

CHANCE BROTHERS and Co., of Birmingham (Class XXIV., 60, p. 706). Two Gothic windows also executed according to correct principles. Honourable Mention.

The three following artists also deserve the Honourable Mention which they have received: HOLLAND and Son, of Warwick, for their "Life of Christ" (ibid., 63, p. 706). I. G. HOWE, of London (ibid., 67, p. 707), for his imitation of an ancient painted window. W. WAILES (ibid., 73, p. 707), for the decorative part in his design. The figures are not equal in merit to the rest of the work.

(b) Pictorial Style.

M. and A. O'CONNOR, of London (ibid., 67, p. 707). In his Raising of Lazarus, this artist has been very successful in giving the characteristics of an oil painting; everything is in perfect keeping, and is drawn with great truth and care. In the richness of the colouring, he has turned his material to very good account. Honourable Mention.

4. Works in Niello.

In this kind of art, which received the name of "Niello" work in the middle ages, figures or ornaments are first engraved on a silver plate, and the incised lines are then filled up with a paste compounded of silver, copper, lead, sulphur, and borax. The dark colours so inlaid contrasting with the bright surface of the silver, produce an effect not unlike that of a print from a copper plate.

This art, which had been for a long time neglected, was revived in the present day with great success by

\* This style of glass-painting might be termed Architectonic, as it is applicable not only to churches, but to many other edifices, civil as well as religious.

Wagner, a silversmith from Berlin, established at Paris. In the exhibition was a gauntlet, on which a design by Maclise was engraved in niello, by S. H. and D. Gass, London (Class XXIII., 63, p. 683). The work is very skilfully executed. Honourable Mention.

5. Designs for Printed and Woven Fabrics, for Embroidery, and for Book-covers.

The primary law of all such designs is, that they must not disturb the flatness of the surface on which they are drawn, but only diversify it with lines agreeable to the eye, and with harmonious masses of colour. Hence no foreshortenings should be attempted in such designs, and all perspective views are to be absolutely rejected, as at variance with the principles of a true style of ornament. It is obvious that the character of the pattern will be essentially affected by the quality of the materials and the purpose for which it is intended. Thus, for instance, shawls, though of a yielding texture, rather follow the movements of the body in a general sense; hence the patterns of shawls should be of considerable size, with soft, flowing outlines. Cottons, on the contrary, and other similar clothing fabrics, which cling more to the body, require smaller and more symmetrical patterns.

M. DIOBY WYATT, of London (Class XXX., 30, p. 822), exhibits a considerable number of designs for various purposes. They are in very good taste, and in perfect accordance with the principles here laid down. Prize Medal.

JOHN LEIGHTON, jun., of London (Class XVII., 24, p. 538). The designs for book-covers exhibited under this name have very remarkable merit, from the variety of forms in the patterns, and the happy choice of the colours. Prize Medal.

C. J. RICHARDSON (Class XXVI., p. 208, p. 751). Out of the multitude of designs exhibited by this artist, some show a good taste. Prize Medal.

The following names have also been Honourably Mentioned: JOHN CARTER, of Crayford in Kent (10, p. 821); J. K. HARVEY (Class XIX., 197, p. 567), for the design of a carpet with a rich pattern; and BENJ. HEALD, for his design for lace (269, p. 570). Prize Medal.

THE GOVERNMENT HEAD SCHOOL OF DESIGN IN LONDON (10, p. 821). The designs for textile fabrics contributed by the pupils, both male and female, of this establishment, were executed in such good taste, and with such correct knowledge of principles, that a Prize Medal was awarded to the Institution, and the names of several of the pupils were mentioned with approbation. These names will be found in the Report of Mr. Panizzi.

This seems to be the most fitting place to notice the patterns of the Oriental stuffs which India, Turkey, and Tunis contributed to the Exhibition in such rich variety.

In the fabrics of India the correct principle already laid down, namely, that patterns and colours should diversify plain surfaces without destroying or disturbing the impression of flatness, is as carefully observed as it was in the middle ages, when the decoration of walls, pavements, and carpets was brought to such perfection by the Arabs. But it is not only the observance of this principle which distinguishes the Indian stuffs in the Exhibition; they are remarkable for the rich invention shown in the patterns, in which the beauty, distinctness, and variety of the forms, and the harmonious blending of severe colours, called forth the admiration of all true judges of art.

What a lesson such designs afford to manufacturers, even in those nations of Europe which have made the greatest progress in industry!

In these remarks I have specially referred to the productions of India. Some of the fabrics exhibited by Turkey and Tunis display analogous qualities, but in the greater part of these we trace in the patterns an European influence, which has overlaid or partly superseded the true characteristics of the national style of ornament.

6. Architectural Designs.

G. TRUEFIT, of London (75, p. 834). A design for a Gothic tomb and canopy, to be executed in iron; the pro-

portions in this design are very good, the style very correct, and the treatment suitable to the material. Honourable Mention.

*Various processes of Printing, such as Lithography, Lithochromy, Zincography.*

The art of printing in colours has been brought to such perfection by the employment of several successive plates for the same impression, as in many cases to produce an effect quite equal to that of a painting.

(a.) *Lithochromy.*

DAY and SON, of London. The specimens exhibited by this establishment are admirable for keeping, force, and finish. Prize Medal. (80, p. 825.)

M. and N. HANNAERT, of London. In the plates executed by these artists there is a clearness, force, and harmony of colouring, combined in a degree which is very rarely attained. Prize Medal. (64, p. 823.)

HULLMANDEL and WALTON, of London. In the works of these artists we find similar excellences in a very high degree. The specimens are executed partly with the stump, partly with lithographic chalk and the stump combined, and finally by printing in colours. Prize Medal. (71, p. 824.)

OWEN JONES, of London. In the establishment of this artist flower and fruit-pieces are executed with great force and truth, and in his patterns he shows excellent taste. In his imitations of miniatures he has been less happy, though these works display considerable merit. Prize Medal. (54, p. 823.)

T. UNDERWOOD, of Birmingham. In the novel attempt to represent water-colour drawing by printing in colours, this artist has been most fortunate: the specimens exhibited by him are well worthy of Honourable Mention. (77, p. 825.)

(b.) *Printing in Oil-colours*

G. HAXTER, of London. The view of the exterior of the Exhibition Building, and a female portrait by this artist, show very great skill in a process which so seldom yields a successful result. Honourable Mention. (125, p. 828.)

(c.) *Zincography.*

R. APPEL (274, p. 838). This artist is the inventor of a process, by which he transfers to a zinc plate ancient or modern engravings, and woodcut impressions, as well as drawings executed either with the pen or the pencil. A peculiar kind of ink is employed for the transfer; and not only is a perfect facsimile of the original thus obtained, but copies, to any extent, of this facsimile are again produced, at an exceedingly moderate price, and all of equal excellence. A woodcut by Albert Durer, taken from his "Life of the Virgin," the zinc matrix to which this was transferred, and the impression from this plate, which were all exhibited, afford sufficient evidence of the value of the invention. Many years ago Messrs. DUPONT and Co. (France, 181, p. 1182), of Paris, obtained similar results by their process of transferring designs to stone; for this they have received a Prize Medal in Class XVII. (Printing). The advantages of such mechanical means of multiplying rare and costly prints are too obvious to need remark. Every kind of drawing can be executed in Mr. Appel's prepared ink; his invention has therefore this great advantage, that it enables artists at once to fix and reproduce their sketches, instead of having recourse to lithography, woodcutting, or engraving on metal. The most rapid and evanescent expression of an artist's thought may thus be arrested, without impairing the spirit of the original sketch in the process of transfer. Prize Medal.

(d.) *Facsimiles of Printing executed by the Hand.*

J. HARRIS, of London. The masterly imitation of old printing, by this artist, has received Honourable Mention. (Class XXX., 244, p. 836.)

C. ARCHITECTURAL DESIGNS.

*1. The Exhibition Building.*

In this most admirable edifice every kind of excellence appears to be combined, whether we consider the wonder-

ful adaptation of the whole building to its purpose, the surprising skill shown in the employment of glass and iron, which have never before been used as building materials on so vast a scale, the happy adjustment of the proportions, the calculation of which, from the complexity and extent of the whole plan, must have been exceedingly difficult, the simplicity of the mode of construction, or lastly, the judgment shown in the choice and disposition of the colours with which the building is ornamented. The whole work reflects the greatest honour on all who had a share in it. The utmost praise is due to Mr. FAXTON for the design of the Building; to Messrs. FOX, HENDERSON, and Co., the Contractors, for the masterly manner in which it has been executed; and to Mr. OWEN JONES for the painting.\* (Council Medals awarded to the two former by Class VII.: see Awards, Class VII.)

2. *Models.*

The practical utility of architectural models, and the instruction and pleasure that may be derived from them, have never been more sensibly felt than at the present day. This branch of art was therefore very properly represented in the Exhibition.

JOHN GRANTHAM (Secretary to the Liverpool Local Committee). A Model of the Town of Liverpool. This work is executed with great accuracy, the proportions are said to be very well preserved, and the details finished with great care. Prize Medal. (Main Avenue West, 95, p. 851.)

JAMES JAMES, of London. A Model of the Britannia Tubular Bridge. Very valuable, as showing the construction of this celebrated work. Prize Medal. (Class VII., 106, p. 821. Prize Medal awarded also by Class VII.)

M. SALTER, of London. A Model of the Church of St. Nicholas, of Hamburg, executed after the designs of Mr. Scott. Also a Model of a Church at Wilton. These two models are entitled to the greatest praise, on account of the accuracy of the proportions, and the masterly manner in which all the details are expressed. Prize Medal for first. (Class VII., Main Avenue West, 221, p. 331.)

N. J. COTTINGHAM, of London. A Model of a spandril of an arch Hereford Cathedral. The manner in which the character of Gothic architecture is preserved in this model shows great knowledge on the part of its designer. Honourable Mention. (Main Avenue West, 63, p. 852.)

S. GUNDS, of London. A restoration of the tomb of Queen Philippa, Queen of Edward III., executed in alabaster, with very rich Gothic ornaments. Honourable Mention. (Main Avenue West, 60, p. 848. Prize Medal awarded by Class XXVII.)

T. DUNHILL, of London. Model of a Metropolitan Cattle-market, with abattoirs, and other appurtenances, executed in plaster and other materials, and very skillfully planned. Honourable Mention. (Class VII., 90, p. 318.)

W. STUART, of Plymouth. Model of the Plymouth Breakwater in limestone. Honourable Mention. (Class VII., 28, p. 341-12.)

In concluding this notice, I must also mention the Mediaeval Court, fitted up by Professor A. W. PUGN (p. 761), one of the most distinguished among English architects, as a designer of Gothic buildings and ornament. In this Court he has endeavoured, with great success, to present to the spectator a general idea of the ecclesiastical art of the middle ages, by exhibiting an assemblage of altars, shrines, tapestries, painted windows, canopies, and patens, vestments, and other ecclesiastical

\* It has been remarked by several distinguished authorities that, when iron is painted, the nature of the material should be indicated by the colours employed. This is, no doubt, true, as a general principle, yet, in this instance, a deviation from it seems allowable. The combination of white, blue, and red harmonizes most happily with the slender tent-like structure, and light, cheerful appearance of the whole building, and contributes to produce that wondrous and fairy-like effect which has so impressed the minds of all who visited the Exhibition. A darker tone would have been inadmissible, as it would have given a gloomy appearance to the whole.

furniture and objects. Most of these articles are executed from his own drawings. The merit of the collection has been duly acknowledged by the Jury.

## THE ZOLLVEREIN.

### 1. PRUSSIA.

Since the year 1815 great efforts have been made in Prussia, by the successive monarchs and administrations of Prussia, to encourage the Fine Arts in that country. Museums, and other buildings of a similar character, have been erected; sculptors, and more recently painters, have been employed in the execution of monumental works, and the cultivation of all those manufactures on which art can exercise any influence, has been greatly promoted by the foundation of the "Institution for Trades" (*Gewerbe-Institut*), under the energetic and judicious management of Privy Councillor Reuthe. That these efforts have led to the happiest results has been proved by the Exhibition, which has furnished to Prussia a long-desired opportunity of showing what progress has been made.

#### A. SCULPTURE AND WORKS OF PLASTIC ART.

##### 1. *Sculpture on a large Scale.*

Until the commencement of the present century, the Berlin sculptors continued to imitate the false and mannered style of the contemporary French school. The first who returned to the principles of nature, and to a careful expression of details, was the sculptor Schnadow.

But the Berlin school owes its present excellence to the auspicious co-operation of three great men, who devoted themselves to its improvement. These were, the late architect Schinkel, the late sculptor Frederick Tieck, and Christian Rauch, a sculptor whose active energies still remain unimpaired notwithstanding his great age. These three artists had profoundly studied the masterpieces of ancient art; the contemplation of these had imbued their minds with an intense feeling for beauty, and revealed to them the great laws of style. Inspired by these models, they did not attempt to reproduce them by a servile and spiritless imitation, but rather to apply the principles therein developed to works fitted for the wants of modern times, combining this reverence for antiquity with an earnest study of nature, and a most diligent and scientific carefulness of execution. It is to be regretted that Rauch himself contributed none of his works, if we except one or two copies from his *Victories*; and that many of his distinguished scholars, such as A. Fischer, Gustav Blesser, Wredow, and Schievelbein were also absent.

But though the school of Berlin was thus only partially represented in the Exhibition, yet many of the works it contributed gave ample proof how great have been the results of the combined influences which have aided in the development of German art.

A. KISS, of Berlin (279, p. 1065). An Amazon on Horseback attacked by a Tiger. With a fencible bound the animal has leaped upon her horse, and fastened on him with teeth and claws. The Amazon is about to transfix her assailant with her spear. This work, which is on a colossal scale, has been cast in zinc by Geiss from the original model, and bronzed by electro-deposit. In this group the artist has, by an original and powerful effort of invention, placed before our eyes the most critical moment of the action. The whole expression and character of the Amazon are very nobly conceived; the anatomy displays consummate knowledge; great style is shown in the general treatment of the surface, and the details are wrought out with wonderful force and truth. The whole work is full of soul; it seems the full earnest utterance of a true artistic nature.

The great qualities of this work called forth, at the time of its completion, the most unbounded admiration on the part both of artists and friends of art. It was executed in bronze by a public subscription, and now ornaments one side of the staircase of the Royal Museum at Berlin.

The approbation which it has received proves that,

where a work of art possesses striking merits, even considerable faults cannot counteract the favourable impression which is produced. It is one of the fundamental laws of sculpture "in the round," that from many, but at all events from the principal, points of view the outlines of the figures shall be distinct, and at the same time beautiful; and this rule is signally transgressed in the work of Kiss. The forms of the tiger and the horse are blended together in one confused mass, so that the front view is very unsightly, and even in the side views we lose on one side the head of the horse, on the other that of the tiger. Council Medal.

F. DRAKE, of Berlin (273, Prussia, p. 1065). The pedestal of a statue of King Frederick William III. of Prussia, erected by the inhabitants of Berlin as a token of their gratitude for the embellishments which this monarch has bestowed on their Thiergarten (Zoological Gardens). The work exhibited is in plaster, half the size of the original pedestal. In the reliefs with which it is ornamented the sculptor selected subjects which contain allusions to the local destination of his work. Thus he has represented a number of figures, of every age and sex, enjoying themselves in the open air. We see groups of children looking into a bird's nest or feeding the swans, young maidens weaving garlands, old people leading children to the scene of the sports, or contemplating their youthful gambols with an air of calm enjoyment. There is much beautiful feeling in the treatment of this subject: the heads are full of expression, the movements of the figures very spirited, and the different groups are skilfully connected. The composition is executed in a very good style of alto-relievo, the details finished with the greatest care.

On the whole, this work is deserving of the very great and general admiration that has been bestowed upon it. It may however be noted as a defect, that the artist has not throughout preserved the relative proportions of the figures. Prize Medal.

ALBERT WOLFF, of Berlin. A statue in marble of a young maiden holding a lamb in her arms. This figure is entitled by the sculptor "Innocence," and its purity and simplicity of character fully express such an idea. The drapery is throughout treated in a plastic style, and the execution is very careful. Prize Medal. (No. 307, p. 1067.)

T. KAMDE, of Berlin. A Group. A Boy, lightly grasping a swan and looking upwards, holds up his left arm as if to guard himself. The group is designed for a fountain, the water being meant to issue from the beak of the swan.

The figure of the boy is very prettily conceived, and the action very spirited. The whole work is executed with care, and in a good style. Duplicates of this group were exhibited; one in bronze, the property of His Majesty the King of Prussia, the other cast in zinc by Geiss. Honourable Mention. (No. 285, p. 1066. Prize Medal awarded, Class XXII.)

C. MÖLLER, of Berlin. Several bronze casts of animals from models by this artist were exhibited: a Newfoundland Dog, cast by Friebel, of Berlin; a smaller Dog, of the same kind, with a Boy, and a Bulldog with a Girl, by H. Fischer. These works are distinguished by great life and truth. They are very carefully executed, and in a good style. Honourable Mention. (No. 292, p. 1066.)

LUDWIG WICHMANN, a pupil of Gottfried Schadow. A Young Maiden in the act of filling her pitcher with water. Cast in bronze, and tooled, from the model of the original, in the foundry of Count Einsiedel, at Leuchhammer, in Saxony. This figure is distinguished by beauty of proportions, good anatomy, and careful execution. The Jury were, however, precluded from noticing it, because it was not exhibited in the artist's name, but in that of the foundry where it was cast.

##### 2. *Sculpture on a small Scale.*

###### (a.) In Metal.

The Shield of Faith. This work was a present from His Majesty the King of Prussia to His Royal Highness

the Prince of Wales. Though it belongs properly to Class XXIII., and has received a Council Medal from the Jury of that class, it is so exquisitely wrought, and, the design is of so high an order of art, that I feel myself compelled to offer a few remarks on it here. In the execution of this work the talent of several most distinguished artists have been most felicitously combined. The architectural portion of the design is due to the Privy Councillor and Director of Architecture, Stiller. All the groups of figures are modelled from drawings by Cornelius, whose rich and fertile genius has here expressed in truly artistic language the cardinal idea of the Christian Faith, and happily combined with this principal motive, an allusion to the immediate purpose for which the shield was executed.

The designs were modelled in low relief by the sculptor, A. Fischer, in a most masterly manner, and with a true perception of the principles of Plastic Art. The relief were then moulded, and the casts from them finally chased and tooled with consummate skill, by the engraver, A. Mertens.

The figures of the twelve Apostles, which are from the designs of Cornelius, were beautifully cut in onyx by the distinguished gem-engraver, Calandrelli, who has long resided in Berlin; the fine enamel and ornamental work are executed by Klossauer, jeweller to the Prussian Court. The Council Medal awarded to this shield is presented to His Royal Highness the Prince of Wales, as its Exhibitor (p. 110).

J. WAGNER and SONS (840, p. 1006), jewellers to the Court of Berlin. An ornamental piece of plate to serve as a fruit-dish in silver embossed work. This, like the preceding work, belongs in strictness to Class XXIII., in which it has received the Council Medal. I cannot, however, pass over in silence a work which shows to what perfection this class of art has been brought by the silversmiths of Berlin. In the whole design there is great beauty of form, and much invention is displayed in the subjects with which it is decorated. These represent the successive stages in the development of civilization.

The first scene represents the simple characteristics of that primeval age which is still engrossed in supplying the mere physical necessities of life, when hunting, fishing, and the tending of flocks and herds, are the only occupations of man. This forms the pedestal of the vase; round the columns a more advanced civilization is represented by figures, with the symbols of tillage, horticulture, and the vintage. In the reliefs upon the body of the vase, which are still unfinished, we have the characteristics of a still higher stage of social refinement; mining, commerce, navigation, and the arts and sciences generally, are here represented figuratively.

As the apex of the whole composition, we have the genius of light overcoming a snake, designed to symbolize the highest form of civilization, when man has arrived at the government of those worst enemies, his own passions. Both the detached figures and the groups in relief which develop this train of ideas are disposed with admirable judgment about the vase; they are also executed with great knowledge, and a masterly finish of detail.

In the fruit, flowers, and foliage, which form the subordinate ornaments, the combination of a close imitation of nature with a very good style, deserves the greatest praise. It may, however, be noticed as a defect, that the mass of the figure of the genius is somewhat too large, and that his wings appear ill set on, as if not originally united to his body. It is to be regretted that another Berlin artist, equally distinguished for his embossed work, M. Netto, contributed nothing to the Exhibition.

JULIUS FRANZ. (1, Zollverein, 293, p. 1066). Two Victories modelled by this artist, from the figures by Rauch, on a reduced scale, of about two feet in height, cast in bronze, and tooled by Fischer. These works are remarkable for the scrupulous accuracy of their execution.

J. BRAUN, of APTINGEN. Four medallion portraits cast in bronze by this artist deserve praise for the truth of the general conception; but the execution, though always

careful, is occasionally somewhat feeble, and the treatment too picturesque. Honourable Mention. (No. 309, p. 1067.)

#### (b.) Medals.

K. FISCHER, Medallist of Berlin, exhibits nine medals. In the design of these, both obverse and reverse, good taste and feeling for nature are combined with correctness of style in the treatment of low relief, and a very careful and conscientious method of execution.

The medal struck in honour of Alexander von Humboldt, as the author of *Cosmos*, is specially worthy of mention. Prize Medal. (No. 281, p. 1084.)

C. PRUEFFER, Chief Medallist to the Court of Berlin, exhibits 22 medals. These show a very careful execution, but the overcharged character of the forms, which are sometimes too full and heavy, is at variance with the true laws of this branch of art. Honourable Mention. (No. 286, p. 1066.)

The works exhibited by the ROYAL IRON FOUNDRY OF BERLIN fall under Class XXII., and have there been rewarded with a Council Medal; they belong, however, so completely to the Province of Art that they deserve some notice here. The admirable taste shown in the ornaments of these works, and the good style of the sculptures, prove the extensive and abiding influence of the immortal Schinkel in this establishment. Among the works which specially deserve notice are, a large vase inlaid with silver and ornamented with a design by Hesse, chief architect of the Palace, after Thorwaldsen's triumph of Alexander, and two stands ornamented in a similar style with small groups. (No. 271, p. 1064.)

#### B. GRAPHIC REPRESENTATIONS ON PLANE SURFACES.

##### *Designs for Tapestry.*

This kind of work has been more extensively practised and brought to a greater perfection in Berlin than in any other place. Among the different designs of this class, those of M. Grunthal deserve special notice for their general good taste. Honourable Mention. (No. 166, p. 1037.)

##### *Lithochromy.*

WINCKELMANN and SONS, Berlin. The specimens of Lithochromy exhibited by these artists are among the most perfect that have been produced. By the employment of a number of stones for the same impression, a great variety of tints has been obtained, so that the most complicated objects, and particularly architectural ornaments, can be represented with all that refinement of gradation which they present in a perspective view. The most remarkable specimens are the views of the Castle of Orlanda, designed by Schinkel for the Emperor of Russia, and several of the Plates in a magnificent work on Architectural decoration, by M. Lewis Gruner, of London. Considering the excellence of these lithochromes, their price is proportionately moderate, which is an additional merit. Prize Medal. (No. 306, p. 1067.)

#### C. ARCHITECTURE.

##### *Models.*

J. C. BOESCHKE, of Magdeburg. A model of the Cathedral at Magdeburg, of considerable dimensions; also a model of the beautiful fountain at Nuremberg. These works are accurate in their general proportions, and the details are faithfully and carefully worked out. A model for another fountain is very neatly executed, and the design is pretty and original. Prize Medal. (No. 785, p. 1094.)

To this artist the Jury have also made a money award of 30*l.* sterling.

#### II. BAVARIA.

##### A. SCULPTURE AND WORKS OF PLASTIC ART.

##### 1. *Sculpture on a large Scale.*

The Munich school of sculpture owes its importance to SCHWANTHALER, whose untimely death in the flower of his years we have to deplore. The number of highly imaginative designs which the fertile invention of this

artist has drawn from ancient mythology, from the middle ages, and modern times, has justly earned for him a lasting fame. At the Exhibition he was represented only by a small number of his works. Though in the statues of Queen Libussa and of King George Podiebrad of Bohemia, cast by Miller, of Munich, from Schwanthaler's models, the imaginative conception and noble proportions of the figures are well worthy of this great artist, they afford but a very imperfect idea of the whole range and compass of his genius. As they were not exhibited in the name of the artist, they could not enter into competition for a prize.

It is to be regretted that the distinguished sculptor WIELMANN contributed nothing to the Exhibition.

JOHN HALBIG, of Munich. (2 Zolli., 90, p. 1102.) A Colossal Lion, cast in one piece by Miller; part of a group representing Victory in a Chariot drawn by Four Lions, and designed to be placed on the triumphal arch at Munich. The motive of this work is good, but the form is too heavy and clumsy. This overcharged appearance may perhaps be partly explained by supposing it to be calculated for the height at which the figure is to be placed.

J. LEEB, of Munich. A Young Girl looking at a Nest full of young Cupids, which she holds in her hands. This figure shows *naïveté* in its conception, and is carefully executed in marble. Honourable Mention. (Ibid. 89, p. 1102.)

#### 2. Sculpture on a small Scale.

M. HAGEN, of Munich. A large Ivory Cup, on which are sculptured figures of children playing, in the style of Fiamingo; in a very good style, and executed with great care. Honourable Mention. (83, p. 1102.)

### B. GRAPHIC REPRESENTATIONS ON PLANE SURFACES.

#### 1. New Processes of Painting.

J. N. VON FUCHS, Professor in Munich, has invented a new mode of wall-painting, called *stereochromy*, which has many advantages over the fresco method which has been so generally adopted for walls. By the new process, the surface can be retouched to any extent, as in the case of an oil-painting, while it possesses far greater durability, being protected by a varnish from the effect of exposure to the weather. A figure painted by M. Muhr, a pupil of Kaulbach, exhibited as a sample of this process, affords good proof of its merit. Prize Medal. (Ibid. 91, p. 1102.)

#### 2. Enamels on Porcelain and on Metal.

OTTO WUSTLICH, of the Fine Arts Establishment of Schmidt, of Bamberg. A miniature of Charles IX. firing upon the Huguenots, on the night of the Massacre of St. Bartholomew, after a picture by Baron Wappers, of Brussels. This miniature is remarkable for its truth, its force and transparency of colouring, the goodness of its general tone, and its careful execution. Prize Medal. (Ibid. 92, p. 1102.)

#### 3. Painting on Glass.

STEPHEN KELLNER, of Nuremberg. A reduced copy of the celebrated painting by Volkamer, in the Church of St. Laurence at Nuremberg. In this work, which is executed with the greatest care, the colours and every detail of the original picture are faithfully rendered. Prize Medal. (Ibid. 86, p. 1102.)

#### 4. Various Processes of Printing.

FRANK VON KOSSEL, Professor at Munich, exhibits a new mode of multiplying Indian ink and other drawings, by means of copper-plates deposited by galvanic action: the invention is hence called *galvanography*. The process is as follows:—The drawing having been first executed either with encaustic colours or with lithographic chalk, a plate of copper is precipitated upon it by galvanic action. By the contact of the particles of metal with the colours or chalk drawing, the plate receives, during its formation, an actual impression of the delineated surfaces, the lines being indented

on the copper as if by the ordinary process of the burin. The plate, thus engraved by galvanic agency, becomes a matrix capable of yielding other impressions.

F. HANFSTÄNGEL, of the Lithographic Establishment of Munich (Ibid. 85, p. 1102), has exhibited two plates, as samples of this process; the matrix or plate impressed by Galvanography, and the matrix, or impression taken again from this plate. An impression in paper, showing the result, is added. These specimens are remarkable for the force, clearness, and evenness of the print. Honourable Mention.

### III. KINGDOM OF SAXONY.

#### A. SCULPTURE AND WORKS OF PLASTIC ART.

##### Sculpture on a large Scale.

ERNST RIETSCHEL, of Dresden. This distinguished artist, one of the ablest pupils of Rauch, exhibits three works, the varied character of which shows the versatility of his talents. 1. A group of the Virgin, weeping over the body of our Saviour, cast in plaster, from a model executed for His Majesty the King of Prussia. In the figure of our Saviour, anatomical truth is combined with nobleness of form; the countenance has a fine dignified character; its mild transfigured expression proclaims the triumph over the agonies of death. In the Mary, the countenance and the clasped hands reveal the deepest but most resigned sorrow of soul. The drapery of this figure is admirably composed. The execution is fully worthy of the invention shown in this group. 2. The Angel of Christ, a very noble relief in marble. The angel is represented in the form of a graceful youth, floating in the air, with the infant Saviour in his arms; two infant angels attend his course. This group has a peculiar charm from the beauty of the heads and figures, the grace of the action, the suddenness of the movement impressed on the flying drapery, and the masterly yet tender handling of the marble. 3. Love riding on a Panther, whose course he tries to arrest, eagerly grasping his neck with both his hands. This beautiful conception is quite in the spirit of ancient art, and is expressed with great vigour of hand. Prize Medal. (185, p. 1113.)

#### B. GRAPHIC REPRESENTATIONS ON PLANE SURFACES.

##### Enamels on Porcelain.

HEINRICH BUCHER, of Dresden. This artist exhibits a rich collection of miniatures on enamel, of which I will only notice here the copy of the celebrated "Christ with the Tribute-money" of Titian, in the Dresden Gallery, in which the character and deep transparent colouring of the original are admirably rendered. The works of this artist are also remarkable for their very moderate price. Prize Medal. (176, p. 1112.)

GUSTAV WALTHER. The six enamels, after well-known pictures in the Dresden Gallery, exhibited by this artist, are creditable works in this class of art. Honourable Mention. (177, p. 1112.)

### IV. DUCHY OF SAXE-GOTHA.

F. E. HENNINGER and Co. A view of the Wetterhorn, in Switzerland, painted on china. This work has considerable merit. Honourable Mention. (772, p. 1093.)

### V. WURTEMBERG.

#### A. SCULPTURE AND WORKS OF PLASTIC ART.

##### Sculpture on a large Scale.

L. VON HOFER, sculptor, of Stuttgart. Casts in plaster from two Arabian thorough-bred horses, in the stud of the King of Wurtemberg. They are represented rearing; each is held down by a naked attendant. The original groups are executed in marble, and are placed in the garden of the palace at Wurtemberg. Good judges of horses are of opinion that in these works of Hofer the characteristics of a particular breed of horses are very accurately given. (105, p. 1119.)

T. WAGNER, of Stuttgart. The Penitent Magdalen, a figure in marble. This work is characterised by truth of

expression and careful execution, but the drapery is drawn over the ridge of the leg so as to intercept its outline, in a manner not consistent with the laws of Plastic Art. Honourable Mention. (108, p. 1120.)

#### VI. ELECTORATE OF HESSE CASSEL.

C. M. WIEHAUPT SONS, jewellers, of Hanau. A chess-board in gold and silver. The sides of the board are richly ornamented with festoons of flowers, small animals, birds, &c., in admirable taste, and executed in enamel with the utmost delicacy and minuteness. The pieces are finished with the same extraordinary richness and refinement of ornament. The kings are portraits of the two great antagonist monarchs of the early part of the sixteenth century, the Emperor Charles V. and Francis I. of France; the queens represent Margaret of Parma, the daughter of the Emperor, and Margaret of Valois, the sister of Francis. The work properly belongs to Class XXIII., and has been rewarded there with a Council Medal; but from its great merit as a work of art, I have felt it my duty to notice it here. (412, p. 1073.)

#### VII. GRAND DUCHY OF HESSE DARMSTADT.

C. W. HAYL, ivory-carver in Darmstadt. A large goblet, on which is carved in relief the battle of Arminius, after a design by Lindenschmidt. This work is entitled to great credit, from the extraordinary finish of the execution. The introduction, however, of several planes in the relief, and the violent foreshortenings, give to the whole composition a picturesque character at variance with the principles of Plastic Art, whilst in some of the foreshortenings, particularly that of a horse, there is a positive want of drawing. Honourable Mention. (78, p. 1129.)

#### VIII. OLDENBURG.

##### *Architectural Models.*

J. H. CASSEBOHM, of Oldenburg (1, p. 1135). A model of the castle of Oldenburg, correct in its general proportions, and carefully finished, though in the details of its architecture the character of the several members is not accurately rendered. Honourable Mention.

#### FRANCE.

The French have been distinguished for many generations by the great encouragement they have bestowed, as a nation, on the Fine Arts. The French Government, under every change in its outward form, has not failed to regard Art as one of the most important instruments of civilization; and recognising its great and beneficial influence on the manufactures of the country, has, by the most liberal grants, placed it in a peculiar manner under the protection of the State. Millions of the national revenue have, in consequence, been devoted to the erection of great public edifices, and to the purchase of the best works of native artists. Establishments like that of the Gobelins Tapestry, and the Sèvres China Manufactory, or the Ecole des Arts et des M<sup>ét</sup>iers, have been not only founded but maintained by the State at an immense cost. In consequence of this encouragement on the part of the Government, the French school of Art has been most fertile in its productions; many branches of art have been brought to a rare degree of perfection, and the diffusion of an improved taste has exercised a most beneficial influence on a variety of trades and handicrafts. By these means Paris has become an universal market, not only for the Fine Arts themselves, but for most of the branches of industry to which they are in any way allied.

#### A. SCULPTURE AND WORKS OF PLASTIC ART.

##### *1. Sculpture on a large Scale.*

During the first years of the French Revolution commencing with 1789 onwards, a reaction against the style of art, previously esteemed, was brought about by the painter David. This movement was followed up by the sculptors Chaudet and Bosio, who devoted themselves to

a diligent but cold imitation of the master-pieces of ancient Roman sculpture.

At a later period the style of many sculptors was affected by the passing but dangerous influence of Canova. After this a very strong Realistic tendency prevailed, and at a later period still the influence of the best Greek Art has been felt in the French as in other modern schools. This tendency on the one hand to revert to the pure Greek models, and the Realistic tendency on the other hand, are the two chief movements which characterise the modern French school. Both styles, and the Realistic especially, were represented in the Exhibition by a number of remarkable works; but it is to be regretted that many distinguished sculptors, such as Rude, Duret, Jaley, Simard, Dunon, Ramay, the Comte Nieuwerkerke, the Baron de Triqueti, and David of Angers, did not contribute any work.

J. PRADIER, Member of the Institute; Phryne (1407, p. 1243). In this youthful female figure the beauty of feature, the subtle refinement of form, and the sprightly grace of the attitude, alike correspond with the name of the celebrated *Hagira* which M. Pradier has given to his work. The careful chiselling of the surface, and the general breadth of the treatment, show that the sculptor has not studied the master-pieces of Greek Art in vain. On the other hand, for so young and beautiful a form, there is rather too large a development of the body; the drapery in front falls too perpendicularly, so as to cut the figure in two, and its monotonous parallel lines want movement; whilst behind, the mass of folds assumes the unsightly form of a triangle. The idea of ornamenting the hem of the garment with a red "Meander" border is not happy, for, in contrast with the colourless uniformity of the rest of the marble, such an ornament appears crude and misplaced.

This artist also exhibits a group (*Ibid.*), cast in bronze, of a crouching Venus conversing with a Cupid, who leans against her. There is great originality in the conception of this group, and the artist has been for the most part very happy in the selection and treatment of the forms. The execution, however, is not equally careful throughout. Council Medal for the Phryne.

AUGUSTE DEBAY, of Paris. "Le Premier Berceau." This name is given by the sculptor to a figure of Eve, seated, with her hands clasped over one knee, and supporting in her lap her sleeping infants, Cain and Abel. In the form and attitude of Eve there is great beauty, truth, and refinement of feeling, and the countenance admirably expresses the tenderness of a mother. The treatment of the figure, however, is rather too picturesque in character; the general motive is somewhat strained and violent; the forms of the children are not happily composed; and there is great want of style in the hair of Eve, which is gathered together behind in a somewhat clumsy mass. Prize Medal. (45, France, p. 1173; and see Illustration.)

E. L. LEQUESNE, of Paris (Main Avenue East). A Satyr, cast in bronze, represented after the manner of the ancients, dancing on a wine-skin, in a state of joyous drunkenness. In this figure the character of the head, and of the strong, hard muscles, quite correspond with the general Satyr type created by the imagination of the ancient artist. The motion is easy and natural, and the carefulness of the execution is maintained throughout. Prize Medal.

A. ETEX (1215, Main Avenue, East, p. 1236). Of the three groups exhibited by this artist the most agreeable is that in marble of Hero and Leander, standing mournfully beside each other.

Cain and his Family. The characteristics of a base, abandoned nature are admirably expressed in the countenance and coarse clumsy limbs of Cain, which are very carefully studied from the life; in plaster.

The allegorical group (in plaster) of the City of Paris imploring heaven to take away the plague of Cholera, is a less agreeable work, on account of the manner in which the subject is treated. The City is represented as a seated female figure, with an old man and a youth expiring of the pestilence, one on each side. In these figures the moment of death is expressed with wonderful truth.

This work is a specimen of that class of art which, seeking to act on the feelings through the representation of mere physical suffering, may be called the Revolting, a style which appears to be little cultivated or admired, except in France.

These works all show great knowledge on the part of the sculptor. \*Prize Medal.

J. CLERMONT, of Besançon (1709, p. 1258). A Bacchante, who is rolling on the ground in a state of drunken excitement. This figure is remarkable for the masterly chiselling of the marble, the great knowledge of anatomy, and the beauty of the countenance; but these excellences do not sufficiently excuse the sculptor for having in this work allowed his imagination to be perverted and degraded to the service of a low sensuality. Moreover, the treatment of the hair is at variance with the principles of a good style, and there is a great want of taste in the arrangement of the folds of the drapery. The Jury considered this subject to be of an objectionable character, but have made Honourable Mention of the excellences pointed out above.

J. M. RAMUS (1419, p. 1244). Cephalus, tenderly supporting in his arms the dying Procris. This group is, in its leading lines, very happily composed, and shows in the forms much knowledge of nature; but the modelling is not in a sufficiently large style, and is not sustained throughout. Prize Medal.

M. PASCAL, of Paris (1660, p. 1266). A group, in marble, of a monk holding out a crucifix, which a little boy is eagerly kissing; a little girl stands by, steadfastly gazing at him. There is a charming feeling for nature in the expression of the heads; but the general composition, and particularly the drapery, may be termed rather Picturesque than Plastic in style, and, with the exception of the nude forms, the whole is only sketched out in the marble. Honourable Mention.

C. CORDIER, of Paris (460, p. 1200). The head of a negro, cast in bronze, by this artist, is a true example of characteristic portraiture; the conception is full of life, the execution most masterly, and well sustained throughout. Honourable Mention.

JEAN DEBAY, of Paris (573). A group of a young hunter, rushing forward to despatch a stag, pulled down by a hound. The hunter is naked, and the whole type is conceived in the spirit of ancient art. This group, from the natural manner of the action, forms a very pleasing composition. The hunter and the animals are modelled with great knowledge, and a good style is shown in the execution. Prize Medal. (Main Avenue East.)

FRATIN, of Paris (1235, p. 1236). This artist, the most celebrated sculptor of animals in France at the present day, contributes to the Exhibition two eagles with a wild goat, which they have slain, a greyhound, another hound, life size, and several animals on a smaller scale, all in bronze. These works are fully worthy of the artist's reputation. The general conception is most spirited, the details of nature are most faithfully rendered, and the treatment throughout, particularly of the plumage and the skins, is most careful, and in a very good style. Prize Medal.

A. LACHESNE, of Paris (573, p. 1205). Two groups, in plaster, of dogs and children. In one is represented a dog rescuing a child from the attack of a snake; in the other, which forms the sequel to the preceding, the snake lying dead, the dog exhausted, and the child full of joy and gratitude for its rescue. These works are very remarkable, from the extraordinary truth and spirit in the modelling and expression of the dog's head. The form of the child, on the contrary, is too swollen and coarse; and in the representation of the shaggy coat of the dog, the execution is too minute, and not in a legitimate style.

In another group, a woman is lying on the ground asleep, or dead. Above her hovers an eagle, about to carry off her child. Here, again, the treatment of the bird is very masterly, and by far the best part of the work. Prize Medal.

BONNASSIEUX, of Paris (64, p. 1174). A group, in bronze, representing Cupid, as a youthful figure, clipping the tips of his own wings; standing beside him is a dog. The form of the Cupid is very graceful, but the

head is too directly copied from the antique type. The execution is very unequal; the dog, in particular, is very carelessly modelled. Honourable Mention.

A. G. FOURDROIS (1231, p. 1236). A large sideboard, ornamented with figures and dogs, on a large scale, carved in wood. In these the artist has shown such a happy invention, and such power of execution, that this work must be considered to rank as sculpture, and cannot be passed without a notice here, although it belongs to Class XXVI., and has been rewarded in that Class with a Conseil Medal.

It may not here be out of place, after this notice of the works of English, French, and German artists, to compare briefly the intellectual tendencies which these three great nations severally manifest in their schools of sculpture.

In each of these schools, though in the case of England only within the present generation, Greek sculpture has been acknowledged as the standard by which all creations of ideal art must be judged.

The English school has, on the one hand, sought to attain the qualities of grace and loveliness of form; more recently this school has also aimed at strength and manliness of character, chiefly in strong action. The French have principally turned their attention to the representation of sensual beauty, to the tender feelings called forth by the relations between the sexes, to other forms of the Sentimental, or to the style which may be designated as the Revolting.

Finally, German art has been especially devoted to the representation of deep religious feeling, or of calm, idyllic scenes; it has also endeavoured to treat the most stirring moments of real life in a grand and impressive manner.

Of the works contributed to the Exhibition by these three nations, those most distinguished in the foregoing notices may be fairly cited in proof of the success with which each school has followed out its peculiar bent.

## 2. Sculpture on a small Scale.

### (a.) In Metal.

Among the French works in silver analogous in style to the productions of Veche mentioned before, is a service of plate in the taste of the sixteenth century, executed by FEUCHER, and exhibited by FROMENT MEURICE (1720, p. 1258). This work is the property of the Duke de Luynes. A Prize Medal has been awarded to it in Class XXIII.

The French department of the Exhibition displayed an extraordinary abundance of small groups of human figures and animals, and other small bronzes.

Many of these are from the designs of distinguished artists, among whom may be noticed PASCAL (1660, p. 1266), who contributes a charming group of three children with bunches of grapes, designed for a dinner service, FRATIN (1235, p. 1236), and also MÉNÉ (630, p. 1208), who works in the same style as Fratin.

In other bronzes we find copies from the works of celebrated sculptors, such as Rude, Duvet, and Pradier; these are often very well executed. A Daphnis and Glòce, after Gaylard, deserves special notice. But a great number of these specimens do not rise above the level of very pretty ornaments, executed without much style, and a notice of them here would occupy too much space. As the French medallists sent no specimen of their works to the Exhibition, no mention has been made of them in this Report, though the skill of many of these artists is very generally acknowledged.

### (b.) Sculpture in Ivory.

L. LAUTZ, of Paris (295, p. 1199). A great cup, ornamented with reliefs, representing a battle scene. The composition of these is too picturesque, and not treated in accordance with the principles of Plastic Art; but it must be admitted, that this is a work of extraordinary merit in the drawing and execution. Honourable Mention.

### (c.) Sculpture in Wood.

M. J. LIÉNARD, of Paris (1326, p. 1339). A Boar-hunt, carved on a clock-case. Although this work is treated in a manner utterly at variance with the principles of Plastic Art, it is nevertheless a perfect masterpiece for truth of

imitation, drawing, and execution. This artist has received from the Jury of Class XXVI. the Council Medal, especially for a richly ornamented clock-case, but his merits have been also acknowledged in Class XXX. by the award of a Prize Medal.

The process invented by M<sup>r</sup>. A. COLLAS (1709, p. 1958), for reducing sculpture by machinery, which has been already referred to in the opening of this Report, must be noticed here. Prize Medal.

## B. GRAPHIC REPRESENTATIONS ON PLANE SURFACES.

### 1. New Processes of Painting.

It is now some years since a process of painting on lava has been perfected at Paris, chiefly by the exertions of the celebrated architect Hittorf. This kind of painting is as durable as that on porcelain, and is burnt in the same manner. A copy of Raphael's picture in the Louvre, called *La Belle Jardinière*, executed by J. DEVERS (818, p. 1219), was contributed to the Exhibition as a specimen of this process. It is very carefully and faithfully copied, but the flesh is rather heavy and deficient in transparency. Prize Medal.

### 2. Enamels on Porcelain and on Metal.

Nowhere in Europe has the art of painting in enamel been carried to such perfection as in the celebrated manufactory of Sèvres. The works of this establishment are distinguished not only by the extent of the enamelled surfaces, but also by the perfection with which facsimiles of celebrated pictures are executed; the drawing and colouring of the original being preserved with marvellous truth. The Jury has therefore awarded a Prize Medal to M. DIETHELM (1369, p. 1241), as the Director of an establishment where such great results have been attained. Although it is to be regretted that the celebrated Constantine contributed no specimens of his works, the Exhibition contained a great number of paintings of the greatest merit.

Madame A. DUCLOSSEAU, of Paris (1369, p. 1241). This most distinguished artist, whose recent decease I regret here to announce, contributed masterly copies of the following pictures in the Louvre:—*a.* *La Vierge au Linge*, by Raphael; *b.* The portrait of Vandyke, by his own hand; *c.* A portrait of a male personage, recently ascertained to be a masterpiece of Johann von Calcar; *d.* The portrait of Her Majesty Queen Victoria, after Winterhalter (96, p. 109).

JACOBUS, of Paris (271, p. 1189). *A.* Flower-piece, after Jan Van Huysum, by this artist, is a perfect masterpiece. Another flower-piece, after Von Spandonck, has also great merit. Prize Medal.

A. BÉRANGER, of Paris (1369, p. 1241). The copy of a Portrait by Rubens, in the Louvre, and one of His Royal Highness Prince Albert, after a portrait by Winterhalter (97, p. 109). Prize Medal.

Madame P. LAURENT, of Paris (1369, p. 1241). Three remarkable enamels on copper, two of which were after Raphael, the other a Venus, were exhibited by this skilful artist. Prize Medal.

MADAME JACOTOT, of Paris (1369, p. 1241). This celebrated artist, now far advanced in years, contributed a copy of the portrait of Raphael, after the picture in the Portrait Gallery at Florence. The original is rendered with great truth. Prize Medal.

BOYER, of Paris (1369, p. 1241). St. John enamelled on iron, of great merit. Prize Medal.

SCHILL, of Paris (1369, p. 1241). Paintings on two porcelain vases, and on a table, very masterly in execution. Prize Medal.

Mme. TUNCAN (1804A, p. 1248). A Holy Family, after Raphael, of remarkable merit. Honourable mention.

MARIE-DE CHASSAGNE (1554, p. 1251). A copy of the celebrated picture, by Horace Vernet, the meeting of Michael Angelo and Raphael, exhibited by Boyer, of Paris. In this work every detail of the original is faithfully rendered. Honourable Mention.

HAYOT (1369, p. 1241). A casket of metal with figures, in enamel. This work there is a successful revival of the process for which the Limoges school of enamel was so distinguished in the sixteenth century. Prize Medal.

### 3. Painting on Glass.

#### (a.) Ecclesiastical Style.

ALFRED GERENTÉ, of Paris (231, p. 1187). A window in the style of the twelfth century. In the figures, which represent the history of Sampson, and particularly in the ornaments, the style of the period is rendered with extraordinary mastery and truth. Prize Medal.

A. LUGON, of Paris (565, p. 1205). In some windows in the taste of the thirteenth, fifteenth, and sixteenth centuries, the artist has given the style of each period with great knowledge and care. Honourable Mention.

#### (b.) Pictorial Style.

MARÉCHAL and GUYON, of Metz (329, p. 1193). The sick of the plague receiving the Eucharist. The characteristics of a picture, keeping, truth of drawing, and expression, are very successfully rendered, and the advantages of a material admitting of such force and transparency of colours as glass, are turned to the best account. These excellences are also exhibited in a very high degree in a female portrait. Prize Medal.

### 4. Inlaid Works in Metal.

J. ROUCOU (1689, p. 1257). Different kinds of arms, such as pistols, inlaid with gold and silver ornaments, in very refined taste, and executed with rare mastery of hand. Prize Medal.

### 5. Designs.

#### (a.) For Woven and Printed Fabrics.

E. LAROCHE (291, p. 1190). A volume containing many designs for shawls, barèges, and muslins. The patterns show great taste and adaptation to the materials, and are admirably executed. Prize Medal.

BERRUS, BROTHERS (55, p. 1174). This establishment is one of the largest manufactories in France, and the designs for shawls which it exhibits have most remarkable merit both in regard to the patterns and the colours. The introduction of small landscapes, however, in some of these designs, is an infringement on the principle which has been already stated in this Report, that the pattern must not disturb the idea of flatness in the surface. Prize Medal.

A. COUDER (1566, p. 1251). Designs for shawls and other stuffs. The execution of all these is very masterly, and those for shawls are in a very good taste. The others are very deficient in this quality. Prize Medal.

J. CHEBEAUX (1146, p. 1233). Some of the designs for cotton and calico by this artist show a very happy invention, and are executed with very great skill. In his designs for other materials the execution is equally skilful, though there is a want of taste. Prize Medal.

The following artists deserve notice both for the taste and execution of their designs:—

F. DIDIER (820, p. 1219) and MEYNER (638, p. 1208), both of Paris, in their designs for shawls; NAGE and Co. (625, p. 1207), and BRAUN (72, p. 1175), in their designs for cottons; E. PICARD (347, p. 1194), in his designs for calicoes; J. H. MÉRAUX (631, p. 1208), in his designs for lace. All these have obtained Honourable Mention, and the last a Prize Medal. (Class XIX.)

#### (b.) For Painted Windows.

N. A. GALIMARD, of Paris (228, p. 1187). In these designs the artist has been very successful in representing figures according to nature, and under the conditions of Architectonic style. Honourable Mention.

### 6. The Government Manufactory of Gobelin and Beauvais Tapestry (1367-68, p. 1241).

This celebrated establishment, which has produced such a number of copies of celebrated pictures, contributed two specimens of tapestry to the Exhibition. One of these is a copy of Raphael's fresco in the Farnesina, in which Psyche is represented carried through the air by Genii, and carrying the vessel which, at the behest of Venus, she has brought from the nether world. The other piece of tapestry is a copy of the celebrated picture by Horace Vernet, representing All Pasha looking on at

the massacre of the Mamelukes, who, at his command, were shot by his soldiers. In both these copies not only is the general effect of the original picture faithfully rendered, but the intension and feeling of the artist are preserved in a degree which could hardly be expected, when we remember that the process by which these copies are executed is a purely mechanical one. (Council Medal, jointly with Class XIX.)

### 7. Different kinds of Printing, such as Lithography and Lithochromy.

R. J. LEMERCIER, of Paris (558, p. 1205). This artist exhibits a number of lithographs, which from their force, depth of shadow, and fine gradation of tints and general tone, must rank among the most remarkable specimens of this art which have yet been produced. Prize Medal.

#### Lithochromy.

ENGELMANN (192, p. 1183). This celebrated establishment has well sustained its reputation by the series of admirably executed specimens of lithochromy, which it exhibits.

#### Printing in Colours from Wood Blocks.

G. SILBERMANN, of Strasburg (374, p. 1194), is the inventor of this mode of printing, and the coloured impressions from wood blocks exhibited by this artist are in every way remarkable. Prize Medal.

Although the facsimiles of the illuminations and initial letters of ancient MSS., exhibited by the Count AUBERT DE BASTARD (1717, p. 1258), are worthy of the greatest admiration on account of the extraordinary truth and skill with which they are executed, yet these works ought hardly to have been admitted into the Exhibition, as most of them were finished by hand.

Here ought not to be omitted the name of Mr. C. E. CLERGOT, of Paris (799, p. 1219), for his designs generally, and his exhibited works in ornament. Prize Medal.

## AUSTRIA.

### A. SCULPTURE AND WORKS OF PLASTIC ART.

#### 1. Sculpture on a large Scale.

The only parts of the Austrian dominions from which large works of sculpture have been contributed are the Italian provinces, and especially Milan. In these works may be remarked a strong tendency to Realism.

G. STRAZZA, of Milan (713, p. 1043). Ishmael. This name is given by the artist to the figure of a boy lying on the earth, expiring of thirst. The dry and meagre forms, characteristic of this period of boyhood, are rendered with a truth which borders on the repulsive. The execution is masterly. The head, which is evidently studied from some type quite foreign to the subject of this work, conveys an expression of exhaustion which is almost painful. In the representation of this subject by painters, an angel bringing help to Ishmael is always introduced, and from the absence of this figure the general impression produced by the work of M. Strazza is most painful, and unrelieved by any mitigating circumstance. Prize Medal.

R. MONTI, of Milan (746, p. 1044). Eve after the Fall, arrived at the full consciousness of her crime. This figure, which is in marble, is appropriately conceived; the motive is pleasing, and the execution is very careful. It has consequently obtained from the Jury a Prize Medal.

This figure was not so generally admired by the public as another work by the same artist, representing a girl kneeling, with a thin veil thrown over her face, but the preference was not rightly given. Though extraordinary skill is shown in the execution of this veiled figure, true judges of art must always esteem it a mere specimen of dexterous workmanship, and they cannot but think, that in thus deviating from the undisguised representation of the human features, the artist has renounced the only means by which beauty, character, and expression can be distinctly rendered in the countenance.

A. GALLI, of Milan (711, p. 1043). A youthful female figure, to which the sculptor has given the name of Susanna. The forms are pleasing and the movement pretty, and the work is very carefully executed in marble. But without the addition of the two Elders it would be impossible to recognize the subject. Prize Medal.

A. SANGUIGNO, of Milan (722, p. 1043). A colossal bust, in marble, of the poet, Vincenzio Monti; the conception of this work is very spirited, and the execution most masterly and careful. Honourable Mention.

I. FRACCAROLI, of Verona (710, p. 1043). David in the act of slinging the stone at Goliath. The motive of this figure is very spirited, but a little strained; the features have a noble expression. The youthful character of the head does not accord with the rest of the body, in which the muscles are too strongly marked. This artist also exhibits a statue of Achilles wounded in the heel. Prize Medal.

L. MARCHESI, of Milan (716, p. 1043). Eurydice. In this figure, which is of marble, there is something very pleasing in the general expression, but the execution of the details leaves much to be desired. Honourable Mention.

### B. GRAPHIC DELINEATIONS ON PLANE SURFACES.

#### Enamel Painting.

NICO (615, p. 1038). Painter in the Imperial Porcelain Manufactory of Vienna. The Holy Family, after a picture in the Imperial Gallery at Vienna, attributed to Raphael. In this copy the forms are rendered with tolerable fidelity, but the pale tone of the flesh very inadequately represents the warm powerful colouring of the original picture. The artist has succeeded better in a flower piece, in which the colours of the flowers are most carefully rendered in all their original truth and force. Honourable Mention.

#### Painting on Glass.

G. BERTINI, of Milan (737, p. 1044). A design, in the centre of which the poet Dante is represented seated: on his right hand is Matilda, on his left Beatrice. This picture is set in an architectural frame, in the Gothic style. It is very seldom that we find in glass painting so much artistic expression as has been attained in the figures, more especially the female figures, in this work; and their effect is heightened by the remarkable harmony of the deep soft colouring. But, on the other hand, the architectural frame is utterly at variance with the taste and principles of construction in Gothic architecture, and two great black spaces, in the upper part of the picture, have a very disagreeable effect, from their contrast to the rest of the design, which is meant to produce the impression of a picture. From the arbitrary mixture of the Architectonic and Pictorial systems of glass-painting in this work, its effect as a whole cannot be agreeable to the best judges. Prize Medal.

P. BAGATTI-VALESCCHI, of Milan (616, p. 1038). A painting on glass, representing Lucia Mondella, the heroine of Manzoni's celebrated romance, the "Promessi Sposi." As a specimen of genre painting on glass, this work is very remarkable in drawing, colour, general effect, and manner of execution. Honourable Mention.

#### Lithochromy.

THE IMPERIAL PRINTING OFFICE OF VIENNA (369, pp. 1025-28). The work, "Paradisus Vindobonensis," exhibited by this establishment, contains a great number of lithographs of flowers and plants, which are represented in form, colour, and every other respect, with remarkable truth to nature. Prize Medal.

## ITALY.

The Italian sculpture of the present day cannot be described as possessing any one general character; some of the modern school still imitate the style of Canova, as for instance, Benaimé; others again, like Tenerani, follow rather in the steps of Thorwaldsen; others, like Marochetti, have devoted themselves, in conception and representation, to the romantic school.

## SARDINIA.

**D. W. BARON MAROCHETTI** (76, Outside West, p. 118). This artist, though educated in France, and at present settled in England, is by birth a subject of the King of Sardinia, so that it is most proper to place him under the latter country. He exhibited a colossal equestrian figure of Richard Cœur de Lion, modelled in plaster, and bronzed, and placed in the open air at the west end of the building. Richard is represented in mail, mounted on a fine charger. The frank and noble conception of the chivalrous king, holding up his sword in his right hand, and the spirited action of the horse, make this a very remarkable work. In some parts, however, of the modelling of the horse there is a want of knowledge. The hind quarter and hind legs, especially, have rather a lame appearance, and the execution of this part of the horse is very imperfect; the disposition of the veins particularly is altogether arbitrary. The artist has, however, exhibited within the building a horse's head, finished in detail, and from this sample we may see that certain further modelling may much improve the general effect. Council Medal.

**NICOLAS LENDY**, engraver at the Royal Mint of Turin, (60, p. 1304). This artist exhibited nine microscopic dies of coins as examples of a process invented by himself, by which dies may be reduced with extraordinary accuracy to a scale, the minuteness of which is hardly credible.

Though the inscription and design on these dies can only be discerned by the aid of a very powerful microscope, the details are rendered with extreme fineness.

## TUSCANY.

Among the works exhibited by this country are a Bacchus by **NERCINI** (115, p. 1298), a Psyche by **FREGIA** (117, p. 1299), and a Dying Gladiator by **COSTORI**, all in marble. These three works, though not without merit, must be reckoned of very subordinate rank, when we remember the great celebrity of Tuscany in art; they have, however, received Honourable Mention.

## Sculpture on a small Scale.

A wardrobe and jewel-casket, by **BARBETTI**, of Siena (91, p. 1298), are, both in taste and execution, most remarkable examples of the rich style of decorative carving of the sixteenth century, commonly known as the cinque cento style; though these works, therefore, have already obtained a Prize Médal, in Class XXVI., they cannot pass unnoticed here.

**L. HIGOTTI** (95, p. 1298). The ornament, carved in ivory by this artist show a good taste, and are carefully executed. Honourable Mention.

## GRAPHIC DELINEATIONS ON PLANE SURFACES.

## Inlaid Works in Pietra Dura.

This kind of art has been carried to great perfection in Tuscany, and its cultivation there for so long a period has supplied most of the palaces in Europe with works in Pietra Dura, which rank among the finest examples of decorative furniture.

No first-rate specimen was contributed to the Exhibition; there are, however, several table-tops by **G. BRANCHINI** (119, p. 1299), which must be considered very remarkable works, on account of the taste displayed in the composition of the flowers and leaves, and the care bestowed on the execution. They therefore received a Prize Médal from the Jury of Class XXX., as well as from that of Class XXVII.

## ROME.

## Sculpture on a large Scale.

It is to be regretted that the most distinguished Artists of Rome, and especially Tenerani, the greatest living sculptor of Italy, sent no specimens of their works to the Exhibition.

Two groups, of a little girl with a dog, by **G. M. BEN-**

**ZONI** (16, p. 1286), may be noticed here. In one of these the child is represented drawing a thorn out of the dog's foot; in the other the dog, after having killed a snake which was threatening an attack, seeks to awaken the child thus rescued. The motive of these works is attractive, and they are carefully executed in marble, but they are by no means of sufficient importance to be considered adequate representations of the modern school of sculpture of such a city as Rome. Prize Médal.

**I. ENOMI**, of Hungary (p. 848). A group in marble, representing an incident in the myth of the Argonauts and Amazons. This composition is not happy in its lines, and the figures are somewhat deficient in character, but the execution is careful. Though this artist is not an Italian by birth, yet, as he received his artistic education in Italy, this seems to be the most proper place for the notice of his work. Honourable Mention.

## Cameos.

Fair specimens of this kind of art, which has been so much esteemed at Rome, and cultivated with such great results, have been contributed to the Exhibition in a series of cameos, cut on shells, by the well-known gem-engraver Saulini. The greater part of these are copied from the most attractive works of the celebrated English sculptor Gibson. Honourable Mention. (24, p. 1286-87.)

## Mosaics.

This class of art, in which the artists of Rome have so long maintained the first rank, and produced such wonderful results, was far more abundantly and adequately represented in the Exhibition than the other branches of Roman art which we have already noticed.

**BARBERI** (15, p. 1286). A table-top, on which are represented views of celebrated cities in Italy, such as Rome, Florence, Venice, Pisa, &c. These views are arranged in a border round the table; in the central area thus encircled is a representation of the sky. Both in the choice of the subjects of the views, and in the force and refinement of execution, this work is among the most remarkable specimens of mosaic that have been produced. There is, however, rather a want of taste in the form and colour of the ornaments which compose the outermost border of the design. Although this work has been distinguished by a Council Médal in Class XXVII., I have thought it necessary to notice it here, on account of its remarkable character as a work of art.

The Mosaic Manufactory at St. Peter's exhibits two excellent specimens by **CASTELLINI** (23, p. 1286). One of these, representing a colossal three-quarter portrait of Pope Boniface II., is an example of the ancient style of mosaic, intended for the decoration of churches, and for distant effect. The other specimen is a half-length portrait of St. John, by **Guercino**. This work shows with what wonderful precision a picture, executed in a period when technical knowledge had been fully attained, may be reproduced in mosaic, with a perfect rendering of the forms, colouring, and general effect.

**B. BOSCHETTI** (17, p. 1286), of Rome, exhibits two mosaics for table-tops, remarkable for their taste and execution; these have obtained Honourable Mention. Awarded Prize Médal.

Three Roman artists in mosaic, **DOMINICO MOGLIA** (21, awarded Honourable Mention, Class XXVII.), the **CAVALIERE LUIGI MOGLIA** (30, awarded Prize Médal, Class XXVII.), and **ROCCHIGIANI** (22, all these at p. 1286), have severally contributed to the Exhibition views of the temples of Paestum, this subject being a favourite one among the Roman mosaicists. These views are executed on a considerable scale. All these artists deserve praise for the truth and careful execution displayed in their works, but the mosaic of Rocchigiani is distinguished from the rest by the force of the effect, and depth and warmth of the colouring. An Honourable Mention has been bestowed on these three artists.

## -BELGIUM.

In this country, notwithstanding its moderate size, there is so general a diffusion of talent and feeling for

the Fine Arts that they have been more freely developed here than has been the case in other countries far greater in extent of territory. Hence, within the last twenty-five years, side by side with the flourishing school of painting in Belgium, has grown up a school of sculptors, among whom are many distinguished names. In this school of sculpture a tendency to the picturesque, which is in conformity with the whole bent of the nation in art, manifests itself in the general character of the composition, and in a peculiar treatment of the surfaces, in which there is always a certain roundness and fulness, and sometimes an exaggerated development. In many ideal subjects this treatment has a very attractive effect, but in some of the works of Belgian sculptors the want of a proper feeling for bony structure in the representation of the figure, and the affectation of the motive, show that the style of Canova has exercised an unfavourable influence on this school. In portraiture the sculptors of Belgium have shown great ability; in this branch of art the whole idealistic tendency of the national mind has found free scope.

Nearly all the distinguished sculptors of this school sent works to the Exhibition, though in some cases it can hardly be thought that the merits of the sculptor were adequately represented by the specimens he contributed.

#### A. SCULPTURE AND WORKS OF PLASTIC ART.

##### *Sculpture on a large Scale.*

E. SIMONIS (464, p. 1166). A colossal figure of Godfrey of Bouillon on horseback, raising the banner with which he led the Crusaders to the Holy Land. Cast in plaster from the original in bronze, which is placed in the Place Royale at Brussels.

In this work the expression of the head is full of life and animation, the action very emphatic, the execution very careful. To compensate for the optical diminution which causes statues placed in the open air to appear meagre and deficient in mass, the artist has in this group exaggerated the forms both of the warrior and the horse. This departure from nature has perhaps been carried too far, and the principles of Plastic Art have been thus lost sight of in the treatment of the surfaces. It may also be remarked that in the side view the form of the horse presents two lines which are too parallel, and by no means happy.

In his group representing Truth trampling on Falsehood, the same artist has shown power in the representation of delicate feminine forms, and the work is carefully executed. The subject, however, is not indicated with sufficient clearness. Two figures of boys, one of whom is crying over his broken drum, prove that M. Simonis has also been successful in that class of subjects called "genre," and which are altogether treated in a realistic manner. Prize Medal.

C. A. FRAIKIN, of Schaerbeck, near Brussels (465, p. 1166). A figure of Psyche moving lightly forward, and bearing a Cupid on her shoulders. The motive of this figure is spirited, the forms are expressed with great tenderness, and the group presents attractions from several points of view. There is, however, in the movement of the head of Psyche something affected, and in the style of Canova. Prize Medal. (465, p. 213.)

G. GARRÉ, of Schaerbeck, near Brussels (466, p. 1166). A group, in which the power of beauty over savage nature is allegorically represented by a lion, who is allowing his claws to be cut by a pretty undraped female figure. This work, of which a cast is exhibited in plaster, is very carefully executed as a whole; the forms of the female figure are very pleasing, though the treatment is rather too soft.

The bust of His Majesty the King of the Belgians, exhibited by the same artist, is very spirited, and is carefully executed. Prize Medal. (466, p. 213.)

J. TUNALINCKX, of Malines (466, p. 1165). A figure, in marble, representing the celebrated Giotto when a boy, looking at his first drawing with an expression of joy. The conception of this work is very spirited, and it is carefully executed. Prize Medal.

C. GEERTS, of Louvain (450, p. 1165). This artist, the most distinguished for wood-carving in Belgium, executed the carvings for the new stalls in Antwerp Cathedral. His chief contribution to the Exhibition is a "Coronation of the Virgin," executed in wood. In this work the artist shows a great knowledge of the Gothic style in the motive of the figures, the expression of the heads, and the manner in which the folds of the drapery are disposed. There is, however, somewhat too much of systematic uniformity in the character of the heads and drapery. Prize Medal.

JOSEPH GEERTS, of Antwerp (451, p. 1165). "The Faithful Messenger." In the work so entitled the sculptor has represented a dove perching on the shoulder of a young girl, to whom it has returned. This statue is very pleasing, but is hardly a work of sufficient consequence to give an idea of the distinguished merits of this artist. Honourable Mention.

J. JAQUET, of Schaerbeck, near Brussels (461, p. 1165). A group, in plaster, of Cupid asking Venus to restore his bow, which she has taken from him. This work is pleasing, though somewhat affected in motive. The execution is careful, though the development of the muscles, particularly on the back and shoulders, is too strong. Honourable Mention.

##### *Sculpture on a small Scale.—Medals.*

L. J. HART, of Brussels (441, p. 1165). Thirty-nine Medals, among which a portrait of Rubens may be particularly noticed. These works show very considerable skill in the class of art in which they are executed. Honourable Mention.

C. JENOTTE, of Liège (447, p. 1165). A series of Medals by this artist are also skilfully executed. Honourable Mention.

#### B. GRAPHIC REPRESENTATIONS ON PLANE SURFACES.

##### *Inlaid Works in Metal.*

J. FALLOISE, of Liège (384, p. 1163). A shield, some drinking cups, a vase, an armlet, all in steel, inlaid with silver. The masterly execution, refined taste, and correct style shown in these works, place M. Falloise in the first rank in the class of Workers in Metal. Prize Medal. (Awarded Prize Medal, Class XXIII.)

#### SWITZERLAND.

J. LEHMANN, of Zürich, a bookbinder (257, p. 1282). The model of the Cathedral of Strasburg, executed in cardboard with a penknife. This model deserves special notice, on account of the correctness of the proportions, and the labour and dexterity shown in the execution. Honourable Mention. (Awarded Prize Medal, Class VII.)

J. LEHMANN, of Berne\* (258, p. 1283). The model of the beautiful Fountain at Nuremberg, executed in wood with the utmost truth of detail. Honourable Mention.

#### SPAIN.

##### *Inlaid Works.*

##### (a.) In Wood.

PÉREZ and Co. (271A, p. 1346). A manufactory for inlaying wood at Barcelona. A table-top, inlaid with a variety of ornaments, in the centre of which are the Royal Arms of Great Britain. The patterns, with a few exceptions, are in admirable taste, the colouring exquisite throughout, the execution of extraordinary fineness, the most minute particles of wood being employed to express the faintest gradations of colour. Altogether this is a work of the highest rank in its class. Prize Medal.

##### (b.) In Metal.

E. ZULOAGA (264 and 264A, p. 1346). The proprietor of an establishment at Madrid for works in metal, from which were exhibited various specimens executed in iron, inlaid with gold and silver, and ornamented with reliefs.

\* It has been already pointed out, in the Report of Mr. Piazzi, that the model of the Fountain of Nuremberg is executed by the same artist as the model of Strasburg Cathedral, which precedes it.

These works are of rare excellence in every respect, both as regards the taste of the patterns and the artistic style of the execution. Among the most remarkable are a chest, worthy to receive the muniments of the "proud nobility of Castile, two pairs of pistols, a couteau de chasse, and a sabre. Honourable Mention. (Awarded Prize Medal, Class XXII.)

THE ROYAL ORDNANCE MANUFACTORY OF TOLEDO (266, p. 1846) exhibits a number of works inlaid in the same manner, among which may be particularly noticed a dagger. Honourable Mention.

### DENMARK.

#### *Sculpture on a large Scale.*

It was for this country that the great Thorwaldsen embodied his spiritual conceptions in such a number of masterpieces of sculpture, and there are not wanting in Denmark at the present day distinguished sculptors who follow in his footsteps with greater or less success.

J. A. JENSEN, of Copenhagen (39, p. 1359, and see Illustration). "Group of a Panther and Hunter. The animal has fastened on the hunter as he is carrying off one of her cubs; he is about to pierce her with his spear.

This group is full of life, and finely conceived; the execution shows great knowledge, and careful minute labour in the details. It should, however, be noticed that the artist has missed the true proportions in the legs of the hunter, which are too short.

Another group by the same artist, "Eve after the Fall," leaning on the seated figure of Adam, has great merit. Equal praise is due to him for a bas-relief intended to form part of a frieze; a drawing of the whole design gives a very favourable impression of it. Prize Medal.

H. W. BISSON, of Copenhagen (39, p. 1358). A figure of Orestes in rapid movement, and brandishing a sword. In this work the conception is full of life, and the momentary character of the action well rendered; the expression of the countenance is noble, the execution careful. Honourable Mention.

#### *Sculpture on a small Scale.*

C. G. KLYGGE, of Copenhagen (34, p. 1358). A jewel casket in ivory, ornamented with reliefs, after celebrated works by Thorwaldsen. The artist has shown a highly cultivated taste and correct feeling for style, not only in the general form of this casket, but in the adaptation of the reliefs to so small a scale, and in the architectural ornaments. This work is also to be especially commended on account of the great care shown in its execution. Honourable Mention.

### RUSSIA.

It is to be regretted that Russia has contributed to the Exhibition no specimen of sculpture on a large scale, although we could here mention two distinguished Russian names, that of R. M. Von Launitz, now residing at Frankfurt, a sculptor full of talent; and the well-known Baron Kloth, of St. Petersburg, who, in the representation of horses studied from the life, is one of the most distinguished artists of modern times. His groups of horses, with their trainers, at St. Petersburg and Berlin, may be cited in proof of his merits.

Count Tolstoy, President of the Royal Academy of Arts at St. Petersburg (328, p. 1381), exhibits plaster casts of a series of medallions, on which are represented in relief the incidents of the successful war carried on by Russia against France, from 1813 to 1814. These works are well known to all connoisseurs, and deserve notice on account of the invention shown in the designs, some of which are very happy; the execution is also careful. Honourable Mention.

N. KONZLOFF (313, p. 1376), a painter in the Imperial Porcelain Manufactory of St. Petersburg, exhibits a copy of a landscape with cows, by Bergström, in which the characteristics of this master, both in form and colour, are rendered with remarkable truth and admirable execution of the details. Prize Medal.

#### *Lithochromy.*

F. DANGRE, of Moscow (302, p. 1388), for an illustrated work, in which furniture and other examples of mediæval decoration are represented in a very masterly manner. Honourable Mention.

It is to be regretted that so distinguished an artist as Fogelberg, now living at Rome, did not contribute any work to the Exhibition on behalf of the school of his native country, Sweden; and that, in like manner, the Netherlands were not represented by Roger, the Director of the Academy of Art at Amsterdam, an admirable sculptor in the Realistic style. The works of both these artists would have shown the great excellence of the respective schools of sculpture to which they belong.

### THE UNITED STATES OF AMERICA.

The American States, which in the course of a few generations have established so vast a scheme of municipal and political institutions, have attained to great perfection in many branches of industry, and are now beginning to turn their attention to the sciences, and also to those arts which minister to the spiritual rather than the animal wants of man, and which have for their high purpose the investigation of truth, and the expression of beauty through form.

All who have truly at heart the advancement of civilization, and regard it as the common good of mankind, must sincerely rejoice at the success which has attended this new movement of the American mind.

#### *Sculpture on a large Scale.*

Several natives of the United States may be mentioned who have attained proficiency in this difficult branch of art, which cannot be acquired without a certain course of training. I am acquainted with the works of two American sculptors, Greenough and Hiram Powers, of whom the latter alone contributed to the Exhibition, and was only represented there by two specimens of his works:—1. The Greek Slave (522, p. 1467). In this work a youthful creature of very delicate form is represented in marble. The figure is studied from the life, and exhibits an extraordinary refinement of imitation. The treatment of the back, especially, is one of the happiest efforts in modern sculpture. It should be noted, however, that the manner in which the right hand of this figure is made to lean on the trunk of a tree, while at the same time the real support of the body is on the left leg, gives an appearance of uncertainty to the motion of the whole figure, and deprives it of that charm of contrast which the sculptors of antiquity imparted to their statues by throwing the weight of the figure decidedly on one side, so as to leave the other side free. It may be added, that the expression of gentle endurance and resignation which characterizes the head, by no means serves to indicate the subject represented by this figure; the sculptor has therefore been obliged to have recourse to the symbol of the marble chain, to justify more fully the title which he has given to this work. 2. A Fisher Boy, listening attentively to the murmur of a shell (548, p. 1468). A youthful refined figure, sculptured in marble; the execution is careful, but not equal to that of the Greek Slave. Prize Medal.

### FINE ART CASTING.

The art of casting sculpture in different metals is obviously of the greatest importance for the diffusion of the finest works. I should not be therefore justified were I to pass over the specimens of Fine Art casting in the Exhibition, though these have been already examined and rewarded by the Jury of Class XXII.

The following artists and directors of foundries may be particularly noticed:—

#### (a.) *Castings in Bronze.*

ENGLAND. THE COALBROOKDALE COMPANY, in Shropshire (pp. 559-561). The cast of Bell's figure of the Eagle-slayer shows great perfection, both in the casting and subsequent tooling.

J. A. HATFIELD, of London (185, p. 829). "Foley's Youth at the Stream." This work is deserving of notice, as a remarkable specimen of casting.

ZOLLVEREIN. The foundry of Count G. EINSEDEL, of Lauchhammer in Prussian Saxony (1 Zollverein, 782, p. 1092), exhibits a great number of large and important specimens of casting. Among them may be especially noticed the figure of a Girl at the Fountain, by Wichmann, a very good example of casting and tooling.

FRANCK. (1 Zollverein, 289, p. 1066). This artist has executed, at Berlin, the whole of the casts of Rauch's monument of Frederick the Great. A Newfoundland Dog, after a model by Moller, and remarkably well cast and tooled, and a number of smaller figures were exhibited by this artist.

C. U. FRACHA, of Berlin (1 Zollverein, 296, p. 1066). This artist also exhibited a great number of casts, among which may be especially noticed an Eagle, and a Danaid, after Rauch.

KESLER, of Greiswald (1 Zollverein, 299, p. 1066). The figure of the Muse Polyhymnia, in the Royal Museum at Berlin; a very successful specimen of raw casting.

MILLER, director of the celebrated Royal Bronze Foundry at Munich (2 Zollverein, 90, p. 1102), an establishment which, has accomplished much under his management, and which, under its late director, Stiglmayer, had already produced such an abundance of castings, and on so colossal a scale.

Those executed by Miller are the Lion, which has been already noticed in this Report, and the two noble figures by Schwanthaler, the first of these being a specimen of raw casting, and the two figures being tooled.

These works are most admirable for the sharpness and clearness of the casting, and also for the beautiful subdued colour of the bronze.

FRANCE. ECK and DURANT, of Paris (1211, p. 1235). The Dancing Satyr, by Lequesne; an excellent cast, well tooled.

QUERRE, of Paris. The Venus and Cupid, by Pradier, and the group of a Hunter killing a Stag, by Jean Debay, are also well worthy of notice.

SIMONS and SONS, of Paris (460, p. 1200). The bust of a Negro, by Cordier; a masterly specimen both of casting and tooling.

#### (b.) Castings in Zinc.

ZOLLVEREIN. M. GEISS, of Berlin (1 Zollv., 267, 279, pp. 1063-65). In the establishment of this artist the

casting of zinc has been brought to remarkable perfection, and works of sculpture, of a colossal and of the smallest scale, as well as architectural ornaments of the most refined taste, have been reproduced in this material.

By a process recently introduced, copper is deposited on the zinc by galvanic action; a bronze surface is thus produced, which is as beautiful as it is durable. The Exhibition contained the following admirable examples of the casting of this establishment:—The Amazon, by Kiss; the Hebe, by Canova; the Boy with the Swan, by Kalide; Baily's Dove; the celebrated figure in the Glyptothek at Munich, known as the "Ilioneus," of the "Niobid;" two Slaves, by Rauch; also a Corinthian and an Ionic Capital.

I am of opinion that the Council Medal was quite as fully deserved by this establishment as by that of the "Vieille Montagne."

SP. DEVARANNE and SONS (p. 1085). This firm has also brought the art of casting in zinc to great perfection, and exhibited a number of works of the same kind as those contributed by Geiss.

Out of this great collection the following may be mentioned as most worthy of notice: the Venus, by Canova; a Lion and a Panther, life-size; and the Danaid, by Rauch.

BELGIUM. The establishment called "La Vieille Montagne," in Belgium (pp. 161 and 1152), which has produced a number of zinc castings of remarkable excellence, has exhibited one most masterly specimen, Her Majesty Queen Victoria, seated on her throne.

#### (c.) Castings in Iron.

ENGLAND. The COALBROOKDALE COMPANY (641, Class XXII., p. 659). A very successful cast of Bell's Eagle-slayer.

ZOLLVEREIN. The ROYAL IRON FOUNDRY of BERLIN (1 Zollv., 271, p. 1061). The great importance of this establishment has been already pointed out in the notice of the several specimens exhibited by it. The process of Galvanoplastic deposit may be here also noticed, as another mode by which sculpture may be reproduced with accuracy, and at a reasonable cost.

JULIUS WINCKELMANN (1 Zollv., 282, p. 1065), proprietor of a Galvanoplastic establishment in Berlin. The statue of Frederick William II., Elector of Brandenburg. This work is very remarkable on account of the great sharpness of the forms.

C. WAAGEN, REPORTER.

November 1851.

## CLASS XXX. SUPPLEMENTARY REPORT ON DESIGN.

BY RICHARD REDGRAVE, R.A.

[The figures after the Names (between parentheses) refer to the Exhibitors' Numbers and to the Pages in the  
OFFICIAL DESCRIPTIVE AND ILLUSTRATED CATALOGUE.]

It was the original intention of Her Majesty's Commissioners that all exhibited "Designs" should be referred to the consideration of the Juries of the respective classes, to whose award the *fabrics* to which such designs were applied, or intended to be applied, were submitted. It was subsequently determined that it would be more advisable that this duty should be undertaken by the Jurors of Class XXX., assisted by associated Jurors from the various classes of manufactures designed for. The awards on Design will therefore be found among those of the Jury of Class XXX.

With a view to the permanent record of the opinions formed on the careful examination entailed by their duty, Her Majesty's Commissioners directed a Report to be drawn up by one of the members of the Jury, which should not be limited to the merits of the "Designs" exhibited, but should have regard to the general state of design as applied to the various fabrics and manufactures in the Great Exhibition.

Such then are the objects to be embraced in this Report, and they form an extensive and onerous duty to be fulfilled by any one individual. When the varied applications of design and ornamental decoration called for by the different uses, materials, and modes of manufacture are considered, and the vast multitude of objects to which they are applied (all more or less requiring examination), the task of the Reporter will be seen to be one of great difficulty and labour, in the execution of which he trusts peculiar indulgence may be claimed.

The desire evinced by the rudest as well as the most civilized nations for the decoration of their buildings, utensils, and clothing, almost raises ornament into a natural want, and must render its proper application of the utmost consequence to the manufacturer, since upon it the value of his manufactures in the various markets of the world greatly depends. It can hardly be possible, therefore, that any one should doubt, on the present occasion, the importance of a careful review of the union of design and ornament to manufacturing skill, since all that the inventive powers, the fancy, and the handicraft of man can do, has this year been gathered into one place, and the world been invited to consider and examine it. But without some critical guidance, some judicial canon, or some careful separation of the magnificent from the beautiful, it is to be feared that the public taste will rather be vitiated than improved by an examination of the Exhibition, as it will readily be allowed that the mass of ornament applied to the works therein exhibited is of the former character, and from that very cause more likely to impose on the uninformed taste of the multitude than the simpler qualities of real excellence to impress us with a just sense of their worth. Such considerations were, doubtless, among the reasons which influenced the determination of the Royal Commissioners on this subject.

We have spoken of design and of ornamental decoration. These are two essentially different things, and it is highly necessary that they should, from the first, be considered as separate and distinct. "Design" has reference to the construction of an work both for use and beauty, and therefore includes its ornamentation also; "Ornament" is merely the decoration of a thing constructed. Ornament is thus necessarily limited, for, so defined,

it cannot be other than secondary, and must not usurp a principal place; if it do so, the object is no longer a work ornamented, but is degraded into a mere *ornament*. Now the great tendency of the present time is to reverse this rule; indeed it is impossible to examine the works of the Great Exhibition without seeing how often utility and construction are made secondary to decoration. In fact, when commencing a design, designers are too apt to think of ornament before construction, and, as has been said in connexion with the nobler art of architecture, rather to construct ornament than to ornament construction. This, on the slightest examination, will be found to be the leading error in the Exhibition, an error more or less apparent in every department of manufacture connected with ornament, which is apt to sicken us of decoration, and leads us to admire those objects of absolute utility (the machines and utensils of various kinds), where use is so paramount that ornament is repudiated, and fitness of purpose being the end sought, a noble simplicity is the result.

The primary consideration of construction is so necessary to pure design, that it almost follows that, whenever style and ornament are debased, construction will be found to have been first disregarded; and that those styles which are considered the purest, and the best periods of those styles, are just those wherein constructive utility has been rightly understood and most thoroughly attended to. A dissertation upon difference of styles would be out of place in this Report, as well as an expressed preference for any particular one, since each, doubtless, contains some qualities of beauty or excellence which will justify its use when restrained and regulated by fixed principles. It may not, however, be improper to illustrate by a few remarks the opinion expressed above, since it involves important principles connected with a proper consideration of works coming within the scope of the Report.

To begin with the ecclesiastical architecture of the middle ages: when the style was purest, the construction was most scientific, the arches were best formed for resistance, the groining elevated and simple, the ornament modest and applied to the forms of construction only. As the style progressed with time, it departed from its primitive simplicity: it became more ornamental, it is true, but at the sacrifice of some of its constructive truth: the use of the arch was partly obscured by its being placed under an horizontal arrangement, and supported by perpendicular mullions, and it was gradually flattened to the worst form for sustaining pressure. The groining, at first simple, became a most elaborate system of reticulation, by its numerous lines reducing the apparent height of the roof, to the entire loss of the sublime effect produced by its elevation and simple groining in the earlier period. At the same time the enormous pendants seemed ready to fall on the heads of the beholder, and to bring with them the flattened arch of which they were the key-stones. The exterior was everywhere decorated, effecting the ruin of the building by the dust and moss which this humid climate soon engendered. In its last period, decoration could be carried no further, and Gothic architecture, which had grown into glory and beauty, from its just and scientific construction, was thrown aside when a florid ornamentation had taken its

place of constructive truth. It was succeeded in this country by the Tudor style, a modification of the Renaissance. The Renaissance itself arose mainly from the study of Roman remains, and those often of the worst period of the Empire, when Greek science, skill, and pure taste had fallen before Roman magnificence and barbarism, and before modern discoveries had opened up the Athenian treasures of Greek art. It was introduced, however, by men of enlarged minds, most of them great constructive architects, and by them it was constructively adapted; they embodied in it many of the just principles of the ancient styles; and if the stream of tradition had brought down much rubbish as well as treasure, still the master minds of the fifteenth century gradually separated them, and applied with unrivalled skill and a fertile fancy what was beautiful and good. It was, however, essentially pagan in all its details, and its ornament conveyed no symbolic truths to the hearts of men. In the hands of less skilful masters it soon became decoration without a pervading spirit, ornament merely used as ornament, without propriety as without meaning; and thus, as the Tudor style, it succeeded in this country to the Gothic, that style dying out, partly from the causes above stated, and partly from the change of feeling consequent on the reformed opinions which then prevailed. This debased form of the Renaissance, in its decoration, had already cast off all constructive truth and consistency: much that was bad in the late style was retained and mixed with it; whatever was good was as certainly forgotten. Columns were reversed, the heavy and broad part being upwards, the small part below; they swelled alternately into enormous bands, and were contracted into severing rings, and sometimes they stood upon balls to give a further sense of insecurity. Terminal figures were introduced which had the weight of their entablatures borne on baskets of imitative fruits or flowers. The covering pediments were broken, contrary to all constructive application, or were placed successively one within another: entablatures were enlarged out of all proportion to the supporting columns; and the useful was superseded by the ornamental.

In France first, and afterwards in all the countries of Europe, the Renaissance was degraded into the style known as that of Louis Quatorze. In all that this style differed from the true Renaissance, it differed merely as arising out of decoration. As a style it never had a commencement in construction, as the Gothic and Renaissance had, both of which were founded on an architectural basis; this sprang from the love of the Grand Monarque for magnificence and display. In it, all that was constructively true was disregarded utterly and systematically; thus supports became curved and broken in line exactly where they require strength, bearing-rails were severed in the centre where the greatest bearing is, the union of horizontal and perpendicular forms was suppressed, styles and rails as far as possible hidden, veneers applied with the grain across the framing, and every effort of invention strained, not to decorate the due constructive truth of things, but utterly to hide and abolish construction altogether. The ruling principle of the style, as far as it can be said to have had one, was the avoidance of symmetry, and the search after variety by every possible means: for this reason, central forms had dissymmetrical sides, and the most unequal division of parts was the rule of composition. Nevertheless for the purpose which called it forth, for mere magnificence and display, it was admirably adapted, being one of the most suitable styles for the display of gilding, and for brilliancy and sparkle in metal and ornate work, showy and glittering, beyond anything attainable in the simpler forms of the Renaissance or of classic antiquity. From these qualities it has long maintained its hold on the public taste; and its florid and gorgeous tinsel still prevails in three-fourths of the works of the Great Exhibition, notwithstanding its gross contempt of constructive principles.

The ornament of past ages is the tradition of the ornamentist, and tradition ever hands down to us things good and bad, both equally consecrated to men's minds by the authority of time. But a moment's reflection will show

how necessary it is to discriminate before receiving anything on such authority. A church or temple built in a rude age remains undisturbed by some happy chance, a villa or a theatre in a remote provincial town escapes the fatalities of accident or time, some tomb is opened, some overwhelmed city exhumed from the debris of ruin that had gathered over it. The ornamental details found therein are copied and illustrated by the notes of antiquarians, or published in the proceedings of learned societies, and are at once regarded as authorities for imitation, it being forgotten that they were perhaps the works of obscure provincial artists, of a barbarous age perchance, or of a people with whom art, no longer studied for its principles, had ceased to progress or had rapidly declined.

Such traditional ornament moreover had, or had not a local use, a consistent application to domestic, ecclesiastical, or funeral purposes, in fact a local symbolism; but even if it had, this, mostly overlooked, is sure to be soon disregarded; and not only have we ornament of a degraded period, of a declining age, or by inferior artists, but to this must be added, that its symbolic life is totally extinct, and, perhaps, fortunately so, for when revived it is indiscriminately, for purposes totally at variance with its first application and original intent. Moreover, the ornament suited for one material is misapplied to a material different from that for which it was designed. Thus ornament originally carved in stone is used for metal or for wood, or, worse still, for carpets or for dresses. That which was intended to be carved in relief is imitated in the inlay of a floor or the hanging of a wall, and senseless anomalies of all kinds speedily arise from undue reverence for and indiscriminate use of traditional ornament. That this is no forced view of things a glance at the Exhibition will at once show, wherein are to be seen the sacred vessels of the church imitated for secular purposes; the funeral urns of the Greek revived as drinking-vessels for the table; the columns of temples turned into candlesticks, and sarcophagi into wine-coolers; while the decorations of ceilings are applied to carpets, and the carved frieze of an Ionic temple to a muslin curtain: all these errors arising from the indiscriminating use of those materials with which antiquity has supplied us.

Ornamentists may fairly be divided into two classes: the traditional, who superstitiously reverence the remains of past ages and are wedded in practice to existing styles; and those who despise the past and feel themselves at liberty to adopt from the abundant sources of nature a mode and manner for themselves, without regard to the works of their predecessors. The first class simply seek to follow where precedent leads them, and to be able to claim the sanction of authority for their works. These, even when taste duly regulates their choice, are men of limited ideas and small progress. Those of the second class, who pay no deference to authority, who think that ornament is governed by no laws, and who see no principles by which they are to be guided, are little likely to raise the art to the level of past times, and, still less, to advance its aim and widen its scope. The true ornamentist would seem to be one who seeks out the principles on which the by-gone artists worked, and the rules by which they arrived at excellence, and, discarding mere imitation and reproduction of details, endeavours, by the application of new ideas and new matter on principles which he believes to be sound, or which time and the assent of other minds has approved to be fundamental, to attain originality through fitness and truth. The antiquarian ornamentist, however, will always have a certain reputation, and justly, if he has the taste to select what is best from the great masters of past times. In any case the critic must be bold who speaks against the authority of the fathers of the art; and praise is safe when great names are on the side of the critic. From this class of ornamentists we may at least demand purity of style, that marked eras should be kept distinct, and that the ornament should be fitly applied to fabrics or structures of the like nature, and, as far as possible, for the same uses, as those for which the ornament was first devised.

From the labours of the second class of ornamentists, united to that constant search after novelty at any sacrifice of time taste for which manufacturers are so con-

stantly urgent, there has arisen a new species of ornament of the most objectionable kind, which it is desirable at once to deprecate on account of its complete departure from just taste and true principles. This may be called the *natural* or merely imitative style, and it is seen in its worst development in some of the articles of form.

Thus we have mere imitations of plants and flowers, with an attempt to make them a strict resemblance, forgetting that natural objects are rendered into ornament by subordinating the details to the general idea, and that the endeavour ought to be to seize the simplest expression of a thing rather than to imitate it. This is the case with fine art also: in its highest effort mere imitation is an error, and an impertinence, and true ornamental art is even more opposed to the merely imitative treatment now so largely adopted. Let any one examine floral or foliated ornament produced in metal by electrotyping the natural object, whereby every venation and striation of the plant is reproduced, and compare it with a well and simply modelled treatment, where only the general features of the form are given and all the minutest details purposely omitted; and if this latter has been done with a true sense of the characteristics of the plant, the meanness and littleness of the one mode will be perfectly evident, compared with the larger manner of the other. But this imitative style is carried much further: ornamental stems and leaves bear porcelain flowers painted to imitate nature, and candles are made to rise out of tulips and China asters, while gas jets gush forth from opal Arums. Stems, bearing flowers for various uses, arise from groups of metal leaves standing tip-toe on their points, and every constructive truth, and just adaptation to use is disregarded for a senseless imitative naturalism. In the same way, and doubtless supported by great authority, past and present, enormous wreaths of flowers, fish, game, fruits, &c., imitated à merveille, dangle round sideboards, beds, and picture-frames. Glass is tortured out of its true quality to make it into the cup of a lily or an anemone: not that we may be supposed to drink nectar from the flower, but that novelty may catch those for whom good taste is not pungent enough, and chaste forms not sufficiently showy. In fabrics where flatness would seem most essential, this imitative treatment is often carried to the greatest excess; and carpets are ornamented with water-lilies floating on their natural bed, with fruits and flowers poured forth in overwhelming abundance in all the glory of their shades and hues; or we are startled by a lion at our hearth, or a leopard on our rug, his spotted coat imitated even to its relief as well as to its colour, while palm-trees and landscapes are used as the ornaments of muslin curtains. Though far from saying that imitative ornament is not sometimes allowable, still it will at once be felt that the manner wants a determined regulation to exclude it in most of the above-mentioned cases from all works aspiring to be considered in just taste, and to leave it to be adopted by those only who think novelty better than chaste design, and show preferable to truth.

The constant search after novelty has just been alluded to as one of the sources of bad taste in modern ornament. Manufacturers are eager to obtain it at any sacrifice of truth and at any cost. The efforts of those past ages, when taste was most indisputable, appear to have been directed rather to the continually perfecting and refining their designs and inventions, than to creating new ones. Thus in architecture the robust simplicity and grandeur of the Doric order remained unchanged from age to age, architect after architect striving only to perfect its just proportions and the symmetry of its parts, rather than to add any novelty of feature or ornament, until, in the Parthenon, it seems to have arrived at the most perfect development that taste, science, and art could unitedly effect. Even among the more voluptuous inhabitants of Asia Minor, at least until the age when their artists became servile and panders, to the coarser magnificence of Rome, the details of ornamentation were few, and those universally received. The volute, the acanthus, the anthemion, the echinus, and a few frets and guilloches, seemed to pass the ordeal of criticism, not that they might be rejected for more novel ornaments, but that the symmetry of their parts might be more justly balanced, the

commoner efforts rejected for those more varied, beautiful, and refined, and the true import given to their projections. Proportion and symmetry being thus sought after instead of novelty, their ornament has come down to us with authority like that of Scripture, rather than of tradition, and all the after efforts of artists, who have adopted and adapted it, have failed to improve its elegance, or to add to its beauty. Even in the eastern nations we find the same usage prevail; and to this day Indian ornament is composed of the same forms as it was in the earliest known works: the principles that governed ornamental practice in those works seem still to be a tradition with the artist and the workman, and still to produce the same beautiful results, as is abundantly seen in the fabrics and tissues of the Indian department in the Great Exhibition. Now, however, our efforts are of an entirely different nature, and the hunger after novelty is quite insatiable; heaven and earth are racked for novel inventions, and happy is the man who lights upon something, however *outré*, that shall strike the vulgar mind, and obtain the "run of the season." Such patterns as often result from the caprice of accident as from any effort of thought—witness what is called the diorama pattern in cotton printing, which was very popular, yet was the result of an accidental folding of the stuff on the cylinder in printing. Accepted for the season, these fantasies no sooner pass away than the world wonders how it could ever have looked upon them with satisfaction, or tolerated for an instant such solecisms in taste, such strange incongruities, or gross absurdities.

The ornament of past ages was chiefly the offspring of handicraft labour, that of the present age is of the engine and the machine. This great difference in the mode of production causes a like difference in the results. In old times the artist was at once designer, ornamentist, and craftsman, and to him was indifferent the use of the pencil or the brush, of the hammer, the chisel, or the punch: his hand and his mind wrought together, not only in the design, but in every stage of its completion, and thus there entered a portion of that mind into every minute detail, and into every stage of finish, and many a beautiful after-thought was embodied by the hand of the "cunning artificer," many a grace added to the work by his mastery and skill. He worked, not to produce a rigid sameness, but as Nature works:—she produces nothing exactly similar to its fellow, in every turn of every stage of growth, in every flower, and in every leaf, adding a changing grace, a differing beauty; so he varied his labours with every feeling of his overflowing mind. But this is not possible with the stamp, the mould, the press, and the die, the ornamental agents of our days: after the type or model is made, all the products are rigidly the same, whence arises a sickening monotony, a tiresome sameness, unknown in the works of nature and peculiar to these artificial works of man: the varying mind has no share in their production, and man himself becomes only the servant of the machine.

Moreover, the old ornamentist worked generally from feelings of piety, from love of his labour, or from the desire of fame, motives hardly known to the artist of this class in our days, at least in this country. Who seeks fame from the ephemera of a season? Who loves a labour that is so soon to pass away? Who cares for a work that is not to be the child of his own hand, but to be produced in thousands by the aid of machinery? The toil of him of old times was spent upon the thing itself, and not upon a mere model for it: the chalice, the cup, the lock and key, the reliquary, were to be without repetition, and without rivals: he sought to give them their highest excellence, and, labouring from one of the feelings we have described, threw his whole soul into his work, so that it became a thing for future ages to look upon and to prize. Not that handicraft or art-workmanship is utterly excluded from our manufactures; it is only partially so, making more painfully evident how greatly ornamental art has suffered from its new union with machinery. Wherever ornament is wholly effected by machinery, it is certainly the most degraded in style and execution; and the best workmanship and the best taste are to be found in those manufactures and fabrics wherein

handicraft is entirely or partially the means of producing the ornament, as in china and glass, in works in the precious metals, carving, &c. This partly arises from the facilities which machinery gives to the manufacturer, enabling him to produce the florid and overloaded as cheaply as the simple forms, and thus to satisfy the larger market for the multitude, who desire quantity rather than quality, and value a thing the more, the more it is ornamented. This state of modern manufacture, whereby ornament is multiplied without limit from a given model, by the machine or the mould, ought at least to awaken in the manufacturer a sense of the importance of the first design. One would think that what was to be produced by thousands, and tens of thousands should at least be a work of beauty, and no pains be spared to insure its excellence. The cost of the first design or model must in such a case be a mere atom when divided among its myriad prototypes. It would seem strange, too, that any one could be found to throw away great expense upon dies and moulds, to carry out a design which in itself was hardly thought worth paying for. Yet often in this country artists are paid little better than workmen, and a belief seems to prevail, that knowledge, skill, and taste come by nature: the artist has often no interest in the result of his labours, his name is unknown, his pay is niggardly, and what there may be of beauty and excellence in his work is often spoiled by the alterations of the manufacturer, who makes no scruple of setting his own taste above that of the artist, and altering and changing a design at his sole pleasure. In France, and some parts of Germany, where taste has long been cultivated, and the value of ornamental design is better understood, these relations are better understood also; and in this country, if good taste is to prevail, the manufacturer must learn to appreciate more highly the value of the designer's labours, must seek to foster his talents and stimulate his *amour propre*. Society also must be prepared to contribute more largely than heretofore to public education in ornamental art, and taste must be disseminated by every available means; for it is not only truth, but a truth that should be told, that, notwithstanding our skilful workmanship and our excellent manufacture of most fabrics, we are sadly behind in the design applied to them, and greatly indebted to foreign artists even for what little is good. Moreover our greatest difficulty consists even less in the want of designers than of skilled art-workmen to carry out designs. A design for cotton printing may be spoiled by the "putter-on," or for silk by him who prepares it for the loom. The sculptor may design a statuette, but there are few able to chase the bronze, or to retouch the clay, or to unite the parts when they come forth from the mould. Even where such are found, they are mostly men of slow minds, who enter little into the spirit of the artist's labours, and who work without feeling as without fire. We find plenty of chasers able to imitate the fur of animals, or the texture of draperies, but few who understand the bones and the anatomy of the parts, and fewer still who carry an artist's spirit into their works. In painting, also, the painter on glass and china is generally a mere copyist, or he works too entirely by rote, and without feeling. The lily and the rose which he paints are always the same lily and the same rose, a work of the hand and eye, in which the mind has no share. There are honourable exceptions, no doubt, but with the many art is a mere handicraft. In France, in Germany, in Bavaria, in Italy, this is not the case. There the artist often carries out his own design, and where he does not, has always at hand a band of skilled art-workmen to embody his ideas, or to complete his labours. The beautiful works in metal by VACHER, WAMMUS, and WEISSHAFF, the china paintings of JACOBUS, SCHULT, DECKENAU, HAMAN, and a multitude of others, and the furniture carvings of LEHNER, are choice examples of the above-stated truths; while the works in oxidized silver, such as seal and knife handles, paper-weights, cigar-cases, &c., exhibited by KUNOPFER, with the bronzes of MANN, FRANK, and a host of other such works, show the skill, taste, and knowledge of the art-workmen of France. In France, moreover, there is a sense and

fancy pervading ornamentation; the ornament, especially where figures and animals are introduced, being especially adapted to the thing ornamented. In England the ornament designed for one work is made to do duty for twenty others: one figure truly plays many parts, and is often used with an innumerable want of fitness. But the English public, and the English manufacturers as a body, are hardly yet awake on the question of design: Government has established schools of ornamental art in many of our large manufacturing towns for the purpose of spreading genuine taste, and educating our workmen; but they are as yet a forced product, and have hardly anywhere, after ten years of struggle, won the warm support of the local manufacturer. Even in this Great Exhibition, the question of design was nearly overlooked, and the works of the designer left without a place: his name was not necessarily coupled with the fabrics or manufactures his skill had designed or decorated, and his reward therefore was left to the good feeling of his employer. No special Jury was named to unite with manufacturers in the various classes in judging of the taste and art displayed in the ornamentation of their fabrics; and that art which, as we have before said, is calculated, when excellent, to raise the reputation of a nation's manufactures, was left to the judgment of those too likely to consider, not its real excellence, but what an untought multitude would purchase and would prize. In France many large establishments have well-appointed schools attached for teaching drawing and modelling, and the rudiments of science connected with their manufactures. In Germany also, and in Italy, schools and institutions have long been in operation for the cultivation of taste in design; and it will be necessary for this country to enter seriously on the same course, if we are to maintain even our manufacturing reputation before the world.

In estimating the progress of this country in ornament and in art-workmanship as compared with the continental nations, there is one circumstance that must enter largely into consideration. In France, Germany, Italy, and Belgium, in addition to schools for teaching ornamental art, royal and national manufactories have been established for many years. In these no necessary expense is spared to bring to perfection the fabrics wrought in them, both as to the highest excellence of workmanship and materials, and to their embellishment by ornamental design. The best painters, sculptors, and designers, as well as men of the most scientific acquirements in botany, mineralogy, and chemistry, are among their professors; and the works being carried on at the public expense for the attainment of excellence, the cost of repeated failures is remedied. In such establishments a band of skilled workmen must of necessity be trained to the ultimate benefit of the private manufacturers, and those difficulties which science had found the means of overcoming, or those new processes and new materials which it had brought to light, be spread abroad for the common advantage of all. Moreover, the sight of excellence and of the products of skilled workmanship is one of the greatest stimulants to further exertion, since all art and all manufacture arrive at perfection by gradual advance on past labours. The workman who sees the results of the skill which has produced such works in china and porcelain as are exhibited in the Sévres room or in the hall of the Zollverein, must feel this stimulus in no mean degree. When it is remembered what one single artist did in this country for the same manufacture, and how greatly Wedgwood and his workmen were indebted to Flaxman, we can well feel what influence a band of artists of like ability, exercising their talents to improve every department of the manufacture, and of these a continued succession, would be likely to exercise over the taste and skill of those in contact with them. Nor is this all: the excellence of one fabric awakens a desire for like excellence in others, and calls forth the same spirit of emulation. It surely cannot be doubted, therefore, that the continental nations, and more especially France, in this manufacture, and through it in many others, have been largely benefited by such institutions; besides the amount of national reputation obtained by them from the display of the choice works which are therein produced.

In these remarks it is not intended to plead for the desirableness of such establishments in our own country, but only to point them out as the means whereby other nations have attained to great excellence. It is no answer to such an argument, although it is indeed true, to say that without these aids the *general* manufacture of such fabrics in Germany and France is behind our own; and that the private show of such works by MINTON, COPELAND, and others, is, both as to manufacture and design, superior to that of any private manufacturer of those countries. This may arise from various causes; but with the like advantages on our side it may well be imagined that much greater excellence would have been attained, the want of skilled art-workmen being felt and acknowledged by these manufacturers as a great hindrance to the complete success of their manufacture. Moreover, it is but fair to remember that such royal and national establishments, by the beautiful works produced in them, have added largely to the number of rewards won by other nations in this peaceful contention, and have placed at some apparent disadvantage the manufacturers and workmen of our own country. Let us hope, however, that the time is coming when England will seize eagerly every proper means of improvement. Symptoms of it are already abroad; and there seems a likelihood that the Great Exhibition of the Industry of all Nations will be valuable to all in showing short-comings as well as excellences; and to none will it be more so than to the British nation, if it awakens us to a knowledge of our deficiency in ornamental art, and to a hearty endeavour immediately to remedy it.

It has already been stated that this Report originated in the consideration of "designs." It is proper, therefore, that the works of the designer should be examined and commented on, before the manufactures to the construction or for the ornamentation of which they were intended to be applied. From the artists we have a right to expect that true taste, that scientific knowledge, and those sound principles, too often wanting in the manufactured works. The difficulties to be overcome in the various processes, or the limited resources of the manufacturer, together with the influence of the public taste on the demands of the market, may form some excuse for the manufacturer if his efforts are imperfect, or directed to sale rather than to excellence. But the designer has so long exclaimed against the bondage which has obliged him to please the public and the manufacturer at the sacrifice of his own better judgment, that he ought gladly to have seized on the present opportunity to exhibit a faith and practice of his own. Now at least he was at liberty to appeal to the few, and untrammelled by any conditions, to exhibit his own powers, his own knowledge, taste, and better judgment, to lead men to the appreciation of the simple and the chaste as the true source of the beautiful. Another reason for commencing with the examination of the works of the artists was, that if the stream was pure at the fountain, the blame would justly lie with those who afterwards defiled it; or, in plain words, if the designer were proved to have set a good example in his works, false taste, where found, might be placed at the door of the manufacturer; while, on the contrary, some allowance might be made for him if the authorized teacher were wanting in taste and true principles.

Before proceeding with the subject, however, it is necessary to arrange, under some general heads, the various works of the designer, and applications of design, which are to form the subject of this Report. The largeness of the field must be an excuse, if many combinations of design and manufacture are entirely overlooked, others very slightly alluded to, and all imperfectly considered. The many thousand specific applications of design, and the large number of classes and sub-classes into which the labours of the designer enter, render it impossible, in the time and space allotted for such a Report, to give more than a general *resumé* of the subject. The attempt, therefore, has rather been to arrive at general principles than to enter upon the examination of individual objects. At the same time, the principles that are found to guide the designer for one fabric are often so self-evidently

applicable to others, that, even thus generalised, the Report has reference to numerous manufactures which have not been specially considered, and to many individual cases that do not range exactly under any one of the heads named in it.

The method adopted has been to declare the general principles, as far as they can be arrived at, which ought to govern the design and ornamentation of any fabric, to indicate prevailing errors and false taste, and to allude sparingly to such works of merit as seem wholly or largely composed with good taste and on sound principles.

The proposed classification divides itself under four general heads—*Decoration of Buildings—Domestic and other Furniture—Domestic Utensils and objects of Personal Use—Garment Fabrics.*

The general heads will be again subdivided as follows:—

1. *Decoration of buildings, consisting of—*

- 1st. Architectural decorations, painted, &c.
- 2nd. Stone, carved wood, terra cotta, carton-pierre, and other relief decorations.
- 3rd. Stained glass.
- 4th. Inlaid floors, mosaic pavement, inlaid tiles, &c.
- 5th. Paper and other hangings.
- 6th. Metal-work.

2. *Domestic and other furniture, including cabinet-work of all kinds, and furniture of all materials—*

- 1st. Stoves, grates, fenders, lamps, gas-fittings, and other hardware.
- 2nd. Carpets, portières, table-covers, and floor-cloths.
- 3rd. Curtains and hangings.
- 4th. Table-linen.

3. *Domestic utensils and objects of personal use—*

- 1st. Porcelain, pottery, &c.
- 2nd. Table and ornamental glass.
- 3rd. Works in the precious metals and jewellery, clocks, &c.
- 4th. Bookbinding.

4. *Garment fabrics—*

- 1st. Woven in patterns of any material, and hand-worked.
- 2nd. Printed " "
- 3rd. Laced " "
- 4th. Ribbons.

In reviewing these various classes it may happen that different materials, ornamented by the same means, and applied to the like uses, may be spoken of indifferently; or even varied uses may be comprehended under the same general remarks, where the same principles of ornamentation are strictly applicable, since the object in view is rather to include, and thereby shorten labour, than to maintain the nice distinctions necessary under the several class Reports.

*Div. 1.—Decoration of Buildings.*

- Architectural decoration, painted, &c.
- Architectural decoration in carved wood, stone, terra cotta, carton-pierre, gutta serena, &c.

The objects in the Great Exhibition which range under the two first heads of this section belong to almost every known style of ornament, and are so various in their character and uses that it is hardly possible so to arrange them as to bring them under general criticism, or to define any principles which would be universally applicable to their design. They consist, 1st, Of decorative treatments, exhibited as efforts of skill. 2ndly, Of restorations of parts of buildings, and of ornamental constructive parts. And, 3rdly, Of works intended to form integral parts of a building, but which are manufactured so as to be adventitiously applied. Properly speaking, the design for the decoration of any building, both externally and internally, is the province of its architect, since in this case decoration is essentially a part of architecture. If the principle insisted upon in the preliminary remarks to this Report, that ornament is the decoration of

construction, be just, it will be apparent that it is hardly possible to judge of the one without the other. In works wherein the decorator makes his own sham construction in order to ornament it, as well as in those multiplied manufactured "parts" which form the staple ornament of a large class of workmen in this line, we may admire the skill of the execution, the cleverness of the details, the excellence of the manufacture, or the imitation of early works of acknowledged merit; but to appreciate "decoration" we must view it as a whole in the place for which it was specially designed, and in harmony with the building whose construction it ornaments. Moreover, it must mainly originate in local circumstances, and ought to have an individual significance. Here, however, the moment we enter upon the varied inspection we become sensible how impracticable it is to lay down any general canon for works which differ almost as widely as the beginning and end of time. In other ages of the world, nations have been fortunate in so adapting design to prevailing wants, and in sympathy with existing feelings, as to produce a national style. But in the present day men no longer attend to such considerations; they are wholly without such guiding principles, and consequently are totally without a characteristic style. They are satisfied with the indiscriminate reproduction of the architecture of Egypt, Greece, and Rome, or of Christendom in any, or all, its marked periods. Originality they have none. One man delights in a Gothic villa; another prefers the style of Italy, even India and China have their advocates, who never consider that climate and use should rule the choice, rather than fantasy and whim, and that there must be conditions arising from the present state of society, from fiscal regulations, modern habits, &c., which, duly attended to, would, in addition to utility, be likely to result in novelty and beauty.

It is this merely imitative character of architecture which has so largely contributed to decorative shams, to the age of putty, papier maché, and gutta serena. These react upon architecture; and, from the cheapness with which such ornament can be applied and its apparent excellence, the florid and the gaudy take the place of the simple and the true. A popular writer describes the wearer of cheap finery as having his jewellery "a size larger than anybody else;" and so it is with the cheap finery of imitative ornament: it is always "a size larger" than it should be—bolder, coarser, and more impudent than the true thing; it excites our contempt by its flashy tawdriness, so incongruous with the meanness and vulgarity it is intended to adorn.

From this manufacture of ornament arises all that mixture of styles, and that incongruity of parts, which, perhaps, is itself "the style" of this characterless age. Through it, also, the plasterer and the paper-hanger too often usurp the place of the architect, to the certain dismissal of the mason and the wood-carver; and ornament, perchance in itself unobjectionable, is sure in such hands to be grossly misapplied.

The "designs" for architectural decorations exhibited are few in number, and are very open to the foregoing criticism.

Those on the foreign side are in the French department: they seem the very vagaries of a fantastic imagination, full of fancy, it must be owned, and skillfully executed, but without the slightest sense of utility or of constructive truth. Everywhere ornament is in excess; the architectural construction obscured and overlaid with figures, fruits, flowers, &c., so that they seem more fitted for the scene of a theatre than for any sober purpose of every-day life. Crowded together in such capricious abundance, the ornament can only be that of those cheap imitative manufactures we have above referred to. The "designs" on the English side consist of a few reproductions and adaptations of early styles, on which invention is as much wanting, as in the others it is in excess. Of the works themselves exhibited in this section, the reasons already given will dispose of a large number, since it is impossible to view them otherwise than as specimens of skillful execution, or the reverse; thus, for example, what can justly be said of the ceiling exhibited by A. MONTMART, of Milan? (Austria, 738, p. 1044). The room

which is fitted up for its reception is badly lighted, and otherwise unsuitable, and the reverse of what is requisite for a library, for which the decoration is intended; but that matters little, since, under the best circumstances, it could be truly appreciated only in connexion with an architectural reality. It may deserve praise for its extremely dexterous and skillful execution; but this is quite a separate thing from exhibiting any just principles on which it has been designed. It may be said, however, that, as a ceiling, the decoration is too heavy, both in form and colour. This, which would be even more apparent in a lighter apartment, is a great error in a ceiling decoration, having the effect of depressing it, and diminishing the height of the room—a fault often seen in the richly gilt and massive ceilings of the continental palaces. It may, indeed, be laid down as a rule, that the decoration of a room should diminish in heaviness, in strength, and in gorgeousness as it passes into the ceiling. Then again, as to the numerous ceiling decorations beneath the galleries on the English side: from the same causes it is only possible to speak of the skill of the decorative workman, since to judge of their local adaptation is out of the question: the light and graceful decorations being necessarily placed at the same height as the heavier and more richly treated ones, and of course their due adaptation judged of equally by that height, although, perhaps, the one may have been designed for a much lower ceiling than the other. The like difficulties, arising from causes before enumerated, prevent the proper consideration of the various specimens of wall-decorations. The principles, however, which are given under the head of Paper-hangings, eminently apply to such works.

The restoration of parts of existing buildings calls for little originality in the designer, since it almost wholly consists in the careful study of the decoration which remains, aided by a knowledge of the traditional ornament of the period. Such are the carefully restored spandrel for Hereford Cathedral by N. J. COTTINGHAM (63, Main Avenue West, p. 852), part of the tomb of Queen Philippa by S. CUMPT (60, Main Avenue West), and the wood-carving for the dining-room at East Sutton Place, designed by C. J. RICHARDSON (Class XXVI., 207A, p. 751). In such works the taste of the designer is shown in excluding the coarser characteristics of the style, and making use of those only which if less marked are also less extravagant, adopting its general spirit rather than copying its individuality. Thus in the sister art the unskilful portrait-painter seizes on the most salient characteristics of his sitter, and dwells upon all the individual defects of form and feature: the result is a likeness indeed, but a caricature even upon the homely original. The painter more skilled in his art avoids such coarse renderings, and under his hand even the plainest face is refined and generalised. In the same way a style becomes degraded. The decorators who adopt it overlook the spirit of its general idea, and exaggerate its peculiar characteristics, until at length it is likely to become a mere distorted caricature. Thus it was that the Renaissance degenerated into the Tudor, and the ornament of Louis XIV. was further degraded into the rococo and bizarre style which now goes by that name. A work, otherwise of much merit, may serve as a slight illustration of these remarks: it is the decoration, carved in walnut wood, for the end of a room, in the style of Francis I., exhibited by Messrs. HOLLAND and SONS (Class XXVI., 161, p. 745). This skillful work is detracted from, in a degree, by want of due selection: thus the large shell-forms, used in the blocking course above the cornice, are heavy and out of place in such a situation, and should not have been so used, however sanctioned by traditional authority. The ornament of the pilasters also, otherwise well designed and skillfully executed, ought in wood-carving to have been kept in lower relief, so as to have been within the surface of the pilaster itself, instead of projecting beyond, by which it is at once evident that the ornament is applied, and not, as it should be, carved from the solid wood.

Space will not permit, even if it were necessary, to speak of the numerous carved and other works in stone,

wood, and marble, for decorative additions to buildings, exhibited in various parts of the Exhibition, since there is little which, from the original or peculiar application of design, calls for especial notice. The errors of such works will often be found to originate in the construction fitted for one material being applied to another; thus, that which ought to have been stone is wrought in wood, or wood treatments are carried out in stone or metal. The costly malachite decoration exhibited in the Russian Court may be noticed as an example of this mistake. Stone doors at all would seem to be an anomaly, but framed after the manner of wood still more so. In addition, the doors, which necessarily produce a sense of extreme weight, are hung to pilasters so narrow as to be quite disproportioned for their support.

It may not be amiss here to advert to the error arising from excess which these works illustrate. Thus, the malachite vases exhibited in this room, are improperly supported on malachite pedestals, greatly detracting from the sense of rarity and richness which would result from having only the principal object made of the rare material, and its support in a baser one, while all the enrichment which would arise from contrast is lost also, and the eye is fatigued with the quantity and sameness of colours, which would have been refreshed had a marble of some homogeneous colour been used for the bases instead of the malachite.

Ornaments manufactured from plaster materials, such as gutta-serena, putty, carton-pierre, &c., have no doubt a substantial value in the Great Exhibition, commercially considered. As regards design, however, they are but dangerous subsidiaries, often doing greater injury, from the tasteless, misplaced, and false decoration arising from their use, than good, by ministering to decorative purposes. Apart from that monotonous multiplication of the same forms, necessarily resulting from the unvarying productions of the mould and the die, which has been before alluded to, there are other evils sure to accompany *manufactured* decorations such as those now under consideration. The great cheapness of the substitute, compared with the real material, inevitably leads to excess. Such ornament always seems added or applied, stuck on as it were, and can rarely be made to appear as a part of construction; it therefore constantly carries with it a sense of untruth, till the mind and eye, from habit, become satisfied with it, and at the same time deadened to what is really true and good. Moreover, decoration of such materials must necessarily be patchy and incomplete: when the parts to be ornamented are large, this evil is seen in its most exaggerated form; a florid and gaudy centre has perhaps to be united with coarse corners, either by other ornaments or by the repetition of the centre portion, and all sorts of expedients must be resorted to to "bring in" the parts so as to suit the architectural distribution of the apartment; it can indeed barely be possible that the quantities, or the geometrical arrangement in which the ornament has been originally constructed, will agree with the place to which it has to be adapted, and more or less of make-shift must be the result. One of the most important works in such materials is the centre compartment of a room in carton-pierre, by M. CRUCHET (810, France, p. 1219), which, with all the excellences of the manufacture, exhibits many of its prominent defects, and may serve to illustrate the general faults of such materials. Thus it is decidedly over-ornamented, and this is shown not only in the excess of ornament, but in the want of relative scale between the ornament and the constructive forms of the architecture, the former being far too large, as well as too redundant. Scale also seems to have been quite disregarded in the parts themselves, since the fruit and flowers, the birds and game, of one part, are different in size from those of another part. The style, again, is mixed, one part being two centuries earlier than the other. There is, besides, far more pains taken with the exact rendering of fur or a feather, than in perfecting the form of a moulding, or the shape of a panel—the architecture has, in the designer's mind, been subordinate to the ornament, and an ill-formed ellipse, or a coarse and unrefined moulding, appears of less importance to him than the mere

imitation of the feathers of his birds, or the fur of the animals of which his ornament consists. Carry this treatment a little further, and it will result in having the game, the fruit, the foliage, and the flowers not only modelled to the exactest imitation, but the skill of the painter called in to add to its naturalism, and the whole painted with the colours of nature; thus decoration will be thought perfect only when it competes with those strange relieved pictures which are exhibited in frames in close juxtaposition with the work in question. Of the artistic and skilful grouping, and of the merit of the modelling of the ornamental portions of this decoration of Cruchet's, there can be no question; but, as has been before said, even these excellences may merge into faults if they are too exclusively directed to mere imitation, and if the design to which they are applied has not the merit of a just perception of use and purpose. One great cause of evil in the use of the materials under consideration consists in the false principle of their application to decorative purposes. It is found, for instance, that peculiar qualities, which are difficult of attainment and an effort of great skill in other materials, can easily be obtained by a new means; instead, therefore, of carefully studying its just adaptation to ornamental production, the effort is only to emulate in excess those peculiar qualities which are trials in the more intractable material. It too often happens, moreover, that the original works imitated were in false taste; and this becomes far more apparent in the copies, since the mind can no longer dwell on them with that admiration which is caused by a sense of difficulties overcome, and which compensated, in some degree, for the absence of good taste in the works they emulate: for instance, the exact imitation in wood or stone carving of the individual details rather than of the general character of objects used as ornament, extreme relief, undercutting, lightness, thinness, and picturesqueness of the forms of foliage and flowers, whereby their natural growth is attempted in carving rather than a due ornamental disposition of their forms—all tending to excess and exaggeration, and to be avoided rather than copied. Another source of error consists in rendering what should be true constructive forms into mere ornament: thus pilasters, and even columns, consoles and trusses intended to support weight, are manufactured in these imitative materials, and introduced only to decorate, until all sense of utility and construction is lost, and ornament becomes the principal instead of the subordinate. Such materials, however, are capable, under proper control, of useful application to ornamental purposes, both from their ready adaptability to various surfaces and forms, and from the cleanness and sharpness with which they can be moulded, as is seen in the works of the GUTTA SERENA COMPANY (85, Class XXVIII., p. 783), those of JACKSON and SON (p. 730), of BIRKFIELD and Co. (157, Class XXVI., p. 744), and of others, as well as in the work above referred to. It is most desirable, therefore, that the errors to which a false application leads should be carefully pointed out, so as to bring these materials as much as possible within their duly limited use.

Some of the above criticisms will apply to terra cotta also; but this material, partaking largely of reality and allowing of being perfected by the hand after the first mechanical process of moulding, would, under fitting regulation, become a most useful and durable agent of ornamental decoration.

#### STAINED GLASS DECORATION.

The art of painting on glass, or glass-staining, has come down to us so intimately mixed up with the ecclesiastical architecture of the middle ages, that it is almost impossible to view the one unconnected with the other. It was born of the same parent (the Church), and from the first both were equally devoted to her service. Of Gothic architecture, and of it almost exclusively, stained glass has always formed a necessary decoration: it follows, therefore, that its ornamentation is almost wholly traditional, and has relation to the various periods of the Gothic architecture which it accompanies.

Not that it is necessary, or even desirable, that the epochs of the two arts should, in their revival, continue

to correspond; but the periods of each, whether simultaneous or otherwise, when utility and beauty were most fully understood and attained, should be diligently studied in search of the principles that guided the artists of those times, and that which is best should be chosen, irrespective of mere correspondence of epoch or antiquarian authority. Moreover, the errors which the ignorance of an early age evidently occasioned should be carefully separated from the truths, and not considered as of necessity a part of the style of the period in which they are found—such, more particularly, as bad drawing and want of knowledge of the human figure; at the same time, that simplicity of treatment which is so highly characteristic of early works, which overlooks all details, and renders a composition from the Scriptures, or a single figure, more as a symbol than as a picture, should, if it is found to be a principle of excellence, be carefully retained.

As is the case with all other manufactures and fabrics, so it is with painted glass: the question of utility, rightly considered, will lead us to some knowledge of what is most suitable in its treatment as a decoration. Glass was introduced into the numerous windows of Gothic architecture to temper the glare of light, and to serve in a manner as a blind, by preventing the direct entrance of the sun's rays, and also to shed that solemn religious light which so well accords with the sacred mysteries of religious worship. The mosaic glass of the early artists of the 12th and 13th centuries was most admirably adapted for this purpose: being composed of many small pieces of full and pure tints, with little white glass, the rays of the sun were broken and dispersed, the light lowered in brilliancy, and the whole effect was homogeneous, rich, and solemn, sufficient light being still permitted to enter for the performance of the religious services of the church. Even compositions of figures were subject to the principle that regulated the whole: the figures were small, so that the colour of their draperies and accessories might be broken up into many pieces to give the same equal distribution as in the ornamental parts of the window. It would seem, indeed, that the painter did not intend to simulate a picture, but rather to symbolize a sacred text or thought, and the figures, therefore, were not so much pictorially arranged, as composed with extreme monumental simplicity; thus they not only partook of the general effect of the window, but the attention of the spectator, impressed with the solemn yet beautiful light, was, at the same time, filled with the holy thought conveyed by the subject, without being distracted by too great an individuality of parts. The representation of shadow, strictly speaking, was not admissible, the composition consisting only of flat forms of the greatest simplicity. For this, even, there would seem to be just reasons: the light being transmitted through the glass to the spectator within, shadow would appear to be anomalous and out of place, since the illumination in such a case emanates from the figures themselves; moreover the simplicity of the shadowless forms was better suited to impress the eye from the distance at which such works must necessarily be viewed. Such would seem to be some of the principles which ought to regulate and which in the best times did regulate, the design for painted glass. An entirely different view of the art has however sprung up with its revival, and has obtained many advocates, especially on the Continent. It has been felt how greatly art has advanced in the hands of the historical painter since the time spoken of: that the principles of composition, of foreshortening, of perspective, of light and dark, and of the arrangement of colour, then quite unknown, have been discovered and developed; that drawing, then in its infancy and unaided by knowledge, has now arrived at maturity; and that science has given us power over the materials which they possessed not, and enabled us to conquer difficulties which they considered insuperable; and it is asked why the painter on glass should not avail himself of all these advantages, to perfect his art, and render it as pictorial as the works of his brethren. By artists who entertain these views the surface of the window is treated almost as a canvas would be: the forms of the figures are large,

even as the size of life: the draperies are massive, and the heads painted with great imitative skill and completeness. Clair-obscur and perspective are studied, and foreshortening and pictorial attitudes in the figures supply the place of the monumental and statuesque delineations of the earlier artists; in fact everything is done to treat the window as a picture.

To the advocates of this style it may be objected, that a picture is specially intended to address itself to the mind and imagination only, while painted glass has a reference to use also; and that, apart from this consideration, each and every art has its own mode of rendering nature—not necessarily implying *deceptive* or complete imitation; thus, for instance, the art of the sculptor is a generalized imitation of form, and even, the painter of high art does not desire to make his picture *deceptively* imitative, but listens with impatience to the remarks of the ignorant, who are apt to praise his work for this quality above others proper to it which they do not understand. An outline of Flaxman's fills the mind with a perfect sense of beauty and with the fullness of a poetical idea; surely, then, the flat and simple treatment of subjects in glass-painting, if such treatment is requisite for its utility and most in consonance with its other qualities, may be found sufficient to give as complete an expression to the pictorial rendering of a Scripture truth as the material and situation of such works require.

Among the works in the Great Exhibition, both manners are adequately represented. Thus the pictorial method is well illustrated in the ably executed window of MARECHAL and GUYON (325, France, p. 1193), of "St. Charles administering the Communion to the Plague-stricken." Here the forms are simple and broad, the masses of colour large, and the effect thoroughly that of a transparent picture, with all its details well drawn, carefully painted, and rounded by shadow; while the composition is arranged with regard to the laws of clair-obscur. But instead of that general and harmonious effect of sobered light, which is so desirable in stained glass for the windows of a religious edifice, the effect is painful to the eye from its extreme brightness, and the window would irresistibly obtrude itself upon the attention of the spectator, and rather distract his thoughts than induce that solemn repose of mind which is so consistent with the place. The great Dante Window, by G. BERTINI, of Milan (Main Avenue, West, p. 1044), is another example of this method. It is a very skilful work so far as regards the manipulative means, well drawn and painted, and exhausting the resources of the material. As a window, however, it is exceedingly sombre, and would far too much reduce the light in any building to which it might be applied. The colouring is cool and pleasant, in which respect it is better than Marechal's window, which is too hot. It is to be observed, also, that the construction of the window is greatly in the way in these pictorial treatments, and that a false construction has been adopted in both these works, in the latter, indeed, without the slightest architectural fitness. The other method of treatment has also many representatives, some of much merit. Among these, the "History of Samson," by A. GERENTE (517A, France, p. 1203), a work of great purity as to traditional style, although in adopting the just principles of design the faults of the age have been adopted also, which must be objected to. The texture of colour in the glass, if such a term may be used, has been obtained with great skill by this artist. LUSSEN's window (565, France, p. 1205), competitive for the St. Chapelle, is also a good example of this manner—dust and time, and the corrosion of the glass, have, however, been too much imitated, necessarily perhaps in a restoration, but rather interfering with this otherwise meritorious work. HOLLAND, of Warwick, "Life of Christ" (407, Class XXVI., p. 760), I. A. GIBBS (North-east Gallery, 75, Class XXIV., p. 707), J. G. HOWE (67, Class XXIV., p. 707), and Messrs. CHANCE and Co. (60, Class XXIV., p. 706), have specimens of glass of this style of various merit.

It would seem to be a great fault in glass to have a prevailing tint or hue, since by a truly harmonious composition of colour such a result would be avoided.

his defect is visible in the glass exhibited in the North-east Gallery, in some of which a prevailing green, in others a yellow hue, is observable. This is often the case also with the modern French glass, as seen in some of the restored churches of Paris, more especially the pictorial glass, in which a hot red hue is often present, sometimes to a painful extent: the flesh especially is hot, and dirty in the shadows. It is to be doubted, indeed, if, with all our knowledge of the harmony and complements of colours, we have yet attained to the principles by which the old glass-painters arranged their agreeable combinations. Whatever was the method, the effect was coolness of general tone: the flesh had little local colour, the prevailing tints of the draperies and accessories were blue, cool green, and amethyst, and even the red was cool, inclining to crimson. The hot browns of the flesh in the modern glass, together with its opacity, are often very disagreeable, and the effect of scarlet instead of crimson may be seen in the work of MARECHAL, before spoken of, where the robe of the cardinal who is administering the sacrament (a large mass) is of that hue, and greatly tends to increase the hot and glaring effect of the whole. In the Parisian churches, where ancient and modern glass are both to be found, even when the former is not of the best period, as in St. Germain l'Auxerrois, for instance, it is quite refreshing to turn the eye from the modern to the old glass, showing how far more harmonious the one is than the other.

In estimating the excellences of the one or the other methods of glass-painting which have been spoken of, the superior durability of the earlier method is to be noticed; also the much smaller liability to accidents from the diminished size of the pane, and the much less damage if a fracture do take place: an unlucky blow may immediately destroy the finest portion of a pictorial window, while it could do but small injury to a work on the older principle. These are minor merits, but to them may be added the greatly increased brilliancy of colour occasioned by the more frequent interposition of the dark line of the *leading*, and the lustre occasioned by the slight change of plane, in the smaller pieces of the early method, bringing out thereby the richness of the glass, as the varied facettes of the lapidary do of the precious stone. Indeed it may be doubted if the subject of *leading* has had all the attention it so well deserves. The skilful manner in which this was executed in the early works is apparent from the preservation of the windows, unharmed by the storms and winds of centuries. It is certain that a varied surface was at times adopted in such works, for resisting, as has been supposed, the pres-

sure of the winds: thus, at Haddon Hall, in the long gallery, glazed in the reign of Elizabeth, each window is waved inwards and outwards over the whole surface, and each piece of glass cut to adapt it to this treatment: the result has been great durability, even although the lead itself is extremely narrow. These are, it is true, windows of uncoloured glass; but it may probably point to some such method being used in decorated windows, to enhance their brilliancy and increase their effect.

#### INLAID FLOORS, MOSAIC PAVEMENTS, INLAID TILES, &c.

The ornament of this section seems the soundest and most satisfactory in the Exhibition—the most free from false principles, the most thoroughly amenable to true. Although this no doubt partly arises from the conditions of the manufacture, it is, in a degree, to be attributed to other causes. The modern introduction of such works in England was at a fortunate time, when the attention of the ecclesiologists and of able artists was called to the revival of mediæval art, and to the study of the best works of Greece and Italy. The designer, therefore, started upon just principles, and continues to adhere to them, even repudiating some of what must be considered errors in the ancient works which have been handed down to us, such as those arrangements of light and dark inlays, giving the appearance of relief, which are found occasionally even in the best ancient examples. The “designs” exhibited are almost wholly on the English side. Apart from those in conjunction with manufactured specimens, Mr. DIOBY WYATT's are the most important: they are varied and fanciful, thoroughly flat in treatment, and consisting mostly of combinations of simple geometrical forms, although there are some of Italian conventionalised ornament. They evidence the careful examination and study which the artist has given to the best antique and mediæval treatments of mosaic. Mr. MIXTON, of Stoke-upon-Trent (86, Class XXVII., p. 770), makes the most important exhibition of such works from designs of Pugin, Gruner, Wyatt, &c., together with some copies of fine mediæval examples and ancient works of great merit.

The illustration No. 1 is of an enamelled wall-tile, imitated from one found at Salisbury, and is given here to show the mode in which flowers were used as ornament in such works by the mediæval artists. The flower is displayed perfectly flat, in one colour, and arranged geometrically.

No. 2 is given as a more intricate treatment on the same sound principles, and is from a design by Mr. Pugin.

No. 2.

No. 1.

No. 3 is an intaglio and enamelled tile of a Moorish pattern, for covering the surface of a wall with an ornamental texture, and with a broken harmonious richness of colour, in very durable materials, for which purpose it is admirably adapted. This manufacturer exhibits also many novel and praiseworthy works in burnt and coloured clay to facilitate the application of design and colour to the exterior of buildings. Among others, a species of Majolica ware, with ornament in relief, coloured with delicate tints, intended to be introduced into friezes, string-courses, panels, &c., and other combinations of the art of the designer with the skill of the tile-maker and the potter, which will enable the architect to break the monotonous surface of brick buildings, and introduce ornamental forms and colour without the necessity of resorting to plaster and stucco, so long the wretched resource for such purposes. From the geological posi-

No. 3.

tion of London, bricks must always be the prevailing material for building purposes: such means, therefore, for the safe introduction of colour and ornament, are especially desirable, and should be carefully studied, that the most judicious and sound principles of ornamentation may be adopted in these newly-revived materials. It is curious to see how instantly the removal of the excise-duty on bricks has been followed by the infusion of a new life into the manufacture, both as to novel forms and the application of coloured ornament to their surface; it must be remarked, however, that the ornament of each separate brick should be perfect in itself as well as perfect in combinations, a circumstance which has not been attended to in the glazed and coloured bricks exhibited by Mr. Minton.

From the general use of carpets, considered, as they are, as a necessary comfort in this country, inlaid floors are far less used here than on the Continent, and it is on the foreign side, therefore, that the best design applied to such works must be sought. The principle of ornamentation, of course, is the same as that for mosaics and other inlays; care, however, should be taken to select wood without a strongly marked form in its grain, since this is likely to interfere with the pattern of the inlay in general; also right-lined figures are preferable to curved ones, from there being less need of crossing the grain of the wood in cutting.

Many skilful and ingenious combinations of geometrical forms are seen in the works of this kind in Belgium, Austria, Russia, and France; among others, the flooring of the bed-chamber in the Austrian room, of which the border, consisting of violet ebony and mahogany banded with maple-wood, is simple and pleasing in effect; and a floor by De Keyn and Co. (406, Belgium, p. 1563), which has much merit in its design; nor should mention be omitted of the very clever inlays for floors and furniture of Mancelly (606, France, p. 1207), some of which are of the most intricate geometrical character, excellently executed, for borders, panels, frets, &c. Being limited by true principles, these manufactures show less that is meretricious than do most other sections of the Exhibition, and far less tendency to that over ornamentation which elsewhere predominates.

## PAPER AND OTHER HANGINGS.

If the use of such materials is borne in mind, the proper decoration for them will at once be evident, since this ought to bear the same relation to the objects in the room that a background does to a picture. In art, a background, if well designed, has its own distinctive features, yet these are to be so far suppressed and subdued as not to invite special attention, while as a whole it ought to be entirely subservient to supporting and enhancing the principal figures—the subject of the picture. The decoration of a wall, if designed on good principles, has a like office: it is a background to the furniture, the objects of art, and the occupants of the apartment. It may enrich the general effect, and add to magnificence, or be made to lighten or deepen the character of the chamber: it may appear to temper the heat of summer, or to give a sense of warmth and comfort to the winter: it may have the effect of increasing the size of a saloon, or of closing in the walls of a library or study: all which, by a due adaptation of colour, can be easily accomplished. But, like the background to which it has been compared, although its ornament may have a distinctive character for any of these purposes, it must be subdued, and uncontrasted in light and shade; strictly speaking, it should be flat and conventionalized, and lines or forms harsh or cutting on the ground as far as possible avoided, except where necessary to give expression to the ornamentation. Imitative treatments are objectionable on principle, both as intruding on the sense of flatness, and as being too attractive in their details and colour to be sufficiently retiring and unobtrusive. Some of the best examples, as well of paper as of silk, velvet, and other hangings, are treatments of texture in a self-colour; as of flock on plain or satined ground in paper, of taffy and satin in silk hangings, of stamped forms or cutting in velvet, or the same contrast of pattern with the ground in various mixed stuffs. By these means the ornament is necessarily flat, and does not disturb the general effect. With the slightest attention to the choice of form it can hardly be in bad taste, whilst great elegance and beauty often arise from such treatments. Next to these, graduated tints of the same colour produce a safe and quiet ornamentation for such fabrics; or gold upon a coloured ground, where the gold is sparingly distributed, and the colour not too strongly contrasted, since in all cases a general tone of surface is to be sought for rather than pronounced individual forms. Further richness may be obtained by the judicious use of two or more colours, either, according to the ancient method of harmony, separated from each other by bands of black, white, or gold, or contrasted and enhanced by their complementaries, and enriched by flock in either case, in the latter by gold. But it is everywhere apparent that the combination of many colours, though it may increase expense from the number of blocks, is far from producing richness in the same degree, while it has often quite the contrary effect, and results only in poverty and meanness. It is necessary, however, to advert to a perfectly different treatment of these materials quite at variance with these rules, and bound by no such principles, by which paper-hanging becomes a pseudo-decoration, the wall being divided into compartments often irrespective of architectural construction, and pilasters, friezes, and mouldings imitated in false relief on its surface, with compositions of pictures, statues, hangings, flowers, fruits, &c., skilfully designed and well drawn, and, it may be, often most ably blocked for the purpose of painting; it is, however, at best but a sham decoration, amenable to no laws, necessarily false in light and shade, often constructively inapplicable, and always impertinent and obtrusive, and should be left to those who, desiring display, are too much wanting in taste to be annoyed at its untruth and extravagance. It perhaps is not quite out of place in the saloon of a theatre, in cafés, or taverns, but ought to be confined to such localities, and only used there until the general taste is so far instructed that the public will no longer tolerate gaudy shams and false magnificence.

The same laws which ought to govern design for

paper-hangings would, therefore, appear proper to regulate hangings of other fabrics, tapestries, &c. Although far from looking at ornament in that exclusive spirit which would reject what is beautiful when it does not square with the requisites of a theory, it must be obvious that pictorial and picturesque treatments for such fabrics are wrong whenever they intrude on the domain of another art. Thus figures, landscapes, fruits, and flowers, when rendered as they would be in works of fine art, are almost of necessity inferior to the pictures they imitate, even when they are as skilfully and wonderfully wrought as in the works exhibited by the national establishment of the Gobelins, where every effort of skill and science has been most successfully used for their manufacture and embellishment. Indeed, it is a matter of doubt whether custom, and the authority of great names and of past times, are not the causes of the continued admiration of such decorations, which perhaps we rather persuade ourselves we like than are fully satisfied with.

With very few exceptions, the exhibited "designs" for hangings appear to be totally unregulated by any perception of rules for their ornamentation, and, even when they happen to be on just principles, would seem to be so by chance rather than by choice. They are mostly florid and gaudy compositions, consisting of architectural ornament in relief, with imitative flowers and foliage. In some of the cleverest designs the flowers and foliage are perspectively rendered with the full force of their natural colours, and light and shade; moreover, they are often three or four times as large as nature, whereby the size of a room would be apparently diminished. The French are the largest contributors, and their designs are characterised by the foregoing remarks; they are, however, exceedingly skilful in their details, the flowers and foliage well understood and artistically arranged, and blocked with great skill and knowledge; but as to style they are most objectionable, and lead to the worst results, especially in the common manufacture of such goods.

The pupils of the Government schools exhibit, among other designs, some meritorious ones for paper-hanging. It is evident that their general taste is controlled and regulated by the knowledge of the just principles which should govern the ornamentation of these as well as of the other manufactures for which they have labour. Being students' works, they can hardly be expected to abound in fancy or invention, and it is sufficient to find that they are well drawn, skilfully executed, and amenable to just laws of composition. In examining the design applied to the manufactures themselves, the same want of just principles is observable as in the works of the designers. It is true that manufacturers must produce works in every style, as well to suit those who are unable to appreciate what is good, as those of more informed taste; but it might be expected, in an Exhibition of this nature—an Exhibition of skilled labour and of the strife after excellence—that excellence would be the rule, and error the exception, whereas the reverse is generally the case. Were it a part of the duty of the Reporter to enter into the clever and skilful execution, the treatment of the pigments, the excellent blocking, or the general manufacture of such fabrics, there would be much to say of the foreign exhibitors, DELICOURT (France, 1715, p. 1258) and ZUBER (France, 1556, p. 1250), SPORLIN and ZIMMERMANN (Austria, 651, p. 1041) of Vienna, and others, as well as of TOWNSEND and PARKER (Class XXVI., 318, p. 758), WOOLLANS (ibid., 322, p. 758), and others on the English side; but in the design of their papers there is little to commend, and works of passable excellence in this respect are the rare exceptions to their collections. One or two designs, delicate in colour and on just principles, are exhibited by FETTER and RAHN (262, p. 1375) in the Russian Court, mixed up, however, with others in the usual false taste; and passable designs on the principles herein advocated are to be found occasionally in other collections, evidently resulting from a happy accident rather than a well-regulated choice. The English and foreign manufacturers seem equally at sea: with the exception of a few simple diapers, which hardly call for individual remark, the works of the best exhibitors on the English side, while they are very hetero-

geneous, are less original, and equally wanting in a sound knowledge of what is properly characteristic for such works.

There are, however, honourable exceptions to these remarks: after passing in review the paper-hangings of the various countries, it is quite refreshing to meet the clever wax-cloth decorations exhibited by M. E. T. VIVIER (France, 734, p. 1215). The ornament of these works is without shadow or imitated relief, thoroughly flat in its forms, which consist of graceful and flowing lines; the colour is equal in scale, without harsh contrasts, and of semi-neutral hues. There is no attempt at shams, to imitate marble, or oak, or any carving; nor to panel it, which is left to arise out of the architectural forms; but a series of graceful lines, with a quiet uniformity of tint, satisfy the mind and give repose to the eye. Moreover, having laid down certain principles on which manufactures and fabrics should be designed with a view to the true use of materials, and to avoid unnecessary display, by the proper application of ornament, it is impossible to refrain from speaking in high terms of the works contained in the Medival Court, manufactured by MESSRS. MYERS (Class XXVI., 523, p. 761), MINTON (ibid., 531, p. 761), CRACE (ibid., 530, p. 761), and HARDMAN (ibid., 532, p. 761), under the direction and from the designs of Mr. W. PUGER (ibid., p. 761). Some may object to the exclusiveness of the style, and to its too purely ecclesiastical and traditional character, even in domestic works; but for just principles of decoration, for beautiful details, for correct use of materials, and for excellent workmanship, the general collection is unique. Thus, in the paper-hangings, for instance, there is no throwing away of many blocks to obtain richness, when one or two can be made sufficient: there is a perfect fitness and a subdued harmony of colour in all such works; and if Tudor roses and heraldic lions are sometimes too pronounced, and there is occasionally a little excess of ornament, richness is generally obtained at the smallest sacrifice of means, and without any sacrifice of truth. The same may be said of the hangings in silk and wool, and the carpets in this collection, the designs for which are highly commendable for their strict adherence to true principles.

Without having any sympathy with the application of decorative paper-hangings, such as those of DELICOURT (France, 1715, p. 1258) and others, it would be unjust to pass them without praising the artist-like design, the powerful execution, and the great ability displayed in these works by the French artists. In that by DELICOURT, besides the skilfully-blocked hunting subject of the centre panel, the details of the parts, such as the grouping of the game and arms on the pilasters, and of the birds and children on the frieze, have great merit, apart from the skill with which the whole has been adapted for block-printing. The same may be said of the work exhibited by MADER BROTHERS (France, 1369, p. 1241), which is an extremely fanciful and clever piece of decoration, and in as good taste as such false treatments can well be. The frieze of children is well designed and ably managed for printing; the landscape of ZUBERAN (France, 1369, p. 1241) has also much merit in its details; and the work of GENOUX has parts worthy of examination.

These decorations bear out the remarks at the opening of this Report as to the superiority of the French working artists. The men who carry out the designer's inventions in France must themselves have a large share of skill and art-knowledge to be able to prepare the design for the manufacturer's processes with the ability so evident in the works just remarked upon.

Among the English contributions in paper-hanging are specimens of the lately-introduced processes of printing by such machinery as is used for cotton goods, and of applying many colours from one block. These are likely to create a style of ornamentation for such fabrics of the most depraved kind. The largeness and flatness of details attainable by block-printing are less suited to cylinder printing than more minute details, and the new processes offer ready means of applying several colours at a small expense; the reverse of what has hitherto been the case; hence the effort has been to impress as many tints as

possible on paper, and excellence is reckoned rather by the number of colours than any other quality. Thus we are informed that works are printed in "sixteen colours," in "fourteen colours," &c., the works themselves evidencing the absence of all knowledge of the effective arrangement of colour; while violent, crude, and harsh tints are too often used to give greater impression of this excellence! and the result is littleness and extreme meanness; in fact, such papers are, in point of design, much inferior to those printed in two colours by the same machinery. Well-considered design, thoroughly adapted for this process, would enable the manufacturer to unite good taste with extreme cheapness; whereas the only present result is by increased labour to detract from the beauty of the ornamentation. It is impossible, however, not to remark the skilful printing exhibited by our English manufacturers.

#### EXTERIOR AND OTHER METAL WORK.

The works, in metal, of this section which are exhibited, consist chiefly of constructions for fountains, and of ornamental iron-work in gates and balconies, and for door-panels, lamp-pillars, flower-vases, and gazebos. The best of the metal fountains are so nearly within the limits of fine art, that their consideration may be left to that class. It is, however, to be remarked, that the zinc castings of the French and German founders show how suitable that metal is, as a means of spreading the best art, for any exterior purpose, in a cheap and durable material, as well as of embellishing public works of the above-named character, at comparatively small cost without the evils arising from oxidation when iron is used. Notwithstanding all that has been said about the incongruity of our climate with public fountains, there are undoubtedly long periods of the year, and those when London is most crowded as well with her own resident population as with visitors, when such works are not only extremely ornamental, but when an exhausting atmosphere would render them of real utility and refreshment. The notion of water, at any season, has a great charm, and is peculiar in its power of giving pleasure even in the simplest jet or fall, agreeably and artistically disposed; and ornamental arrangements for its full display would not only be picturesque additions to our city, which offers so many localities for their adoption, but would afford to our artists motives for combinations of figures with ornamental decoration, and thus, perhaps, be a means of once more uniting fine and ornamental art, which, sadly to the deterioration of public taste, have for so long a time been almost wholly separated. It may be doubted if the public would willingly part with even the tame and common place repetitions which adorn Trafalgar Square; and those who have had the pleasure of enjoying the fountains of Italy and France will be quite prepared to judge of the effect which more skilfully-designed structures would have on the public mind here.

Such works in iron as gates, balconies, and panels, are, for the greater part, in cast metal, which of late years, from its capability of cheap ornamentation, has almost wholly superseded wrought iron for these purposes. Where the object is intended to be fixed and immovable, as a balcony or panel, cast work is not unsuitable, and is capable of much beauty of ornamental design, as we see in panels exhibited by MUEHL, WAHL, and Co. (France, 934, p. 1225). In these the ornament adds to the strength by its numerous articulations, while it is light and elegant in its forms. Works of this kind are generally of a size to admit of casting in one piece, ensuring thereby strength and lightness by continuity of parts. But in cast-iron constructions intended to be moveable, as in the various kinds of gates, a very different character of design is necessary; in the first place, because entire casting is not always possible, both from the difficulty of running the metal into the numerous ramifications of the ornament in works of such increased size, and from the fear of warping in the cooling, as well as the great expense of a mould, which is saved by forming the ornament of a series of parts. This leads to the necessity of framing the work in wrought, and applying the ornamental details in cast iron; but hence results this evil, that the ornament

has little constructive use, and is apt to look rather an addition than an integral part of the work. In the panels exhibited at the south end of the Transept, great pains have been taken to get over this difficulty, but not with success, since the two metals are joined in parts wholly at variance with constructive strength; in fact, it is a wrought-iron design partly executed in cast metal. Moreover, cast-iron ornament is necessarily far heavier than that of wrought iron, from the extreme brittleness of the cast metal; this heaviness is sadly opposed to its real constructive strength in the manner usually adopted for putting together; the ornamental parts of such structures being riveted or screwed into the framing, there are smaller points of attachment than in wrought iron; the parts bed themselves less perfectly at the junction; since it is impossible to assist this union with the hammer, and the metal has small tenacity, and easily breaks with any sudden jar: thus there is much less power to support, while there is of necessity much greater weight to bear; and without very careful and well-considered design, making the ornament as far as possible a brace to the work, the whole is apt to be an insecure aggregation of parts, without constructive unity or truth. In large works, cast in one piece, such difficulties are greatly surmounted, as weight can then be made to add strength, instead of detracting from it. In the old hammer-wrought gates, the ornament was not only a truly integral part of the work, but most materially assisted in the general support. Thus great lightness and elegance were, in this case, consistent with great strength, since the ornamental details supplied a mass, not only of tying and bracing the work together, but of preventing the front of the gate from drooping with its own weight, to the great hindrance of its use, and which in cast works of this kind has often to be assisted by the use of friction-rollers—a make-shift that the older workmen would have despised. When, therefore, we consider the varied beauty of which wrought iron is capable, its far greater durability, its tenacity and power of resisting accidents, the individuality of design which arises from its being wrought by the hand instead of cast in a mould (thereby leaving the fancy and the feeling of the workman untrammelled), it seems not too much to say that it is to be hoped the use of the wrought metal will again prevail over that of cast for such purposes.

The gates and pilasters exhibited by the COALBROOKDALE COMPANY (p. 659-660), at the north end of the Transept, from designs by Charles Crookes, are an excellent specimen of casting, being wholly of cast iron, each gate in one piece. Much of the false construction alluded to has consequently been avoided, and many of the difficulties overcome. The design of the gates, however, partakes too much of that adopted in wrought constructions, especially in carrying up the form of the centre, at the top, into florid ornamentation, which tends in this weightier metal to sway down the gate, without any compensating beauty or usefulness. The introduction of a heavy panel of ornament below is also rather commonplace, and due regard seems hardly to have been had to the whole surface in designing the ornamentation. The pilasters have more originality: the small twisted bars surrounding the centre columns give a lightness, compared with the strength obtained, which adds to the elegance: the striking-plates of the hand-gates, however, should have been ornamentally constructed or banded in with the pilasters in the centre, to increase the strength and resist the jar of the closing. The other great work in metal by this Company is an ornamental dome of cast iron (Main Avenue West, 83). This is a work of much pretension, designed in the natural style, the pilasters representing oak-stems, ornamented with leaves and acorns, and with the intervening branches twisted into an ornamental form: this treatment is mixed with some conventional ornament, here and there, as it were, indiscriminately introduced into the pilasters, having a very patchy effect. The pilasters, also, arising as they do from a single stem, and widening above their base, have an unsteady and insecure appearance, which might easily have been avoided. The great fault, however, is in the setting on of the dome, which from the outside seems to

have no constructive connexion with the pilasters, since in it the rusticated treatment is abandoned, and it seems dropped in among the branches, without any proper support. The work, nevertheless, has a certain impressiveness from its size, and its general proportions are well chosen.

There are in various parts of the Exhibition garden-seats and chairs in cast metal, which are principally to be noticed from the great want of due consideration of the material evidenced in their design: thus sometimes they are ornamentally constructed of branches and foliage naturally imitated, or of brackets alone; while, in others, carved and flowing lines are given to the back, arms, and legs of the seat, which add nothing to the comfort of their use, and sadly detract from the form properly belonging to such works in cast metal, which should be right-lined, and have a geometric character both of ornamentation and construction. It must be confessed, indeed, that the tendency to consider the ornament before either the requirement of the material or the use to which the work is to be applied, is but too evident in many of the works in metal in this class. Thus, two large lamp-pillars, designed by an architect, and exhibited in the Austrian department, have as much iron in their over-charged bases as would found three pillars, each capable of sustaining the taper upper shaft of the same design. The application of metal to the construction of the building is, on the other hand, an excellent example of just use, construction having had the first consideration, and ornament being entirely subservient; a due amount of elegance has nevertheless resulted from its simplicity, and from the true principles on which it has been designed.

#### Div. 2.—Domestic and other Furniture.

A very large and important section of the Exhibition is comprised under the head of furniture and upholstery, and such works claim especial attention in this Report both as to their general design and their ornamentation. Almost every nation contributing to the Exhibition has sent to us its share of furniture, so that here, it might fairly be supposed, we should be able to study the conveniences for living which each country possesses, and their various contrivances for ease and rest.

The English nation, more especially, having that peculiar word *comfort* in its language, might be expected to exhibit how that sense of comfort is adequately provided for; and since, as a nation, we have a reputation for what is solid and substantial, that our furniture at least, so mixed up as it necessarily is with our daily life, with our home habits, and with our national mode of living, would, both as to design and ornament, be solid, substantial, sensible, and useful. Our continental neighbours, on the contrary, living as they do more abroad than the English, and being usually presumed to delight in the gay and the ornamental, would be likely to display more fanciful, showy, and decorative works in this class. In other manufactures, plain and useful fabrics are exhibited, even when they have no pretensions to ornamental design; it seems therefore rather unfortunate that in the furniture on both sides of the building, but more especially on the British, the ornamental so largely prevails to the exclusion of the useful, and that tables, chairs, and beds, fitted for convenience, rest, and repose, have been made to give place to what are presumed to deserve the name of objects of art.

English furniture has, until lately, enjoyed a reputation for its excellence of make and thorough usefulness, and manufacturers were wont to rest their credit on good materials and excellent workmanship. In such furniture the doors fitted with the nicest accuracy, the drawers moved with perfect smoothness, and the wood was so well seasoned that a faulty panel of shrunken joint was out of the question: it descended as a possession from father to son, seeming the better for its very age, and, as is fancied of old pictures, gaining richness even from time. But these sensible qualities, in which we undoubtedly used to excel, have on this occasion been less regarded by our manufacturers than decoration and display, and they have mostly selected furniture of a class allowing

the largest application of ornament, as sideboards, cabinets, bookcases, and works of the like kind, on which to exercise their skill, too often neglecting their own peculiar strength to rush into competition with their foreign rivals, without the skilled art-workman to execute, or the taste to design, which they possess. Nor is the foreign department wholly free from this misdirected effort to excel, which has resulted in many instances in over ornamentation; thus, there are chairs so decorated that rest is impossible, cabinets and bookcases which take up much room and hold little, and beds so monumental that they remind us rather of the last sleep than of a couch fitted for our nightly repose.

In endeavouring to lay down principles which may serve as general rules for the designer, it will without difficulty be conceded that, in every kind of furniture having a specific purpose, the first consideration of the designer should be *perfect adaptation to intended use*; this may appear so obvious a truism as to want no enforcement, but a walk through the Exhibition will speedily undeceive us, for there we see a multitude of objects offending against this rule; in some of these use is almost entirely overlooked, or has been evidently quite a secondary consideration, whilst in others it partially gives way either to effect or ornament. Thus in the English department a table of costly manufacture has ornament in solid relief on its upper surface, and many of the grates evidently require a glass-case, since fire and smoke would be the worst enemies to such polished marvels. Nor are these faults peculiar to England; on the foreign side may be seen a pianoforte, surrounded by bristling bullrushes, which must always be catching in the dresses of those who approach it, and with hardly a right line in any part of it; and chairs so heavy that they must be fixtures instead of moveables; while of minor incongruities, the instances are too numerous to specify. Manufacturers should also aim at obtaining the greatest amount of convenience and accommodation in the least space, in order that the furniture may be as suitable as possible to the size and uses of the apartment in which it is placed.

Another consideration to be attended to is stability of construction, *apparent as well as real*; the first being necessary to satisfy the eye, the last being indispensable to excellence and durability. Thus the legs of articles of furniture, designed in the style of Louis XV., are often broken in the centre across the grain of the wood, or having their base of support far within the perpendicular line of the bearing; a fault which, though not actually rendering them unstable, yet offends the eye as much as if they were really insecure.

The constructive forms, moreover, should not be obscured by the ornament, but rather brought out by it; nor should all portions be equally decorated, but only such parts as friezes, pilasters, capitals, pillars, or panels; herein simplicity is the safest guide to beauty. Over-enrichment, indeed, destroys itself, and it would not be difficult to point out works of the greatest pretension and the most costly workmanship, which are completely spoilt by this fault. Cabinets entirely covered with carving, the very stiles and rails being as decorated as the panels and pilasters: metal chandeliers, with leaves and flowers in as great profusion as in nature: papier maché hidden under a surface of pearl and gold. So extremely prevalent, indeed, is this error, that it may be said to be the ruling vice of the Exhibition. It should be remembered that contrast is one of the first elements of pleasure, and that *repose* is one of the most valued excellences of art; thus simplicity serves as the background to ornament, as the setting to the gem, or the foil that enhances the beauty of the jewel; and the good artist is as much shown by saving his labour as the bad one by over-enrichment.

It results from the above rule that ornament should arise out of construction; the work, abstractedly, should be constructed, and then decorated; not that it is meant that the ornament should be *applied* to the object, but (as in wood for instance) carved from it; thus the leg formed for support, the pilaster or column for bearing, may be lightened and enriched by cutting away from the block or slab, not by adding to it. In his natural state man is

a true workman in this respect, and works on just principles without knowing it. The New Zealander or the South Sea Islander first forms his war-club or his paddle of the shape best adapted for use, and then carves the surface to ornament it. The Swiss peasant, or the shepherd of our own hills, does the same. Such also is the case in the Eastern specimens of these works in the Exhibition, as is particularly exemplified in some choicely carved sandal-wood boxes in the Indian Department. Here the natural and the refined taste agree, for the best wood-carved ornament of the Renaissance is on this principle, low in relief, seldom projecting beyond the surface of the pilaster, or the framing of the panel. In this respect the French furniture as a whole is advantageously contrasted with ours, there being less of that imitative treatment, of those bulky bunches of flowers and fruits, which project in such graceless abundance from a large number of the British productions. This arises partly from their far greater knowledge, partly from their better appreciation of the laws of ornamental treatment and arrangement.

Another subject requiring attention from the designer is the judicious choice of the materials from which the works are to be manufactured. Allusion has before been made to the error of adapting one material to the ornament which had been designed for another; but besides avoiding this fault, the material itself should be so employed as to display it to the greatest advantage, and to produce the fullest effect of which it is capable. This remark applies equally to works of stone, wood, metal, glass, or any other material.

Thus, for instance, in wood-carving care should be taken not only to have the relief so managed as to guard the work as much as possible from accidental injury, but the designer should seek to adapt the forms of the ornament to the direction of the grain when it is open or free, and the work should be framed with a view to this consideration; moreover, ornamental carving should not be applied to wood of strongly-marked party-coloured grain, but that which is homogeneous in colour should be selected for the purpose, in order that the shape of the ornament may as little as possible be interfered with by being mixed up with the forms and colours of the grain. It is curious how much costly and skilful labour has been thrown away from inattention to such minor considerations as these. Again, in metal work a careful study of the material will suggest, among other things, the proper treatment of the surface; this is a matter of the greatest importance to the general effect. A due distribution of burnish and mat, of gilding and plain, or of the various kinds of surface tooling or frosted work, is of the utmost consequence—not to save labour, though this may result from it—but to give richness without gaudiness, and to enhance the beauty of certain parts by contrast with others. When the whole surface is burnished indiscriminately, as is frequently seen, the result is a glitter which obliterates form: when the whole surface is mat, the peculiar quality of metal seems lost from the want of burnish.

In some of the furniture exhibited, otherwise of much merit, the ornament is merely conventional, and derived from known examples; while in others, it has been so designed as to have a significance and motive in its adaptation. To such we should naturally allow the higher merit, but conceits and puerilities are so numerous in works of this class, as almost to destroy the pleasure which arises from ornament specially designed. We shall, however, have the gratification of referring to some well-considered works of this kind which are evidently the results of an imaginative and thoughtful mind.

There are not many "designs" for furniture in the Great Exhibition, besides those which are shown by persons exhibiting also manufactured works of a similar kind. In such cases it has been thought most desirable to judge of the manufactured product rather than of the designs; even LIEBHARD (1826, p. 1239) on the French side, and C. J. RICHARDSON (207, p. 761) on the English, the two largest exhibitors, may thus be judged of, since they both exhibit completed works.

These general remarks will serve to introduce the first subdivision of the section—

#### CABINET-WORK AND FURNITURE OF ALL KINDS.

The furniture of a man's house had need to be well designed, well constructed, and judiciously ornamented, for, from being constantly under his hand and eye, defects overlooked at first, or disregarded for some showy excellence, grow into great grievances, when, having become an offence, the annoyance daily increases. Here at least utility should be the first object, and, as simplicity rarely offends, that ornament which is the most simple in style will be likely to give the most lasting satisfaction. Yet, on looking over the various articles of cabinet furniture exhibited, how seldom has this consideration been attended to. The ornament of such works on the English side consists largely of imitative carving; bunches of fruit, flowers, game, and utensils of various kinds in swags and festoons of the most massive size and the boldest impost, attached indiscriminately and without meaning to bedsteads, sideboards, bookcases, pier-glasses, &c., rarely carved from the members of the work itself, but merely applied as so much putty-work or papier-mâché might be. The laws of ornaments are as completely set at defiance as those of use and convenience. Many of these works, instead of being useful, would require a rail to keep off the household. A sideboard, for instance, with garlands of imitative flowers projecting so far from the slab as to require a "long arm" to reach across it, and ever liable to be chipped and broken; and cabinets and bookcases so bristling with walnut-wood flowers and oak-wood leaves, as to put use out of the question. Now, besides that such treatments are not ornamental, they are not beautiful, and only enter into competition with stamped leather and gilded percha. There is great reason to doubt if this merely imitative carving is ever just in principle, when applied ornamentally to furniture; for, although the masterly chisel of Grinling Gibbons has raised it to great favour in this country, and although it may be tolerated when executed as skilfully as is that on a pier-glass frame by W. G. ROGERS (Class XXVI., 195, p. 750), yet it becomes absolutely unbearable under less skilful hands, and when it is lavished in such profusion as we find it on many other works. On the foreign side, as has been remarked, there is far less of this false mode of decoration, and a better sense of ornament prevails; the works are more frequently designed in the traditional styles. In France, a modification of the Renaissance is principally used, and in this the ornament is in low relief, and does not interfere with use; although false construction is a vice of that period, which has not been remedied in modern works, but is sometimes exaggerated.

The style of Louis XV. lingers in some of the French works; its playfulness of line and surface, its varied treatment and mixture of materials, together with its showiness, still command favour with the multitude. In the French Court (and in some works on the English side, probably of French manufacture) it is seen in its genuine character. The surfaces of these works are carved, when practicable; they are veneered in party-coloured woods, and panels are formed by or-molu mouldings, often in both instances completely at variance with the true construction; and occasionally the panels are filled with porcelain enamels, the whole having at least a gay and sparkling appearance. Some attempts have been made in the English Department to adapt ornament of this period to cabinet furniture, but it has been totally misunderstood. Instead of the treatment above described, the bold scrolls and shell forms used in the decoration of rooms at that period are here seen carved in all their coarseness on furniture. Such works bear out the remark before made, that these forms were especially adapted for gilding, and, indeed, are hardly bearable, except when so treated, or when made of metal. This becomes even more apparent when full-coloured woods are used, such as mahogany; in this material the ornament is even more coarse and heavy than in lighter-coloured wood. Since, however, the vendors of cheap furniture have adopted this manner as a cheap and flashy decoration for their goods, it is to be hoped that it will soon be entirely proscribed, or retained only by such dealers.

Those designers who unreservedly adopt the ornament of past times must, of course, apply it to their works without any peculiar significance or connected idea, but merely for its beautiful forms, elegance, grace, or richness. Where, however, any significant allusion, sentiment, or happy idea can be embodied in the ornament, uniting it with the use and intent of the work on which it is to be placed, it will have a charm which the others want. Not that this want is peculiar to the application of traditional ornament, since the designer in the natural or imitative manner seldom attempts any connexion between his decoration and the work to which it is to be applied. There seems no fitness, for instance, in surrounding the frame of a pier-glass with dead birds, game, shell-fish, nets, &c., although they may be excellent specimens of carving; nor is it clear why eagles should

support a sideboard, or dogs form the arms of an elbow-chair; nor, again, why swans should make their nests under a table, at the risk of having their necks broken by every one seated at it: indeed, in most cases, as such imitative forms cannot in the strict sense be called ornament, they almost challenge inquiry as to why they have been adopted, and disappoint us when we find it has been without motive; this is not the case with traditional ornament, which, like the current coin, is accepted at once without inquiry.

The sideboard, carved in walnut, as here shown, and which is exhibited in the French Court, by FOURDINOIS (France, 1231, p. 1236), is an apt illustration of ornament having a just and characteristic significance. This piece of furniture is of rare excellence and merit in design, and of skilful and artistic execution as to carving, and,

although of a highly decorative character, is fitted for the purpose for which it is intended. Six dogs, emblematical of the chace, resting on a floor of inlaid wood, support the slab, which has a simple carved moulding along its front, and is inlaid in geometric forms. The dogs are not merely imitative, but are treated as a part of an ornamented bracket or console, thus composed architecturally for bearing and support. Above the slab, standing on four pedestals, are female figures, gracefully designed as emblems of the four quarters of the world, each bearing the most useful production of their climate as contributions to the feast. Thus Europe has wine; Asia, tea; Africa, coffee; and America, the sugar-cane. In the central space between the pedestals, which is rather the widest of the three, the products of the chace are poured out on the very board, and above this the space is filled with a framed picture of rare fruits, giving an opportunity to enliven the work by the addition of colour, without militating against good taste; above the figures,

which are treated as statues, the cornice is bracketed, and supports boys with the implements of the vineyard and of agriculture. It rises into a pediment in the centre; this is broken in the manner of the Renaissance, and decorated with a figure of Plenty crowning the group. The upright line of the back is gracefully varied at the sides, and constructively strengthened by carved brackets, above which are terminal figures bearing the implements of fishery on the one side and of the chace on the other. The panels of the pedestals and of the side compartments below are filled with carvings formed of the fruits of various countries, grouped with the instruments of horticulture and agriculture. Two brackets on the side compartments between the figures give an opportunity for placing silver plate in a position for display. The ornamental parts of this piece of furniture are carved throughout in a masterly manner, and in a bold and free style; it is consistent as a whole, and free from puerilities, and, while it is thoroughly fitted for its purpose as a sideboard,

it is at the same time of a highly ornamental character, without any of its decoration being overdone or thrown away. It corresponds in its constructive form with the Renaissance of the 15th century—in the style of its carvings rather with the works of the 13th; the gates of Ghiberti having evidently supplied the idea of the groups of fruit and implements which fill the panels; and it may be remarked as a fault, that it has been overlooked that the relief in Ghiberti's work was suited to metal, the ornament standing beyond the face of the framing of the panel; but in adapting it to wood this should have been modified so as to bring the impost of the carving within the surface; such faults, however, are trifling in a work otherwise of great ability. The care which has been taken to keep all the ornamental details in the same scale throughout is an additional merit, and the wood has been judiciously chosen as to colour and grain.

When we turn from such works as the above to furniture designed strictly in accordance with the rules of a traditional style, we feel that there is often a cold propriety about it which requires consideration before we can admire it; yet among such are some of the best works of the Exhibition. The wardrobe of T. F. WINTZ, of Stuttgart (Wurtemberg, 70, p. 1118); the console-table and glass of A. BARBERTI, of Siena (Tuscany, 91, p. 1298), are excellent specimens in their kind, well designed constructively, and ornamented in exact conformity with the Renaissance style; the cabinet of RINGUET-LEPHINCE (France, 1437, p. 1245) has high merit; the ornamental treatment of a picture-frame by M. J. LIENARD (p. 1239); the cradle in the Fine Art Court (353, p. 842), so skillfully carved in boxwood, by W. G. ROGERS, from a well-composed design by his son, W. HARRY ROGERS, also; and a sideboard by a student of the SCHOOL OF DESIGN AT SHEFFIELD (p. 758). With these exceptions, the best works are in the French Furniture Court, although in them the style is often mixed, and the constructive faults of the Renaissance have been adopted as well as the ornamentation. In other styles, perhaps, the best example of a careful adherence to tradition is observable in the furniture of the Mediaeval Court, as in a Gothic sideboard, really fitted to display a service of plate; a carved oak cabinet bookcase, by J. G. CRACE (Class XXVI., 530, p. 761); and other works. These are particularly to be commended for their sound constructive treatment, and for the very judicious manner in which ornament is made subservient to it. The metal work is also excellent; and the brass fitting of the panels of the bookcase deserves to be studied, both for the manner in which it has been put together, and for its graceful lines. The candelabra of the sideboard also are sensible forms, without any unnecessary ornament. Such furniture in old times was often ornamented with mottoes or texts, a practice which might well be revived, as having far more significance than the commonplace conceits of much of the ornament of the present day. It may perhaps be objected that the general forms of furniture in this style want variety, and this is rendered more apparent by the florid lines of many of the works around them; but the principal reason will be found to arise from a due consideration of the true constructive treatment of wood, which is ill adapted to curved forms on account of its grain, and requires horizontal and perpendicular lines as the basis of framing. The ecclesiastical character of the works in this Court has been already alluded to. It must be remembered that the spirit of the age from which they have been adopted was to bring a sense of the pervading authority of the Church, and the outward forms of religion, at least, into all the offices of daily life. This was altogether changed when the revival of ancient learning and of ancient art destroyed the Christian symbolism of ornament and deluged the Roman Church with decoration derived from Paganism, and consequently entirely opposed to the true spirit in which all ecclesiastical ornament should be conceived. The change in ecclesiastical decoration soon pervaded domestic furniture also, and ornament lost all significance and symbolic life. Some credit, therefore, is due to the revival of a better and purer state of things, and a return to the old paths and avoidance of the present mere sensualism of ornament. Yet it is not on this account, but

as examples of careful and strict adhesion to true principles of construction and ornamentation, that the works in this Court are so often alluded to; they deserve commendation for their illustration of truth, and as showing what one man, by earnest and well-directed attention, can achieve in the reformation of taste, and in the training and forming of other minds to assist in his truthful labours. Their unity of character, moreover, is not the least among their many excellences.

The cases of musical instruments have been barely alluded to in this section of our Report, although they must be classed under the head of furniture. Such works, exhibited in various parts of the Exhibition, display a vast amount of labour entirely thrown away, and tending only to vulgarize that to which it is applied. Some pianofortes are entirely covered with inlays; some with gilding; some have pillars that support nothing, and carved brackets applied to no purpose. There is little harmony to the eye, however much may be produced for the ear: common sense, nevertheless, would seem to require simplicity in the exterior decoration, that one organ may have rest while the other is occupied. The thought indicated by the ornament is frequently most commonplace, being often that of a whole concert of musical instruments around the one ornamented, or their substitution for brackets, columns, or legs. There seems to be as little invention as fitness in adapting lyres as legs to pianofortes, yet this has been resorted to, whilst any consideration of a better mode of applying the support, especially in the case of grand pianofortes, appears to have been overlooked. Some of the best makers, both native and foreign, have contented themselves with carefully selected woods of choice grains, enriched by carved or gilt mouldings only, and have justly relied rather on the merits of their instruments than on the gaudiness of the cases. This is, at least, sensible, since the ornament of such works is quite supplementary, and will less bear overdoing than on many other articles of cabinet furniture.

Inlays of metal, mother-of-pearl, or tortoiseshell, may be introduced with excellent effect in furniture; but they must be used sparingly. Such a marvel of labour as the table exhibited by PEREZ (271A, p. 1346), in the Spanish Court, of course does not come within the scope of this remark; the subdued colour of the wood used, and the forms chosen, are nevertheless so judicious, that as a piece of ornamental inlay it is excellent for its art, as well as from its curiosity as a feat of labour. Some of the bulk cabinet furniture in the French Court may be instanced as showing that an excess of really beautiful ornament tires us, and causes meretriciousness. There are some excellent specimens of geometrical wood inlays for furniture exhibited by MARCELLIN (France, 606, p. 1207), and the inlaid top of a table among the furniture by LEISTLEA (pp. 1039, 1040), in the Austrian rooms, has much merit; such inlays come under the same general laws as mosaics, which have already been treated of, requiring great simplicity and perfect flatness. The table (112) in pietra dura, by BOSCHETTI (Rome, 17, p. 1286), consisting of a wreath of orange-flowers, bordered by a simple line, is in the purest taste; the more costly one near it is marred by the introduction of a band of architectural ornament, contrasting far too strongly with its ground,—a fault worthy of notice, as it prevails largely in similar works.

The furniture in papier maché is almost wholly of English manufacture; it is derived from the old importations from Japan, but has gone far beyond such goods in its excess of decoration: it is the most gaudily decorated of all manufactures, and seems quite beyond the pale of any just principles of ornament. There is no apparent reason why this material should not be used for chairs, conches, tables, or cradles; but the art of designing for it is not yet attained: as the material possesses peculiar properties of strength and lightness, without needing any framing, it should be considered purely for itself, and the designer must forget all other constructive forms. As to its ornamentation, the sooner it has a thorough revision the better, since at present it is a mass of barbarous splendour that offends the eye and quarrels

with every other kind of manufacture with which it comes in contact. The simple lacquered work of India may afford an example for the ornamentation of papier maché. Figs. 2 and 3, Plate 3, are specimens of lacquered ware taken from the tops of small boxes in the Indian Department. The purely ornamental treatment of the forms and their elegant flowing lines, with the agreeable manner in which both gold and colour are dispersed over the surface, is a lesson of richness without gaudiness worthy of the attention of the manufacturers of papier maché: and when it is remembered that this ware is of the commonest and cheapest character, it serves to show that vulgar forms and bad ornament are not necessarily connected with cheap manufacture.

Some of the greatest faults in the furniture of the Exhibition are its unsuitableness to uses, and its false construction. Look, for instance, at the costly articles of the Austrian rooms, and it will be found as skillful in execution as it is deficient in adaptation to its intended purposes. The bed looks more fitted for a corpse to lie in state on than for a place of repose; it is a congeries of parts without an object: the footboard is so high and solid that it shuts in the sleeper as in a prison, and completely impedes the free circulation of air; the footposts rise from massive purposeless bases, and dwindle into mere sticks as they approach the heavy canopy; the wood selected is unsuitable for carving, its party-coloured grain blurring the ornamental forms. In the other furniture like inconsistencies appear; in the cabinet large spaces are thrown away, and therefore, though occupying much room, it has little that is available for use; the centre space, with its canopy (though pretty), has no apparent purpose, and it is quite disproportioned to the size of the wings, besides being deficient in the appearance of support. The bookcase has the same fault of room thrown away and of unsuitableness to use, besides being a false adaptation of Gothic stone forms to wood-carving. This latter fault is elsewhere also largely prevalent; it is an error in most of the Belgian furniture. Thus we have a wardrobe which would be more characteristic as an oratory, and a bookcase with arches that support nothing, and buttresses which have no thrusts to resist. Indeed it should be remembered that the arch is not a wooden, but essentially a stone construction; it will be evident, on a moment's consideration, that it is a means of obtaining support by a number of separate small parts, the reverse of timber construction. It ought, therefore, to be well considered before being used in wood, wherein it should arise rather from coupled knees or brackets introduced to strengthen horizontal beams, than as an independent form. Its improper use will also be seen in various sideboards on the English side. In these the back consists of a mirror, over which a wooden arch is thrown; the glass having the effect of a void or opening; the thin wooden arch, bearing nothing, not only has a meagre appearance, but, having nothing to sustain its thrusts, is quite as much at variance with the use of the material as it is, with a proper sense of construction. One of the best of such treatments is seen in an elegant cabinet and mirror exhibited by Mr. SNELL (Class XXVI., 170), wherein a light inner column and arch, metallised by gilding, is introduced with good effect; even here, however, the pilasters which support the outer arch seem to want brackets at the sides of their base to give more appearance of support, for the introduction of which there is ample space; the small abortive ones which are used serving only the more directly to pointing out this want.

Sham construction is another error alluded to, not only of the kind before spoken of,—the suppression of the true constructive forms, as panels, framing, &c., and giving undue prominence to others,—but also where those portions which are intended for support (as, for instance, columns in cabinets, legs in sideboards, &c.) are made to move from under the parts intended to be supported when opening the doors of the furniture. This is a common case in cabinets designed in the Renaissance style, and has the authority of some of the best antique specimens; nevertheless, it is a constructive fault, and is instanced because it is the source of many like errors of a more

glaring kind, as where legs are made to remove, or where the whole front of a cabinet or wardrobe is made into doors hanging to the sides without a framed fascia and hanging style, and both the side and centre columns (where columns are so used as decorations) are made to move with the doors.

In reviewing the furniture of the Exhibition, the question of the education of the art-workman again comes prominently under review. While it must be confessed that the general design of the French works in this class are greatly in advance of our own, it is also apparent how much more widely diffused in France is that art-knowledge, which, combined with handicraft, constitutes the true art-workman. Although this is peculiarly seen in works in metal, it is evident in many other branches of industry. Wherever the human figure is used as ornament in English works, it is pretty sure to be faulty: the figure may be well composed, may be evidently designed in good taste, since that is often the work of a superior artist; but in the execution it is almost always disfigured and spoiled. The extremities are finished without knowledge of the internal structure, the fingers, toes, and joints have no bones within the skin, but that "gummy" undecided treatment which evidences the ignorance of the workman. In wood-carving this is equally apparent, even when it consists only of ornamental forms. Very often in such work the "design" of the ornament would seem to be by the same unskilled hand that carved it, since it is mostly out of place, coarse and merely "natural" in style, and rarely reaches beyond the expression of the most commonplace thought, or the imitation of the commonest fruits and flowers. That great power of imitation and skill of hand, however, are not wanting in the English carver, is evident from many examples, and is particularly shown in the beautiful and delicate flowers, &c., of T. W. WALLIS, of Louth (Fine Art Court, Class XXX., 89, p. 825), which are quite equal to the French works in the same style; but even these go no further than imitation, and the human figure cannot be carved by a merely imitative process:—success in rendering either the human figure or animals when in life and motion can only be the result of knowledge attained by a careful study of the structure of the bony framework and of the moving muscles; and it is the want of such anatomical knowledge and of a proper training in art that causes the deficiency we are obliged to notice in the English Department, and compels the carver to confine himself to mere works of imitation, knowing that higher are beyond his powers.

The two figures in the front of the cabinet of RINGUET LEPRIERE (p. 1245), for instance, are unapproached by anything in English furniture; as is the rare excellence of the carvings on the sideboard of FOURDINOS (p. 1236), and the works of LIENARD (p. 1239). Even where the figure has had a partial study, the imitation is often cold and "mannered"; the letter is followed rather than the spirit, and it is almost impossible to find a workman entering into the feeling and spirit of the artist-designer, and treating the work in a good and bold style. The bronzes of men and animals are perfect instances, in French works, of the power of the workmen to enter fully into the feelings of the artist, and to appreciate style and intention, but the same union has hardly anywhere been attained by the English workman. The Belgian carvers, with GIEKERS (p. 1165) at their head (a perfect artist in wood), are advancing in the same direction, and it must be allowed that the Austrian figure carving, as shown in the furniture of LEISTLER (p. 1039, 40), is much beyond ours, while the Berlin casting and chasing of small works is fast rivaling the French, and in some cases is of a much purer style. The carving of Italy is careful, but tame, and inclined to littleness; this will be seen by comparing the style of the children in BARNETT's table and mirror (p. 1398), a work otherwise highly commendable, with the gusto and vigour—the larger manner and bolder treatment—of some of the French works. The children of a small scale in the bookcase of HOLLAND and SON (p. 745), which contains some otherwise good carving, show the timidity of the English art-workman when he has to deal with the figure. Some very small

panels, carved in white wood, on a sideboard by J. M. LEVIEN (p. 751), are in better style, although very minute, but the general want of knowledge is too apparent. This deficiency of power and skill in the human figure is only an additional evidence of the want of better education for our art-workmen. They need to have proper treatises prepared for them, laying down the principles of ornament, and giving them a thorough foundation in practical geometry, form, proportions, and, above all, in anatomy, together with a careful education of the hand and eye; and unless the Government and the manufacturers of this country are soon awakened to our deficiencies, and prepared to make great sacrifices, we must be content to lag still further behind as the world advances, and for the future to be manufacturers of cheap goods, leaving excellence and beauty to our continental neighbours.

#### HARDWARE.

Under this head are comprised grates, fenders, fire-irons, stoves, gas-fittings, lamps, and various miscellaneous applications; the whole being largely connected with ornamental design. The works in this section, however, are not more miscellaneous in their use than they are in their style of ornamentation, almost every manufacturer endeavouring to exhibit in any and every style. Thus we have Greek candelabra adapted to many uses, Gothic chandeliers and Renaissance lamps, with a pretty large sprinkling of the forms and ornament of Louis XV. and XV., to which, on the English side especially, is to be added the *natural style* before alluded to, which, adopting foliage or flowers as its leading idea, presents them as they grow, without any constructive or architectural arrangement whatever. Yet even this is encouraging, since it indicates a desire for something more than mere reproductions of the antique, or that *shille* of ornament which the ignorant gather from many works, and re-assemble without taste or appropriateness; it at least indicates a change. In a great portion of the metal works French taste is found largely to prevail on both sides of the building, nor is this to be wondered at, since, for a long time, the lively fancy and invention of many excellent French artists have been directed to designing and modelling for these goods; ably seconded, also, by trained and educated workmen capable of appreciating their labours, and completing them by skilful casting, chasing, and fitting. But the tendency of the French mind towards display has resulted in over-ornamentation, and it is unfortunate that this fault is rather a merit in the eyes of the world, and has been eagerly adopted by the manufacturers of other nations, more especially of our own, that which is meretricious being retained, whilst what is really excellent in French design, and especially in French workmanship, is overlooked by them, or is unattainable.

Moreover, whilst the most able French artists in metal, eschewing the gaudy style of Louis XV., have returned to a modified form of the Renaissance, and have given it somewhat of newness of character, the English designers for hardware (with a few exceptions) either still adhere to the contorted style first named, or produce works composed of ornaments pirated from all times and all nations, put together without any sense of construction, without selection and without fitness. Such works are a thorough chance-medley that disgrace our manufacturers, and make us look back to the simpler forms of the middle ages with respect and regret.

Let any one examine the characteristic simplicity of the candlestick here engraved (exhibited by Messrs. HARDMAN, 532, p. 761, from a design by M<sup>r</sup>. W. Pagin), adapted as it is for use, standing firmly, capable of being handled, light, yet strong, and compare it with the showy works around it, so ragged and tangled with ornament that all characteristic form is lost, branched arms bristling with foliage weighing down rather than bracing and supporting them, with perhaps a bunch of flimsy chains dangling in the way of those who would touch or lift them, or two or three Parian Cupids basking at the foot, or bearing up the candles; and where the hand should grasp the stem to lift the candelabrum, the ornament so

sharp and thorny that to touch it would be impossible.

In making such a comparison can we do otherwise than feel that the one is honest, useful, characteristic, and therefore beautiful, whilst the others are flashy and grotesque, full of little prettinesses, which some misname "ideas," put together without any leading motive, and having no definite character or true construction?

The faults of English design for hardware are obvious to every one; the error of the French designers is equally open to the most superficial observer. In the great mass of these works there is no rest for the eye—the whole surface is nothing but ornament. Thus, for instance, the French art-bronzes have justly obtained a wide reputation, and the works of Deniere, Pradier, Méne, and other French artists, are sought for all over Europe; but when such become a part of manufacture, and liable to be classed as hardware, art is overlaid with ornament, and the skill of the workman is directed to that which degrades the work, and sadly militates against good taste. Thus, figures designed with much fancy, and modelled with ability and vigour, are vulgarized from the imitation of fur and of the texture of the garments, of buckles, buttons, and ties of the dress, of chain or plate armour or weapons, whilst the homogeneity of the bronze is no longer retained, but various parts of dress are treated in various tints of the metal; and all the different qualities of surface, such as tooling, frosting, and burnishing, in which it is but just to say the workmen are most skilful, are brought into play to enrich the effect; while sometimes we have, in addition, combinations of many materials, such as marble, porcelain, ivory, and bronze, united in a single work.

Another class of works are those anomalous candelabra composed of porcelain vases filled with a bunch of flowers in oracoli, a few bearing candles amongst a number of barren branches, the whole being a bush of glitter and burnish. This is the direction which naturalism in ornament takes in France. Such works have a total absence of constructive feeling, and an equal want of proper treatment of metal; to add to their finery, an épergne of artificial flowers is often mixed up with metallic ones, as a centre-piece for the dinner-table. There are many large candelabra in various parts of the Exhibition—in France, Holland, Austria, and Russia—which evidence the wide dispersion of French style, and contain exaggerations of the most frequent French faults. The error, however, does not wholly rest with the de-

signer, since it will be long before he has a public sufficiently educated to relish the amount of plainness which is absolutely necessary to give the true value to each part enriched.

*Grates.*—Grates rank among the principal works in hardware to which ornamental design is applied, at least on the English side, and there by far the best specimens both as to design and workmanship are to be found: this was to be expected from the general necessity for warmth in our cold and variable climate; an Englishman's love for his fireside having passed into a proverb. It is gratifying also to see that the design and decoration of these goods have greatly improved in the last few years. Some works of great merit are to be found among those exhibited, while the workmanship generally is excellent. There is, however, an evident tendency to do too much, and it is incumbent on designers for such goods carefully to avoid this, and to endeavour to restrain manufacturers from such treatments of the metals as lead to gaudiness and glare, and by which, at the same time, the grate itself is rendered less useful. The great secret, after constructive use has been considered, consists in the proper and judicious treatment of the materials, which offer

great advantages for contrast, either with or without the introduction of bronze or or-molu. True excellence will be found to be closely allied to simplicity—a moderate use of ornament and of the burnisher, and the contrast of broad flat masses of plain metal with ornamented or burnished mouldings, with inlays of brass, or with bronze and or-molu ornaments. The arched form, which has generally been adopted for grate-fronts is architecturally suitable and agreeable in outline, giving ample opportunity for ornament in the mouldings of the arch, as well as in the spandrels, besides having sufficient surface of metal to contrast with; moreover, it is not likely to interfere with the architectural arrangement of the mantel-piece to which it may have to be fitted. Messrs. Ronson and Hooze (Class XXII., p. 609) exhibit several grates designed by Mr. A. Stevens, highly decorative in character, and of great general merit; two especially, fronting on the Central Avenue, designed in the Renaissance style, evince great artistic ability. The one engraved, however, which is exhibited by them, is more constructively simple, and sufficiently ornamented for its office as an article of furniture, while it displays most judicious use of the material. The face is of ground

cast metal; the ornamented moulding of pale bronze, with the leafage of brass, and the figure bronzed, while some semi-burnished lines about the fire give a very chaste and tasteful effect; the fender is also of bronze and brass, with the leading lines burnished. Much more ornament than this would raise the grate out of its right place in the scale of furniture, and draw undue attention to it; its sober simplicity is more to be commended than many of the very highly ornamented grates around it. Messrs. Stuart and Smith (p. 603) have also some peritorious works as to design, but from the excessive introduction of burnished surfaces the grates look too fine for use. Messrs. Hooze have avoided this by a large introduction of the ground metal, which contrasts excellently with either burnished or brass ornaments, and adds to their beauty by its own repose and sobriety. It can never be too much insisted on, that ornament loses its value when it overloads a work, and that large unornamented spaces are required to enhance and give zest to the decorated parts. As we descend to grates designed by inferior artists, we find excess substituted for excellence, and works of such brilliant gaudiness of surface

as to be quite unfitted for their intended use; indeed, the process of keeping them in order would seem to require that a whitesmith formed part of our establishment, or that the housemaid should have a practical education to enable her to take to pieces the elaborate constructions which would come under her care, independently of the skill required to clean them. Messrs. Stuart and Smith have made attempts at the combination of materials with some success, and have also some cleverly designed metallic inlays for hearths.

It is tiresome to repeat what has so often before been said; that use ought to be considered before ornament; yet no section of furniture suffers more from neglect of this rule than that comprised under hardware, not only in the works exhibited in the British, but in all parts of the Exhibition. In some cases this shows itself in applying a form of construction suited for one use, to another for which it is quite inapplicable. Thus some chandeliers in the French Court, which at first sight seem cleverly designed, and a skilful treatment of the metal, on examination are found to consist of a large central lamp, which alone is intended to give light, surrounded by a circle of

branches bearing sham candles, not intended or prepared in any way for illumination, but introduced merely to allow of a little extra ornament. From the same cause results the impertinent *application* of figures, in bronze or in Parian; a fertile source of bad taste. These are too often merely added to the work, and not constructively treated; and thus seem to have no real relation to the forms they are connected with. Hence the manufacturer is enabled to adapt the same figure to many purposes, and to the most opposite uses; sometimes at the base of a chandelier, sometimes at the top, and sometimes perched upon the branches. Profitable to the manufacturer this may be, but it is as completely opposed to every just principle of design as to every hope of progress or good taste.

In the treatment of metal the rendering of the surface demands the most careful study, since much of the beauty of a work results from this being properly understood. No doubt the true lustre of metal is only given in the burnished state; but when burnishing is introduced in any quantity, it becomes not only tormenting to the eye but wants contrast to bring out its brilliancy. Moreover, by its glitter it obscures ornamental forms, which rarely look sharp or clear in their details under this treatment. When figures or animals, introduced for decoration, are burnished, their true form is almost undistinguishable on account of this glitter and the reflection from the polished surface, besides the pressure of the tool completely destroying all details of form and surface. Yet many important works (a clock in the Russian Court may be especially instanced) have the figures entirely burnished. The evil caused by a glittering surface in such works is duly appreciated by the French artists, who have wisely adopted bronze as the material for figures in the baser metals, and have overcome the difficulty by oxidation in their works in silver. A medium state of the surface between mat and burnished, though much to be desired, is not always obtainable, nor has it perhaps been sufficiently sought. Bronze, however, from its colour, partially supplies this want; and the mixed metals, and ground cast iron from its duller polish, afford good contrasts to burnished iron or steel.

While our use of burnish often tends to blur and destroy form, the older workmen took advantage of a polished surface to produce ornament; this may be seen in some of the old church chandeliers, of which the central trunk, consisting of a plain turned boss, seems richly reeded when the branches are lighted, merely by the reflection of the lights on the metal.

In most of the modern works, burnished and matted surfaces seem to be used indifferently or at random, instead of applying the burnisher to give variety to recurring forms, or to enhance leading lines. These are often entirely matted or tooled, and those parts burnished which will give the greatest flutter and glitter to the object.

The *natural* taste in connexion with the ornament of hardware has already been condemned. It is as false in construction as it is to all just ornamental principles.

The facilities which modern mechanism gives to the production of ornament, and consequently to over-ornamentation, have also been adverted to in the earlier parts of this Report. It is to be hoped that in view of these facilities manufacturers will see their own interest, and seek the best designs at any cost, since these will frequently be found to combine cheapness of production and simplicity with good taste. There can be no doubt that half the ornament in the Great Exhibition, and consequently the labour expended on it, is in excess; that is to say, that a better effect might have been produced without it; and this wasted labour might have been bestowed on the more careful completion of simpler designs, to the enriching of the manufacturer, and the great advantage of the public taste.

#### CARPETS.

The use of these fabrics suggests the true principle of design for their ornamentation, which is governed by the laws before given for flat surfaces, where the object is

rather to treat the whole as a background than to call particular attention to the ornamentation. Flatness, should be one of the principles for decorating a surface continually under the feet: therefore all architectural relief ornaments, and all imitations of fruit, shells, and other solid or hard substances, or even of flowers, strictly speaking, are the more improper the more imitatively they are rendered. As a field or ground for other objects, the attention should hardly be called to carpets by strongly-marked forms or compartments, or by violent contrasts of light and dark, or colours: but graduated shades of the same colour, or a distribution of colours nearly equal in scale of light and dark, should be adopted; secondaries and tertiaries, or neutralized primaries, being used rather than pure tines, and lights introduced merely to give expression to the forms. Under such regulations as to flatness and contrast, either geometrical forms, or scrolls clothed with foliation in any style, leaves, flowers, or other ornament, may be used, which with borders and compartment arrangements, and the use of diaper treatments, leave ample room for variety and for the inventive skill of the artist. It may be thought impossible or unnecessary, to confine the designer too strictly by such laws, and they are, indeed, rather stated from a sense of their truth than with an immediate hope of their thorough acceptance; but at any rate they may serve as curbs to extravagance of design, and as guide-marks to lead back the errant designer to the path of consistency. In speaking of designs for these articles we turn first to France, both as the largest contributor of designs generally, and because the importance of her national manufacture of these fabrics must claim for them our first consideration. Three of her principal ornamentists exhibit designs for carpets; two of them, however, seem to consider any such principles as those given entirely unnecessary: their works might as well be florid designs for the decoration of ceilings, if such a false system could be applied anywhere. Thus one of the most important carpet patterns of one of these artists bears a deep border of architectural decoration shaded in relief, consisting of shields and scrolls, of the Louis Quinze period, with wreaths of flowers rendered imitatively and in perspective. This border seems thrown downward, to form a reversed coving; within the field of the carpet, as in a mirror, is a forest, with the sky seen through the central opening between the branches, whilst among them, almost as large as the trees themselves, sport beneath their shade or float in mid-air. The principal work of the second is of a like character, with trees and flowers, fountains and statues, earth and sky, mingled on the surface of the design, in total contravention of those laws which have been presumed to be just ones for such a purpose. The third artist, M. CLEMONTE (p. 1219), both in his carpet and in his other designs, forms an honourable exception. Flatness, a just ornamentation, and a quiet distribution of colour being the consistent results of his labours. With regard, however, to the two former, it would be unjust not to speak of the great executive skill, the knowledge, and clever arrangement observable in their works. These, however, by their attraction, only increase the evil such designs foster. The results of such false principles are apparent all over the Exhibition, and are plainly visible in the carpets and hangings exhibited by France. To begin with the establishments which, under royal or national aid, have carried these fabrics to the highest pitch of excellence in all that relates to skill of manufacture, brilliancy of colour, and magnificence of design. In the face of the many and rare excellences they exhibit, both of handicraft and scientific knowledge, the chemist and the botanist having united their sciences with the invention and taste of the painter, it is extremely daring to reprobate the ornamentation of these costly works; but the designers who have laboured for them have, by these very excellences, so largely contributed to the spread of bad taste and false principles in such fabrics, that it becomes a positive duty, in the face even of the highest authorities, to object to the principles on which they are ornamented, if we would place carpet designs on the right footing for the future. That the stream is impure

At the fountain head has been shown in reviewing the designs, where the artist, exhibiting what should be specimens of his own taste, has fallen into the false taste of the public, or rather outrun it. In the manufactured products we see the result; the principal carpets exhibited combining a mixture of ornament with natural or imitative flowers, designed with the greatest skill, coloured with the tints of nature, and gracefully and tastefully disposed; the ornament however, is purely architectural, and in shaded relief, without any sense of flatness; and consists largely of the broken curves, the coarse scrolls, and the shell forms of the Louis Quinze period. In the carpet from the manufactory at Aubusson (France, 1499,) the contrasts of colour, both as to tints and light and dark, are of the most violent kind; distressing the eye, and distracting the attention from any works which might be in juxtaposition with it. The carpet from the Gobelins Manufactory is less objectionable in its contrasts of light and dark, and is highly skillful in its arrangement of colour, but it has the same erroneous use of it; the same adoption of the ornament of another material, the same florid taste and want of flatness. It may be said that these works, designed for the gorgeous magnificence of palaces, can hardly come under sober rules; that they are essentially intended for display. Even allowing this to be the case, such specimens may well serve as warnings of the danger of adopting the like style for more general uses; and even in a palace, the chaste simplicity of its statues, and the subdued hues of the works of high art which should adorn it, could stand little chance of vying with the richness and lustre of fabrics so over-decorated; and the princely inhabitant would certainly share the attention of the spectator with the gaudy carpet which covered the floor.

The English designers contribute less to the Exhibition than their French neighbours, and, although their works are behind the others for skill and execution, some are in a far more sober and just taste. The designs exhibited by the students of the Government School of Design are of this number; being the works of students, it can hardly be expected that they should abound in invention, and we ought to be satisfied to find that good principles prevail in them. There is a good design exhibited by J. K. HARVEY in the Fine Arts Court (Class XXX., 119), and two or three of inferior excellence in other parts; but it may be fairly said that our carpet designers, as a body, have not sent evidence of their skill to the Exhibition, but are to be judged rather by the fabrics themselves. With the exception of France, already remarked upon, no other nations have contributed any designs.

On turning attention to the manufactured goods, they will be found to consist of such a confused mixture of styles, and to exhibit such a total want of consistency, that it is at once evident the designers both at home and abroad, are amenable to none of those principles which have been explained as governing the decoration of carpets. It is true that, among the number of works exhibited there are many of great skill and ingenuity of decorative treatment, of rich combinations of colour, and which nearly approach to excellence; but it is nevertheless obvious, even from their extreme variety of style, that designers and manufacturers feel themselves bound by no laws, and perfectly at liberty to adopt any or all modes of ornamentation, without regard to what is suitable for the material or the uses which the fabric is meant to subserve.

The French designs applied to carpets are largely characterized by the works already remarked upon, the prevailing faults of these being the prevailing faults of the large majority of their works—architectural relief ornament, perspective treatments, want of flatness, crudeness of colour, harshness of contrast, and want of relative scale in the ornament, pervading the greater number of their works. Three imitations of Persian rugs from the NATIONAL MANUFACTORY at BEAUVAIS, from their flatness, quiet contrasts, and broken hues of negative colour, show to great advantage in connexion with the works around them. Nor can it be said that the other European exhibitors follow any sounder principles of design, either

in their national workshops or in the general labours of their manufacturers. The prevailing taste of France seems to be that of the Continent generally, but with less excellence of details, skill of arrangement, and knowledge of art; and although here and there works of much merit may be exhibited, the absence of true principles is everywhere apparent.

The English carpet manufacturers are large exhibitors, and on the whole the decoration of their best goods may be characterized as less extravagant than the foreign ones, not, however, that there is here any acknowledgment of sound principles, or complete repudiation of false ones. Thus, sometimes, as in the carpets of the Medival Court, and in those exhibited by Messrs. NEWTON, JONES, and WILLIS, a flat floral ornamentation and geometrical arrangement has been duly attended to, but the contrasts are too strong, or the necessary sobriety of colour is not obtained. Sometimes floral decoration has been used, as in the carpets exhibited by Messrs. TURNVILLE, SMITH, and Co. (Class XIX., 318, p. 571), WHITE and Co. (Class XIX., 343, p. 572), HENDERSON, WIDNELL, and Co. (Class XIX., 201, p. 567), BROWN, MACLAREN, and Co. (Class XIX., 114, p. 564), WATSON, BELL, and Co. (Class XIX., 337, p. 572), and by Messrs. JACKSON and GRAHAM (Class XIX., 390, p. 573), all which have much merit, but the flowers are often far beyond the natural size, the colours are bright and gaudy, and flatness is not attempted; in short, imitation and not ornamentation has been the rule of the designer. The last-named manufacturers exhibit a carpet designed by John Lawson, which, as greater attention has been paid to ornamental requirements, is given in the accompanying impression. In the carpet

itself the border is about half its width too narrow for the centre, but this is not seen in the woodcut; the colour of the centre consists of gradations of a neutral red, the forms of the border are red on a dull white ground. While it is one of the most commendable of such fabrics, it will serve to illustrate the error of indiscriminately applying the ornamentation of one material to that of another. Thus the design, taken from the excellent work on the Alhambra by Mr. Owen Jones, and there used as a wall decoration, where its "up and down" treatment was characteristic and proper, is no longer so when applied to a carpet, since this requires an "all-over" treatment, or an arrangement towards the centre, a consideration which does not seem to have entered into the mind of the designer. Messrs. WHITE and Co. (p. 572), and Messrs. WATSON, BELL, and Co. (p. 573), exhibit carpets of great merit, imitative of those of India and

Turkey, and it is only necessary to turn to them from the surrounding works to be convinced of the justness and truth of the Eastern style and application of colour to such fabrics; indeed a most careful examination has confirmed a strong feeling as to the great superiority of the designs of Indian and Turkish carpets, both in the arrangement and general tone and harmony of the colours, and the flat treatment and geometrical distribution of form. The Turkish carpets are generally designed with a flat border of flowers of the natural size, and with a centre of larger forms conventionalized, in some cases even to the extent of obscuring the forms, a fault to be avoided. The colours are negative shades of a medium or half-tint as to light and dark, tending rather to dark, with scarcely any contrast, and therefore a little sombre in character. Three hues predominate and largely pervade the surface, namely, green, red, and blue; these are not pure but negative, so that the general effect is cool, yet rich and full in colour. The colours, instead of cutting upon each other, are mostly bordered with black, the blue has a slight tendency to purple, and a few orange spots enhance and enliven the effects. The distribution of colour in these fabrics is far simpler than in those from India, which last have sometimes a tendency to foxiness, from a larger admission of warm neutrals, as brown and brown purple; they also admit of a much greater variety of colours than the Turkish. The colour of the Indian carpets, however, is so evenly distributed, and each tint so well balanced with its complementary and harmonizing hue, that the general effect is rich and agreeable; the hues all tend to a dark middle tint in scale, and white and yellow are sparingly introduced to define the geometrical arrangement of the forms, such arrangement being the sound basis of all Eastern ornament. The illustration given in Fig. 1, Plate 1, is from an Indian rug, and will illustrate the various principles, and the tone of colour contended for. A large silken carpet and a smaller one, exhibited by the HONOURABLE THE EAST INDIA COMPANY (p. 917), are fine examples of the skill and taste which are evidently traditional in the Indian races.

Having spoken thus highly of the decoration of such goods in India, it is painful to observe the attempts ignorantly made to vitiate the sound taste of the native artists. It has no doubt been done by those who are unaware of the true knowledge and just principles evident, more or less, in all the Indian manufactures; but it is not the less necessary to be commented on, since a school of industry seems actually in operation at Jubbulpore for teaching the reformed Thugs to make carpets in the worst European style, and at Bangalore the same teaching seems in operation. It is to be hoped that, when the admiration elicited by the display of the Indian fabrics at the Great Exhibition is re-echoed back to the land that produced them, this strange error will at once be remedied. Even if good, such patterns are not consonant with Indian tastes, and it is perhaps fortunate that they are really so extremely bad that they may fall at once before the better knowledge which the European judgment of the merits of Indian ornament will call forth and support.

The gross errors to which imitative treatments have led in the decoration of carpets have been already referred to in the general prefatory remarks, and need hardly be insisted on afresh after the definite principles which have been just given; neither need more be said on the error of adopting unchanged the ornament of other materials; it therefore only remains to remark that a certain vagueness of form and absence of flow of line in the Turkish carpets, which sometimes approach monotony, might be remedied by the introduction of strap ornament in the borders, and of diapers of flat floral ornament on the central field, under the same true principles of colour and contrast that these works evince, which, uniting the flowing and varied lines of European decoration with sound Eastern taste in tone, colour, and geometrical arrangement, would suit our climate and use, and banish some of that trash and crudity so evident on all sides, and which has its climax in the cheap manufactures of these articles. One thing is certainly to be learned from the works referred to, namely, that bright colours are not

necessarily rich or beautiful, but that tone is a great source of richness, and has at the same time the further merit of keeping such goods in their true place in the scale of furniture. No nations exhibit greater richness of what may be called upholstery, or more gorgeous costumes, than those of India and Persia, and the wisdom displayed in the negative tone and subdued colour of their carpets is worthy of consideration, as a means of enhancing and supporting the richness and costliness of their other fabrics and their personal decorations.

Almost all that has been said of carpets is applicable to druggets and felted goods for the same uses, and the principles of their ornamentation, under certain modifications, may be applied to floor-cloths and painted cloth for furniture covers, as well as to printed, felted, and woven fabrics, in various materials, for table-covers.

Floor-cloths are not so much used in this country for dwelling apartments, as in halls, staircases, lobbies, and other approaches, and richness and fulness of colour are, therefore, in general, less needed. The laws which regulate mosaics and inlays for floors will, in some degree, rule these works also, except that wood inlays, especially when large, require a design capable of being framed in its construction, and of having due regard to the shouderings of mortices and tenons, a construction obviously unnecessary in floor-cloths. It is, therefore, requisite to guard carefully against mere imitations of such designs, and more especially to avoid all imitations of carpet patterns. Frets and guilloches for borders, and geometrical combinations for the inner field, with a centre, may be adopted when the work is large, as in the cloth exhibited by Messrs. SMITH and BAKER (Class XIX., 371, p. 573), which has much merit, although it is too violent in its contrasts; while all-over patterns of simple geometrical diapers, in quiet, graduated tints, have the best effect in cloths for general purposes. The painted cloths for furniture follow a little too much the old Japan colouring, and are heavy and monotonous from their darkness. There are good diapers on some of the French cloths exhibited, and on some of those of GÖHRING and BÖHME, of Leipsic (3 Zollv., 164, p. 1711); but their cloths for the ceilings of carriages are wormy in line and unpleasantly crude in colour. The table-covers in woolen, cotton, flax, and silk, either woven, printed, or felted, of which there are a great variety in the Exhibition, are often characterized by the same faults as the carpets—imitative flowers and architectural relief—vases, baskets, &c., forming too frequent contrasts of colour are some violent kind. Thus there is great richness in a cloth with a border decorated with the flowers of the Brugmansia, exhibited by WHITE and SONS (Class XIX., 343, p. 572), but the requisite flatness is not obtained; and there is much merit in a Gothic pattern, with a well-coloured border, exhibited by H. and T. WOOD (Class XIX., 352, p. 572), but the architectural decoration introduced is objectionable.

#### CURTAINS AND HANGINGS.

The ornamentation of textile hangings follows the same laws, and is amenable to the same general principles, as that of other wall decorations, flatness of treatment and subdued contrasts of colour being the only sure guides.

The richest, and at the same time the most subtle effects in silk, are produced merely by the processes of weaving, as of satin figures on a satiny ground, in a self-colour; and ornament properly suited for this treatment of the silk is generally in good taste, and allows the full splendour of the rich material. Next to this, graduated tints of a self-colour, as gold on straw colour, or even ornament in one colour, on a ground formed of the natural golden tint of the silk, where the contrast is not too violent, has a good effect, and shows to advantage beside those over-decorated works which are covered with natural flowers in many colours; since the lustre and gloss of the silk, and the richness of colour consequent on these qualities, are seen to the greatest advantage in the flat masses of such ornament, heightened as they are by the duller ground; while smaller parts and varied

ments interfere with these inherent qualities of the material.

A hanging exhibited by Messrs. MATHEVON and BORDARD (France, 1349, p. 1240), decorated with bunches of flowers, on an ash-coloured lilac ground, displays great ability in the designer, combined with thorough knowledge of the powers of the loom, and it has been executed with equal skill by the weaver; it is, indeed, a choice example of the style; yet its lustre and beauty, and fitness as a hanging or curtain, are not commensurate with the costliness of its production, and it cannot compete for apparent richness of material with a plain mulberry-coloured hanging, ornamented flatly in satin and tulle, that hangs beside it. Had these flowers been treated flatly, arranged geometrically, and coloured in simple tints, they would not have been so artistic, but they would have been far more truly ornamental, and more suitable for hangings.

There are some well-designed fabrics among the Prussian silks, exhibited by G. GARAIN (Zollv. (1), 119, p. 1055), consisting of an heraldic treatment of the Prussian eagle, on a red ground, with the ornament in gold. The silk hangings of the Austrian bed are likewise in good taste. With these must be named the hangings of the Mediæval Court, and those in mixed materials, executed for the Duke of Devonshire by Messrs. REYNOLDS, of Dublin (Class XII. and XV., 266, p. 498, 499), consisting of fleur-de-lis and shamrock, in silver, on a subdued crimson ground, or in gold-coloured silk, on a washed ground. The hangings decorated with ornaments from the Alhambra, exhibited by A. DESTREUX and Co. (France, 164, p. 118f), are in good taste and on good principles, as are also some in mixed fabrics, in the same style, by ARNOV and Co., of Halifax (Class XII. and XV., 130, p. 491).

The natural treatment of flowers as the ornament of textile fabrics is nowhere seen to greater disadvantage than in the rich altar-cloths in gold brocade exhibited by French, Austrian, and Russian manufacturers. The coloured and shaded flowers instantly vulgarise and give a commonness to this essentially rich material; while diapers of colour, or a different texture produced by weaving, or silver threads woven with the gold, as in some of the Russian fabrics, have a rich and true effect.

The consideration of chintzes comes under the head of hangings: and upon these fabrics it is quite necessary to make a few remarks, since their decoration seems at present to be of the most extravagant kind. Overlooking the fact that the lightness and thinness of the material will not carry a heavy treatment, and that, in addition to all the principles which have been shown to regulate designs for hangings, the use of imitative floral ornament is peculiarly unsuitable on account of the folds, the taste is to cover the surface almost entirely with large and coarse flowers—dahlias, hollyhocks, roses, hydrangeas—or others which give scope for strong and vivid colouring, and which are often magnified by the designer much beyond the scale of nature. These are not only arranged in large groups, but often cover the whole surface, in the manner of a rich brocade. Nothing can be more erroneous, or more essentially vulgar, as would at once be evident did not fashion blind us for a time, and a feeling for costly labour and difficult execution prevail over truth and good taste.

Moreover, it is scarcely possible in such distributions of colours, whether arranged or woven, to arrange them according to just or scientific laws; for although this is attainable when colour is in simple flat tints, and subordinated to geometrical groupings, when the tints are broken up and gradated into shades, and distributed with regard to flowing and naturally-dispersed forms alone, the due quantities for harmony, the juxtaposition of complementary and harmonizing tints, and true balance of parts, easy in any simple or symmetrical arrangement, becomes difficult or impossible. The present mode of ornamenting these fabrics seems to have arisen from the false spirit of imitation—a desire to rival the richness of silk; but it is overlooked that the texture, naturally tight, requires lightness and elegance of form and colour; that, as a summer fabric, richness and fullness of hue, as tending rather to a sense of warmth, is out of place, and

that, on the contrary, fresh and cool light grounds, with flat ornamental forms, either “all over” or in “up and down” bands, or diapers of floral ornament, on a simple textural ground, are the true principles for the decoration of chintzes.

Before completing this Report on furniture, it is necessary to say a few words on muslin curtains, of which there is a large display in the Exhibition. These fabrics should, of course, have a perfectly flat treatment, whether purely ornamental forms or flowers are used for their decoration. The best effect for borders is obtained by a symmetrical arrangement of flowing lines, which may be large in pattern, from the lightness of the material; while a diaper treatment, or small sprigs arranged with large and regular spaces over the central field, are the simple rules for their decoration. It would seem hardly possible to err much in designing for a fabric which admits of such small variation, the contrast of the thick work with the more filmy ground being the source of the ornamental form, and colour being rarely used; yet, perhaps, in the whole Exhibition, there are not more glaring mistakes than are made in the decoration of these goods. In the Swiss muslins, the effort seems to have been directed rather to curious skill in workmanship than to taste in design, and some of the most costly goods are in the worst conceivable taste—immense cornucopias, pouring out fruits and flowers, palm-trees, and even buildings and landscapes being used as ornament. Even when this only consists of flowers, they are used imitatively and perspective, foldings of the leaves, and in some cases the actual relief of fruits, being attempted. Although the same faults occur in the English manufactures, these, on the whole, slightly incline to better taste, especially in some of the woven curtains from Nottingham, and in the fabrics exhibited by the UTRECHT COMPANY (Class XIX., 265, p. 570), but there is a sad want of good design in this class.

Except that curtains allow of an “up and down” treatment, which table-cloths do not, most of the same rules apply to damask table-linen as to white muslin curtains. The ornament of damask linen arising, as it does, merely from the gloss obtained by various distributions of the warp and woof in weaving, ought to be extremely simple in form; yet even in these goods we find buildings, landscapes, vases, baskets, fruits in relief, and flowers perspective treated as the details of decoration, while one designer has copied a centre-piece of precious metal, the property of H.R.H. Prince Albert, in the table-cloth upon which it is meant to be placed. These faults are present, not only in the Irish linens, but in those of France and Saxony also. There is a good design, in the German Gothic style, applied to a cloth exhibited by D. BIRRELL (Class XIV., 27, p. 511), and some well-considered adaptations of Greek ornament in the borders of some damasks by A. H. C. WESTERMAN and SONS, of Westphalia (1 Zollv., 544, p. 1081); but the general manufacture of such goods wants serious revision. A border of flat ornament, consisting of flowing lines or flat floral treatment, carefully studied as to the distribution of quantities; a diaper geometrically arranged over the inner field, either of floral or ornamental forms, with a judicious interspace (the diaper being rather dispersed than crowded), and a central form, give the best general distribution for the surface of table-linen. Proper attention should be paid, in designing the border, to the quantity allowed for turning down over the edge of the table; and care should be taken, when heraldry and heraldic devices are introduced, that they should be strictly flat. Landscapes, solid and shaded forms, perspectives, and architectural relief ornament, should be carefully avoided. Although the principles which govern the decoration of these fabrics appear to be simple and self-evident, there are few manufactures where a greater amount of error prevails, the nearest approach to purity of style being floral treatments, imitatively rendered.

In concluding our remarks on the design of this section, it is worth calling attention to the different relative importance, in an ornamental point of view, of the various articles which are comprised under the head of the furniture of an apartment. These are the work of various manufacturers, each endeavouring to give the greatest

amount of decoration to his own works, without duly considering their relation to other fabrics. Thus the carpet manufacturer ornaments his articles so slowly that they outvie the hangings—the wall decorator, of paper-stainer, his goods, till they emulate the cabinet furniture—whilst the upholsterer overlays his share of the furniture with florid carving, with or-molu and inlays, or with rich broderies of silk or velvet, so as far to outshine the rare workmanship of the jeweller or the goldsmith, or the art of the bronziest, the sculptor, or the painter, with which they are mingled.

All this arises out of error; each article of furniture has a due share of importance—a relative value as decoration—beyond which it should never be forced; and the designer for each should have this truth strongly impressed on him in all his labours. We may suppose it easily conceded that the carpet, bearing the relation of the groundwork for objects, should have a quiet richness of surface and texture, intruding in the least possible degree on the eye or the observation; the wall decorations, the next in importance, being entirely of the nature of a background, should be subordinate to the cabinet work, which, in its turn, should hardly be forced into undue competition with the skillful works in glass, porcelain, metal, or the fine arts, for which it serves merely as a means of display or arrangement. Yet how often is this order entirely reversed, and the simplicity of fine art out-shone by the gorgeousness of mere furniture! Where the educated taste of a decorative artist is not sought for, this too often arises from want of taste in the purchaser, who selects each object for itself, and not on full consideration of this principle of subordination; but were the designer really alive to the truth of the principle, such gaudy and false ornamentation would hardly be applied to inferior fabrics. Jewellers are careful that the setting be a proper foil to the more valuable stone, but those who have the means of richly decorating their dwellings often make such a show of the setting that it overpowers the gem.

#### DIV. 3.—*Domestic Utensils and Objects of Personal Use.*

The third section of this Report is devoted to the examination of design applied to domestic utensils and objects of more immediate personal use. Although there is not any exact line of demarcation between such works and those more properly ranging with domestic furniture, the division is sufficiently accurate, and is convenient as permitting classification under the separate heads of

1. Porcelain and pottery.
2. Table and ornamental glass.
3. Works in the precious metals, &c.
4. Bookbinding.

It is to be remembered, however, that the Report has reference only to the decorative art applied to such works, and that unornamented objects of utility are consequently not included.

It will at once be evident, that whatever is comprehended in this section ought to display the greatest purity of form and the rarest excellences of ornament, while they should be characterized by the utmost refinement and finish, since they are daily under our hands, and continually subject to minute personal inspection. Their utility, moreover, should have special attention, and convenience and usefulness be carefully studied. Here the ornamentist will have full scope for the highest efforts of his ingenuity and taste; and when working on the most precious materials, may add by his labour even to their value and richness.

Moreover, in those classes in which use is a first requisite, as is largely the case in china, pottery, and glass, the purest forms should be sought, allied to the greatest convenience and capaciousness; and the requisite means of lifting, holding, supporting,—of filling, emptying, and cleansing, should engage the attention of the designer, before the subject of their ornamentation is at all entered upon.

#### PORCELAIN AND POTTERS' WARE.

There is hardly any nation, however primitive its state, with whose works we are acquainted, that has not numbered among its manufactures some kind of potters' ware; rudely made and barbarously decorated perhaps, and imperfectly fired, but sufficient for the simple domestic purposes of people in an early stage of society and civilization.

As nations advanced in culture, their potters improved also, both in elegance of contour, in beauty of decoration, and in manufacturing excellence; so that fictile fabrics alone will often mark the standard of national civilization, and indicate the progress of a people in the arts of life.

This has been the case not only with the Greeks and the Eastern nations, but with the modern Europeans also, both of Italy, Germany, France, and England. It is unimportant that in Europe the improvement of these manufactures has, until of late years, been dependent on the patronage and assistance of princes, since, at the period of the first impulse to excellence, this was largely the case with all works of costly production. It is sufficient to notice that the pottery faithfully reflects the taste of the time; that its improved manufacture and decoration has been coincident with general culture; and that the style and progress of art, its motive and object, are as vividly depicted on the pottery as in the pictures and statues of the age. Thus when pagan subjects began to be treated among the artists of Italy, from the revival of learning and the spread of a knowledge of the literature of Greece and Rome, this change was immediately stamped as indelibly on the pottery of Urbino as upon the pictures of Raphael and his galaxy of pupils. In the same way, when the luxurious court of Louis XV. became interested in the manufacture of porcelain, and encouraged it with royal munificence in the workshops of Sevres, all the glare and glitter of that luxurious court, its debased art and theatrical prettiness, were at once impressed upon the works of that manufactory.

In this view of the ceramic arts there is much that is hopeful in their present position, since not only is there a manifest progress in the last few years in the general manufacture of porcelain and pottery, both at home and abroad, but a decided improvement in their decoration. We seem to have nearly passed through the stage of mere imitation; the antique has been carefully studied, not so much with a view to the mere reproduction of the elegant forms of its utensils and of their decoration (too much the custom during the latter end of the last and the commencement of the present century), as, from the examination of the vases and tazas of antiquity, to obtain the geometrical bases of their construction, and the principles on which the Greeks applied ornament to their surface. Hence has resulted an improved elegance and refinement in modern porcelain; and the beautiful details of Moresque ornament, or the richness and elegance of the Renaissance, have been adapted to its decoration on the same just principles that guided the artists of Greece and Etruria in ornamenting with their own national and significant ornaments the beautiful works which time has spared for our admiration.

The designs for porcelain or pottery are few in number and of small importance; they are, moreover, the works of students, and in the present Report need not be all-verted to. The works exhibited it will be desirable to class for consideration under two heads, generally broadly distinguishable, without, however, having special reference to peculiarities of manufacture or of material, whether as hard or soft paste, as earthenware and porcelain, since these will have proper attention in the Report of Class XXVII. They may fairly be divided into ornaments and works of utility. It has elsewhere been said that manufactures may be so over-decorated as to be degraded into mere ornaments; yet when works are produced simply with that object, they may not only be admired as addressed to the purpose of giving pleasure by their beauty, but by their production they often sensibly exercise a useful influence on the general taste

of the manufacture. This is nowhere more evident than in the beautiful and valuable collection of porcelain exhibited in the Sèvres Court, the products of that celebrated manufactory. There is not a more interesting department in the whole Exhibition, nor one which more fully illustrates the wisdom of a judicious application of the best art to manufacture. Here we find the taste of the first artists assisted by the science of able chemists, and, under a judicious direction, united to the most skillful workmanship and manufacture, and the result is that the fabrication of porcelain is carried to the highest state of excellence. The greatest part of the display, however, consists of works which must be classed as *ornaments*, such as vases, caskets, chalices, tazzas, &c. The forms adopted are pure, and those pure forms rarely interfered with by the reliefs. The details of the decoration, the modelling of the reliefs, and the painting,—whether these consist of figures, flowers, or simply of ornamental forms,—are of rare and felicitous excellence in many cases, and of high merit in all. The finished perfection of these choice works must have exercised a great influence on the other manufactures of the country, not only by forming a band of workmen educated to perceive excellence as well as to produce it, and capable of giving assistance in many other branches of manufacture, but by their effect on the general cultivation of the public taste. Nor do such establishments benefit the country that supports them alone, they diffuse taste abroad, even into other lands. Thus the improvement of our own general manufacture of china has already been adverted to, and yet it is but justice to say that it owes much to the labours of the national establishments both of Sèvres and Dresden; not only that their works have in some cases served as our examples, or guided our manufacturers by the principles of their decorative treatments, but from the stimulus to improvement which has resulted from the contemplation of rare works, and of that perfection which arises from a manufacture occupying itself rather upon efforts of skill than upon general production, and able to employ itself upon them irrespective of expense and regardless of cost.

Yet the danger of producing mere ornaments is fully illustrated even in china ware; more particularly in the works of the ROYAL DRESDEN MANUFACTORY (3 Zollverein, 174, p. 112), since, as far as is shown in this Exhibition, the porcelain manufactured therein would seem never to have got beyond this result. The works have none of that purity of form which almost of necessity arises out of constructive utility; the reliefs, governed solely by the imitation of natural objects, and not by the requirements of the rules of art, are quite unsuited to the material; and the colour has none of that judicious subordination to the effect of the whole which is seen in many of the productions from Sèvres. The surface is often covered with purely imitative flowers in high relief, glowing and brilliant as the tints of nature, yet looking gaudy as ornament, and, from their flimsy projections, liable to injury with every touch, and their preservation a source of constant anxiety to the possessor. Ever the May-flower pattern,—a production of great beauty, on the principle of a diaper of form and colour,—from its minute hollows, is quite incapable of being cleansed, and from the thickness which it adds to the form, contradicts the true effect of porcelain, which should unite lightness with capacity. Imitation seems to rule, and not ornamentation. It may be, and no doubt is, difficult to form a tree with all its flowers and foliage out of porcelain, but nothing is, arrived at when this is effected; it certainly has no utility, it is not ornament, and the more truly imitative it is rendered, the less it would be regarded, unless our attention was specially called to it as a wonderfully difficult effort of labour.

Altogether, a rooco air pervades the porcelain from Dresden, partly resulting from the style which was in vogue when the manufacture was at its zenith there, and largely from the production of works merely ornamental, from which it obtained so large a share of its celebrity. It still clings to the contracted constructive forms and extravagant pretensions of the style of Louis XV., which have been almost entirely laid aside in the establishment

at Sèvres: antique shapes, with a more classical style of decoration, having supplied their place.

Among the most beautiful works in the Sèvres Court are the elegant tazzas, covered with moresque ornament in green and gold, and in blue and gold, on the natural white ground of the material. The two vases in unglazed bisque, decorated with figure subjects, painted by M. Roussel, after the designs of M. Amory Duval, are chaste and beautiful specimens, the colour being carefully subdued, so as to harmonize with the delicacy of the form of the vases. The Labour Vase, by M. Klagmann, sculptor, is a good example of figures in relief as ornament, so applied as not to interfere with the general lines of the form. It is a vase of large size, in white bisque, very artistically designed and modelled, and is an evidence of many difficulties of manufacture, arising from its size, skillfully overcome. A casket, enamelled with white figures on a blue ground, the work of M. Ilaman, is also an example of great beauty. When we consider the choice paintings on porcelain and in enamel executed at Sèvres, not only from the old masters and others, but original works also, we shall be sensible of the great impression they must produce on the workmen, and the emulous efforts of manufacturing skill they must call forth. The figure paintings of Ducloux, Thurgot, Beranger, Laurent, and others, with the flower-pieces of Jacobber, Schildt, &c., must be allowed to have exerted this influence in a high degree. In our own country we have skilful enamellers, as may be seen in the exhibition of such works in the Fine Art Court; but those artists are not connected with the potteries, nor employed by the manufacturers; in fact, their art is too costly for such uses, unless where, as in France, a nation pays for that which is of great value for a nation's improvement.

The skilled French artists who have been enumerated are the successors of a line of others, who, for nearly a century, have laboured to improve the manufacture of porcelain, aided by a band of workmen trained in the same school, to assist them in their efforts—with what eminent success has been sufficiently shown. In England our china painters are not artists, and but few of them seem to have artists' feelings, nor until of late years have they had opportunity of gaining the necessary instruction. The painters on china copy fruit, foliage, and flowers well; but when such labours are original, they too often consist of but slight variations of some stock and stereotyped forms and colours, which the workman uses over and over again, without novelty either in grouping or drawing. In the power of painting the human figure they are mostly deficient, and few of them are able to execute subjects of which flesh forms a part. The modellers also have been sadly deficient in knowledge of the figure and of its anatomical details. In both these particulars, however, they are slowly improving, and the introduction of parian and other materials for statuettes, which is beginning to form a large branch of business in the potteries, and which, as yet, is nearly peculiar to England, has been of service in showing them their defects, and in urging them to amend them. The Schools of Design established in the potteries, in which some of the principal manufacturers take an earnest interest, have already produced some results, and energetically supported, will no doubt be of essential value to the workman and to the manufacturer. This is abundantly evident in the statuettes exhibited by Messrs. COPELAND (Class XXV. 2, pp. 713, 714), and Mr. MINTON, (Class XXV. 1, pp. 709-715), as well as many other British manufacturers. These statuettes, often reductions from the works of eminent sculptors, are completed far more successfully than would have been possible a few years ago; and when we consider the difficulty of putting them together by properly and skilfully adjusting the parts after they come forth from the moulds, and the further care required from their extreme shrinking in the firing, many of them may be regarded as highly successful results. Still there is room for improvement; the completion, in the details of the joints, features, and extremities, is not quite equal to some of the bisque figures that have been produced at Sèvres; and it is yet a desideratum (which may, however, arise from the spread of statuary

porcelain) to unite in one person the artist and the workman, as in the case of the bronzists of France, as well as many of the foreign workers in the precious metals.

The Royal Manufactories of Berlin and Bavaria have avoided many errors prevalent in the china-ware of Dresden; and have rather followed classic models. The works exhibited, however, are deficient in originality; the vases are of the most common classic forms—overloaded with ornament, and having landscapes and pictures painted in compartments on their surface. The Dresden enamel-painters on china rank next to those of France; and BUCHER (3 Zoliv., 176, p. 1112), and WATTHEY (3 Zoliv., 177, p. 1112), in their copies of paintings by the old masters, evince a perfect knowledge of their art. TAPREMA, in Russia (318, p. 1376), and NICO, in Austria (615, p. 1038), exhibit skilful enamels on china; but the porcelain from these countries has no peculiar originality or excellence to recommend it.

In considering the question of design, as applied to that division of pottery and porcelain which more especially comprises works of utility, constructive form should have the first attention; and in such works as are intended for vessels of capacity those forms should be adopted which, while they are most elegant, are best fitted for containing or holding. Such articles, moreover, being of continuous use, the power of ready cleansing is of great importance, and should have due attention from the designer. It is to be remembered, also, that the means of receiving that which is to be contained is as necessary as its ready out-pouring; since it is hardly desirable to have to apply a funnel to fill a pitcher or jug intended for constant use, although this may be permitted in a bottle, which is required to keep its contents cool, or to be carried about, and subject to spill them by jolting, and therefore needing a smaller aperture. Moreover, a jug, or pitcher, which will admit the hand to cleanse it thoroughly, must be more suited to daily use than one which will not. A due consideration of utility would regulate the form in many other cases; as, for instance, in cups and other drinking vessels, it might be most graceful to curve the top edge outward, but since such a form is likely to overflow the person in drinking, however superior in elegance, it should not be adopted. When utility is considered before ornament, numerous truths of the like kind will be arrived at, which are entirely overlooked when the order is reversed; thus relief, when used, should be extremely low, and without indented hollows in the composition, as well as without undercuttings, in order to give facility for cleansing; but while this is required for utility, it is necessary for elegance and beauty also: the Greeks were fully aware of it as an important truth, and in their pottery abstained from reliefs, or kept them to the lowest impost: the vases of Etruria have generally their line unbroken by the ornament, and the reliefs on the celebrated Portland vase are so extremely low as entirely to preserve its outline. In the same spirit our great Flaxman worked to improve this fabric, as may be seen in the examples exhibited by Messrs. Wedgwood; the style being still a tradition in their works. The Eastern nations are sensible of the same truth, and their

decoration of pottery is on this principle, being entirely subservient to the lines of the form. The antique Chinese vase for cut flowers, exhibited by Mr. ALCOCK (p. 1419), and here engraved, will illustrate this, as

well as the fitness of form to use. The neck narrow at the bottom, whereby the stalks would be compressed and supported; the enlarged bulb, to contain sufficient water for their nourishment, and at the same time to serve as a boss for the hand to grasp, is of a piece with the proper consideration of the decoration. This is not painted, but is of the nature of an inlay, being *cloisonné*, enamelled over the whole surface; that is, the enamel colours are filled into a coffer of metal standing on edge around the ornamental forms, the line of the vase being carefully preserved.

The application of handles is another important point connected with constructive design. The easiest and most convenient means of lifting the weight, when lifting only is required, and of lifting and pouring when both are requisite, being the question to be determined. Too often this is arrived at more by chance than by calculation. We see, for instance, the form of an Etruscan vase, such as is shown in figure 1, adopted as a pitcher;

the original having two handles, formed for its occasional removal only; for its new purpose, a spout is substitute

for one of the handles; perhaps it is to serve as a ewer, requiring raising and reversing at every effort to pour,

(and yet, so changed, it is acted upon by the hand and wrist at the greatest possible disadvantage, the hand having to lift the weight, as it were, at the end of a long lever, and reverse it by the power of the wrist," as is shown at *a* (fig. 2), while a much less power applied at *b* (figs. 2 and 3) would suffice to reverse the pitcher and pour forth the fluid. The height of the handle is of less importance when the contents have to be delivered from near the bottom, as in the Eastern form at fig. 4; since the slightest tilt of the vessel would begin to empty the contents through the spout, which would not be the case if they had to be discharged from the top. These hints will serve to show how important the proper consideration of the insertion of the handles is in such works, and how errors arise from merely adopting inconsiderately a form fitted for one use for another purpose. It would carry the subject too far to increase examples, but these suggestions followed out would lead to multiplied instances of false adaptation, and may serve to induce a more careful consideration of the subject. In the application of colour to porcelain and earthenware, the surface never should be wholly, or indeed largely covered; the material has a purity that should be decorated, not obscured. A due consideration of this simple rule would condemn a vast amount of bad taste, such as completely metallizing the surface of china by gilding, changing china into imitative marble, or covering the field of many utensils with pictures, landscapes, or flowers. The Greeks decorated their pottery in bands, introduced to mark the change of curve, or to separate the various surfaces: the eastern pottery is in the same way decorated in bands, or where the surface is more covered, it is merely with a diaper, which leaves the material sufficiently visible.

Landscapes and pictures are almost always out of place in pottery, and it certainly is objectionable to cover the centres of plates and dishes with pictures and views; not only because it hides the surface, which it has been before said it is desirable to retain, but because utility would be better served by the absence of any decoration in the part which receives the viands, to satisfy that sense of cleanliness only to be obtained by the white unchanged surface of the material.

There is still another subject to be referred to, which consists in the imitation of the ornament peculiar to one age and one purpose on the utensils of another age, and which are intended for totally different uses: or applying the ornament of one material to the decoration of another, which last fault, in speaking of other manufactures, has already been often strongly alluded to upon. The revival of Wedgwood were, in a degree, in this spirit; and although they produced a vast change for the better in the forms of our pottery, and placed a salutary curb on the extravagance of the style that they obtained, they were but the resurrection of a dead art; and the funeral urns of Etruria, being inconsistent with modern uses, have a cold formality quite inconsonant with the feelings of the time. An attempted manufacture of these vases, decorated with the beautiful outlines of Flaxman, of which a large number are exhibited by another house, can have only partial favour, as they can serve no other purpose than as ornaments, and will never enlist the sympathies of the general public in their favour.

The abuse of the ornament of other materials to unsuitable purposes is shown in many ways in this fabric; among others, in copying engravings and pictures on to various utensils. In one case the most sacred symbols of religion serve as decoration for the borders of plates, while the centres of them, and of the dishes of the same set, consist of angels, copied from an illustrated prayer-book, flying in the midst of a blue heaven diapered with stars. Such incongruities, improper in any case, are sadly and strangely inapplicable to a dinner-service. It has been well said, that "symbolical ornament demands perfect accordance between the use of an object and its decoration;" but can anything be more inharmonious than such sacred symbols mixed up with a festive dinner? Such incongruities are ever arising from unthinking imitation.

When, however, the allowance has been made for faults, failures, and short-comings, it is impossible not to

feel that the general manufacture of china has made great progress in this country. There is a greater selection of pure forms—a less gaudy treatment of the whole surface—than heretofore; and where works are founded on past styles, their most meritorious qualities are selected; their faults rather avoided, whilst the power of the art-workman has visibly increased. Thus, in the beautiful dessert-service from the manufactory of Mr. MINTON (Class XXV., 1, p. 709), whilst there is much that is derived from old Sevres patterns, it has been, by judicious adoption, rather than imitation. If the figures are a little crowded, they will be found exceedingly well modelled; and the purity of their white material, contrasted with the delicate hues of the colours combined with it, has a chaste effect, the furthest possible removed from gaudiness. Indeed, the great merit of the works from this manufactory is the restrained use of colour, and the general delicacy of the decoration. Some of the small figures on the centres of the plates are excellent specimens of the china-painter's art, and there is almost a total abstinence from landscape, or mere pictorial subjects, on these utensils. As to the imitative renderings of flowers on china, it is hard in this case to object to their want of conformity to principle, since the beauty and purity of the surface of china is so suitable to such art that here, if anywhere, their use may be overlooked. The porcelain both of Messrs. COPELAND and Messrs. ROSE (p. 711, and Class XXV., 47, p. 727), holds a high place also for form and colour; and some of the most successful of the larger efforts at enamel-painting on china in England are exhibited by the artists in the employ of these manufacturers, as well as some excellently-finished statuettes. The application of porcelain to decorate the jambs of fire-grates has produced some well-designed slabs from both Messrs. COPELAND and Messrs. MINTON; although, perhaps, one of the best designed of such works, with certainly some of the best English flesh-painting, is to be found in some jambs attached to a grate exhibited by Messrs. STUART and SMITH (Class XXII., 102, p. 603). An application of the design of some jewelled embroidery from the work of M<sup>r</sup>. C. J. RICHARDSON, to ornament a flask, exhibited by Messrs. COPELAND (p. 712), gives a rich treatment, although contrary to the sound principle of not covering up the surface of the material too entirely; but in another specimen exhibited the whole merit of the adoption has been lost by introducing a landscape amid the lines of the form, making it appear how much chance and how little principle has governed the choice. One or two plates in Mr. Copeland's collection have great merit in their design, the width of the ornamental margin being well considered and the centres judiciously plain.

The general manufacture of pottery in France includes some artistic adaptations of design to brown stone-ware, and of colour to its surface. The collection is exhibited by M. MANSARD (France, 1342, p. 1240). Although belonging too entirely to the class of ornaments, and objectionable from the false relief sometimes adopted, the application of art of a superior kind to common materials deserves much praise, and is worthy of attention, as showing how much might be done by a like attention to the manufactures of such wares at Lambeth and Fulham. Of the *Palissy* ware exhibited, little can be said in this Report; for although evincing much skill, it is so entirely opposed to all utility, and even beauty, and so completely a work of mere curiosity, that the difficulties overcome do not redeem it. The true *Palissy* ware did not consist of such unmeaning reliefs as are here applied to plates and dishes. The porcelain exhibited by M. LA ROCHE (France, 1287, p. 1238), contains some plates of meritorious design, as well as one or two elegant tazzas. In Bavaria some plates, designed by KAULBACH (64, p. 1101), are very judicious in the treatment of their ornamental borders; although the pictures from Reynard the Fox, painted on their centres, must be objected to. Some jugs, designed in the old German style, are pleasing, from their varied surface.

GLASS.

Among the many beautiful materials which the earth has yielded to the industry of man, to add to his comforts

and increase his enjoyments, glass holds a prominent place. If we regard its use in the fabrication of utensils to contain the fluid portions of our food, it is most especially valuable, since its surface has the power of resisting the action of almost all liquids, and, as a material, it unites strength with extreme lightness and great capacity. Its perfect transparency is another rare quality, whereby the purity and clearness of the liquid it may serve to contain is immediately manifest, enabling the satisfied eye to minister indirectly to the pleasures of taste. Moreover, whilst it is one of the most cleanly materials, from its extreme smoothness and hardness of surface, it is also most easily purified, and its pristine brilliancy is restored by the smallest possible effort of labour. Besides all these varied qualities, the materials of which it is composed are of the least costly kind, and the processes of its manufacture extremely simple; so that it is fitted for general use, and within the means even of the poorest purchasers.

For the purposes and utensils above enumerated, the qualities ascribed to it, properly understood and duly considered, will lead to a discovery of the principles which should govern its design and decoration. Of these, the foremost are its brilliancy of surface and its transparency, both which should ever be preserved with the greatest care in all right treatments of glass. And yet, strange to say, these qualities are not only often disregarded, but there is a strong tendency to contradict and destroy them: thus we see wine-glasses and decanters, water-bottles, carafes, and drinking-vessels of many kinds, not only with the surface covered with grime and ornament, but sometimes wholly and entirely changed and obscured by grinding, so as to render them perfectly opaque: or, we have colour most injuriously applied to destroy purity, and prevent a proper enjoyment of the glowing lustre of the liquid contents; whilst sometimes the material is wholly or partially opalized; in the one case making it into a spurious porcelain, in the other into a species of japanned hardware, without the toughness and tenacity of that manufacture. Another excellence of glass is its lightness, as compared with its power of containing: the maintenance of this quality is opposed to the heavy and deep surface-cutting to which glass is now so frequently submitted, especially in water-jugs and decanters, and in the pieces of dessert-services. This cutting is intended to enhance the jewel-like and prismatic effect of glass, but it is opposed to its true qualities for such purposes, and should only be resorted to in handles, stems, or bases, where transparency is unimportant, where constructive thickness is necessary, and the grasp in holding may be aided by the facets of the surface. Yet it has been the fashion to carry this practice of cutting to an extreme, tending to vulgarize, as far as possible, the simple and beautiful material: in some of the works exhibited it has been applied even to the bowls of wine-glasses.

The more simple mode of manufacturing glass is productive not only of the most beautiful shapes, but of its best qualities; and blown glass unites thinness, translucency, and pure surface, to forms which combine the greatest symmetry with varied curves; that is, the sphere, resulting from the circular motion of the workman's instrument, elongated by the breath and weight, into the ellipse and its combinations. These blown forms may be ornamented by narrow bands of engraved ornament, of which flatness and symmetrical distribution are requisite qualities: in wine-glasses and drinking vessels it ought to be reserved for those parts of the bowl which do not interfere with a perfect sight of their contents. Any gilding or enamelling can only be admissible under the same rules. In all cases, elegance of form should be the first consideration, to which cutting, gilding, or engraving should be entirely subordinate. The relation of the stem to the bowl in wine-glasses is another point of some importance. The practice has of late obtained of making them of such extreme tenuity as to produce a sense of fragility and insecurity, which is quite as great an error in taste as the contrary fault of heaviness and thickness.

Like porcelain, a section of the manufacture of glass is devoted to the production of what can scarcely be called by

any other name than *ornaments*. But while the production of porcelain ornaments has been fostered by princes, and, through the clever artists attached to royal manufactories, has arrived at great beauty and rare excellence, reflecting back an improved taste on the design and decoration of the general manufacture, glass has not been favoured with such advantages; and the specimens of Bohemian and Hungarian glass in various parts of the Exhibition, notwithstanding the rare beauty of the materials of the manufacture, can hardly be instanced for the merit of their design. The mode of manufacture, by casting in clumsy masses in wood or metal moulds, and reducing by cutting with the wheel, is contrary to the best qualities of glass, which consist of lightness and elegance. This alone causes many of the faults of the manufacture; since the true characteristics of glass are lost, and are replaced by qualities too apt to degenerate into the meretricious and the gaudy. Thus transparency is merged in rich colour, and this, again, overlaid with gilding: or the surface is flashed with opal, cut away by grinding to the coloured under-surface; sometimes giving the appearance of porcelain, sometimes even that of the inferior manufacture, papier maché; whilst, occasionally, the whole surface is frosted by grinding, and tinted in crude colours, the appearance of glass being entirely lost, and only its worst quality, that of brittleness, remaining: whilst the forms adopted are often as inelegant and rude as they are unsuited to the material to which they are applied. The tall chandeliers exhibited among Count Harrach's glass are examples of these remarks; at first sight they resemble papier maché, from the excess of gilding on the dark ruby glass; and when examination determines them to be glass, the deeply indented horizontal throatings of the mouldings of the shafts give a sense of dangerous insecurity and ill-adapted construction. This is far less seen in the smaller works of the same kind, but it is, nevertheless, the natural result of a wrong application of constructive forms to the material, and of an improper over-decoration of the surface; whilst it would appear that the true adaptation of such glass for the above purposes has not yet been obtained, its use in the manufacture of lamp pillars, knobs, and handles, lock furniture, and finger plates, has been more successful, and seems likely to be attended with more tasteful results.

When glass is used for large objects, such as chandeliers and candelabra, where construction is required, its known brittleness is rather at variance with the constructive application of the material, and it seems in the principal branches and supports to require not only a hidden metallic structure, but even the appearance of it to the eye, to overcome a certain sense of insecurity.

In upright standing candelabra the work should arise out of some other material as a base, and it is exceedingly objectionable to base a glass superstructure on the same material, supported on foliated or other forms of the nature of feet. A hanging chandelier a construction entirely of glass equally quarrels with the sense of security; the chandeliers of the last century illustrate the error of such constructions—their long bent branches appear weak and brittle, and the full beauty of the glass is not brought out by the lighting; the present mode, which treats glass rather as a string of jewels assisting to hang up the branches, is more consistent with its true use and best qualities; for while in masses it constructs ill and has not its full brilliancy, lustre and prismatic beauty are obtained by loose pendant forms cut with proper facets, so that every motion, however slight, contributes to the splendour of the work by the varied reflections of the lights. In such works coloured glass should be introduced sparingly, and it should always be translucent, opalized coloured glass hardly ever having a judicious effect.

In referring to the exhibited works in the manufactured material, the first place is due to the glass fountain of Messrs. OSLEN (Class XXIV., 20, p. 700). It is a matter of regret that a production so unique in this material should not be entitled to praise for its design; the truth is, that, works of the like magnitude in glass never having been before attempted, and the designer

being consequently thrown on his own resources, he should have seized the opportunity so offered, and, striving to forget what had been done in other departments, treated the material for itself alone, and consistently with its own proper requirements. Instead of this there is an attempt to mix architectural stone forms with others that have become almost conventional in glass, and the result is inconsistent and unsatisfactory. The glass pillars are far too slight for the heavy inverted canopy, and both those canopies are too large for the basins above, very inharmonious in their contrast of lines, and unfitted for the agreeable display of the water; the glitter of the jewel-formed ornaments with which they are covered being confused with the motion over them of the natural element, instead of serving to show out its brilliancy and clearness; indeed, it is evident that the main source of error has been in supposing glass, and especially cut glass, a suitable material for a fountain; it is at once seen that this is not the case; instead of its being a proper foil for the sparkling water, glass emulates its sparkle and lustre, and the result is a failure from want of contrast.

The unsuitableness of glass, when on a large scale, for self-construction is also seen in this work, and is partly felt in the large and otherwise elegant candelabra exhibited by Messrs. Osler (*ut supra*), the property of Her Majesty, especially in the horizontal indentations of the architectural moulding of the bases, which induce a sense of liability to break arising from the known brittleness of the material, as has been before alluded to in the works from Bohemia; in other respects they are in good proportion and beautiful in material, and the gilt bases on which they stand supply the want of a metal foundation before remarked on; the colourless quality of the glass is extremely beautiful. It is hardly possible to estimate properly the effect of cut glass except under the influence of the light for which it is adapted, an influence which has been noticed even in the case of metal chandeliers, and which would be much more marked in its effects on the prismatic forms of glass; but loose pendant pieces attach together in long sweeping lines are well adapted for this purpose; and the general forms of such works as exhibited by Messrs OSLER (p. 700), Messrs APPELEY PELLAT and Co. (Class XXIV., 33, pp. 701, 705), by PERRY and Co. (Class XXIV., 36, p. 705), and others, are good, although they do not satisfy the mind as to construction, and sometimes appear to want simplicity. It has been necessary to diverge a little from the classification at the head of this section to take notice of the above works and others of the like character; in returning to the objects more especially included in this part of the Report, the table glass exhibited by Mr. J. G. GREEN (Class XXIV., 32, p. 701), deserves especial notice, both from the general excellence of the forms, and from his large adherence to those principles which have been considered as best regulating the true use of this beautiful material. In his blown-glass jugs, water-bottles, and wine glasses, some of the purest forms derived from Greek utensils have been selected and adapted to the material and to present use; they are decorated with ground ornamental forms in bands, and although the ornament is sometimes too redundant and dispersed, it is in the right direction. Many of the forms exhibited by Messrs. PELLAT, and by Messrs. RICHARDSON of Stourbridge, have great merit, while the beautiful applications of glass to door-handles, and the extreme purity of the material obtained by Messrs. Pellat, of itself gives it a high ornamental character in such works. Messrs. H. HARRIS and SONS (31, p. 700) have some finger-plates in glass that point out a beautiful use of the material; one with a diaper in silver on a blue ground is chaste in effect and clever in its design. P. J. LAROCHE, of Paris (1287, p. 1288), exhibits some goblets and glasses of pure blown forms, simply ornamented and in good taste; but on the whole the best white glass, both in forms and ornamentation, is to be found on the English side.

The design of the Bohemian glass, both of COUNT VON HARRACH, (587, pp. 1036, 1037), the largest exhibitor, as well as of Messrs. KOTZ, of Prague, and of other manufacturers, Foreign and English, is tending rather to

injure than improve public taste from over-decoration. The richness of the material, from the brilliant colours that may be produced in it, renders it liable to this fault, which is greatly increased by the gaudy extreme to which the ornamentation is carried, too often applied to coarse, unrefined, and inelegant forms.

#### WORKS IN THE PRECIOUS METALS.

The design and ornamentation of works wrought in the precious metals deserve especial attention in this Report, since in this department we may expect to find the highest art applied to the richest and most costly materials. Moreover, in such manufactures more than in any other the labours of the artist and the ornamentist seem to concur, and are often so intermixed that it is difficult to designate their several provinces, or to determine where art ornament diverges from one another. Here we have a field wherein we may study the right application of each, and understand the due limit within which each is available for the purposes of manufacture.

However, in the highest range of his art, the ornamentist may be merged in the artist, there is a distinct difference in the principles of the two arts, a difference which becomes more apparent as the ornamentist descends from labours of such high requirement to those more strictly within his own province. Art has its childhood in a careful imitation of nature, and grows into an abstract imitation, or generalization of nature's highest beauties and rarest excellences—still, however, imitatively rendered—and nature, thus selected, becomes the vehicle for impressing men with the thoughts, the passions, and the feelings which fill the imaginative mind of the artist. The generalized imitation of nature is the language in which these imaginative abstractions are embodied and expressed, and thus whether the artist be sculptor or painter; the landscape painter even proceeds on the same principles, and endeavours by a selected imitation to reproduce the aspects of nature in harmony with certain feelings which fill his mind, and which he wishes to impress on the mind of others. In its lower phases art relies more and more on imitation, seeking to give pleasure only by the reproduction of beautiful objects or beautiful combinations, until, in its lowest development, art, if it can be so called, rests contented with mere imitation.

In considering in a like manner the scope of the ornamentist, it will be evident that in his highest aims he is assimilated to the artist, so that it becomes extremely difficult, nay impossible, to separate them, or draw any line of distinction between the one and the other. Thus the beautiful shield which embodies the description given by Homer of that of Achilles, designed by Flaxman, and exhibited in electrotypes in the Fine Arts Court (365, p. 843), and that skilful specimen of embossed work, the shield by Antoine Vechte, in the collection of Messrs. Hunt and Roskill (Class XXIII., 97, p. 686), are at one and the same time works of art and works of ornament. From this high range the occupation of the ornamentist descends by imperceptible degrees; not as in the case of the artist through the more and more close imitation of nature, but by selecting from her whatever is beautiful and graceful, irrespective of her individual embodiment of these qualities, and adapting them to give pleasure separately and apart even from any wish to recal the objects themselves from which he has sought or obtained them; his effort is to give the most characteristic embodiment of those natural objects (viewed in relation to some peculiar quality, form, or colour, or some particular adaptation required), rather than to imitate; indeed he departs more and more from imitation as he diverges from the path of the artist to occupy his own separate province as an ornamentist. These are truths to be continually borne in mind, as they constitute the only cure for that false style of ornament so largely pervading the manufactures of the day, and already so frequently alluded to under the name of *naturalism*, consisting of the mere imitative rendering of natural forms as ornament, and which is nowhere more largely exhibited than in works

in the precious metals, and in the affiliated manufacture of plated and Sheffield wares.

While it is not possible, therefore, in works in the precious metals, entirely to separate the artist from the ornamentist, still for the purposes of description their separation is marked with sufficient distinctness. A great cause of the faults exhibited in these works seems to be, that they have received their design rather from the artist than the ornamentist; thus we have figures having no constructive connexion with the work ornamented, but rather of the nature of statuettes perched wherever a ledge, or shelf offers accommodation for them; these are generally as imitatively treated as the material used and the powers of the artist permit, and are applied to inkstands, candelabra, and works of the like kind requiring a purely ornamental consideration. Many centre-pieces, racing-cups, and testimonials are treated merely as groups would be by the sculptor, although the lowest style of his art has but too frequently been adopted, and imitations of textures, chain and plate mail, and such laborious littlenesses, made a point of, rather than that nobler view of art, which, discarding miniature and strictly imitative details, seeks by grandeur of form and largeness of manner, to make us forget the scale of the work in the dignified style of its treatment. Now, if it is proper that these works should be consigned to the hands of the artist, he is bound to treat them according to the laws of his own art, not only by a noble style, but also by making them as groups truly statuesque, combining the parts so that they form an agreeable whole in all possible directions of view. Above all, the thoughts which, as works of art, they serve to embody, should be such as are worthy of being illustrated on metals of great value, which enriched by true art are enhanced in worth a hundredfold.

If we contemplate some of the inventions of the artists, and some of the thoughts which they have wrought out, we shall be indeed surprised that such puerilities could be dwelt on long enough to execute them as works of art. And still more that manufacturers, so shrewd as they generally are, should be found to engage in their production, were it not sufficiently evident that there is a large and wealthy public whose taste does not rise above such art, proved by its becoming patrons and purchasers. What can justify the employment of the precious metals, and what ought to be the more precious labours of artists, upon huntsmen and ploughboys, to render them with all the coarseness of their garments and the texture of their hose? or who, but the givers of a testimonial, relying on the known taste of its receiver, would require art to be degraded into the mere imitation of a hedge-row occurrence on a hunting-day when the sport was successful; knee-breeches and top-boots being as important items in the groups as the hounds, horses, and the portraits of the individuals whose good fellowship it commemorates? It is such art in the more precious metals, employed on such thoughts, that leads, in the imitative manufactures, to the many paltry inventions which are found to prevail therein. Rachel at a well in a rock under an imitative palm-tree draws—not water, but ink: Burns' shepherdess would find the same black fluid in the formless well by her side; a grotto of oyster-shells with children beside it, contains, not a light, but an ink-vessel; the milk-pail on a maiden's head contains, not goat's milk, as the animal by her side would lead you to suppose, but a taper. Such works are akin to épergues with the hippopotamus and his keeper; or Paul and Virginia under a palm-tree that upholds the glass for flowers on its top; or Apollo dancing, supporting at the same time a glass épergne twice his own size; and inventions of equal or greater novelty wrought out with great waste of skill and labour. Even when we arrive at really artistic works in this style, of which happily there are many, it is more than doubtful whether the ornamentist would not be more suitably employed upon them, and an ornamental and architectural construction first obtained, ere art was called in to aid in their completion. It is not pleasant to add, that the above strictures more especially refer to English productions. It is true that such works have often a local significance or an individual importance, causing their exhibition here, and making it less likely

such should be exhibited by the foreigner than plate of a specific use, or ornamental works whose characteristics are more general; but it is impossible to deny that the taste of the class who purchase or commission these works abroad must be higher than our own.

In France, for instance, we find testimonials and prizes taking the shape of art rather than of massive metal. The President of the Republic, in contributing a prize to the winner of the Chantilly races, presents a shield, on which are four reliefs, illustrating racing, in various ages of the world; and when the workmen of Montfaucon and the inhabitants of Lot desire severally to present testimonials to Generals Changarnier and Cavaignac, the weight of silver is of far less importance in their eyes than the rare beauty of the art-workmanship. These works are exhibited by M. Froment-Meurice; and the two latter, two beautiful swords, are choice examples of design and chasing. Moreover, it is worthy of notice that in such works the artist does not consider, his vocation a separate one, but regards the utility while he perfects the art. In both the above sword-hilts, the ornament (group of figures) has been so thoroughly adapted and composed for its purpose as a handle, that it is perfectly accommodated to the grasp; which is the case also with a beautiful short sword, ornamented with the history of St. Hubert, executed by M. Marcet, and exhibited by MARREL BROTHERS (France, 331) in the same department.

When the amount of those works exhibited by the gold and silver smiths of Great Britain is regarded, an amount whose value is to be estimated by its weight in *tons*, it must be owned that there seems ample encouragement for more skilled labour; but the slightest glance will serve to show how largely the mere weight of metal enters into the estimate of value by the possessors of plate here: and, on the contrary, how little fine art is considered to add to its worth. And yet art would give a more real and permanent value than mere material, and tend at the same time to separate the precious metals from the plated substitutes which ape their richness, but which would never engage the hand of the artist in such rare and costly efforts of skill; indeed, it is a curious fact, observable in the imitative manufactures, more especially in those where the production is very easy, and the sale likely to be extended from the cheapness this induces, that, instead of being employed on art, of the best character, in the first type, it is often of the most wretched description, notwithstanding one might suppose that the cost of the first model, even if high in itself, would be trifling dispersed over a multitude of copies; but it is probable that the style of the work in such cases is suitable to the general taste of the purchaser. Thus the electrotype process, by which means the rarest specimens of art can be, and have been, reproduced, applied to general manufacture, or where original works have been attempted, has been too often used on the worst art and the most puerile ornament. The same is observable in works formed by stamping in dies, and even, though in a less degree, in those cast in moulds, and afterwards chased; and it is only when the same man's mind invents the work which his hand executes, that the highest skill is seen conjoined with the most beautiful art.

It must be owned, however, that our countrymen are greatly deficient in the treatment of the precious metals as the medium of art. The truth seems to be, that here one artist designs the work, and perhaps makes the model, whilst another is employed to produce it in the metal. Thus we find works designed with great ability, and modelled with much knowledge, and evidently by artists of great professional excellence, yet these works are completed in the metal with every possible littleness of imitation, serving only to degrade and vulgarise the art if it is employed upon; and this frequently is caused by the surface treatment and the mode of execution, wherein imitation has taken the place of art. Thus the true artist does not produce the texture of the fur of animals hair by hair, but gives its general expression by some conventional rendering, by the indications at the parts where the skin folds, or by tooling to emulate the lustre of its gloss. In the same way true art does not imitate the materials of our dress by the threads of its manu-

facture, but indicates them rather by the shape and contour of the foldings. Yet in the works under examination, the surface is often subjected by the workman to a most laboured treatment, labour without knowledge, which dwells more upon hairs and threads, upon details and buttons, than on the form of a joint, or the bones of an extremity: the one is a labour that requires no exercise of thought, nothing but mere dexterity; the other requires a workman not only educated into a knowledge of the parts, but who can enter into the feeling and intentions of the designer. This dwelling with complacency on mere labour, and evident satisfaction with its tedious felicities, can only arise from the habit of giving the models of the superior artist into less skilful hands, to be completed in metal.

Again, in the higher works in silver the foreign artist has had the boldness to regard the material, rich and costly as it is, merely as the vehicle of the art he adds to it; and that lustre and brilliancy, which is one of the great excellences of the rarer metals, he subdues by acids to prevent the glare from interfering with the forms of art. To the eye, silver, so treated, might be so much zinc, did not the informing mind and the beautiful art enshrined in it at once bespeak the valuable metal which alone is capable of rendering such a noble return to the artist's labours. The metal so used serves only to display the art; but our workers in the precious metals have not yet arrived at such a state of virtue; the value of the mere silver is too great in the eyes of the public to be given up, and the full glitter of its polish must be sought to satisfy their feeling of cost and magnificence. From the same cause it is, no doubt, that figures well designed and artistically modelled, are loaded with toolings and burnishings, are matted and frosted, and every other expedient attempted, to show the silver rather than to exhibit the art.

Another defect of the works in the precious metals, as exhibited on the English side, may be traced to the same cause—the separation of the work of the artist and the silver workman: hence casting and chasing are the means of production here, whilst the foreign artist himself uses the hammer and the punch, and beats out with his own hand the creations of his fancy or the inventions of his skill. Casting and chasing in their proper application are means only of producing and perfecting a thing, after the design and model have been executed: even in the hands of the artist himself they are but completing and perfecting processes; the work, as far as invention goes, is already done before it is committed to the mould; and the chaser does not perfect what the caster has produced, with the more or less excellence, according to the art-knowledge which he possesses; but by the embossing process, called *repoussé*, the artist himself produces the work by punching the plate of silver off a soft matrix, and continually annealing it in the course of his labours. By this embossing process the mind of the artist is working with every stroke of the craftsman's hammer; and not only does his own hand work out every characteristic quality of the surface, whether of flesh, or of drapery, and his knowledge supply every essential detail; but thoughts seem to arise out of the very method and means of working, and each stroke on the punch may prove a suggestion leading to new fancies, or be followed out into more happy details. Even from the accidents of annealing—constantly necessary during the work—the colouring of the metal in the furnace calls up new thoughts, like those which arise in the mind of the poet watching the glowing embers, and the artist at once embodies his new-found fancies. Chasing has none of these suggestions; as before said, it only perfects: whilst embossing is to it what sketching in the hands of the painter is to engraving. The very means in the one are suggestive in every stage of the progress; while the other is only a more or less complete copy of a previously-designed original. The beautiful and skilful works of Antoine Vechte, both the shield before alluded to and the vase representing the story of the Titans (p. 686) which accompanies it, with the magnificent *repoussé* wrought in silver partly by the same process, the work of Wagner, exhibited at the entrance of the Court of the Zollverein, are rare specimens

of this mode of working, and its suggestiveness will be at once understood by those who are at the pains to examine them, since they all three have parts only partially finished, such parts remaining as it were in the state of sketches, and speaking in this state so strongly to the inventive fancy of the artist, that he who looks into them feels a strong desire to work out the thoughts and fancies they cause to crowd upon him. The iron shields exhibited by *Le Pape Mou-tier* (France, 1864, p. 1241), are also fine examples. This mode of workmanship tends also to a unity between the ornaments and the objects ornamented, whilst chased work and cast figures, too often necessarily wrought apart, and applied to the group or thing ornamented, have oftentimes a contrary tendency. In reviewing the question of works in the precious metals, there seems a coarseness and florid style pervading English works, showing itself in groups "in the round" in imitative art, in bold and overcharged relief; in coarse ornamentation, and in enlarged scale; whilst in France, the only other large exhibitor, and in the works of Wagner, in Germany, and of certain French artists on the English side, there is much less of this grandiose coarseness, particularly in the art not specially devoted to purposes of manufacture. At the same time they have, perhaps, in some cases rather too much ignored the consideration of the material, and treated it entirely as a medium for the art. This was not the case with the mediæval goldsmiths, or with those of the 16th century, who, whilst adding exquisite art to rich materials, so treated the general surface as to obtain at the same time the richness and lustre of the precious metals. One thing that we neglect, however, which our French neighbours do not, is the use of enamels; and the varied treatments of surface by oxidizing, parcels-gilding, burnishing, niello, &c.

The use of enamelling as an ornamental addition to the surface of the precious metals has been confined, with one or two exceptions, to chalices, patens, reliquaries, and other ecclesiastical goldsmiths' work, founded on ancient and mediæval examples; and there are some good specimens of Champlevé enamelling in the collection sent by Mr. HARDMAN, (522, p. 761), as well as in the works of KEITH (Class XXIII., 121, p. 694), and SKIDMORE (Class XXIII., 23, p. 694), and in France in those exhibited by M. PONSIELOUE-RUBAND (1405, p. 1243); but the most artistic examples of the use of enamelling are in the elegant mountings of rock crystals, agate, and lapis-lazuli, as cups and flagons, by Mr. MOREL (117, p. 693), of Burlington-street, which for felicitous design and beauty of execution, equal the rare examples of the 16th century. It is understood, however, that these are the works of a French artist. Mr. WEISHAFT, of Hanau (1 Zoll., 412, p. 1073), in the tastefully-designed chessboard which he exhibits, has also made an artistic use of surface enamelling, both in the dresses of the chessmen and the ornament of the table; while the choicest specimen of the combination of many materials to form a rich and beautiful work is seen in the shield of Faith, presented by His Majesty the King of Prussia to his godson, the Prince of Wales; it was designed by CORNELIUS and STRÜTZER (p. 110), and executed by Hossauer, Fischer, and Mertens; and is rich, without the slightest tendency to excess. The subjects, from the Scriptures, in silver, are ably executed in low relief, and carefully chased; the single figures of the Apostles beautifully designed, as are the accompanying enamels. The ivory forms that frame in the compositions towards the centre, and surround the outermost rim of the shield, not being continued through the compositions of the outer margin, there is a slight appearance of its wanting constructive framing in that part, and there are three different scales of figures in the compositions. With these slight exceptions, it is both a beautiful work of art and a rare example of the skilful combination of precious materials, as well as of unity of intention in the whole composition.

The natives of India have long been skilled in the art of enamelling both on metals and for jewellery: the works exhibited in the cases of the East India Company contain many interesting specimens of this art—both applied to the surface of domestic utensils, as flagons, cups, &c., and to necklaces, bangles, and articles for personal adornment; the portion of a dagger-case given in Fig. 1, Plate 3, is beautifully ornamented with enamelling, and is not only

a choice example of the art, but of the Indian treatment of flowers as ornament. An enamelled incense-burner of large size, and the flower-vase inserted in the remarks on pottery (p. 1648), both from China, and exhibited by Mr. ALCOCK (p. 1418), are beautiful and choice productions in this art.

If we can allow such works as testimonials, racing-cups, centrepieces, and others of the like character, to be given up to the treatment of the artist, there is still a large number of other articles in the precious metals and their representatives having a defined purpose as utensils, and strictly devoted to a use, which must belong to the domain of the ornamental designer, and be subject to all the laws of his art. Of these, utility should be the first consideration. They should be composed on geometrical forms and have a symmetrical construction. Capacity and mobility, in most cases, will have to be regarded, in connexion with proper stability and solidity: and it should be remembered that, as domestic *utensils*, they are not to be placed under glass shades, and therefore will require constant cleansing and polishing, and that, not at the hands of the silversmith, but of the butler or his assistant. This alone ought greatly to regulate the treatment of surface, which should be such as will best display the beauties of the metal, and yet not render it liable to injury under such cleansing. Then again, it is usual to make the handles and knobs points of ornamentation, and this not improperly; but it should not be forgotten that they are to be grasped for lifting, and should be convenient for that purpose. And neither in these, nor, indeed, in any other part of the ornamentation, should the relief be so bold, or project so far, as to be liable to accident or entanglement in the use of the articles. Some of these remarks may seem almost uncalled for, but are not so: nor are the errors recited confined to English manufactures, but are equally evident in those of France. Thus it is impossible to justify large and florid groups of dead game, of fish, of fishing utensils, or the like imitative treatments, as the knobs of dish-covers, or the handles of tureens; however beautiful in design or excellently chased, they are not convenient for use; nor can the hand be safely brought in contact with the metallic tops of a pheasant, the tentacles of a lobster, or the twigs of a fish-basket, any more than stags with their branched antlers can well be laid hold of to remove a venison dish. Faults of this class chiefly arise from the natural or imitative treatment, which has to answer for so large a growth of errors.

It has before been remarked that the figures introduced into the ornament of metal-work are too often merely applied or stuck on, not arising out of the work as a constructed whole, and this more especially in those works which have been usually committed to the skill of the artist; but, if not to be tolerated in those works, in objects of utility they are far more out of place, and ornament requires that figures should have an ornamental construction. It cannot be too often repeated, that imitative trees and foliage, flowers that are like the growth of the hothouse electrotyped, and which dangle and shake with every movement, as much almost as would their prototypes on their natural stems, are not ornaments, are in the worst possible taste for any useful purpose, and have a flimsy and tinsel-like appearance, as much beneath the impressive effect in metal of even mere plain surfaces, as they are wide of any pretensions to fitness or propriety of works in metal at all. This naturalism is evidently a hobby of the artist's, and should have no quarter at the hands of the ornamental designer. In the section devoted to hardware, the treatment of metallic surfaces has already been the subject of remark; much of which will apply here also; but in connexion with this imitative art, it may be remarked that the frosting, which it renders almost necessary for its display, is even more opposed to the brilliancy of metal than that oxidation so useful in showing art-treatment.

In jewellery, used for personal adornment, the fancy has play, and the imagination need be but slightly curbed. In such works being in their very nature so much employed to display them to the greatest advantage, the designer should be careful that neither gold

nor enamel interferes with them, and that there is sufficient motion in the parts to bring the light into play on their surface. In mourning ornaments, bracelets, brooches, &c., M. MEURICE has shown himself a skilful artist; here, indeed, the fancy of the French art-workmen has full scope, and in such smaller works in metal as cane-heads, seal-handles, buttons, snuff-boxes, &c., the most delicate workmanship is found combined with artist-like design and pleasing inventions, both by this exhibitor and in the articles displayed by RUDOLPHI (France, 1466, p. 1246), GUEYTON (France, 1619), and others. It only remains to remark upon some of the works for domestic use exhibited in this Class which have not already been spoken of or alluded to. One of the choicest works of utility is the tea-service of ECK and DUMANG (France, 1211, p. 1235), which deserves attention for the architectural arrangement of the whole as an harmonious composition, and for the beauty and elegance of the individual forms and their ornamental details; it is a thorough study of ornamentation; the figures, where introduced, are perfectly parts of the composition, and are oxidized to show the beautiful workmanship employed upon them; the ornament is in low relief over the surface generally, and parcels-gilding has been used to give expression where the treatment became confused by a little excess. The plateaus on which the cups, cream-vessels, &c., are arranged, are treated with ornament in niello, and every effort has been adopted to give variety to the surface without interfering with the general repose of the whole. Constructive use, moreover, has been well considered; the composition consists of a raised central urn, from which the water flows through several vents into four teapots arranged below, whilst chalices for sugar, cream-pots, &c., are grouped lower down in the arrangement, the bottom having spaces for the cups designated by circular groups of ornament in niello; the only difficulty is to conceive how so massive a piece of plate is to be filled at the top with hot water, and conveyed into the drawing-room, without discomposing its general arrangement: in addition to which, it certainly has the fault of being over ornamented, notwithstanding the great care that has been taken by low relief and otherwise to prevent such an appearance.

The work on the English side which most nearly corresponds with the last-mentioned is the centerpiece, the property of His Royal Highness Prince Albert, exhibited by Messrs. GARRARD (Class XXIII., 98, p. 689); this also has been designed with a proper sense of architectural arrangement, and is elegant in its general forms, especially the central tazza, while the low relief ornament on its surface is well considered and in good style; being entirely treated in gold, it has a tendency to monotony, counteracted as far as possible by a very judicious use of burnished surface. The portraits of animals introduced, although very cleverly modelled, do not harmonize with the general treatment. This collection contains also some well-designed salt-cellars, vegetable-dishes, and candlesticks, whilst even some works in the florid and nearly discarded style of Louis XIV. look almost satisfactory, compared with testimonials and racing-cups of the character before alluded to. Messrs. HUNT and ROZEZEL's (Class XXIII., 97, p. 686), principal centre ornament and plateau exhibits some cleverly-designed figures well modelled and with much appropriateness of subject, and it groups well as a composition. Many of the figures in the round, however, have too much the appearance of separate groups placed on the ornament and not forming part of it, a mode of treating such subjects which must be considered objectionable: this firm deserves great praise for exhibiting the shield and vase of M. A. Vechte. Messrs. ELZBACRON's (Class XXIII., 1, p. 672) application of electrotyping to the reproduction of art and ornament has been successful as showing its perfect adaptability to this purpose. The "hour clock-case," designed and modelled by Mr. JOHN HULL (Class XXII., 641, p. 661), is a good example; it is an artist-like work of much fancy, and is a great improvement upon the worn-out commonplace which the constant demand for such works abroad has occasioned; it deserves notice as a work of art, but is wanting in the symmetrical and archi-

tectural arrangement necessary to bring it properly into the province of the ornamentist. The repetitions of Mr. DELL's graceful statuette of Eve (Class XXII., 641, p. 166), Mr. CHEVERTON's reduction of Theseus (194, p. 832), and of some mediæval examples of silver work, show the perfect applicability of the process. By this art also, in other hands, the shield of Æneas, designed by the late Mr. W. PIRRS (Class XVIII., 97, p. 687), a work of great merit, and the still more excellent work of Flaxman, the shield of Achilles, have been presented in metal, and every one must admire the beauty of relief, the richness of composition, and the classic feeling they exhibit; it is equally a subject of regret that they were never completed as works in metal by the hands of these artists themselves. Had they worked on the metal by the embossing process, which has been before enlarged upon, there is no doubt that the transference of the art from one material to another, from clay and plaster to metal, would have had a much fuller adaptation than mere repetition permits of, and would have placed these shields, as works in the precious metals, on a rank with the noblest labours of past ages.

The beautiful art-workmanship, elegant forms, and the ornamental treatments of metal in the small chalices and dagger-handles exhibited by MARREL BROTHERS (France, 331, p. 1193), should be alluded to, as well as the execution of the cup by Le Brun, exhibited by ECK and DURAND (p. 1235), since the art employed upon them is of the true character for such works: but it is not necessary to lengthen the Report by specially adverting to many other works which, while they contain much individual merit as efforts of skill, or even separately considered as efforts of art, are not consonant with the view herein taken of such labours; at the same time it must be remembered that many of the foregoing remarks are intended to apply to the views adopted in treating such works as testimonials, racing-cups, &c., not to disparage the ability of the many talented and skilful artists who have laboured upon them, rather indeed to show that what is often expended on mere material ought to be apportioned to the labours of the artist, and that by the means employed to work out their inventions they are overlaid with littleness and spoil in production. Indeed, in England, the general impression resulting from an examination of the works in the precious metals would be that the endeavour of the manufacturer was to give the greatest quantity of metal with the smallest amount of art, which is not so observable on the foreign side; the view intended to be promoted in this Report is, that art gives value to the metal, not the metal to art. A remarkable contrast in this respect to our own goldsmith's work is seen in the collection sent by the HONOURABLE EAST INDIA COMPANY (p. 119), wherein the least possible amount of metal is so treated by delicate hand-labour, by exquisite pierced work, enamellings, and inlays, combined with such a thorough consideration of the treatment of surface by built-work, &c., as to give the greatest amount of skilled workmanship with the smallest quantity of the material; and even in their commoner works (inlays and incrustations of silver on iron) there is such a due consideration in the first place of beauty of form, and such varied and beautiful ornamental arrangements of the details, that they well deserve the consideration of the ornamentist.

The Eastern nations largely practice the art of inlaying both in metal and in other materials, and their weapons of war are decorated with inlaid work, and with delicate chisellings of the most fanciful and varied character; this is seen in the works of this class exhibited by the Company; they abound with ornamental inlays, &c., often extremely elegant, and always designed in strict accordance with true principles. Thus, the ivory inlays of gun-stocks given in figs. 1, 2, 3, and 4 of plate 2, have all the elegance of the Renaissance, and the flowers adapted from nature, and traceable even to their originals, are yet perfectly conventionalized, flat, and symmetrically arranged; indeed, the proper ornamental treatment of flowers (the result after what is beautiful and characteristic in their form and colour, and not the imitation of their shape) is always attended to in Indian ornament, as a reference to the floral forms in each of the

three coloured plates will prove. Almost all the arms exhibited are more or less ornamented, containing a store of suggestions most valuable to the manufacturer, and a rich mine of study to the ornamentist: among other qualities these works display is the tasteful distribution of the ornament, the sense of just quantity; it is rarely that a border contains too much or too little ornamental form, that a diaper is too crowded or too vacant, too large or too small; a reference to the inlays of plate 2, or to the textile fabrics in plate 1, equally illustrates this truth. Nor is this excellent art applied only to costly goods; the same just principles are evident in the cheapest and the lacquer workboxes (of which a specimen is shown in figs. 2 and 3 of plate 3), a manufacture of the cheapest kind, show the taste and skill of the Indian workmen equally with the more costly enamelling of the dagger-case (fig. 1) on the same plate. The inlays of silver in iron, for various domestic and personal utensils, such as hookahs, flasks, bottles, tazzas, &c., are not only simple, beautiful, and correct in their appreciation of quantity, but strictly ornamental, and abounding in suggestions of great value to those who will attentively study the single specimen, the inlay of a hookah, is given in fig. 5 of plate 2: the same principles, applied to a great variety of forms, are exhibited in many works in the Indian Court. There can be no doubt of the superior workmanship of some of the best European inlayers, but in much of the ornament, and in all the true principles for its application, they had been forestalled by the natives of our Indian possessions, and by other Eastern workmen. The inlaid and incrustated arms of M. LE PAGE MOUTIER (France, No. 1364, p. 1241), and M. ZULOAGA, of Madrid (Spain, 264A, p. 1346), are beautiful specimens of ornament and workmanship, while M. FALLOISE, of Liège (Belgium, 384, p. 1163), and M. ROTCOUR (France, 1689, p. 1257), are successful exhibitors of inlaid work applied to other ornamental purposes. These inlays and incrustations are a means of most agreeably diversifying surface with ornamental tracery and beautiful lines without interfering with the general forms of objects, and deserve more attention than has been given them by our artists.

Works in metal have been little alluded to in this part of the Report, but it is to be remembered the object is to mark on design, and not on execution, and that the efforts in the latter material will always be made in the former's behalf. The art applied to gold and silver has been already described in detail, and manufacturers of the baser metals should take care to be guided by the same principles, and to follow how ever they may, the lead of the costly metals; and it is for me much to say, that in many respects the exhibitions of the London and Birmingham manufacturers, rich with the labours of the gold and silversmiths, whilst in as far as they sometimes recur to the poorer examples of past ages they are occasionally in the better taste of a better instructed age.

#### BOOKBINDING.

The ornamental art of bookbinding has been already described, and the principles applied to it have been given. In the present part there is much to be said, and a large display under this head of a few remarks is necessary to counteract the effect of such labours as are not even there, and much more to be seen in the works of the time. This cannot be over-looking, as only some extent of the art is to be protected by literary works, in order to make the vehicle of such literary ornamentation and decoration, as that which attracts the eye, and is the first object of attention, and the care of the inner contents, and the manner of binding to arrive at the result of a beautiful and useful book. The use of gold and silver, and the use of gilding, is heavy and costly imitations of carved work in leather, gutta serena, and even less durable materials; the perpetration of such imitations on a cheap and inferior material, and the use of such materials, must be avoided if the art is to attain to

Fig. 1

Fig. 2

Fig. 3

Fig. 4

Fig. 1

VI

Fig. 2

Fig. 3

the simple excellence of the mediaeval, or to the richness of the binder of the sixteenth century. It is no doubt desirable, nay, desirable, that the outside of a book should have some reference to the contents of the inside contents; but still the design should be subservient to ornamental treatment, should be mere ornaments, and as has been so often reiterated, should not be mere reproductions of the ornament proper for a totally different material. To a book, however, the nature of this preparation for study, let into the cover, can hardly be supposed to be appropriate binding for a work on colour, apart from the impossibility of any symmetrical arrangement of the object itself, or of the tufts upon it, for its newly added purpose. Neither is the perspective delineation of theapse of a cathedral a proper ornamentation for the cover of a "Church Service," any more than the host of ornaments in the same direction, consisting of the fronts of cathedrals, oriel and rose windows, and stone tracery of many kinds, so often adopted for such purposes. In tooled work and block impressions, bookbinding requires flatness of treatment as one of its first principles; interiors of churches, perspectives of tunnels, and figures, pictorially used, are out of place. Heraldry and heraldic devices should be displayed flat, and even strap-work, or more combinations of lines, should not be arranged so as to give the appearance of projection, any more than coloured materials or metals should give the appearance of relief, although the fine old Grolier bindings and other works of the Renaissance period sometimes offend against this rule. Another class of errors arises from mere imitation of details without full consideration of their intent and use. Thus, formerly, when the heavy Church Services were really bound in boards and richly ornamented, hinges were a necessary appendage, as well as bosses, by their projection beyond the surface to protect any delicate carving or tooling, or rare metal work, inlaid into the cover; and, at present, in books of considerable use, of large size, which require great strength, and come under the same conditions, the use of these appendages is desirable and appropriate. But that which is proper for a copy of the Scriptures, or a Church Service, for the lectern, is hardly suitable for a book for the pocket; yet these miniature works are ornamented with hinges and bosses, sometimes really in metal, and sometimes only imitated as tooled work on the surface of the leather. Even in some works, where their introduction is appropriate, their intention is at times overlooked or misrepresented, as in the leather binding of a book of "Hours," by Madame Guise, 1857, p. 124, the figure of the Virgin Mary, in the centre, whilst it has a high relief, as in some book-covers, projects more than the hinges, and the decorative bosses at the corners of the cover, which should serve as its protection.

The designs exhibited are principally those exhibited by the Messrs. W. & A. G. WYATT (Class XXX-30, p. 83) and F. E. L. LIMER (Mr. H. LIMERON) (Class XVII, p. 53); the work of the former gentleman, whilst it is rich and decorative, and on first inspection is to be seen as somewhat overcrowded, and, in its simplicity, which is rare in design, the binder of the sixteenth century, the work of the last named exhibitor, may be better than the bindings of any design exhibited in Class XVII. The evidence much fancy and decoration, and a tendency to the picturesque, and at times, and means in style.

Among the works exhibited, as mentioned, for good design, is a binding by M. LORTIC, France, 1652, p. 124, of "L'Orion des Rois," decorated with a diaper of interlacing lines, round, and a "Catholicon," although this is a further deficiency in the proportion of its margin to the works of J. LIMERON (France, 1652, p. 124). It consists rather in adopting a design of the past than in any peculiar novelty, and is less the case in the English, German, or mediæval bindings. The illuminated Book of the Middle Ages," as bound by J. WRIGHT

(Class XVII, p. 54), has much merit, although wanting in a nice adaptation of the ornament to the corners. The Glossary of Ecclesiastical Ornaments is also good, although the whole surface is too generally covered, and the margins too narrow for the size of the diaper. The cover of "Thomson's Seasons," by J. LIMERON (p. 53), is one of the best designs of Luke LIMERON and the work of enamel binding, in variegated colours, by J. S. ELLIS (Class XVII, 8, p. 537), has merit in application of colour if not in novelty of design. Messrs. De La Rue (Class XVII, 76, p. 543), in works of actual bookbinding, as well as in much that is allied to the branch of industry, exhibit some specimens of good design, the ornament being composed of combinations of leaflets symmetrically arranged on flowing lines, stems, showing how a principle duly carried out is sure to result in a novel and distinctive character of design. There is a harmonious unity about these works, but they are a little frigid and inclined to poverty, which does not, however, necessarily belong to the adopted. Some fancy papers, exhibited by this firm, are greatly to be praised; the ornament (in various styles) is most agreeably distributed, the forms flowing and elegant, and richness attained without gaudiness. Some of the patterns would work well in silk or poplin, or even in suitable figured fabrics; and it is in this manner that the design of one manufacturer, properly understood, may apply to another, where there are many qualities common to both, and no principle infringed in such adoption.

#### DIV. 3.—Garment Fabrics.

Perhaps there is no subject which comes under review in this report of more importance than the consideration of design as applied to garment fabrics, since the amount of skill and labour engaged in their production forms so large a part of the industry of the world. Moreover the design applied to apparel must exercise a great influence over the general taste of the public, and persons who have been accustomed to consider gaudy, rigid, and large ornament suitable for articles of clothing, will hardly be capable of judging correctly of what is true, tasteful, and appropriate, in the ornamentation of domestic utensils and furniture of their dwellings. There is a great source of error in designing for garment fabrics, over ornamentation, and attracting undue attention to the ornament—which may arise from many causes; thus, the violence of contrast either of light and dark colours, from overcharging the colour, or from the ornament being too large for the fabric, are the causes. These are modified by the material; thus, muslins and laces will bear more pronounced contrasts than the more solid or more absorbent fabrics of jacquard, muslins or damasks. Silks and satins, again, will bear greater fulness of colour than the finer surfaces of cotton; while woven patterns in silk, or by taffeta, and even in a self colour, will bear more figures than those applicable to either woven patterns in varied colours, or the same printed on cottons or silks. Thus, the pattern inserted (G F, fig. 1)—half the size of the original—is from a printed barge, and give the large scale of pattern which appears suitable for the open texture of this material; it would, however, even in the reduced size of the woodcut, be too large for a Swiss cambric, although it might be even larger than the original size of the pattern on a self-coloured figured silk. These observations will show the necessity of the designer carefully attending to texture, lastly, in preparing his design, the illustrative difficulty of adopting what is suitable for the ground of one fabric to the decoration of another. The lines, agreeable distribution, and treatment of the details will illustrate other points in the design.

See also the pattern of a muslin (G F, fig. 2), and a muslin (G F, fig. 4). Though the scale of pattern, however, is a most important consideration, it is difficult, even after the above observations, to lay down an absolute rule on the subject, since the stature of the wearer of the garment must have some weight in determining the suitable size of

Fig. 1.

the pattern. Generally speaking, however, ornament for such fabrics should consist of small, rather than of large forms—should be treated flatly, and without light and shade—and inclined to subdued contrasts of colour, and of light and dark. A geometrical rather than a dispersed arrangement of the forms moreover would be found the most agreeable to the eye, and the most consistent with sound principles, some of the best patterns being formed by diapering sprigs, leaves, flowers, or often even simple geometrical forms, regularly over the ground. That such patterns are essentially in good taste is shown by their constant reproduction for the more cultivated class of customers; whilst the sprawling trails and coarse imitative treatments brought out from year to year as the novelties of the season, pass away and are forgotten, or are thrust cheaply on the market at a low cost, to catch persons whose taste is regulated by their pockets, rather than by their cultivated senses. To see the above principles carried out fully and completely, it is necessary to call attention to the garment fabrics exhibited by the EAST INDIA COMPANY (p. 917): these are almost wholly designed on the principles here presumed to be just ones; the ornament is always flat and without shadow; natural flowers are never used imitatively, or perspective, but are conventionalized by being displayed flat and according to a symmetrical arrangement; and all other objects, even animals and birds, when used as ornament, are reduced to their simplest flat form. When colour is added, it is usually rendered by the simple local hue, often bordered with a darker shade of the colour to give it a clearer expression; but the shades of the flower are rarely introduced: the “cloth of gold figured in the loom” (fig. 3, plate 1), and part of an Indian scarf (fig. 2, plate 1), illustrate fully these remarks. The ornament is geometrically and symmetrically arranged, flat in simple tints, and bordered as above described, with darker shades of the local colour. The principle of colour adopted is a balance of the complementaries red and green; in both cases with white introduced to give points of expression, and to lead the eye to the symmetrical arrangement of the ornament: in figure 3, purple is introduced to harmonize with the gold ground, a harmony very frequently used in the rich tissues of India; in fig. 2, variety has been obtained by introducing two reds, giving an interchange of a lighter tint in every other flower in the border. The borders of these scarfs are beautifully illustrative of the simple and graceful flowing lines which characterize Indian ornament: and in fig. 2, we can observe the difference between the Eastern and the mediæval patterns; while the same principles are acknowledged in both, the

latter are often stiffer and more angular than the graceful sprigs of this border. Both these works show how much beauty may be obtained by simple means when regulated by just principles, and how perfectly unnecessary are the multiplied tints, by which modern designers think to give value to their works, but which increase the difficulties of production out of all proportion to any effect resulting from them, nay, often even to the absolute disadvantage of the fabric. If we look at the details of the Indian patterns we shall be surprised at their extreme simplicity, and be led to wonder at their rich and satisfactory effect; it will soon be evident, however, that their beauty results entirely from adherence to the principles above described. The parts themselves are often poor, ill-drawn, and commonplace, yet, from the knowledge of the designer, due attention to the just ornamentation of the fabric, and the refined delicacy evident in the selection of quantity and the choice of tints, both for the ground, where gold is not used as a ground, and for the ornamental forms, the fabrics, individually, and as a whole, are a lesson to our designers and manufacturers given by those from whom we least expected it. Moreover, in the adaptation of all these qualities of design to the fabrics for which they are intended, there is an entire appreciation of the effects to be produced by the texture and foldings of the tissue when in use as an article of dress, inasmuch that no draught of the design can be made in any way to show the full beauty of the manufactured article, since this is only called out by the motion and folding of the fabric itself. An expression of admiration for these manufactures must be called forth from every one who examines them, and is justly due to merits which are wholly derived from the true principles on which these goods have been ornamented, and which result from perfect consistency in the designer.

In reverting to the general question of design for garment fabrics, it may be remarked that the making up of such goods for use should have due consideration in the general direction of the pattern. Thus, while “up and down” treatments in stripes and trails are proper, the horizontal direction of pronounced forms is not to be admitted, since, crossing the person, the pattern quarrels with all the motions of the human figure, as well as with the form of the long folds in the skirts of the garment; from this reason, large and pronounced checks, however fashionable, are often in very bad taste, and interfere with the graceful arrangement of any material as drapery.

In designing for garment fabrics, it will generally be found that the simplest patterns are in the best taste. The efforts, however, both of designers and manufacturers, have been too often directed to difficulty and complication, rather than to produce the greatest effect with the least possible means. Thus we find the number of blocks used in printing any pattern, or of colours in weaving, or the number of cards required to produce a

c By dispersed, is meant the attempt to distribute the pattern over the ground, without any apparent arrangement.

certain design, dwelt upon, rather than the excellence of the design itself, and gaudiness and ugliness are estimated, if expensive and troublesome in production, rather than beautiful simplicity at small cost. As simplicity is one of the first constituents of beauty, it will often happen that simple patterns are far the most beautiful, and that one printing, or weaving in one colour, is in good taste, while every multiplied difficulty becomes further removed from it. It has before been said, that calling undue attention to the ornament is a great error in designing for garment fabrics; there needs, in the larger masses of the dress, a sense of what a painter calls *breadth* or repose, which is only attainable by great simplicity, by flat or diapered treatments of small forms, by uncontrasted light and dark, and delicate tints of colour: those difficult patterns of many parts are too apt to offend against the above requirements, and to cause the figure to stare upon the ground and attract attention to itself, to the destruction of the true decoration of such fabrics.

In examining the designs for garment fabrics, both British and Foreign—many of them of great merit—two things immediately strike the observer, namely, that while there is great evidence of the interchange of ideas between European designers and manufacturers (the same patterns or modifications of them being seen on both sides of the Building), it is impossible to fix on any general principle or principles that have circumscribed the efforts or regulated the taste of European designers as a body, or of any one of them as an individual. Thus we have the same artist exhibiting patterns consisting of natural imitations—patterns founded on symmetrical and geometrical arrangements—flat and shaded treatments—trails dispersed over the surface—or sprigs diapering the ground—minutely small or coarsely large forms—indeed, showing his abilities indiscriminately without any apparent preference, in any and all styles and in manners most opposite. The case is entirely different in the Indian fabrics exhibited (for there are no designs), whether carpets, embroidery, or for garments; three or four leading and governing principles being prominent in all such works. These appear the result of science, the other of chance; and it is singular, in this age of desire for novelty, that no manufacturer or designer has thought of seeking excellence or singularity, and therefore celebrity, by a rigid adherence to some fixed rules of design: seeking beauty of form and arranging colour in compliance with their dictates, and repudiating that off-hand lawlessness which is the universal practice. In view of this general dereliction, this equal indifference to principle, it becomes desirable to examine the causes of failure, and to endeavour to impress the value of the principles which have been neglected, rather than to offer especial remarks upon the designs exhibited in this section, and since, without the insertion of many illustrations, it would be impossible to advert to the fabrics themselves, to consider designs and ornamented fabrics at the same time.

In the section on the precious metals it has been stated that imitation is not one of the principles of ornamental art generally, but rather one of the elementary bases of fine art, and it is now desirable to give another distinctive difference between the two which will serve still more to define their respective provinces. It is, that geometry, not necessary as a principle of art, is essentially required as the basis of ornament; thus the grouping and arrangement of art is picturesque and dissymmetrical; and consists rather of unequal quantities, except in some of the works of the early artists, which had an ornamental source. Ornament, on the contrary, has a geometrical distribution, and is subject to symmetry and correspondence of parts, and it may be truly said, that it is confounding these provinces, and a departure from this true foundation on the part of the ornamentist, that has caused so much bad ornament in the various manufactures of the Exhibition, and in none more than in the textile fabrics. Thus it is not possible to cover a large space with a repetition of small ornament, without some symmetrical arrangement developing itself, however studiously we may endeavour to avoid it, the necessary

"repeats," for instance, leading to the development of the square. In such *dispersed* patterns, therefore, some amount of symmetry is produced by chance; thus the pattern (G F, fig. 2) has not been founded on any geometrical lines, yet a four or five-fold repetition would develop a regular arrangement of parts, some determinate recurrence of the berries, for instance, subject to a symmetrical law of lines. In such a case, then, the geometrical law of recurrence is arrived at adventitiously, the necessity inducing it being ungoverned by the controlling will of the designer, who therefore has neglected all the beauty resulting from a proper choice of the regulating form

Fig. 2.

Moreover, if a repetition by means of blocks or cylinders wholly without a symmetrical arrangement is an impossibility, would this not lead us to infer that symmetry is a law of nature not lightly to be broken through or disregarded; and should it not induce us to search for those geometrical figures which give the best distributions of quantities, and the arrangements most pleasing to the eye? In fact, we ought not to attempt to overcome this law, but to accept it, and so regulate it as to give effect to other qualities essential to beauty, such as proportion, quantity, grace, and harmony of colour.

Having shown then that symmetry, regulated by geometrical forms, should govern the distribution of ornament, a little investigation would lead to the causes why certain symmetrical arrangements please more than others; thus the square of equal sides and equal angles (fig. 1) is the simplest and least varied basis of distribution, the most obvious regular figure, and at the same time the most inelegant and commonplace; simply changing the direction of the lines, however, and placing the square lozenge-wise, as in fig. 2, gives a decided improvement; variety is partially joined to perfect symmetry, and a more pleasing arrangement of the forms and quantities is the result (fig. 2). Then again, if we not only change the direction of the governing lines, as in the last figure, but their angle also, as in fig. 3, and adopt the equilateral triangle and the lozenge which is its plural, we have a further variety, in the interchange between the upright and perpendicular spaces of the quantities, and the result is a still more elegant distribution arising from the mere variation of arrangement of the same simple details. Having arrived at these facts as a starting point, viz., that symmetry is a necessary condition of repetition, and that symmetrical beauty is largely influenced by the angle or combination of angles which govern it, we may pass from the right angle, and the angle of sixty degrees, which forms the equilateral triangle, to study arrangements under various other geometrical combinations, founded on other polygons and on ordinate lines from the various intersections of the sides of polygonal figures; such as hexagons, octagons, &c., of an equal number of sides; or

triangles, pentagons, &c., of an unequal number, developing many beautiful symmetries and proportional arrangements.

Thus the design inserted (G F, fig. 4), intended for a printed muslin, is founded on combinations of the octagon and its ordinate lines. As combining geometrical

Fig. 4.

forms with a thoroughly flat floral treatment it is very ingenious; the size of the pattern (one-half larger than the block) is very well considered for the texture of the fabric, and it will serve to illustrate the subsequent remarks on *quantity*, as the pattern covers well without being crowded, is *broad* from the absence of harsh contrasts, whilst a sufficient amount of surface is left uncovered as required by this material. The colours, much wanted for the proper expression of the pattern, were delicately rendered in pink and green; and the design had a character of much elegance for a light fabric such as muslin; it was exhibited by Florence Collins, among the works of the students of the Government School of Design.

Geometry then is the basis of symmetry, leading the way to those arrangements which best govern the general distribution of *form*. If this view of the value of geometrical arrangement is correct as to the distribution of *form*, it is still more so as to colour; some colours require definite arrangements in juxtaposition with one another for harmony, and are governed by their own laws of relative quantity, having reference to their power of mutual neutralization, as three yellow, five red, and eight blue; such arrangements being more easily obtained and regulated on a geometrical basis, than on those dispersed patterns which arise out of repetitions of the accidents of growth, or natural imitations.

The subject next in importance is *quantity*, by which, in the decoration of garment fabrics, the taste of the designer is so largely made known. The due appreciation of quantity regulates the amount of the surface of the ground to be covered by the ornament, the interspaces between diapered forms, and the size of the ornamental details, especially in relation to the geometrical bases which govern the grouping; thus in the figs. 1, 2, and 3, the spots which are regulated by the ordinate lines might be larger or smaller, or, instead of them, the lozenges might be filled wholly or partially with orna-

ment, as in the design inserted (G F, fig. 4), the beauty and elegance of the design largely depending on the proper quantity admitted. Here the taste of the designer is exercised where rules help him no longer, but where he is guided by the considerations before mentioned as to textures of stuffs and qualities of surface, very important considerations which will be further spoken of. A study of the Indian tissues will show how well understood *quantity* as a source of excellence is in the East, their quantities being generally extremely suitable to the colour and texture of the material sought to be ornamented.

To recur to the subject of textures and surface as important considerations regulating design. It is too much the custom with designers to imagine that the patterns applicable to one quality of surface may be used indiscriminately for another, and that which is successful in one material, or by one process, must necessarily be a success in another; thus, no sooner does a pattern in silk or worsted obtain the notice of the public than it is immediately copied in printed cottons, without any regard to differences of material or modes of production, to the lustre and richness which belong to the former, and must be wanting in the latter. In adopting the patterns of the weaver, the progress by squares necessary to the weaving process is imitated in printing where it is neither suitable nor required; sometimes the whole texture and treatment is copied on the cylinder. As an observable instance, no sooner did alpacas make a strong impression on the public and become popular, than their low tones and broken tints were imitated largely in cotton prints, which almost changed their character from this circumstance, a low-toned surface or ground being adopted with slightly contrasting figures; they lost their own character to take up an unsuitable one. Cotton prints are capable of being easily cleansed, and the whiteness of the material is a great cause of beauty, from its appealing to our sense of purity; this source of excel-

lence is heightened rather than diminished by such a treatment of the ornament as contrasts with the general ground without covering it too much (see G. F. fig. 4.); when the ground, therefore, is entirely covered, as in these imitations, this appeal to the eye is lost, and, however suitable such patterns may be for the poorer classes, they take from the true beauty of the fabric. The contrary is the case with woollens; the material does not admit either of the same easy purifying, nor has it the same native whiteness; the whole ground, therefore, may be coloured, or where its native hue is retained it must be more largely covered with the pattern. Thus fig. 2 (p. 1669) is a pattern of a de-laine manufactured by DOLFUS MEIG and Co., (1191, p. 1234) and shows not only a proper flatness of treatment, but an agreeable quantity and a due amount of the surface covered by the ornament, and is therefore suitable for such goods.

The consideration of texture and surface is necessary in the application of design to other fabrics as well as cotton, and to other means besides printing; thus colour, which has such effect on printed woollen goods, and shows with such richness and fulness in the absorbent material of de-laines and flannels, where it may be used broken over nearly the whole surface, is apt to destroy more valuable qualities when applied in varied tints, to the decoration of silk, and should be used more sparingly on this material either in woven or printed patterns, leaving large spaces of the ground untouched, so much of the true beauty of silk residing in its lustrousness and the textural beauty of its surface. Of course this remark does not refer to self-coloured silks or to figured brocades in a self-colour, where the greatest brilliancy of colour does not interfere with the textural beauty, but only to weaving or printing patterns, consisting of many colours, too largely over the surface; the fact is, that a variety of colours tends to vulgarize both cotton, woollen, and silk fabrics, and, although least objectionable in woollen goods, they want an attention to laws of harmony which either has not been given them, or is not easily attainable by those hues which chemistry has placed at the command of the manufacturer, comprising durability among their other qualities.

The proper treatment of texture has other considerations as respects the ornamentation of garment fabrics which may find a place here, although a little irrelevant to the present matter: graceful and elegant foldings are very important in all goods intended for personal wear, and many of the most beautiful qualities of materials are brought out by the interchange of light and reflection playing over their surface on the motion of the wearer; it is important, therefore, that no mode of decoration should be adopted to destroy this quality, even irrespective of the sacrifice of proper utility which takes place in all works so overcharged with decoration or stiff from embroidery as to impede ease of movement and freedom of action in the wearer: the full lustre of silk more especially is dependent upon the folding, and every fabric is more or less influenced by the same cause. When gold or silver threads are introduced in the weaving, stiffness must result from it, and the skill of the designer should be so exercised as to give the greatest effect from the least possible use of such materials. This has been particularly understood in the Indian tissues, which exhibit the best effects under folding in a remarkable degree, while the opposite error was noticeable in many costly priests' robes exhibited in the North-East Gallery, so stiffened with gold and covered with raised embroidery that the wearer must be encased in them as in a suit of armour; the whole were not only vulgarized by excess, but were perfectly unsuited for use, and for the best display of those ornamental qualities sought for. The priests' dresses exhibited in the Medialgal collection had not this error; they were soft and flexible as the tissues of India, yet rich withal and fully decorated, suitable for use, and adapted to give the best effect in that use.

The restrained use of means has often been before adverted to, nor is it unnecessary to recur to it in this section also; under the old and simple methods of cotton printing, when the resources were few and the means limited, the

style was in some respects better than at present obtains. Thus block-printing by hand required flat forms and flat tints diapered regularly over the surface, and some simple flower or leaf so used had a pleasing and just effect, of which Peel's well-known parsley-leaf may serve as an instance. It will at once be seen that these qualities are herein advocated as *principles*, to be filled up and enriched by more modern resources, yet as ascertained truths not to be departed from. In the place, however, of the former limited means, printing from metal cylinders has put at the command of the designer all those powers of more perfect imitation enjoyed by the engraver, and, instead of using them as they should be used, consistently with the requirements of manufacture and the principles of ornamental art, they are wasted on the imitation of flowers, foliage, and accidents of growth, quite out of ornamental character and opposed to just principles.

Having thus remarked upon the principal excellences and defects of design in this section, it is felt that the difficulties before stated, arising from the varied principles adopted by one and the same manufacturer, the large number of the works exhibited, and the impossibility of referring to any particular work alluded to, almost entirely preclude any comment upon individual works. Generally, however, it may be stated that there is less dereliction from true ornamental art in woven than in printed goods, the powers of the weaving process being more limited than those of the printing process, so that varied tints and complicated forms fortunately present greater difficulties in production in the former than in the latter case. Thus, whilst the skill of the designer, and, irrespective of principles, the taste of the printed silks of F. CROQUEUX (1148, p. 1233) must be admired, a comparison with woven silks of much simpler pattern would certainly result in the favour of weaving. Of this some of the silks exhibited by CAMPBELL and Co. (Classes XII. and XV., 201, pp. 495-96), are examples, as well as the Irish poplins of REYNOLDS and Co. (Classes XII. and XV., 266, p. 498), and ATKINSON and Co. (Classes XII. and XV., 256, p. 498). In these latter goods there is evidence of much taste, and a greater adherence to the principles herein laid down than in almost any other fabrics except the Indian. The mixed materials of Bradford and Muddersfeld, and some of those of the same kind exhibited in the Zollverein by MESSRS. REIMANN and Co. (1 Zoll., 580, p. 1082), are also very satisfactory where those manufactures are not too unattractive; they bear the addition of crude colours ill, and the low tone and quiet contrast of such goods are greatly in their favour. Silk, as has been before stated, is so rich a material in itself, that colour is hardly needed, and where used it should be with great caution; the silk which forms the pattern on woven mixed fabrics is in itself a bright contrast to the more absorbent woollen ground, and should not be forced into opposition by bright colour; and in all cases the chance of error is diminished by abstaining from colour in pattern rather than the contrary: that crude colour is most dangerous in silk goods is shown in the very feeling that prompts to moderate it in chine silk, wherein the pattern is blurred and made more undefined by the process of dyeing to get rid of the crudeness that must be caused by printing in colour on the finished material, and which would almost reduce silk to the grade of glazed cotton or chintz.

#### SHAWLS

In the section of garment fabrics, design as applied to shawls has been reserved for a separate head: not so much from the importance of the manufacture, although even for this reason it would call for careful consideration, as that it leads to the examination of the principles on which these fabrics were decorated in the countries from which this article of dress has been derived to us.

The exhibited "designs" come first under notice: these are almost exclusively by French designers. The beauty, excellence, and costliness of the shawls imported into Europe from the East have united the Cashmere pattern so intimately with these fabrics in the public mind, that it has become almost a fixed idea connected

With them; and it is consequently thought indispensable to the manufacturer that Eastern forms and Eastern treatments should be applied to these goods. Thus for a long time such works were but mere imitations, and the invention of the artist was less taxed than the laborious skill of the copyist. It is due, however, to the French designers to say, that they have of late made earnest study of the works from Cashmere and Persia, not with an intent to continue mere imitations, but to obtain the principles on which the Eastern artist designed; and among those who have studied the Indian mode of ornamentation, the Messrs. BUAZOT (France, 55, p. 1174), must be spoken of as having greatly distinguished themselves where many are competitors.

There is nothing more difficult than to disabuse the world of a rooted error, and as the multitude, who rarely understand the true cause, of excellence, have adopted the idea that the form called the *Indian pine* is the distinguishing characteristic of Cashmere patterns, this form is supposed to be necessary to the sale of shawls of this fabric, and is therefore the prominent or leading feature in all the European imitations and repetitions of these goods. But there are principles of excellence in the designs from India and the East that are the real causes of their beauty, apart from any leading form, and, unless these are understood and practised, the forms alone will help but little towards the rich effects so constantly found in those works.

The Indian pine, moreover, is not present in all Cashmere shawls; in some it is either greatly suppressed or entirely absent. Whatever may have been the cause of its introduction there, whether as a sacred or national symbol, or as used only for the supposed beauty of its curves, its constant repetition in works intended for European wearers is, to say the least of it, a cause of great monotony, and implies a want of invention on the part of the designer, whose skill should supply some novel application of ornament to such fabrics to wean the public from this stock idea on the subject. But in doing this, care should be taken to keep in mind those principles which are the true cause of the beauty of the Indian fabrics, comprising their treatment of form, treatment of colour, beauty of line, and due consideration of the material. The treatment of form is one of the essential excellences of the Cashmere designs. The objects used in ornamental decoration are always, for woven fabrics, treated quite flatly, as is the case, indeed, in all the Eastern and Indian works, whether these consist of ornamental forms having no apparent relation to natural objects, or flowers, foliage, or even of birds or animals. There is hardly any instance in which this rule has been overlooked. Moreover, excepting in the ground, large masses are rarely introduced, but large leading forms (as the Indian pine, before spoken of) are filled in with a minute diaper of smaller forms, mostly floral, and the beauty is enhanced by the graceful curves and elegant flow of these leading lines. The colours also are subject to a general rule; they consist of simple flat tints without shading, each flower, or petal, where flowers are used, each leaf in foliage, being rendered by one tint. In the best Cashmere shawls these inner diapering forms are very minute, and thus a broken texture of colour is given to the surface ornamented. The tints, where in large masses, as in some of the embroidered ornament, have rather a tendency to secondaries; thus purple, green, and gold prevail, and the red is inclined towards the colour of the pigment called Indian red, or in some cases to pink, which is a diluted crimson (a red with blue in it): thus the general hue has rather the direction of coolness; this is particularly seen in the carpets also, both Indian and Persian, as has been before remarked. In the Cashmere woven shawls, if pure tints are used, which may be the case, these tints become broken by the mixture of colour produced by the threads of other tints coming to the surface in them in the process of weaving, thus neutralising their force and producing the same negative tendency; invariably flat forms without perspective or distinct rendering, flat tints without shading, and single hues of the same colour, are the principles of the designer. The due consideration as well of the ma-

terial as of the use to which the fabric is to be applied is evident both from the nature of the ornament, which never draws peculiar attention to itself, and from the texture, since, notwithstanding the use even of metallic threads in the ornamental design, the Indian fabrics seem never to lose the property of flowing in beautiful folds, and adapting themselves to every motion of the wearer, an excellence not so constantly present in the European manufacturers. Now the French designers, to whom it seems clear that manufacturers are almost wholly indebted for their designs, although they have made much study of principles, seem either to have overlooked some, or to have willingly ignored them; either in deference to the ruling idea entertained by the public, or in order to obtain novelty; but novelty should never be sought at a sacrifice of truth. Let the designer throw away, if he pleases, the Indian forms—the Indian pine form, perhaps, the soonest the better, since it never had any symbolical significance with us, and it has long ceased to have beauty of line, tormented as it is into every possible variation, from the normal form—and avoiding mere imitations endeavour after a treatment in harmony with European taste and feelings.

Thus, for instance, geometrical leading forms are sometimes used in the Cashmere shawls, and such treatment might be most successful in the hands of European artists, considering the varied and complicated combinations of flat forms open to their choice. The Byzantine tracery, guilloché, or even the graceful forms of the Renaissance, if perfect flatness were preserved, might be dispersed with colour in the Indian manner; but the tide seems to have set in quite the contrary direction,—the leading forms of the Eastern patterns are kept, the just principles are disregarded: the Indian pine, exaggerated often to extreme caricature, is applied not merely to shawls but to other goods; the diaper, moreover, instead of being flat, is composed of flowers often the size of nature, imitatively and perspectively drawn, and sometimes most elaborately shaded. Thus simplicity is lost—the principle of flatness is totally disregarded—the colour not being in flat tints, and the broken texture of surface entirely done away with; the result has a certain showy beauty, but it is meretricious and unsound; it may be the novelty of a season, but it is built on a false foundation and will never last.

There is a circumstance connected with floral ornament which hardly seems to have had proper consideration; it deserves, however, some attention. Many of the flowers used by us as ornament are not in a state of nature, but have already been subjected to another art, the art of the horticulturist, subjected by him to a process of cultivation which unnaturally stimulates the growth of the parts, and by means of which, the stamens being converted into petals, the flower becomes doubled and rendered artificial—more beautiful, perhaps, as a flower, but less tractable as ornament, and far less simple, far less fitted for that flat display which is required by some fabrics. By these means the five-petalled rose, the five-petalled pink, &c., become a bunch of petals; and if we would see how entirely some flowers are thus rendered artificial, the dahlia may be instanced as an example: in its simple state it has a single border of petals with a central disk,—by cultivation it is a cluster of petals, so regularly disposed as hardly to be distinguished from a rosette of ribbons made up by the milliner. Flowers in this state are already conventionalized by another art ere the designer takes them in hand, and the result is analogous to the case of the artist who copies the actions and passions of the stage instead of seeking them in their simple reality in common life. Moreover, flowers in a natural state have simple and clear characteristics which they often lose in cultivation, and it is the difficulty of duly expressing them, as artificially changed by cultivation, that seems in some degree to have led to the false manner of treating them in the ornamentation of woven or printed fabrics.

To return to the consideration of the fabrics themselves. The new mode of varying the Indian treatment above described is not so prevalent among the "designs" as it is in the fabrics exhibited, only one exhibitor of designs for shawls showing example of this extreme depre-

ture from the true style in his works. The relaxation of just principles is, however, seen, even in those which purport to be simply imitations of Cashmere designs; it is shown in the introduction of small landscapes on the spaces of the ground between the large leading forms; in representing in the pattern borders of ornament quilled or gathered in, the manner of a fringe; and in the spaces filled up with small diaperings being imitative of foliage, palm-trees, &c., instead of being merely flat, graceful, and flowing ornamental forms. So far from endeavouring to suppress novelty, it is most desirable to encourage it as far as possible, since true novelty is not an extreme characteristic of the present time, but it must be sought by other means than those reprobated; the designer must not suppose that by exaggerating a secondary characteristic of style into undue importance, and adding new materials entirely out of harmony with it, anything really beautiful and new will be likely to result.

In the shawls exhibited this new manner is seen to be very widely spread. The greater number of those on the Foreign side, both printed and woven, are thus ornamented, and Norwich and Paisley are following in the same track. One French house exhibits two woven shawls in juxtaposition, which may serve to compare the two systems. The one is an imitation Cashmere shawl, consisting of straps or bands filled in with gracefully-curved ornamental forms, powdered over with colour in the usual manner, the Indian pine being slightly visible only in the border. The other design is in the new manner; it displays very great ability and cleverness, and is most skilfully manufactured. In it the Indian pine form, exaggerated in all its peculiarities, is filled in with imitative flowers, the size of nature, naturally drawn and shaded, with such minute imitation that even insects have been depicted on their surface. The variegation of some flowers, as tulips and asters, and the shading of others, as roses, &c., is substituted for the dispersing of colour which is characteristic of the style; simplicity of tint is therefore lost, and flatness wholly abandoned; great pains and labour have evidently been bestowed on the design, yet the result contrasts unfavourably with the neighbouring Cashmere pattern, the negative colour of this last being much more satisfactory than the hot unpleasant hue of the former, arising partly from the shades containing more colour than the local hue of the flower, instead of being more negative, and more especially from the impossibility of introducing the contrasting and harmonizing tints exactly where necessary, which can so easily be done by the simpler methods of India. It is sincerely to be hoped that this false manner will be abandoned; that when imitations are intended they will be in a pure style, and when novelty is sought for it will not be attempted by thus outraging true principles.

#### RIBBONS.

In examining design applied to ribbons it is necessary to have especial regard to their use, and the purpose which they are intended to fulfil; for although many of the principles which have been laid down as regulating the decoration of garment fabrics are equally applicable to them, these principles are modified by the place which ribbons hold, largely partaking, as they do, of the nature of ornaments added to the other portions of the dress.

It may be said that, when the dress itself has much pattern, ribbons, which serve as bands marking the leading lines, or as borders, should be plain in colour and without much enrichment; their office is contrast, and either simple colours or stripes in that case are most desirable; but when the garments themselves are plain and unfigured, or figured without strong oppositions of light and dark or colour, then the ribbon may become a true contrast by its ornamentation, and require marked forms and colours to give that expression which is so requisite. When regulated by good taste, ribbons, beside giving effect to form by their contrast, serve another important purpose, by being the means of introducing brilliant portions of pure colour complementary to the general masses of the dress, thereby, when the pervading tone of the dress is negative, giving that brilliancy and

heightening which, when judicious, is a great means of enhancing its effect, and giving richness without gaudiness. This use of ribbons points out their proper ornamentation, which should be in simple forms, permitting the introduction of pure tints; these require a geometrical arrangement to give them adequate force and expression, and for this purpose the patterns of the Indian diques offer most valuable suggestions to the ornamentist; even the introduction of gold and silver may be taken advantage of as a very suitable enrichment for these ornamenting fabrics. It is to be regretted that the great prevalence of natural floral treatments as the decoration of garment fabrics has caused the adoption of the same style in ribbons, where it is more peculiarly out of place, and that the rare efforts of the designer, and the greatest manufacturing achievements, have been misapplied to overcome the difficulties this treatment induces. The design of the Coventry ribbon, for instance, apart from the style adopted, is one of great merit, more successful than the best foreign efforts in the same direction; but while it is a rare proof of difficulties attempted and successfully overcome, it is also a proof of misapplied excellence and unsuitable ornamentation, being based on the artistic principle of imitation rather than on those proper to the ornamentist, abstract beauty of form and colour.

There is an evident tendency to gaudiness and over-decoration in the greater number of these articles exhibited, and it largely arises from the above cause. The increased width these goods are now manufactured, and the wrong direction of the decoration applied to them, have greatly altered their character, and we find landscapes, figures, portraits, and all kinds of natural imitations, applied as their ornament. It is pleasant, in the face of so much that is erroneous, to notice the just taste exhibited by one manufacturer of these fabrics; the silk ribbons of Buisson, sen. (France, 1125, p. 1232), have a character entirely their own, the ornament consisting of geometrical figures in gold-coloured silk, diapered over a plain ground of some delicate tint, or borderings of geometrical ornaments on the same principle, having an analogy to the Indian patterns without imitating them, and being very appropriate for the intended use of such fabrics.

#### LACE.

The concluding subject of this section of garment fabrics is lace design. Lace is assimilated to certain other classes of fabrics, by its uses as well as by its peculiar qualities; thus, it worked muslin, for instance, in its general lightness, and in being usually without colour either in itself or in its ornamentation; and to ribbons as being an ornamenting fabric to other parts of dress. It is one of the peculiarities of lace that it is necessarily ornamented, since, without some pattern upon its surface, it would hardly retain its name. Its characteristics of lightness and fineness of texture should never be forgotten in its ornamentation, which should essentially be light, elegant, and flowing; all straight lines should be avoided, not only from the necessities of the manufacture, but because graceful forms are required to pervade its ornamentation. At the same time this textural lightness may lead into the opposite error, and the ornament be so flimsy as entirely to lose proper point and expression; and thus, where lace is used as a trimming, the line which it is intended to enforce or enrich be inefficiently marked from this very meagreness. The old point lace, worked with the needle, was often too heavy in character, from too equal a distribution of the masses of its ornament; it wanted less crowded spots to give value by contrast to the general surface; whereas the modern lace, from the object of the manufacturer being to cover large spaces with little work, too frequently errs in the opposite direction, and wants parts of more full enrichment to give it point and character. The border or edge, which in reality constitutes the true lace, should have the most solid and marked ornamentation, out of which should grow graceful curved forms, less marked and pronounced, gradually passing, in wide lace or in veils, &c., into diapers of sprigs or small ornamental forms over the remaining space. While the natural lines

of the growth of plants may be adopted as the ornament of lace—for which they are very suitable from their elegance and variety—subjected to a symmetrical arrangement, however, in the succession of pattern, almost all imitations of flowers are to be avoided; floral forms being the rule, flowers imitated quite the exception. The petals and leaves should rarely be filled in solid, but treated with stitches of varied forms of the nature of a diaper of texture, so as to give lightness, variety, and richness at the same time.\*

The great excellence of the French and Belgian lace seems to consist more in the truer appreciation of beauty of line and delicacy of form, than in any very marked superiority of design over the English. In the work itself these characteristics are even more evident than in the designs, since they are most carefully and faithfully attended to and preserved. There is, moreover, a more just appreciation of quantity in the ornamental arrangements of the Brussels and Valenciennes laces than in our own; the patterns of Honiton lace are generally too heavy, the form rather too large and overcrowded, and the whole effect a little too solid and equal, although this partly arises from the mode of manufacture.

As compared with the important exhibition of the manufactured article, there are few "designs" for lace on the Foreign side; and the best of those are more remarkable for execution than for any particular originality. Viewed relatively to the beautiful fabrics themselves. On the English side there are some designs for lace curtains, and one for a lace veil, founded on Brussels patterns, by H. HULAND (Class XIX., 269, p. 570), of Nottingham, which has merit. There are also several designs exhibited by the students of the Government School of Design, some of the most elaborate of which, by C. P. SLOCOMBE (10, p. 821), and T. RAWLINGS (10, p. 821), have been extremely well executed in Honiton lace by Mrs. TRENDWIN, of Exeter (Class XIX., 55, p. 561), and Mr. GILL, of Colyton (Class XIX., 386, p. 573). The designs are novel, but a little too architectural in their general arrangement, resulting in a slight degree of stiffness, and a want of that flowing ease which should characterise the ornament of the material. The female students also have some clever designs for lace. The beautiful fabrics exhibited will have their due share of attention from the Jury of the Class for the manufactured article. Some of the best design is to be found in the works of GROUTCOCK and Co. (Class XIX., 3, p. 559-60), FORSTER and Son (Class XIX., 45, p. 561), and those already mentioned. The Nottingham lace curtains, although not to be commended for their design, show a tendency in a better direction than the Swiss-worked muslins; the treatment is generally flatter, the borders better considered for quantity, and, in some of these works, a diaper over the central field has been adopted with good taste. In these goods, and in machine lace, some of the best designs are to be found in the fabrics of HEYMAAN and ALEXANDER (Class XIX., 25, p. 560); and R. BIRKIN (Class XIX., 20, p. 560), has one or two well-adapted designs for narrow machine lace also. On the Foreign side the Belgian and French laces, from the grace and flow of the leading lines of the ornament, and the greater delicacy and refinement of the forms, together with the better appreciation of just quantity in the distribution of the parts, upholds the acknowledged superiority of their manufacture. The English lace, especially the hand-worked lace, seems rather to call attention to the labour bestowed on it as a part of the excellence; the foreign lace, even when greater labour has been employed, strikes us as rather elegant and beautiful than as laborious and costly, from the more easy and playful forms of its decoration. These qualities entirely accord with the nature of the fabric, and charm us more when, on examination, we become sensible of the curious elaboration which often accompanies them. The lace cuffs and barches of P. VAN DER KELEN (Belgium, 313, p. 1161) include some of excellent design; and also the lace exhibited by VAN HANLEN (Belgium, 309, p. 1160), B. DREAZON (Belgium, 314, p. 1161), and F. ADRIAT (France, 1848, p. 1200). On the whole there are fewer errors in the design for lace than prevail in

most other manufactures, partly arising from its circumscribed nature. Besides the faults enumerated in the foregoing remarks, the tendency to the natural imitation of flowers is seen in some of the Honiton lace.

Having passed in review the various sections and sub-sections into which this Report has been divided, it might, before concluding, be thought desirable to consider the best means of obviating the various faults observed and commented upon in the course of this examination: this, however, would be too large a subject, and one not necessarily within the nature of the Report itself. The public and the manufacturer, both equally interested, and whose improvement is equally necessary—for to be useful it must be mutual—are now awake to the necessity of better education in design; and the question naturally arises, whether the means adopted in the Government schools are the best possible for the proposed end, or whether it would be desirable to extend their scope, so as to make them not only schools of design, but in some degree workshops, where the specialties of design may be fully explained, and the due application of ornamental art to manufacture thoroughly exemplified and carried into practice.

This question, however, is twofold, and has reference to two classes, whose functions and qualifications are not necessarily identical—the designer and the art-workman. That the designer should be acquainted with certain of the means of production and the peculiar processes of the manufacture for which he designs can be doubted by no one, since without a knowledge of the general conditions of the manufacture his art is to be employed upon his labours would be useless. But the question is one of amount, and the consideration to be arrived at is, shall this knowledge be given in the course of his art-education? or is it best acquired when, having obtained a thorough knowledge of ornament, he turns his attention to some special application of his powers?

That the art-workman should know all the processes of the manufacture he is engaged upon is absolutely necessary; it is his starting point as an education in the technicalities or processes of ornamental art is the starting point of the designer. What the art-workman has to add to his manufacturing knowledge is, such an amount of art as will enable him thoroughly to appreciate and perfectly to carry out the work of the designer, without which, indeed, he is imperfectly educated in his trade; while, on the contrary, the designer (not necessarily a workman) has to obtain such an insight into the processes of the workman or the machine as will enable him to fit his design to the difficulties of production. Like the artist and the ornamentist, the two classes, whilst generally distinct, sometimes merge into one another, from which cause the question has been unnecessarily obscured. The truth is, that while, in some cases, it would be most desirable that the designer should understand the minute specialties of the manufacture, in others it is nearly unnecessary; while the art-workman's province is quite apart from the imaginative, and all that he requires is a full acquaintance with the technical means of art, such as drawing, modelling, chasing, painting, &c. In these he cannot be too fully educated; but since the large mass of those who are to be instructed are of this class, it is obvious that the principles and practice of design need not necessarily form a part of the education in all schools of ornamental art.

This view of the question does not interfere with those special cases so often alluded to in this Report, wherein, from the high requirements of the material, or of the object itself, the artist-designer is at the same time the artist-workman also, and embodies and produces his own conceptions by his own skilled handicraft.

The general truth seems to be, that when a designer has thoroughly mastered the technical language of art, and the general principles of design and its application, the amount of special knowledge sufficient for his purpose is speedily acquired in any branch of manufacture to which he may devote his attention; and in all cases more strict adaptation to uses, more originality, and greater aptness to mould the power of production to the best and most beautiful results, will arise rather from a full insight

into the means at the manufacturer's command than from any technical education in those means.

This, however, is not the case with the art-workman; to give him proper instruction in *carving, chasing, embossing, painting, &c.*, it should go on consecutively with his learning the technical elements of art, and his perfection as a workman will be measured by his power of embodying his art-knowledge in his trade labours. The process, moreover, is a tedious one, requiring the hand to be educated as well as the eye and mind, to enable him successfully to combine art with handicraft; and it would seem, therefore, that such labours are essential parts of true schools of ornamental art.

Yet the several requirements enumerated are partial and local, and not to be made a part of general so much as of local education. Thus, since London and its vicinity are the seat, more or less, of all manufactures, and of the highest efforts of those manufactures, for this reason, and as a central normal school, it would be advantageous to embody in the course of the London head school instruction in all such matters; but they could only be partially useful in the provinces; as die-sinking and chasing, for instance, at Birmingham, chasing and embossing at Sheffield, modelling and painting in the Potteries, &c.; and it being ascertained which are the proper localities for central provincial schools, their peculiar handicraft should be taught therein, and the instruction obtained in the surrounding districts be of such a character as to prepare best for the higher instruction of the central provincial school. The truth is, that our schools have all been *accidentally* founded, rather than of any general, comprehensive, and well-defined principle: and before proceeding further, it is very desirable to have some well-arranged distribution of the means of instruction for the whole kingdom, laid down in accordance with local wants and local seats of manufacture, to control and regulate the whole, so that schools, when founded, should fall in with a pre-arranged and predetermined system. These remarks are made with no intention to dogmatise on the subject, which should rather be viewed practically than theoretically, and the solution be based on known results, rather than inferred from any suppositions of view. The great public establishments of France, both of the Gobelins and Sevres, would on this account demand especial attention and consideration, since the fabrics produced therein have attained a greater excellence, both of design and manufacture, than is seen elsewhere; and it would be desirable to gain full information

as to the knowledge of art obtained by the workmen, as well as of the processes of manufacture by the designers in those celebrated manufactories. In the same view, the schools founded for the instruction of the bronzists of Paris, and in which they mostly obtain their art-education, should have a full share of attention, both on account of the reputation gained by these works for artistical completion, as well as the great fancy and invention displayed in the Parisian bronzes. While our own Medival Court and the clever revivals it contains will show the influence on manufacture of an educated designer acquainted with the various processes of the manufactures for which he designs, and apparently controlling both the manufacturer and his workmen in their production, we have to learn, in the former instance, whether the workmen have any, and what amount of, education in *design*, and whether their *inventive* powers have been stimulated, or only the most perfect technical acquirements obtained; on the other, we pretty well know that the workmen have obtained but little even of the technical *language* of art, and that in invention they are entirely led by the designer.

The condition of the schools at Lyons also, and their routine of instruction, would furnish much valuable information on this subject, since, in the manufacture of silk, the relations between the art and the means of execution are most intimate and complicated. They would show whether the education of the workman in art, and in many cases the exalting him into the place of the designer, has resulted in a pure and just ornamentation of the fabric, or whether it has led to the skilful appliance of manufacturing means to the production of difficulties of execution in these fabrics, rather than to the simple and the beautiful in their ornamental decoration.

In conclusion, the Reporter may be permitted to express his sincere regret at his own shortcomings. It will be evident, on the perusal of the Report, that there are many omissions, and that important subjects have been treated with great brevity. Almost entirely deprived of counsel or assistance from his fellow Jurors, this task being nearly altogether out of their jurisdiction, and only undertaken by him after the Jury labours were concluded, he has to ask for a large share of indulgence. He trusts, however, that a proper spirit of inquiry into the sources of true excellence in ornamental art may be elicited from his brief labours, and lead to the rejection of what is meretricious and false, and to a more simple, grave, and earnest style in modern ornament.

London, November 1851.

 AERIAL MACHINES—Model of a char-volant or carriage

drawn by kites, 309. General description thereof, *ib.* Not impossible that, under some circumstances, the application of the propelling power of kites may be useful and attended with satisfactory results, *ib.* More applicable to nautical purposes than to land locomotion, *ib.* Experiments made with machine on the London and Bristol road, satisfactory results, *ib.* Rotary balloon, *ib.* Description of the propelling power, *ib.* Aerial machines designed to take any direction required, *ib.* Description thereof, *ib.* Model locomotive balloon, *ib.* Improved valve for a balloon, *ib.* Locomotive parachute equipped for service, *ib.* Balloon of improved construction *ib.*, 310. Navigable balloon, *ib.* Aerial machine with wings, *ib.*

Affonso, M. J., 536.

Affourtit, G. L., 161.

Afinger, J. B., 686, 618

AFRICA.—Fine specimens of African gums and resins from Aden, 76. Collection of woods, native or grown in Africa, 114. Fine specimens of elephants' tusks from Africa, 164. Finest quality of ivory peculiar to the African and Asiatic elephant, *ib.*

AFRICA, SOUTH.—Interesting specimens of timber and other woods from, 140. Specimen of an olive-wood work-box from Groenkloof, 653. Specimens of sticks of rhinoceros' hide from South Africa, 664.—See also *Cape of Good Hope.*

AFRICA, WESTERN.—Samples of coffee from, 59. Collection of oil and oil-seeds, 83. Samples of cotton, 95. Specimen of teak timber, 140. Specimens of soap, 610. Specimens of stuffed birds from the river Niger, 647. Specimens of singular sticks, 664. Collection of fans from the banks of the Niger, 668.

AGATE.—Specimens of articles manufactured in agate from Oberstein (Prussia), 517.

Agincourt, Antoine D', 527.

Agombart, P. 574.

AGRICULTURAL AND HORTICULTURAL IMPLEMENTS (Class IX).

—Tabular classification of objects in the Exhibition into which this class is divided, x. List of Jurors and Associates appointed for this class, xxvii. List of exhibitors in this class to whom Council Medals have been awarded, lxii. The like of those to whom First Medals have been awarded, *ib.* And of those of whom Honorable Mention is made, *ib.*

Practical effect of agricultural machinery upon the soil or its products, 425. Certainty of action and cheapness evidently the standard by which the merits of agricultural implements have to be tried, *ib.* More has been done in England for agricultural mechanics in the last 10 years by the yearly shows and trials of the Royal Agricultural Society than had been attempted anywhere in all former time, *ib.* Few simple classes to which the inventions may be reduced, although they are numerous, *ib.* Review of the various classes, with general remarks thereon, *ib.* 1st. Instruments of tillage. 2nd. Implements used in the cultivation of crops, 233-251. 3rd. Harvesting implements, 251-253. 4th. Preparation for market, 253-257. 5th. Machines for preparing the feed of stock, 257-259. 6th. Churns,

289. 7th. Draining machines and implements, 289. Concluding observations, 240, 241. List of exhibitors; exhibits and awards, &c., 242.
- Remarks on the agricultural implements from Belgium, viz., P. Claes' corn drill and roller, 227, 229, 280. Deistanche's and Odeur's ploughs, 226, 227. And Duchane's churn, 229. Prizes awarded, 242. Report on the agricultural implements from France, viz., Talbot Brothers' plough, 226. A. D. Lavoisy's churn, 229. And Vachon and Co.'s seed and corn separator, 242. Prizes awarded, *ib.* Description of M'Comyck's reaping machine from the United States, and remarks on Prouty and Mears' plough, also from the United States, 226, 231, 232. Prizes awarded, 242.
- See also under the titles of the various implements.*
- AGRICULTURAL ROOTS.**—Observations on the agricultural roots exhibited, 54.
- Ainge and Aldred, 877, 878.
- AIR-PUMPS.**—Ingenuity displayed by the exhibitors of air-pumps, 246. Most important facts known relative to the properties of air have been elicited by the employment of air-pumps, 262. New and improved construction of instrument, *ib.* Small number of manufacturers who have contributed, *ib.* Instruments exhibited, description of construction thereof, 262, 263.
- Aire and Calder Bottle Company, 536.
- Airy, G. B., 305, 337.
- Aked, T., and Sons, 376.
- Aken, P. Van, and Son, 193.
- Akers, Lieut., 148.
- Akkoondoff Shah Mirza A., 159.
- Akroyd, I., and Son, 356, 360, 730.
- Akenoff, J., 352.
- ALABASTER.**—Slabs of Oriental alabaster from Egypt, 24. Magnificent series of marbles and alabaster from Tuscany, 35. Rich stores of Oriental alabaster which the Egyptian Government has been induced to open of late years, 561. The tazza, by Mr. Dallamoda of Rome, one of the most interesting works in mineral manufactures in the Exhibition, made of this material, 562. Samples of alabaster from Egypt, 561. Vase of Oriental alabaster, executed by Signor T. Dallamoda, referred to, 564.
- ALARM BAROMETERS.**—*See Barometers.*
- ALARM CLOCKS.**—*See Clocks, Timepieces, &c.*
- ALARMS (FOR HOUSES).**—Apparatus for the detection of fire or robbery, 315. Principal of construction, *ib.*
- Alba, S., 672.
- Albani Brothers, 43.
- ALBERT, HIS ROYAL HIGHNESS PRINCE.**—Report of Viscount Canning, made to His Royal Highness and the Royal Commissioners, on presenting the Jury Awards, i. ii. Answer of His Royal Highness to the foregoing, xxxiii, xxxiv. Remarks on the specimens of wool, the produce of the Cachemere goat, exhibited by His Royal Highness; Honourable Mention awarded, xlix, 159, 358. General Council Medal awarded to His Royal Highness for the original conception of the Exhibition, xxv. Prize Medal (Class III.) awarded for oats and beans, 52, 54. Council Medal (Class VII.) for model dwelling-houses, 207, 579. Reprint of His Royal Highness' Speech at the Mansion House Banquet, in different languages, 401. Garden seat in cannel coal, exhibited by His Royal Highness, 559. Remarks on a scagliola candelabrum, the property of, 576. Prince of Wales' shield, exhibited by, 685. Portrait of His Royal Highness, painted on china, after Winterhalter, 687, 702. Another portrait on china, after Thorburn, 687. Proposition to erect a statue to His Royal Highness Prince Albert on the site of the Exhibition Building, 690.
- Albert, J. W., 275, 279.
- Albinet, —, Jun., 359.
- Albrecht, Gremmell, and Co., 62.
- Albro and Hoyt, 475.
- ALZHEIMER.**—Excellent examples of this substance, obtained from eggs, dried and manufactured, exhibited in the French Department, 166.—*See also Blood, Preparations of.*
- ALZHEIMER.**—Importance of the manufacture as a branch of fancy stationery, 249. Admit of every variety of ornamental display in the bindings, *ib.* Beautiful and numerous specimens exhibited, *ib.* Awards to exhibitors, 454, 455.
- Albuquerque, Mello, J. D., 84.
- Alcida, R. G., 182.
- Alcon and Locatelli, 490.
- Alcock, R., 23, 733, 739.
- Alcock, S. and Co., 541.
- Alcock, W. B. and Co., 631.
- ALCOHOL.**—Specimens of, procured from potatoes, 47.
- ALDER BARK.**—Specimens of, 57. Dye extracted, *ib.*
- Alderson, Mrs., 474.
- Aldi, —, 399.
- Aldridge, J. M., 507.
- Aldridge, W., 689.
- ALE AND PORTER BREWING.**—Illustrations of, 50.—*See also Beer.*
- Aleria, Bishop of, 397.
- Alexander, —, 283.
- Alexander and Son, 332, 334.
- Alexandrovsok Imperial Manufactory, 197, 371.
- Alfonso, Don Joaquin (Juror), xxv, xxx.
- ALGERIA.**—Existence of a large number of metalliferous localities in Algiers, 29. Operations not yet sufficiently complete to insure profitable returns, *ib.* This result probable, *ib.* Concessions for eight metal mines in Constantine province granted by the government, *ib.* Great obstacle from the difficulty of obtaining fuel, *ib.* Opening of the Bonâ Mines, *ib.* Concession of four copper and lead mines in the province of Algiers, *ib.* Observations on the working of the mines, *ib.* Specimens of iron, lead, and copper ores from Algiers, *ib.* Sample of wheat, of great promise, from Algeria, 52. Rice and maize, of indifferent quality, 53. Sample of hard wheat-flour, of admirable quality, 55. Samples of Tous-les-Mois flour, 62. Complete and well-arranged collection of raw produce of Algeria, 69. Samples of oils, 84. Collection of colouring matters or dyeing stuffs, 90. Interesting and promising samples of cotton, demonstrating in a remarkable manner the progress of the colony, 95.—Fine specimens of cork, 103. Highly valuable collection of the woods of Algeria, 152, 153. Fine examples of red coral, 164. Promising specimens of cochineal, 166. Cigarette and other papers manufactured from the leaves of the dwarf palm tree, 454.
- Algiers, Commission of Woods and Forests, 103.
- Algiers Mining Commission, 29.
- Algor, J., 490.
- ALIMENTARY PRESERVES.**—Importance of preserved alimentary substances, 63. Only practically applied during the last 25 years, *ib.* Intimately connected with the annals of Arctic discovery, *ib.* Stimulations of the manufacturers by the Admiralty to obtain perfection in the art, *ib.* Enormous consumption of, in India, 63, 64.
- Remarkable cheapness of the preparations, 64. Quantities exhibited from various countries, *ib.* Extensive preparations in Australia, Cape of Good Hope, &c., of equal good description with the English, *ib.* Abundance and cheapness of animal food in the colonies, *ib.* No perceptible difference either in the mode or perfection of preservation, *ib.* So long as the sealing remains sound the viands undergo no change, *ib.* Vegetables preserved in a similar manner as the animal food, *ib.* Description of, most advantageous for preserving, *ib.* Samples exhibited in the British Department, *ib.* From the colonies, 64, 65. From France, 65. From Austria, *ib.* From Spain, *ib.* From Lunbeck, *ib.* From Switzerland, *ib.* From Russia, *ib.* From the United States, *ib.*
- Alloth, T. S., and Co. 367.
- ALKALI.**—Use thereof in the manufacture of glass, 523, 524.
- ALKALINE SALTS.**—Samples of, 45, 50.
- ALKANET ROOT.**—Fine samples of alkanet root are shown in the Austrian collection, 50. Specimens from Spain, 91.
- Allan and Son, 480.
- Allan, T., 102, 282.
- ALLANTOIN.**—Specimens of, 44.
- Allard and Clavey 613.
- Allday, W., 507.
- Allen, —, 283.
- Allen, A. B., and Co., 239, 490.
- Allen, F., 520.
- Allen and Moore, 503.
- Allen, R., 353.
- Allen, J., and Co., 483.
- Allen and Solly, 478.
- ALLENHEADS MINE.** (Northumberland).—Section of the Allenheads Lead Mine, Northumberland, 11.
- Alkon 2H., 166.

- Allen, A. J., 680.  
 Allison, J., 52.  
 ALLOPHOSPHORUS.—See *Phosphorus, Red, or Allo-*  
*sophic.*  
 ALLOYS.—Series of metals, and the alloys that may be  
 obtained by mixing them, 13. Objects exhibited, and  
 notice, by U. Jordan, stating the composition of the  
 different alloys, *ib.*  
 Alluand, sen., 28, 542.  
 ALMAYAC CLOCKS.—See *Clocks.*  
 Almeida, Dr. D., 507.  
 Almeida, Messrs., 122, 138.  
 Almeida, Francea, 84.  
 Almeida, Silva, and Co., 84.  
 Almeria, Province of (Spain), 84.  
 Almond Oil. See *Oils.*  
 Almer, A., 600.  
 ALON FIBRE.—Samples of, from Barbadoes, 102; from the  
 Cape of Good Hope, *ib.*  
 ALON, EXTRACT OF, 50.  
 ALUM.—The esoteric principle of alues, 49.  
 Alout, M. G., 406.  
 ALPACA MANUFACTURING.—Specimens of, exhibited, 356, 357.  
 Importance and rapid development of this manufacture,  
 374.  
 ALPACA YARNS.—See *Yarns.*  
 Alsop, Robins, and Co., 364.  
 ALSTON MOOR (Cumberland).—Brown hematite and car-  
 bonate of iron existing in large quantities, 7. Section  
 of the Alston Moor Mines, illustrating the lead veins,  
 11.  
 Alther, J. C., 470.  
 ALTITUDE INSTRUMENTS.—See *Astronomical Instruments.*  
 ALUM.—Antiquity of the manufacture of alum and cop-  
 pers from the pyritous schists of the coal formation,  
 42. Considerable improvements of late years, *ib.* Partic-  
 ulars as to the processes pursued, *ib.* "Concentrated  
 alum," *ib.* Mode in which the Rhenish alum is ob-  
 tained, 43. Specimens of alum referred to, 21, 35, 43,  
 44, 45-50.  
 ALUM (OR WHITE) LEATHER.—See *Leather, &c.*  
 ALUMINA, SULPHATE OF.—Has become a considerable manu-  
 facture under the name of "concentrated alum," 42.  
 Alvarez, J., 641.  
 Alvean, Juan d', 57.  
 Alvera, B. G., 61.  
 Alvarez, C. D. S., 84.  
 Alvert, J. V., 479.  
 AMADOU (or German tinder).—Specimens of prepared am-  
 dou, 104.  
 Amand, J., 22.  
 Aman and Egil, 367.  
 AMAZON ATTACHED BY A TIGER (sculpture).—Notice of  
 this work, 608, 607, 707.  
 AMBER.—Is found associated with certain lignites, and is tol-  
 erably abundant, 32. Rarity of transparent specimens of  
 fine colour, *ib.* Prussia the only country furnishing  
 them for commercial purposes, *ib.* Collected chiefly  
 on the shores of the Baltic; specimens exhibited, *ib.*  
 Specimens of yellow amber necklaces, 520. Necklaces,  
 brooches, and articles for dressing-cases in lemon-  
 coloured amber, *ib.* Extensive use of this material for  
 the manufacture of mouth-pieces for pipes, 670. High  
 price of mouth-pieces in the East, *ib.* Current belief in  
 Turkey that amber is incapable of transmitting infec-  
 tion, *ib.* In Europe, ivory, bone, and horn have to some  
 extent usurped the place of the more costly material, *ib.*  
 Amber much employed for beads, brooches, ear-rings,  
 &c., *ib.* Coarser descriptions and chips employed for  
 the manufacture of varnish, amber oils, and succinic  
 acids, *ib.* Occasional substitution of copal for amber,  
*ib.* No difficulty in distinguishing between the two by  
 a chemical analysis, *ib.* Remarks on the chemical char-  
 acters of amber, *ib.* Mode of obtaining amber pecu-  
 liarly interesting, *ib.* Terrestrial and marine amber,  
*ib.* Evidence of the extreme antiquity of amber, *ib.*  
 Variety of amber most valuable, 670, 671. Double  
 meaning of "Electron" (amber) used by the ancient  
 authors, 671. Specimens of amber mouth-pieces from  
 States of Germany, *ib.* Splendid mouth-pieces from  
 Persia and Turkey, 672. Extraordinary value of those  
 from Turkey, *ib.* Various amber manufactures contri-  
 buted, names of exhibitors, and awards, 673, 678.  
 Ambrose, J., 689.  
 AMERICA, NORTH.—Collection of woods, native of, or grown  
 in, 114-116. See also *Canada. New Brunswick. Nova*  
*Scotia. United States of America.*  
 AMERICA, SOUTH.—Collection of woods, native of, or grown  
 in, 118, 119, 147.  
 Amey-Berte, K., 372.  
 AMHERST (EAST INDIES).—Collection of the woods of, con-  
 tributed by the Indian Government, 136, 136.  
 AMMONIA.—Importance of ammonia to agriculture, 40.  
 AMMONIA BENZOATE OF.—Specimens of, 43.  
 AMMONIA, CARBONATE OF.—Method of preparation thereof,  
 46. Specimens of, 45.  
 AMMONIA; HYDROCHLORATE OF.—Specimens of, 45.  
 AMMONIA, NITRATE OF.—Specimens of, 43.  
 AMMONIA, SALTS OF.—Specimens of, 44, 45.  
 AMMONIA, SULPHATE OF.—Process of production thereof, its  
 value per ton, and for what purposes useful, 43. Spec-  
 imens of this sulphate, 45, 50.  
 AMMONIACAL SALTS.—Prepared from urine for manuring  
 purposes, 45.  
 Amos, C. E., 235.  
 Amoskeag Manufacturing Company (United States), 348.  
 Amuller, E. F., 581.  
 ANASTATIC PRINTING.—Specimens of, noticed, 688.  
 ANASTOMOSIS.—Instruments for illustrating. See *Per-*  
*spective.*  
 ANATOMICAL MODELS.—See *Models, Anatomical.*  
 ANCHORS.—Remarkable improvements in the form and pro-  
 portions of, 210, 218.  
 Ancion and Co., 221.  
 Andelle, G., and Co., 536.  
 Anderegge, F., 348.  
 Anderson, D. and J., 348.  
 Anderson, G., and Co., 63.  
 Anderson, Sir J. (Juror), xvi, xviii, xxi.  
 Anderson, T. (Associate Juror), xvi.  
 Andriass, Count G., 213.—See also *Iron.*  
 André, J. P. V., 490, 500, 507.  
 Andree, C., 365.  
 Andrews, M., 371.  
 Andrews, R., 193.  
 ANEMOMETERS.—Self-registering anemometer and rain  
 gauge, 302. Principle of construction, *ib.* Furnished  
 with paper for the consumption of a month, *ib.* An-  
 emometer exhibited, designed for coal-pits and hos-  
 pitals, 302. Small travelling anemometer from Bel-  
 gium, *ib.*  
 Angell, G., 520.  
 Angell, J., 516.  
 Angers Slate Company (France), 28, 559.  
 ANGEL METALS. Various, exhibited, 316.  
 Angola, Governor of, xlv, 153.  
 Angraud, —, 404, 448, 451.  
 Angrene Brothers, 478.  
 ANIMAL KINGDOM.—Report on the animal substances  
 used in manufactures, 157. 1st. For textile fabrics  
 and clothing: Wool; general remarks, specimens ex-  
 hibited from various countries, exhibitors, and awards,  
 157-159. Hair and bristles: notices on the exhib-  
 its, exhibitors, and awards, 160. Whalebone: spec-  
 imens exhibited and awards, *ib.* Silk: general re-  
 marks; specimens exhibited and awards, 160-163.  
 Feathers and down: articles exhibited, exhibitors, and  
 awards, 163.—2nd. For domestic or ornamental pur-  
 poses, or for the manufacture of implements, 163,  
*et seq.* Oils, wax, &c.: notices on the exhibits, awards,  
 &c., 163. Horns and antlers: remarks on the ob-  
 jects exhibited, *ib.* Ivory: observations, exhibits,  
 and awards, 164. Tortoise-shell: articles exhibited,  
*ib.* Pearls: specimens exhibited, *ib.* Mother of pearl  
 or onyx: articles exhibited, exhibitors, and awards, *ib.*  
 Cameo shells and corals: exhibits, &c., *ib.* Sponges:  
 specimens exhibited and awards, *ib.* Goldbeaters'  
 skin: specimens thereof, 165.—3rd. As agents in the  
 manufacture of various articles, *ib.* Gelatines, isin-  
 glass, and glues: countries from which contributed,  
 specimens exhibited, names of exhibitors, and awards  
 granted, 165, 166. Animal charcoal, bone black and  
 ivory black: specimens exhibited, &c., 166.—4th. For  
 pigments and dyes, *ib.* Cochineal and carmine:  
 countries from which contributed, exhibits, and  
 awards, *ib.*  
 ANIMAL AND VEGETABLE SUBSTANCES USED IN MANUFAC-  
 TURES (Class IV.).—Classification of objects, vii. List  
 of Jurors, xxvi. Exhibitors to whom Council Medals  
 have been awarded, xiv. Prize Medals, xiv-xix. Hon-  
 ourable Mention, xix-iv. The relative excellence of  
 the "Raw Materials" from the vegetable and animal  
 kingdoms, in the Exhibition, due rather to peculiarities  
 of soil and sky than to the individual merits of the

- exhibitors, 68. The jury, therefore, has been guided and influenced by the invention, skill, and industry manifested in the amelioration and perfection of these substances, *ib.* Jury resolved itself into two Committees, one for the vegetable, and one for the animal kingdom, *ib.* Preliminary explanation of the grounds on which the Council Medal has been awarded, 68-90. Subdivision of the Report, as respects the vegetable kingdom, into eight heads; and as respects the animal kingdom, into five heads, 68. Names of exhibitors to whom Council Medals have been awarded, for collections of raw produce or materials, 68-70. Collections of raw produce for which Prize Medals were awarded, 70. Report of the Committee of the Jury on the vegetable kingdom: general remarks, 71.—1st. Gum and resin series, including starch, 71-79.—2nd. Oil series, 79-85.—3rd. Dyes and colours, 85-91.—4th. Tanning materials, 91-93.—5th. Fibrous substances, 93-103.—6th. Cellular substances, 103, 104.—7th. Timber and ornamental woods, 104.
- ANIMAL AND VEGETABLE SUBSTANCES** (Manufactures from, not being woven, &c., Class XXVIII).—Classification of objects in this Class, xlii. List of Jurors, xxx. List of exhibitors to whom Council Medals have been awarded, cxlii. Prize Medals, cxlii, cxliii. Honourable Mention, cxlii. Division of the Jury into Sub-Committees, 590. Sections into which this Class has been divided by the Jury, 590 *et seq.* Section (A.) *Manufactures from Caoutchouc*—General remarks, 590-593. Council Medals awarded, objects for which awarded, 593-595. Prize Medals awarded, 595, 596. Honourable Mentions; notices on the exhibits, 596. Remaining exhibitors, and articles exhibited, *ib.* Section (B.) *Manufactures from Gutta Serena*—General remarks, 597. Council Medal awarded; object for which awarded, 598. Prize Medal awarded, *ib.* Honourable Mention; article exhibited, *ib.* Other contributors; nature of their exhibits, *ib.* Section (C.)—*Manufactures from Ivory, Tortoiseshell, Shells, Bone, Whalebone, Horn, Bristles, &c., Cork, Cocoa-nut Fibre, Vegetable Ivory, &c.*—General remarks; various objects exhibited; names of exhibitors; awards and notices, &c., 599-601. Section (D.) *General Manufactures from Wood, not being Furniture*.—(Objects exhibited, awards, &c., 602.—Section (E.) *Manufactures from Straw, Grass, and other Materials*.—Objects exhibited, and awards, *ib.*
- ANIME**.—Fine samples of anime, abundantly produced by the simiri, or locust-tree, from Berbice and Trinidad, 76.
- ANNATTO**.—Nature of this colouring matter, 88. Seeds from which obtained, *ib.* Samples of its dyes, *ib.* Specimens exhibited, *ib.*, 89.
- Ansell, C., 217.
- Anson, Hon. Cole G. (Juror), xxv, xxviii.
- Ansted, Professor D. T. (Juror), xxx.
- Anstey, S., 14, 586.
- Anthelme, —, 43.
- Anthony, Dr., 605.
- ANTHRACITE**.—Specimen of anthracite from Cwmllyn-fell, in the Swansea Valley, South Wales, 13. Specimens of anthracite coal from Gwendraeth, Llanelly, South Wales, *ib.* Selection of this coal for the use of the boilers in the machinery department of the Exhibition, *ib.* Blocks of anthracite from Pennsylvania, 17, 18.
- ANTIMONY**.—Process of the treatment of antimony illustrated, 14. Specimens of the sulphuret of antimony and of antimony in the metallic state, 14, 15. Antimony and metallic antimony, from Koenigsberg, in Hungary, 21. Specimens of crystallised tartarate of antimony, 43.
- ANTLERS**.—See *Horns and Antlers*.
- Apollo Steam Company (Vienna), 622, 628.
- Appel, R., 688, 696.
- Apperley, J. and D., 352.
- Applegarth, —, 198, 698, 446.
- Appold, J. G., 178, 181.
- AQUA MARINA**.—Specimens of, from the Isle of Elba, 35.
- Arbisey, M. D., jun., 58.
- Arbuthnot, Messrs., 89.
- Archer, J. W., 507.
- Archer, T. C., 387, 650, 852.
- ARCHERY**.—See *Bows and Arrows*.
- Archibald, C. D., 16, 85.
- ARCHES**.—Specimens of preparations of, 45, 47.
- ARCHITECTURAL DECORATIONS**.—Notices of the principal works of art in this Section, viz., 1. Integral, in relief, colour, &c., 686; 2. Adventitious, as stained glass, tapestry, &c., 686, 687. See also *Carton-pierre, Painted Glass, Papier Maché Decorations*.
- ARCHITECTURAL DESIGNS**.—Notices of the contributions to this division of the Fine Arts, 695. Remarks on the Exhibition Building as an architectural work, 696. Notices of the principal architectural models in this Exhibition, 696.
- ARCHITECTURAL MODELS**.—See *Models, Architectural*.

- Austin, G., 515.
- Austin, J. H., 23.
- AUSTRALIA.—Samples of wheat, barley, and a few of oats, from the quarter of the globe, including Van Diemen's Land, and New Zealand, 52. Samples of maize, 53. Flour of excellent quality, 54, 55. Good samples of resins and gums, 76. Colouring matters of the different species of *Xanthorrhoea* well worthy of notice, 80. Samples of bark for tanning, 93. Collection of woods, native of or grown in Australia, 119, 120, 148. Case containing 132 specimens of merino wool, 159. Specimens of printing from Hobart Town and Sydney, 407. —See also *New South Wales. South Australia*.
- AUSTRALIAN WHEAT.—See *Wheat*.
- AUSTRIA.—Sheet iron, called iron paper, from the works of Baron Von Kleist, at Nendek, Bohemia, 4. Imperfect view afforded of the mineral resources and industry of the country, 19. Working of mines actively carried on, *ib.* Small number of exhibitors, *ib.* Contributions chiefly from Carinthia, Styria, Upper and Lower Austria, Hungary, Bohemia, and Salzburg, *ib.* Principal sources of mineral wealth in Austria, 19, 20. Objects exhibited, Prize Medals, and Honourable Mentions awarded to exhibitors from this country, 20, 21. Remarks on the chemical and pharmaceutical products contributed by Austria, 43 *et seq.* No agricultural produce from Austria worthy of notice, 52. Different varieties of maize, 53. Beautiful samples of red and white millet, 54. The wheat flours of this country, especially the Croatian, exceedingly good, 55. Samples exhibited, *ib.* Samples of oil-cake, 56. Sample of *bier stein*, fabricated from extract of malt and hops, 60. Samples of starch, dextrine, and starch gum from, 78. Series of samples of oils, 83. Fine sample of alcanet root, 80. Peculiar value and excellence of the felting wools exhibited in the Austrian department, 69. Samples of strong and well-prepared flax from Moravia, 99. Specimens of fibrous wood, 103. Use of this substance, *ib.* Good series of specimens of German tinder, 104. Series of specimens of woods, 151. Specimen of selected teasels, 157. Samples of wool, 157, 158. Fine examples of Italian silks, 162. A dynamograph exhibited by the Chevalier De Burg, 169, 304. Jacquard cylinder, 197. Rifles and pistols, 221. Surveying and levelling instruments, 256. Balances, 260. Daguerreotypes, 278. Specimens of photographic pictures, 279. Various chemical apparatus, 297. Thermometers, 302. Description of a pyrometer exhibited by M. Wurm, of Vienna, *ib.* Models of crystals in glass, 305. Drawing instruments, 306. Description of various planetariums, 307. Globes, 308. Printing machine for the blind, 311. Seraphines, 332. Specimens of cotton manufactures, 348. Variety of woollen cloths, 351. Principal seats of the manufacture, *ib.* Good quality, *ib.* Worsteds stuff goods, 356. Observations on the yarns from Austria, 359. Samples exhibited, 360, 361. General remarks on the silk productions of this country, 362. Specimens of ribbons, 365. Samples of manufactured silks, 365-368. Specimens of linen, 372. Great progress made in the manufacture of mixed fabrics within the last ten years, 374. Low price and excellent quality thereof, *ib.* Bohemia supplies tissues of a quality bearing the stamp of decided progress, *ib.* No originality either of design or manufacture, *ib.* Objects exhibited, 375, 376. Collection of shawls, 380, 381. Specimens of furs, 386. Samples of glove leather, 393. Samples of boots and shoes, 479, 480. Handsome contribution of gloves of various descriptions, 481. Magnificence of the typographical specimens, 399. Writing machine for the blind, 423. Numerous specimens of bookbinding, 425. Statistics of paper-making of this country, 443. Specimen of playing cards, 447. Beautiful specimens of albums, 449. Specimens of black lead pencils of excellent quality, 450. Collection of stationery, printing, bookbinding, &c., 452. Observations on the printed goods and dyed yarns, 458. Numberless varieties of woollen-dyed yarns contributed, *ib.* Specimens exhibited, 459. Articles exhibited in lace and embroidery few and not suited to the British market, 467. Specimens of embroidery, 472. Carpets, 475. Specimens of richly-embroidered over-coats; of dress-coats and other wearing apparel, 482. Specimens of wearing apparel, *ib.* Specimens of cutlery, tools, &c., 489-491. Observations on the collection of general hardware and iron manufactures, 497. Specimen of works in silver, 517. Articles of jewellery, 520. Articles of glass exhibited by Austria, for which Medals, &c., have been awarded, 536, 537. Articles of porcelain, earthenware, &c., exhibited; Prize Medals, &c., awarded, 542.

- Grand collection of furniture in the Austrian collection, 544, 546, 550, 551, 552. Considerable fancy and excellent workmanship displayed, 546. Painted ceiling, 546, 551. Beautiful specimens of paper-hangings, 548. Articles of Japan ware, 549, 551. Billiard tables and cues, 551. Oval mirror frame, 552.
- Five specimens of bricks, 554. Vases manufactured of the tuff obtained from the hot-water springs of Carlsbad, 559. Three fine chimney-pieces of Carrara marble, exhibited by G. Bottinelli of Milan, 562. Specimens of inlaid work in marble, 562. Specimens of cement, 574. Specimens of artificial pumice stone, 575. Specimen of artificial stone and marble, *ib.* Specimens of good common bricks, 580. Remarks on the large brick-making establishment of Mr. Miesbach of Vienna, 580, 581.
- Beautiful ivory combs, 599. Extensive assortment of mother-of-pearl ornaments from Vienna, 600. Brushes, *ib.* Large manufacture of olive-oil soap in Austria; character of the Eau-de-Cologne supplied in the Exhibition, 603. Samples of soap and perfumery, 613, 614. Contributions of a dressing-case, dressing-table, &c., 633.
- Specimens of straw work and willow plait, 602.
- Contributions of tallow-mould candles, 618. Statistics of the manufacture of stearic candles in Austria, 622. Specimens exhibited, 628, 629. Imitation lucifer-matches, 635.
- Contribution of miniature flowers, 642. Specimens exhibited, 644.
- Remarks on the parasols and umbrellas from Austria, and specimens exhibited, 657. Extensive contribution of walking-sticks; specimens exhibited, 664. Collection of pipes (principally Meerschaum) from Vienna, 671. Specimens exhibited, 672-674. Snuff-boxes and papier-maché wares, 675, 676. Specimens of toys exhibited, 678, 680, 681.
- Notices of the principal works of sculpture, 703. Enamel painting, *ib.* Painting on glass, *ib.* Lithochromy, *ib.* Austrian Government, 63.
- AUTOCRONOGRAPH.—Description of this instrument, 315. Purposes for which adapted, *ib.*
- AUTOMATIC MUSICAL INSTRUMENTS.—Remarks of the Jury on this class of musical instruments, 332.
- AUTOMATON TOYS.—Great variety of, 678, 679, 681.
- AUTOPHONS.—See *Barrel Organs*.

- BELGIANS, H. M. THE KING OR THE—Notice of a Bust of, by G. Geefs, 705.
- BELGIUM:**
- Products of the mines and manufactures of zinc, exhibited by the Vieille Montagne Company, 4. Mineral industry of Belgium represented in the Crystal Palace by 58 exhibitors, 21, 22. Working of coal brought under notice by only a few isolated specimens, 22. Greater part of the objects exhibited furnished by the iron works, clay works, refractory sandstones, and grindstones, *ib.* General account of the different rewards granted by the Jury, grouped according to the nature of the products, 22, *et seq.* High reputation enjoyed by the products of the Company of Zinc Mines and Foundries of the Vieille Montagne, 22. Description of two safety lamps exhibited, one by M. L. Mueseler, and the other by F. Elvin, *ib.* Prizes awarded for the manufacture of iron, 22, 23. Remarks on the articles exhibited under the head of Zinc and Brass Works; Prizes awarded, 23. The department of mineral industry as regards terra cotta, bricks, crucibles, refractory clays, and kaolin, well represented.
- Exhibition, *ib.* Great number of manufactures of grindstones and horn a country which consists in great part of palæozoic deposits, *ib.* Objects exhibited under the class of slates, grindstones, hones, &c., *ib.*
- Large number of samples of wheats from Belgium, 52. None of any striking superiority, *ib.* Samples of peas, beans, haricots, pulses, &c., 54. Sample of hay, *ib.* Potato flour of unusual excellence, 55. Oil-cakes of various kinds, 56. Samples of hops, *ib.* Samples of starch, 78. Vegetable oils, 83. Specimens of oak bark, 93. Samples of flax and hemp, 99. Horse hair and bristles, 160. Raw silks, 162. Samples of glues, 166. Animal black, bone black, and ivory black, *ib.* Description of a marine engine from Seraing, 172. Locomotive engine of good construction, *ib.* Portable engine and boiler, *ib.* Donkey engine, use thereof in steam-boats, *ib.* Cab phaetons, 193. Wool made "soft-bobbin" from, 196. Woollen manufacturing machinery, *ib.* Notice of a singular power loom, 197. General remarks on the manufacture of small arms, 220. Objects exhibited, 221.
- Agricultural implements, 226, 227, 229-239.
- Sextants exhibited, 252. Surveying instruments, 254.
- Balances, 259. Spectacles, 273. Small travelling anemometer, 302. Brass musical instruments, 331.
- Various specimens of cotton manufactures, 348. Assortment of choice woollen cloths, 351. Principal seats of manufacture, *ib.* Annual value of manufactured goods, *ib.* Markets to which chiefly exported, *ib.* Specimens of woollen stuffs, 358. Good assortment of hannels, *ib.* Samples of woollen yarns, 361. Specimens of flax and hemp manufactures, 371, 372. Active commerce in mixed fabrics in Belgium, 374. Increasing desire to take advantage of the demand for exportation, *ib.* Ancient excellence of the weavers of the country, *ib.* Extensive produce, both for home and foreign demand, *ib.* Objects exhibited, 375, 376.
- Specimens of furs, 387. Horse-hair fibre stuffing for furniture, 388. Samples of tanned, curried, and varnished leather, 391, 392. Specimens of saddlery and harness, 394. Specimens of boots for exportation, 480.
- State of printing in Belgium, 406. Specimens contributed, *ib.* State of the paper manufacture, 453. Present statistics of the trade, 433-435. Specimens exhibited and names of exhibitors, 435. Specimens of playing cards, 447. Large quantity of envelopes, 448. Beautiful display of albums, 449. Various specimens of sealing-wax, 451. Large variety of printing, paper, and fancy stationery, 452, 453, 454.
- Specimens of lace and embroidery, 471. Carpets and table covers, 475.
- Specimens of cutlery and edge tools, 490, 491. General

- remarks on the specimens of hardware, iron manufactures, and ironmongery, 497. Articles showing the art of inlaying and damascening iron and copper, from Liege, 517.
- High reputation of the Belgian window glass; large exportation thereof, 526. Articles of glass contributed from Belgium for which Medals, &c., are awarded, 538.
- Specimens of paper-hangings, 548, 551. Collection of furniture; mosaic floors and tables, 550, 551, 552.
- Models of paving stones, 555. Works in Ordain stone, 558. Marble chimney-piece of considerable merit, 562. Marble columns, 563. Interesting as examples of the black marble of the country, *ib.* Specimens of cement, 574.
- Specimens of plumbago crucibles of good quality, 585. Examples of the use of shells for cameos, 600. Specimens of brushes of all kinds, *ib.* Collections of carved wooden boxes, 602. Toilet soap, 610, 615. Manufacture of stearic candles; specimens exhibited, 623, 628, 630. Cases of stuffed birds, 646. Remarks on articles consisting of workboxes, reading-desks, &c., from Spa, 653, 655. Contribution of parasols, 657. Specimens of inlaid walking sticks, 664.
- Flourishing state of the fine arts in Belgium, 705. Character of the sculpture, *ib.* Notices of the principal works on a large scale, *ib.* Medals, *ib.* Inlaid works in metal, *ib.* Castings in zinc, 707.

 BLIND, APPARATUS AND BOOKS FOR TEACHING THE.—Portable typograph or writing machine, 311. Beautiful mechanical contrivances, *ib.* Description thereof, *ib.* Method of using it, *ib.* Machine for facilitating the writing of the blind, *ib.* Printing machine, *ib.* Construction thereof, *ib.* Designer himself blind, *ib.* Invention for teaching drawing and writing, *ib.* Simplicity thereof, *ib.* Triangular alphabet, *ib.* Improvement on the circular alphabet, *ib.* Gull's writing apparatus, *ib.* Circular printing machine, *ib.*  
 Numerous inventions and devices for the instruction of the blind, 413. Estimated percentage of blind persons to the whole population, *ib.* Printing for the blind looked upon as a curious or doubtful experiment a few years ago, *ib.* It is now established that books are true sources of profit and pleasure to them, *ib.* Brief historical sketch of the origin and progress of printing for the blind, together with the present state of the art, 413-422. The whole credit of the invention of printing for the blind belongs to France, 413. Establishment of the Institution Royale des Jeunes Aveugles, *ib.* Haüy's original invention, and his book, *ib.* Modification of the letters of Haüy, and revival of the printing by Dr. Guillié, 414. List of elementary and other works published by him, 415. Advances of embossed printing under Guillié, *ib.* List of books published by the Institution between 1821 and 1840, 415. Vicissitudes of L'Institute des Jeunes Aveugles de Paris, 414. Reorganization and able management of the Institution, by M. Dufau, *ib.* List of works for the instruction of the blind published by M. Dufau, 415. Establishment of an institution for the blind at Vienna, in 1804, 414. Institutions for the blind established at Berlin and St. Petersburg, in 1806, *ib.* First improvements made in embossed typography in Great Britain and the United

- States, 414. Works published by James Gall of Edinburgh, and spirit thereof, 414, 416. Intelligent and active interest displayed by the Rev. Mr. Taylor of York in the education of the blind, 416. Works published by him, *ib.* Efforts of Alexander Hay in the cause of embossed typography, and failure thereof, *ib.* Gold medal offered by the Society of Arts of Edinburgh, in 1839, for the best method of printing for the blind, *ib.* Result thereof, *ib.* Establishment of the Perkins Institution for the Blind at Boston, in 1833, *ib.* Improvements effected in embossed printing by Dr. S. G. Howe, *ib.* The alphabet contrived by Dr. Howe has never since been changed, 75. List of the books printed at the press of the Perkins Institution in Boston, with the prices thereof, 417. Establishment of the Frieslander Institution, Philadelphia, *ib.* System of instruction pursued, *ib.* List of books printed at the Philadelphia press, 418. Typography of the Philadelphia books exceedingly well executed, 417. Virginia Institution for the Blind, 418. Press set up at this institution in 1848 or 1849; elementary and school books printed, *ib.* Much praise due to the American Bible Society at New York for their commendable efforts in the circulation of the Scriptures among the blind, 418. The blind could read in the United States before the public attention was called to the subject in Great Britain, *ib.* Steps taken by the Society of Arts of Edinburgh, on receiving the various alphabets in competition for their Medal in 1836, *ib.* Award of the Society's Medal to Dr. Fry, *ib.* Improvement of Fry's alphabet by Mr. Alston, *ib.* Remarks on the printing of the whole of the Bible by Mr. Alston, *ib.* List of books issued from the Glasgow press since its first establishment, 419. Since 1837, the Glasgow press has been almost the only one that has supplied England, Ireland, and Scotland with embossed books in Roman type, *ib.* Objections to the use of small Roman capitals, *ib.* Publication of a magazine for the blind by Simpkin, Marshall and Co., *ib.* Establishment of an institution for the blind at Stockholm in 1806, *ib.* Nearly the same system of typography prevails in all the institutions abroad, *ib.* Five existing systems of typography in Great Britain, 419, 420. Disadvantages resulting from this want of uniformity, 420. Opinion in favour of Howe's American typography, *ib.* Observations on Mr. Lucas's system; list of works published at Bristol, *ib.* Formation of the London Society for Teaching the Blind to Read in 1839, *ib.* List of books printed at the Institution on the Avenue Road, Regent's Park, *ib.* Establishment of the London and Blackheath Association in 1838, 421. Object thereof, *ib.* Embossed books by Mr. F. R. on the phonetic principle; list of works already published by him, *ib.* System suggested by Mr. Moon, Master of the Brighton Blind Asylum, *ib.* List of Mr. Moon's publications for the blind, 421, 422. Comparison of the six systems used in the English language, 422. Howe's books are not only less bulky, but also much cheaper, *ib.* General remarks on the apparatus and books exhibited from Great Britain, *ib.* United States, *ib.* France, 423. Austria, *ib.* Bavaria, *ib.* Recommendation that a uniform system should be adopted in England, *ib.* Dr. Howe's plan simple, easy, and fit for general adoption, *ib.* Awards to exhibitors of means for teaching the blind, 422.

**Bonnet, J. and C.**, 365.  
**Bonneton, J.**, 364, 161.  
**Bontems.**—Specimens of, exhibited, 483.—See also *Wearing Apparel*.  
**Bonney, —**, 646.  
**Bonte, L.**, 376.  
**Bontemps, G. (Associate Juror)**, xxx. His manufactory for sheet-glass at Choisy-le-Roi, alluded to, 524. Attention devoted by M. Bontemps to the manufacture of glass for optical purposes, 523. His co-operation with Messrs. Chance, *ib.*  
**Bontems, —**, 681.  
**Bonyun, G. R.**, 76.  
**Bonz and Son**, 43.  
**Bobbyer, J. H.**, 503.  
**BOOKBINDING.**—Splendour in binding books, a taste which dates back from remote times, 423. Attempts made to submit bookbinding to general principles, *ib.* Ornaments devised so as to mark the period in which books were written or the subjects on which they treat, *ib.* Magnitude of the scale on which bookbinding is carried on in England, *ib.* Application of machinery to this branch of industry, *ib.* Introduction of embossed calico, *ib.* Rapidity with which binding in cloth boards is carried on, *ib.* High price of binding as compared with the cost of books, *ib.* Observations on ornamental binding, 424. Beautiful specimens of designs and bindings exhibited by Great Britain, 424, 425. Elaborate work bestowed on most of the productions of the United Kingdom, 425. General want of good designs, *ib.* Attempt at emblematical binding generally unsuccessful, *ib.* Imitations of old English style of bindings a nearer approach to simple, useful, and good work, *ib.* Specimens from France, *ib.* Remarkable for superior taste in their design as well as for neatness, *ib.* The best designs imitations of old artists, *ib.* Bookbinding carried on on a large scale in Vienna and Prussia, *ib.* Specimens from Austria, *ib.* From the Zollverein, 425, 426. From the Netherlands, 426. From Sweden, *ib.* From the United States, *ib.* Bookbinding has not advanced in that country so much as other branches of the book-trade. Specimens from Van Diemen's Land, *ib.* Observations on vellum-binding for account-books, ledgers, &c., *ib.* Specimens exhibited, *ib.* List of awards showing the names of the exhibitors, lxxviii, lxxxi, 451, 452, 453, 454. Principles on which this art should be founded; great extent to which they are overlooked in the present day, 740, 741. Various specimens of book-covers and bindings, and of designs for the same, criticised, 741.  
**BOOKBINDERS' CLOTH.**—Various specimens of, 424, 452.  
**BOOKBINDING MACHINE**, 205.  
**BOOKCASES.**—Various descriptions exhibited, 550, 551. Remarks on a carved bookcase by Mollard and Son, 694.  
**BOOK-COVERS, DESIGNS FOR**, 695.  
**Boote, T. and R.**—Process of inlaying one clay upon another, patented by, 541.  
**Booth, J. F.**, 387.  
**BOOTS AND SHOES.**—Specimens of, from almost every description of material and from most parts of Europe and the United States, 479. Great novelty of construction and adaptation manifested in some instances, *ib.* English manufacturers enabled to compete with the foreign, from the improvements made during the last five or six years, *ib.* Increase in the consumption of English boots and shoes, *ib.* Articles exhibited; names of exhibitors; awards, &c., 479, 480. Specimens of waterproof boots and shoes from the United States, 595. Also from France, *ib.* Specimens of vulcanized India-rubber boots and shoes, 596.  
**BORACIC ACID.**—Preparation thereof by Count F. de Larderel, of Tuscany, high character of his operations, 38. Process of preparation described, *ib.* The product exceeds in quantity the limited supply of borax from British India, *ib.* Extended uses in manufactures of porcelain and crystal, 38. Caution required in the use of boracic acid from the facility with which it fuses earthy particles, 532. Samples of boracic acid, 46, 47.  
**BORAX.**—Borax used in glass-making, 524. Not generally adopted on account of its expense, *ib.* Formerly supplied from Thibet, but impure, *ib.* Boracic acid now supplied from the works of M. de Larderel in Tuscany; origin of this manufacture; its high price, *ib.* Objections to its employment, *ib.* Discovery of this material on the western coast of America as borate of lime; denominated Hayessine, from its discoverer, *ib.* Samples of borax, 46.—See also *Boracic Acid*.  
**Borde, J.**, 84.  
**Borden, G.**, 65.  
**Borie Brothers**, 202, 204, 580.  
**BORING TOOLS.**—Set of, from Switzerland, 208. Successful construction thereof, *ib.* Set of powerful tools from Paris, *ib.* Excellence of the apparatus, *ib.* Used in the formation of the celebrated "Puits Artesien" of Grenelle, *ib.*  
**BORNEO.**—Coals from Labuan; sulphuret of antimony; pepites of gold, and rolled diamonds, 15. Large series of rice from Borneo, 53. Betel-nut, 57. Coffee, 59. Arrow-root, 62. Sample of cotton grown from Pernambuco seed at Sarawak, 94. Specimens of woods from Labuan, 138, 139.  
**BORROWDALE (Cumberland).**—Mine of graphite at, nearly exhausted, 3.  
**Borzone, J.**, 162.

**BRASS INSTRUMENTS (Musical).**—General Remarks by a Juror of Class X. on the exhibits in this class of musical instruments, 330.  
**BRASS MANUFACTURES.**—Admirable workmanship of the brass manufactures of Messrs. Estivant of Givet, France, 5. Objects of extraordinary dimensions and difficulty of execution exhibited, *ib*. Annual make of Messrs. Estivant, value represented, *ib*. Objects in rolled and hammered brass from France, 26. Excellence of the brass-work of the United Kingdom, 497. Eminent examples of work of this character, *ib*. Ornamental brass-work scarcely to be considered in a very advanced condition, *ib*. Innumerable applications of brass-work to which the use of gas has given rise, 497, 498. Brass-work struck from dies, 498. Remarkable skill and artistic treatment of the ornamental brass-work of French manufacture, *ib*. Ornamentation of every kind exhibited, *ib*. Comparison of the ecclesiastical brass-work of British and French manufacture, *ib*. Inferiority of the French productions, *ib*. Specimens of general brassery from France and Belgium, *ib*. List of awards and exhibitors, 502. Brass-works of Belgium, 23.  
**BRASS TUBING.**—Specimens of, from Paris, 27. Purposes for which used, *ib*. Bent tubes of great ingenuity, *ib*. Superiority of these tubes, *ib*. Used for conveying gas under the name of "rope tubes," *ib*.

*Peculiar geological interest attached to these marbles, ib.*  
 Campbell and Co., 745.  
 Campbell, Dr., 97.  
 Campbell, Major H., 127, 136, 187.  
 Campbell, Harrison, and Lloyd, 365.  
**CAMPBACHY (South America).**—Logwood obtained from, 87.  
 Campenhout, C. Van and Co., 623, 628.  
**CAMPHINE.**—Turpentine separated by distillation into oil or spirit of turpentine, 73.  
 Camphine Company (Hull), 72.  
**CAMPION.**—Samples of, 44, 46, 47.  
 Camus, —, 65.  
 Camuzat, —, 404.  
**CAMWOOD.**—Dye-stuffs extracted from, 87. Dyed samples, *ib.*  
**CANADA.**—Superiority of the collection from Canada, so far as the mineral kingdom is concerned, to all countries that have forwarded their products to the Exhibition, 15. Systematic manner in which the collection has been made by Mr. W. E. Logan; nature of the arrangement adopted by him, 15, 16. Oxide of iron an important mineral amongst the iron ores of Canada, 16. Richness of the ores of copper from Lake Superior and Lake Huron, *ib.*  
 Fine samples of wheat from Canada, all of the ordinary English kinds, 52. Barley also good, *ib.* Samples of pulses, 54. Clover seeds, *ib.* Flour and biscuits, *ib.* Linseed and cameline seed, 56. Hops, *ib.* Arrow-root, 62.  
 Samples of hemlock bark for tanning, 92. Samples of Canadian flax, 98. Specimens of the chief varieties of Canadian timber and woods, 140. Raw silk, 163. Specimens of oil obtained from porpoises, *ib.* Pair of fine, moose horns, *ib.* Specimens of glue, 165.  
 Surveying instruments from Canada, 254. Bow or stringed musical instruments, 330.  
 Few specimens of woollen cloths, 352. A few common and low shannels are produced in Canada, but much has not been attempted, 358. Specimens of sleigh harness, 374, 375. Specimen book containing a large number of beautiful types, also stereotype plates, 407. Large and well-formed collection of printing types cast at Montreal, 453. Articles of wearing apparel, 484. Specimens of edge-tools, 490, 491. Specimens of stoves, scales, wire, &c., 507, 509.  
 Examples of articles of clothing and furniture ornamented with porcupine quills, 600. Specimens of cooper's work, 602. Collection of brooms made of Indian corn straw, *ib.* Inferior nature of the soap from Canada, 610. Stearic candles, 623. Confectionary, 638. Fans made of the bark of trees, 668. Collection of clay-pipes from Canada, 671. Specimens exhibited, 673.—See also *Gold. Iron. Iron Ores. Sands.*  
 Canada Agricultural Association, 52.  
 Canales, J., 84.  
**CANARY.**—Collection of the woods of, contributed by the Indian Government, 132.  
**CANDELABRA.**—Specimens of candelabra in silver, 512, 513. Two candelabra of cast-iron, inlaid with silver, from Berlin, 517.—Large candelabrum with bacchanalian figures, from France, 518. Objectionable excess of ornament in candelabra composed of porcelain and metal, 725.  
**CANDLES.**—Little known of their early history, 615. Impossibility of avoiding the mention of lamps under this head, *ib.* Intimate connexion between candles and lamps, *ib.* Probable antiquity of candles, 616. Torches may be regarded as a coarse description of candles, which possibly originated from them, *ib.* Notices in Pliny and Apuleius, also in Fosbroke's works, with regard to the use of candles, *ib.* Manufacture and consumption of wax candles in the middle ages, *ib.* The occupation of the wax-chandler existed in England at a very early period for making tapers for religious rites, 616. By the sixteenth century the trade of wax-chandler was extensively established in England, 617. Manufacture of wax tapers at Venice in the seventeenth century, *ib.* Introduction of the invention into France about the middle of the same century, *ib.* Mode of making Hampshire rushlights in the eighteenth century, *ib.* Improvements effected in the form and quality of candles by W. Bolts in 1799, *ib.* Great interest would attach to a complete history of domestic illumination, *ib.* Want of space and materials for, the Jury undertaking such an inquiry, *ib.* Also to enable them to follow the many contrivances invented in modern times to facilitate the manufacture and combustion of candles, *ib.* Chemical improvements of the last thirty years, *ib.* Many disadvantages under which the ordinary tallow candle labours, *ib.* Disagreeable smell of tallow candles arises from the tallow being imperfectly purified, *ib.* Requisite conditions for proper tallow for candle-making, 617, 618. Plaited wicks not applicable to tallow candles without some special contrivance, such as is effected in Palmer's lamp, 618. Description of Palmer's candle lamp, *ib.* Improvement in the tallow candle effected by a reduction of the fusibility of the materials employed, *ib.* Mode of preparation of stearine for candle-making, *ib.* Burning-points of stearic and margaric acids, *ib.* Transition of the tallow candle to the stearic candle, effected, *ib.* Tallow candles of two kinds, "dips" and "moulds," *ib.* Manner in which both descriptions are made, *ib.* Several improvements of late years in the mechanical arrangements for the manufacture of tallow candles, *ib.* General introduction of stearic candles impeded by their price, *ib.* Samples of mould candles from Austria and the British colonies, *ib.* The manufacture of tallow candles in the United Kingdom a most extensive trade, *ib.* Table exhibiting the amount of duty on tallow, wax, and spermaceti candles received in each year 1820-1829, 619. Number of candlemakers in 1830, *ib.* Quantity of tallow entered for home consumption in the years 1841 to 1850, *ib.* Samples of tallow candles exhibited, number of exhibitors, *ib.* Price of tallow, composite, and stearic candles, *ib.* General remarks on the manufacture of stearic candles, *ib.* Discoveries of Chevreul, *ib.* Separation of fatty acids from soaps, *ib.* Difficulties originally encountered in the manufacture of stearic candles, as they would not burn the ordinary wick, 620. Experiments made and improvements effected in the wick, *ib.* Sketch of the main features of the development of the stearic manufacture, *ib.* Numerous experiments necessary to prevent the crystallization of the stearic acid during the moulding of the candles, *ib.* Sulphuric saponification, experiments of Frérey, Gwynne, and Clark, *ib.* Remarks on the discoveries and patents of Dubrunfaut, Jones, Wilson, and Price and Co., 620, 621. Improvements effected in the manufacture of stearic candles, *ib.* Principal candle-manufactories in foreign countries, *ib.* Description of the lime process as practised at Messrs. Ogleby and Co.'s works at Lambeth, 621, 622. Description of the sulphuric saponification and distillation process employed at the works of Price's Patent Candle Company, 622. Statistics of the Austrian manufacture of stearic candles, 622, 623. Manufacture of stearic candles in Belgium, Canada, and Denmark, 623. Stearic manufacture of France, *ib.* Statistics of the trade in France, *ib.* Stearic productions of Holland, India, and Prussia, *ib.* Creditable manufacture from Russia, Sardinia, and Spain, *ib.* Fine stearic candles from Sweden and Norway, 624. Newly invented machinery employed in the manufacture, *ib.* Good samples of stearic candles from Turkey, *ib.* Details of the British stearic candle trade, *ib.* Prices of stearic candles, *ib.* Preference shown by the British public for candles coloured yellow to resemble wax, *ib.* Absurdity of lowering the beautiful white of the pure stearic candle, *ib.* Wax candles discarded at grand fêtes in France, and use of the pure white stearic candle, *ib.* No stearic candles exhibited in the Wurtemberg Department, *ib.* General remarks on wax and spermaceti candles, *ib.* Substances of various origin and of very different composition included under the name of wax, *ib.* Description of wax employed in candle-making, *ib.* Chinese wax not a vegetable wax, *ib.* Knowledge of true chemical composition of wax owing to Mr. Brodie, *ib.* Results of the researches of this chemist, 624, 625. Paraffin too costly to be converted into candles if made

- from wax, as its preparation entails a considerable loss of material, 625. Paraffin much better adapted than any other substance for illuminating purposes, *ib.* Experiment of James Young with a view of obtaining coal paraffine; results, and specimens exhibited, *ib.* Observations on wax bleaching, *ib.* Processes employed, *ib.* Wax more valuable when bleached, *ib.* Quantities of wax imported into the United Kingdom in the year 1850, 625. There is no duty on wax, *ib.* Quantity of wax candles imported, and duty paid thereon in the year 1850, 626. Wax not adapted for moulding, *ib.* Manner in which wax candles are made, *ib.* Wicks of wax candles always made of twisted unbleached Turkey cotton, *ib.* Platted wicks not adapted for wax candles, *ib.* Mode in which large wax candles used in churches are made, *ib.* Process of manufacturing long wax tapers, *ib.* Materials used for colouring wax candles, *ib.* Wax mortar lights used as night lights, *ib.* Samples of wax candles and tapers from China, Egypt, India, Russia, Tunis, and Turkey, *ib.* Messrs. Barclay and Son's collection of wax candles and specimens to illustrate wax bleaching, *ib.* Collection of ornamented wax candles for weddings and fête-days, in fair proportion, *ib.* Candles made of vegetable wax in its natural state, *ib.* Chemical relations of spermaceti closely allied to wax, *ib.* Description of the process of spermaceti refining at Messrs. Ogleby and Co.'s works, Lambeth, 626, 627. Price of spermaceti, 627. Manner in which spermaceti candles are made, *ib.* Remarkably fine specimens of spermaceti and spermaceti candles in the English Department, *ib.* Specimens from the United States and New South Wales of a less important character, *ib.* Very little spermaceti imported into the United Kingdom; major part obtained by refining sperm oil, *ib.* Number of exhibitors from the various countries, *ib.* Classification of the Exhibitors, *ib.* Principles that have governed the Jury in making awards, 627, 628. List of awards, 628-630.
- Candy and Co., 363.
- CANNEL COAL.—Production of naphtha from cannel coal; purposes to which applied, 42. Oil procured by the distillation of the cannel coal of Boghead, near Bathgate in Scotland; well adapted for lubricating machinery, *ib.* Objects manufactured from cannel coal, 55.
- CANNING, VISCOUNT.—Report of Viscount Canning, President of the Council of Chaimen of Juries, on presenting the awards of the Juries to the Royal Commission, i, in Answer of H. R. H. Prince Albert to Lord Canning's Report, xxxiii, xxiv. Juror, xxv, xxx, 604.
- CANNON AND THEIR CARRIAGES.—Small number of cannon exhibited, 220. Those exhibited sent rather as samples of manufacture and materials than for their original merits as instruments of war, *ib.* Remarkable specimens of wrought-iron guns presented by Spain and Turkey, *ib.* Specimens of cast-iron ordnance from the celebrated foundry of Liège (Belgium), *ib.* Remarkable beauty of the workmanship of a piece of ordnance from Prussia, *ib.* Models of the construction of guns for the English service, *ib.* Models showing the construction of artillery used in the East India for siege and field service, *ib.* Ordnance mounted for sea service, *ib.* Observations on the Swedish guns exhibited; general description thereof, 223. Shell-gun constructed for loading at the breech, *ib.* Experiments made to ascertain the merits of cannon constructed by Major Cavalli and by Baron Wahrendorff; results thereof, 223, 224. Great ingenuity and merit of Baron Wahrendorff's construction, 224. Excellent samples of Swedish and Danish cast-iron field guns, *ib.* Substitution of cast iron for brass guns in the Swedish service, *ib.* Cast-iron guns of the same weight as brass not suited to the tropics, although they might be to many climates, *ib.* Models of Swedish field-guns extremely well executed, *ib.* Model of a 30-pounder long gun on a carriage and slide for caemates, *ib.*
- Cantagalli, L., 583.
- Captier, J., 372.
- CANTHARIDIN.—The blistering principle of cantharides; how obtained, 44. Samples of cantharidin, 49.
- Canton, C., 563, 585.
- CANVAS.—General excellence of the specimens exhibited, 370, 371, 372, 373.
- CAOUTCHOUC AND MANUFACTURES THEREFROM.—Samples of caoutchouc of Indian rubber of considerable interest, particularly those from Sumatra and Java, 74. Caoutchouc is obtained from certain plants yielding milky juices, 590. Though the great majority of these plants are tropical, still they are not without their European representatives, *ib.* Families of plants which furnish this milky juice in the greatest abundance, *ib.* Period of the first introduction of caoutchouc into Europe, 591. Statistics relative to the importation and consumption of caoutchouc or Indian rubber since its application to the waterproofing of garments, *ib.* Enumeration of some of the plans which are employed for procuring India-rubber, *ib.* Mode in which it is procured by the natives, *ib.* Obtained both from the Old and New World, *ib.* Numerous specimens furnished by the East Indies, *ib.* Great quantities imported into Europe from Mexico, from South America, and from Brazil, *ib.* That which comes in the shape of bottles generally preferred, *ib.* Mode in which the purification of the caoutchouc is accomplished, *ib.* Multiplicity of purposes to which caoutchouc has been applied within the last thirty years both for sanitary and industrial purposes, 592. Observations on the two most important purposes to which it has been applied, namely, the rendering of various tissues waterproof first discovered in England, and the art of drawing it out into fine threads for the manufacture of elastic tissues, discovered in France, 592. Remarks on the mode of vulcanizing India-rubber, as first discovered and applied to practical purposes in America by Mr. Charles Goodyear, 592, 593. Articles manufactured from caoutchouc exhibited; particular remarks thereon; Exhibitors and awards, 593-596.
- Cape, —, 425.
- CAPE OF GOOD HOPE.—Samples of galena, graphite, and iron ores from the Cape, 15. Samples of wheat, 52. Maize, 53. Flour, 54. Dried fruits, 56. Mustard seed, 62. Specimens of myrtle or berry wax, 82, 83. Lichen or orchilla weed, 90. Tanning bark, 92. Aloe fibre, 102. Specimens of timber and other woods, 140. List thereof, 141, 142. Samples of wool, 159. Specimens of oil obtained from sheep's tails, 163. Collection of buffalo and rhinoceros' horns, *ib.* Varieties of specimens of elephants' tusks, 164. Fine specimens of coral, *ib.* Specimens of guano, 166. Articles of furniture, 551. Peculiar kind of inlaid work in marble, 569. Cement mosaic, in imitation of wood and marble, 576. Specimen of yellow soap, 610. Collection of conserved fruits, 638, 642. Specimens of stuffed animals, 646.
- Cape of Good Hope Agricultural Society, 71.
- Cape of Good Hope Moravian Mission, 141.
- CAPE TENES MINES (Algeria).—Observations on the products thereof, 29.
- CAPE VERDE ISLANDS.—Rock orchilla from, worthy of favourable notice, 90.
- Capellemans, J. B., 536.
- Capello, B., 544.
- Capello, G., 550.
- CAPERS.—Samples of, from Portugal, 62.
- Caplin, L., 345, 346.
- Caplin, Mad., 346.
- Capellemans, Deby, and Co., 44.
- Capelletto, L. (Juror), xxvi.
- Capper and Waters, 469.
- Capronnier, J. B., 535.
- Carabé, Manuel, 87.
- Carabé's Wife, 88.
- Caradus, G., 103.
- CARBIDES.—See *Guns*, &c.
- CARBON, BISULPHURE OF.—Samples of, 46, 47.
- CARBON, SULPHURET OF.—Is one of the newest of chemical manufactures, 38. Its application in electro-plating, *ib.*
- CARBONATES.—See *Ammonia*, *Carbonate of Soda*, *Carbonate of White Lead*.
- CARBONATING OR AERATING MACHINES.—Specimens of, for making soda water, seltzer water, &c., 203.
- Card, W., 331.
- CARD CASES.—Elegant variety exhibited, 450.
- CARDOL.—An oily substance, how prepared, 46.
- CARDS (for Carding Machines).—Machines for making, 196, 199. Excellent samples of cards for cotton and wool, 199.
- CARDS (Paper).—Introduction of a superior description of blank visiting and message cards by Mr. Creswick, 447. Great encouragement given by printers, &c., to these cards, *ib.* Several important manufactories in existence, *ib.* Superiority of the English productions over those of other countries, *ib.* See also *Playing Cards*.
- Cardwell, C., 469.

 Caron, E., 16.  
 Caron, J. M., and Co., 507.  
 Carpenter, F. S., 465.  
 Carpenter and Tildesley, 503.  
 Carpenter and Westley, 274.  
 CARPETS.—General excellence of the specimens of carpeting contributed, 370, 373. The first specimens that claim attention are those from India, Persia, Turkey, and Tunis, 472. These carpets all made on the same principle, *ib.* Manufacture not carried on in any large establishments, but in pastoral districts, *ib.* Description of the loom employed in the manufacture, 472, 473. Silk carpet from Cashmere, sent by Gholab-Singh, 473. Carpets from Turkey, deserving of special notice, *ib.* Large and beautiful carpet from the Gobelins manufactory, *ib.* Seats of manufacture of the most magnificent and costly carpets in Europe, *ib.* Manufacture of Axminster carpets ceased to exist about 20 years ago, *ib.* Observations on the Aubusson tapestry and carpets, 473. Manufacture well represented in the Exhibition, *ib.* Progress made by France in the manufacture of velvet pile carpet, *ib.* Moquette or velvet pile and Brussels carpet are woven upon the same principle, *ib.* Introduction of the manufacture of Brussels carpet into Kidderminster about 90 years ago, *ib.* Steady progress and increase up to a recent period, *ib.* Introduction of Whytock's patent tapestry carpets, *ib.* Three new kinds of carpet have been invented and brought into extensive use within the last 20 years, *ib.* Great perfection to which Whytock's patent tapestry carpet has been brought, *ib.* Peculiarities of this manufacture, *ib.* Simplicity and ingeniousness of the process of manufacture, *ib.* Specimens exhibited showing the capabilities of the manufacture as regards design and colouring, *ib.* Excellence of the specimens of the patent Axminster carpets, *ib.* Object of this invention, *ib.* Remarks on the carpets woven plain by steam power and afterwards printed, *ib.* Large sale of this manufacture more especially for exportation, *ib.* Novelty of the carpets, rugs, &c., of patent wool mosaic, *ib.* Rapid extension of the carpet manufacture in Great Britain, 474. Patents recently taken for the application of steam power to carpet weaving, *ib.* Application of steam power has been successively accomplished, *ib.* Reduction of price likely to result therefrom, *ib.* Promising aspect of the carpet manufacture, *ib.* Estimated number of looms employed in Great Britain, *ib.* Average earnings of the operatives, *ib.* Estimated value of the manufactures, *ib.* Progress making in the carpet manufacture in Austria, Portugal, Sardinia, and Prussia, *ib.* Numerous exhibitors of Berlin work, *ib.* Beautiful specimens exhibited, *ib.* Highly creditable specimen of tapestry exhibited by Mrs. Alderson, *ib.* Contributions in embroidery extremely interesting, *ib.* Power-loom invented and patented by Mr. Bigelow of the United States for carpet weaving, *ib.* Excellence of the specimens of carpet woven by the loom, *ib.* Invention of the first loom for weaving Brussels carpets by steam power, by Mr. W. Wood, *ib.* This was patented in 1842, *ib.* Great economy of labour and other advantages resulting from the application of steam power to carpet weaving, *ib.* Mode of weaving invented by Mr. Fawcett, of Kidderminster, *ib.* Importance of its results, *ib.* Improvements made in carpet weaving by Messrs. Humphries and Son, of Kidderminster, *ib.* Originality and beauty of design of the different specimens exhibited for furniture by the Government manufactory of Gobelins and Beauvais tapestry, *ib.* Specimens exhibited, awards of Prize Medals and Honourable Mention for carpets, 474, 475.  
 Notice of designs for carpets, 683. General remarks on carpets and the principles to be observed in designs for their ornamentation, 737. False principles of design, &c., in the French carpets, *ib.* The works of the English designers in a more sober and just taste, 728. Criticism of certain of the examples, French and English, in the Exhibition, *ib.* Superiority of Turkish and Indian designs, 728, 729. Druggists and tiled goods used as carpets, 729. Floor-cloths, *ib.*  
 Carpi, Hughedi, 403.  
 Carquillat, —, 365.

 CARRIAGE BREAKS.—See *Railway Breaks*.  
 CARRIAGE CLOCKS.—See *Watches*.  
 CARRIAGES (Class VA.).—Tabular classification of objects in the Exhibition into which this class is divided, viii. List of Jurors and Associates appointed for this Class, xxvi. List of exhibitors in this class to whom Prize Medals have been awarded, lv, lvi.  
 Report on carriages generally, not including those connected with rail or tram roads, 192, 193. Table showing the apportionment among the various countries of the contributions in this department, 192. Want of variety in the kind of carriages, *ib.* Absence particularly of the higher class of equipages, *ib.* Absence of travelling carriages, properly so called, *ib.* Also absence of vehicles intended for the public service, *ib.* These deficiencies to be accounted for, in some measure, from the general introduction of railways, *ib.* Observation of the Jury, that although they recognise the use of superior woods, leather, and other materials, and excellent workmanship, they perceive many defects in style, and the display frequently of bad taste, *ib.* Great improvement, which has taken place with reference to "lightness," and a due regard to strength, *ib.* The many innovations and contrivances in springs, steps, &c. carriage, locking movements, &c., not always improvements, *ib.* Great deficiency of "elegance of design" in the exhibition of carriages, *ib.* How far attributable to the new demands of the age requiring vehicles to be constructed to convey the greatest number of persons, *ib.* No successful application of any new material, 193. The application of caoutchouc to the wheels of carriages to render them noiseless of very doubtful general utility, *ib.* General use of very superior patent and channelled leathers, *ib.* Carriages now beautifully appointed as regards the interior fittings at a comparatively moderate cost, arising from the perfection which textile manufactures have attained, *ib.* Great difficulty of determining the exact intrinsic value of an article like a carriage, *ib.* Unanimous opinion of the Jury that in this class there is no article possessing such pre-eminent and indisputable merit as to be entitled to the "Council Medal," *ib.* List of contributors to whom the "Prize Medal" has been awarded, and list of their exhibits, *ib.*  
 Carrier, Rouge, 507.  
 Carrière, Fa, 161.  
 Carrington, F. A., 208.

 Carter, Vavasseur, and Rix, 365.  
 Carthagens, Royal Arsenal, 372.  
 CARTRIDGE PAPER BOXES.—Only within the last few years that manufacturers have adopted this mode of packing their goods, 450. Large quantity of boxes manufactured in England, *ib.* Superiority of those made in France, *ib.* Large number of persons employed in the manufacture, *ib.* Trade divided into six branches, enumeration thereof, *ib.* Specimens exhibited, *ib.*  
 CARTHAGE, ORNAMENTS IN.—Recently manufactured in England, although employed for many years in France, 549. Importance of its introduction for architectural decoration, from its lightness and other advantages, *ib.* Mode of composition of the material, *ib.* Great extent and beauty of design of works executed, *ib.* Advantage of this material over plaster of Paris, *ib.* Objects exhibited, and awards to exhibitors, 549, 550.  
 CARTS.—Great advantage of the one-horse carts used by the Scotch and Northumbrian farmers over the three-horse waggons and three-horse dung carts of the south country farmers, 332. Improvement in one-horse carts

- by Mrs Busby, 232, 233. Approval of Crosskill's wheels, 233. Description of a cart made by Messrs. Gray and Co., of Uddingston, near Glasgow, *ib.* Prizes awarded, 242.
- Cartwright and Hiron, 520.
- Cartwright and Warner, 478.
- Carvalho, L. de, 163.
- CARVED FURNITURE.—See *Furniture*.
- Carver, T. and T. G., 197.
- CARVING BY MACHINERY.—Various specimens of carved work executed by machinery, 550, 551. Operation of the machine, 550. Great economy, *ib.* The work requires finishing by hand, *ib.*
- CARVINGS IN IVORY.—See *Ivory Carving*.
- CARVINGS IN WOOD.—See *Wood Carvings*.
- Casajo, J. R., 57.
- Casey and Phillips, 365.
- CASHMERE.—Specimens of, from various countries, exhibited, 356-358, 376.

- Causse, D. A., 438.
- Causse and Garion, 161, 367.
- Cavaillon, De, 45.
- Cavalli, Major, 224.
- Cavet, —, 340, 361.
- CAVIARE.—Sample of Russian caviare of the finest quality, 65.
- Cawood, J., 164.
- Caxton, W., his works as a printer referred to, 397, 400, 408.
- Cazal, —, 660.
- Cazalet, Rev. W. (Associate Juror), xxvii.
- Cazaux, —, 304, 305.
- CEILING DECORATIONS.—Specimens of, in various styles, 546. Awards to exhibitors, 551.
- CELLULAR SUBSTANCES.—Only three substances included under this head, 103. Cork, rice-paper, and German tinder, *ib.* Good samples of those articles exhibited; awards made, 103, 104.
- CEMENT, MANUFACTURES IN.—Number of exhibitors not large, nor the objects exhibited numerous, nor from many countries, 572. Countries from which contributions have been sent, *ib.*
- CEMENTS, ROMAN, PORTLAND, &c.—Common mortar and other simple lime cements, Parker's, Portland, Medina, and other hydraulic cements, various artificial stones (not terra cotta), and scagliola work included under this head, 573. Brief statement of the basis of the various cements above enumerated, and the chemical principles involved, 574, 575. Different exhibitors in these materials, specimens exhibited, remarks thereon, awards, &c., 575, *et seq.* Specimen of a kind of earthy fire-proof cement or paint from America, 587. Result of experiments by two exhibitors of Portland cement, Messrs. Robbins and Co. and Messrs. J. B. White and Co., showing its superiority over Roman cement, 587, 589.
- CEMENT (undescribed).—Specimen of, 48.
- Centro Chamber of Commerce, 99.
- CENTRE-PIECES, SILVER.—Description of a centre-piece in repoussé work, manufactured by Froment Maurice, of Paris, 514. Also description of a silver centre-piece for the table, exhibited by E. A. Wagner, of Berlin, *ib.* Large centre-piece, designed by Ignace Szilkoſ, of Moscow, displaying great talent, 515. Table centre-piece, representing a wild bear at bay, from Paris, 518.
- CENTRIFUGAL FORCE.—Machine to illustrate the effects of, 315. Principle of construction, *ib.*
- CENTRIFUGAL PUMPS.—Description generally of the nature, construction, and utility of the centrifugal pump, 179-181. Description of Appold's centrifugal pump; table showing the result of experiments on this pump, 181. Table of experiments on Gwynne's centrifugal pump, 182. Also on Bessemer's centrifugal pump, *ib.*
- CERAMIC MANUFACTURES (Class XXV.).—Tabular classification of objects in the Exhibition into which this class is divided, xxi. List of Jurors and Associates appointed for this Class, xxx. List of exhibitors in this Class to whom Council Medals have been awarded, cvi. The like of those to whom Prize Medals have been awarded, *ib.* And of those of whom Honourable Mention is made, cvi, cvii.
- View taken by the Jury of the duty assigned to them; particularly with reference to the award of the Council and Prize Medals, 538, 539. Importance to the ceramic art of the material termed Parian, Carrara, or statuary porcelain; is a modification of "biscuit," 538. Process of M. Baptesmes for the manufacture of buttons, by pressure applied to a dry body in a state of powder, 539. The series of articles exhibited gives a very adequate idea of the present condition of the ceramic art; countries contributing; the British side most largely represents the importance of the manufacture, *ib.* Messrs. Minton stand foremost for the number, variety, and beauty of their articles; remarks as to a dessert service and other articles, 539, 540. Observations as to the collection exhibited by Mr. W. T. Copeland, 540. The like as to Messrs. T. Wedgwood and Sons, *ib.* As to Messrs. J. Rose and Co., *ib.* Also other English exhibitors to whom Prize Medals are awarded, 540, 541. Criticism to which some of the articles are open, 540.
- Remarks on the articles contained in the French Department of this Class, 542. Special reference made to the products of the Sevres Manufactory, *ib.* The like as to M. M. Jouhameaud and Dubois, *ib.* As to Le Baron A. Du Tremblay; particulars as to his process called "email ombreant," *ib.* Similar mention of the articles exhibited by J. M. Gillé, and also by others to whom Prize Medals are awarded, *ib.* Names of exhibitors of whom Honourable Mention is made, 542, 543.
- Other exhibitors in this class to whom Prize Medals are awarded, 542. Observations in regard to the articles in the Austrian Department, *ib.* And in the department of the Zollverein, 542, 543.
- Critical and general remarks on the examples of porcelain and pottery ware contained in the Exhibition, 731, *et seq.* Antiquity of pottery among all nations; fictile fabrics alone often mark the progress of a people, 731. Hopeful position of the ceramic arts in the present day, *ib.* The works exhibited divided into two classes, ornaments and works of utility, 732. The danger of producing mere ornaments illustrated in regard to the works of the Royal Dresden Manufactory; deficiencies of Dresden porcelain, *ib.* Various examples in the Sevres Court criticised, *ib.* Deficiencies of English artists; the statuettes of parian by Copeland and Minton an evidence of a desire for improvement, *ib.* Works of the Royal Manufactories of Berlin and Bavaria; many of the errors prevalent in the china-ware of Dresden avoided, 733. Constructive form should have the first attention in works of utility, *ib.* Relief, when used, should be low, *ib.* The application of handles an important point connected with constructive design, *ib.* Principles to be observed in the application of colour, 734.—See also *Earthenware*, *Porcelain*.
- Cercoeil, L. F., 44.
- CEREALS.—Very few samples in the Exhibition of oats, rye, and barley; the staple crops of northern and mountainous Europe and Asia, 51. Wheat is very insufficiently represented from the United States—better from our cold and temperate colonies; indifferently from England, Scotland, and Ireland; and hardly at all from Northern India, &c. Three collections of cereals pro-

# INDEX.

- minently interesting, viz., types of Messrs. Lawson, Mr. Maund, and Mr. H. Raynbird, 51. Samples exhibited in these collections, 51 *et seq.* No wheats exhibited superior to the South Australian, 51. No bulk of corn exhibited by France, 52. Those exhibited chiefly intended as illustrations of manufacturing processes, *ib.*
- OBSERVATIONS ON THE CEREALES**, rarely cultivated in Europe, such as rice, maize, and the *Cotis lachryma* (Job's tears), 53. Remarks on millet and other small grains used as food, 53, 54. See also *Barley. Beans. Maize. Mall. Oats. Rice. Rye. Wheat.*
- CEYLON**.—Minerals and ores obtained from the crystalline rocks of Ceylon, 15. Samples of millet of fair quality, 54. *Tamarinds*, 56. Cocoa-nuts and betel nuts, 57. Great extent and importance of the cultivation of coffee in this island, 59. Samples thereof, *ib.* Arrow-root, 62. Samples of eighteen descriptions of oil, 82. Various dye-stuffs, 90. Specimens of native Bourbon, and Sea Island cotton, grown in Ceylon, 95. Specimens of woods, 133, 140. Fine tusks of the Ceylon variety of elephant, 164. Specimens of tortoiseshell, *ib.* Collection of pearls, *ib.* Ornamental cocoa-nut oil-soap from Kandy, 610. Cocoa-nut, stearin, and olein, 623. Desk of porcupine quills, 653. Collection of fans and ivory fan-handles, 669.
- Chabot, —, 88.
- Chadbourne, Dr. T. (Juror), xxviii.
- Chadburn Brothers, 273.
- CHAFF-CUTTING MACHINES**.—Improvements which have been made in these machines, 233. Great advantage and economy resulting from the use of them, *ib.* Result of a trial of three of these machines, showing a great difference as to the labour required by them for preparing a given amount of chaff, *ib.* Superiority of Cornes' chaff cutter, *ib.* Approval also of Garrett and Son's and Smith and Co.'s chaff-cutting machines, *ib.* Prizes awarded, 233, 242.
- Chagot, A., sen., 644.
- Chailoux, Lepage, and Pochon, 66.
- CHAINS AND CHAIN CABLES**.—Introduction of chain cables into the navy, 210. Improved capstan for ships of war, adapted to the use of, 210, 217. Specimens of various descriptions of chains and chain cables, 504, 505, 507.
- Chairmen of Juries**.—See *Council of Chairmen of Juries.*
- CHAIRS**.—Various descriptions exhibited, 550, 552.
- Challinor, E., 541.
- Challis, Professor, 312.
- Challoner, Col. B. (Juror), xxvii, 226.
- Chalmers, D., 197.
- Chalmers, J., 839.
- "CHAMBRAY" FABRICS**.—Specimens of these fabrics from France, 336.
- Chambellan, G., and Co., 390.
- Chamberlain, —, 315.
- Chamberlain and Co., 541.
- Chamberlain, T., 632.
- Chambon, C., 161, 364.
- CHAMOIS LEATHER**.—See *Leather.*
- CHAMPAGNE BOTTLES**.—Care required in the manufacture thereof, loss per cent. by bursting, 523.
- Champagne and Rougier, 365.
- Champagnet-Sargass, J., 367.
- Champagnowne, H., 563.
- CHAMFLEVE ENAMELLING**.—Specimens of, 738.
- Champoyeau, N., 161.
- Chance, Brothers and Co., Messrs.—Manufacture of sheet-glass commenced by Messrs. Chance and Hartley in 1832; co-operation of M. Bontemps, 526. Partnership dissolved in 1836, *ib.* Manufacture for crown-glass established by Mr. Hartley at Sunderland, 526. Improvements introduced by Messrs. Chance, Brothers, and Co., *ib.* Success of the Messrs. Chance in producing large discs of flint and crown glass, 529. Other notices relating to this firm, 269, 270, 271, 375, 530, 533, 536, 686, 695, 715.
- Chance, J., 526.
- Chance, R. L. (Juror), xxx, xxxii, 533.
- CHANDLERS**.—Specimens of, in bronze, &c., 502, 506.
- Chandelon, Professor J. (Juror), xxx.
- Chandler, Mr., 230.
- Chapel, M., 63, 79.
- Chapin, W., 417.
- Chapman, —, 345.
- Chapman, J. E., 122, 132.
- Chapon, Med., 642.
- Chapot and Selon, 23.
- Charagat, E., 661.
- CHARCOAL**.—See *Raw Produce.*
- CHARCOAL, ANIMAL**.—Specimens of animal charcoal, bone black, and ivory black, exhibited by different nations, names of exhibitors and awards, 166.
- Charles and Co., 507.
- Chassagne, Mariette de, 702.
- Chatelain and Coron, 358.
- CHATELAINES**.—Beautiful specimens of, entirely of wrought steel, 516. Other specimens thereof, *ib.* Chatelaine in gold and turquoise-blue enamel, 520.
- Chater, J. (Associate Juror), xxx.
- Chatwin, J., and Sons, 600.
- Chaudiere Mining Company (Canada), 16.—See also *Gold.*
- Chaudoir, C. and H., 23.—See also *Boiler Tubes of Loco motives.*
- Chauvin, G., 507.
- Chavin, —, 339, 342.
- CHAY ROOT** (a dye).—Deserves a better reputation than it at present possesses, 89. Attention drawn to this dye in 1798 by a special minute of the Board of Trade recommending its impostation, *ib.* Specimen contributed, *ib.*
- Cheavin, S., 173.
- Chebeaux, J., 689, 702.
- Cheesborough, W., 159.
- Chesewring Granite Company, 556.
- Chegaray, A., 413.
- CHEMICAL APPARATUS AND UTENSILS**.—Specimens of chemical glass apparatus, 43. Observations on apparatus for manufacturing chemistry, 202. Small number of manufacturers who have contributed, 205. With the exception of Quennessen, France, and Staffell, Russia, no great preference can be given to one or other of the principal exhibitors, *ib.* Glass and china apparatus from Germany, adapted to practical use, *ib.* No new invention, except M. Staffell's, *ib.* Chemical cabinet combining usefulness with economy, *ib.* Chemical furnace on the same principle as that of Dr. Black, *ib.* Various galvanic batteries, *ib.* Graduated glass instruments, *ib.* Purposes for which adapted, *ib.* Retorts, phials, and capsules, covered with an electrolytized precipitate of copper, *ib.* Covering of glass vessels with copper, although not new, its use very little known in England, *ib.* Blowing apparatus, for the purpose of a continuous blast, *ib.* Boxes filled with chemical tests, 296. Saccharometer and lactometer, *ib.* Optical analysis of sugar surpasses all other modes, *ib.* Palladium crucibles and capsules, *ib.* Advantages of palladium for this purpose, *ib.* Practicability of coating the interior of clay or plumbago crucibles with films of plating, &c., *ib.* Galvanic machines of novel construction, *ib.* Pneumatic battery for igniting gunpowder in blasting operations, *ib.* Hydrometer capable of ascertaining the specific gravities of all fluids, *ib.* Accuracy and efficiency obtained by this instrument, *ib.* Apparatus from France; platina alembic for sulphuric acid, *ib.* Gazoscope, principle of construction, *ib.* Experiments made in the coal mines of St. Etienne, efficiently thereof, *ib.* Safety-lamp for chemical purposes, *ib.* Assay furnaces, *ib.* Collection of chemical utensils, 297. Galvanic battery, *ib.* Black-lead crucibles, *ib.* Steam apparatus for chemical and pharmaceutical purposes, *ib.* Assortment of chemical apparatus, *ib.* Carbon battery, *ib.* Galvanic battery from Bavaria, *ib.* Silver hydrometer, *ib.* Apparatus from Prussia, *ib.* Graduated vessels for measuring fluids, *ib.* Apparatus for analysis of beer, *ib.* Apparatus for assaying precious metals from Russia, *ib.* Remarks on the various chemical utensils in refractory clay exhibited, 585, 586. Specimens of chemical apparatus from Prussia and from Belgium, 585, 586. See also *Parcelain for Chemical Purposes.*
- CHEMICAL BALANCES**.—Simple instrument, sensible to the 100th of a grain, 258. Good example of a make-shift for a balance, *ib.* Chemical balances from France, 259. From Prussia, *ib.* From Sweden and Norway, 260.
- CHEMICAL MATCHES**.—The manufacturers of chemical matches placed in an anomalous position with regard to the other contributors in the Great Exhibition, from their not being permitted to send their actual produce, 339. This precaution deemed advisable as a security against fire, *ib.* Impossibility, in consequence, of the

- Jury making any equitable awards in this branch of industry, 632. Opinion that this result is much to be regretted, *ib.* Remarks on various ancient analogous inventions; production of fire by the friction of wood, 632, 633. Apparatus of the middle ages for procuring light, 632. Perfection of modern chemical matches; accomplished chiefly within the last 30 years, 633. Remarks on Doebereiner's hydrogen lamp, which has contributed indirectly to their improvement, *ib.* Introduction of what was called the "phosphorous match," *ib.* Covering the sulphurized end of a match with a mixture of sugar and chloride of potash, and immersing it in concentrated sulphuric acid, the first important and permanent improvement in the means of obtaining light, *ib.* Observations on the introduction of Jones's "Prometheans," and also on the introduction of lucifers and coagres, *ib.* Various chemical match manufactories established in Germany, *ib.*—Statistics, and other information respecting the progress of the art in Germany, 633, 634. Large production of chemical matches in Austria; number of exhibitors, 634. Number of exhibitors from other parts of Germany, *ib.* Statistics relative to the manufacture of lucifer matches in France: unrepresented in the Exhibition, *ib.* Reporters unable to obtain information respecting the extent of this manufacture in the United Kingdom, *ib.* No exhibitor of lucifer matches in the American section, although made to some extent in the United States, *ib.* Low price at which these articles are now produced, *ib.* Point of perfection which the match has at present reached, 635. Recipe of Dr. R. Boettger's composition for match tips, *ib.* Reference to Mr. R. Partridge's patent for forming wooden splints, *ib.* Remarks, in detail, on the disease attending phosphorus match-tippers, *ib.* Number of exhibitors of imitation matches, and other means of obtaining light, classified according to the several countries from which they have been sent, *ib.* List of exhibitors; objects exhibited, *ib.*
- CHEMICAL AND PHARMACEUTICAL PROCESSES AND PRODUCTS (Class II).—**Tabular classification of objects in the Exhibition into which this class is divided, vi. List of Jurors and Associates appointed for this Class, xvi. List of exhibitors in this Class to whom Council Medals have been awarded, xxxix. The like of those to whom Prize Medals have been awarded, xxxix, xl. And of those of whom Honourable Mention is made, xi, xli.
- Total number of exhibitors, English and foreign, in this Class, 37. General outline of the contributions, *ib.* Details respecting the principal novelties, viz., red, or allotropic phosphorus, 38. Iodine, *ib.* Sulphuret of carbon, *ib.* Boracic acid, *ib.* Sulphuric acid, 39, 39. Salts of sea water, 39. Bichromate of potash, *ib.* Prussiates of potash, 39–41. Carbonate of soda, 41. Stannate of soda, *ib.* Artificial ultramarine, 41, 42. Alum and coppers, 42. White lead, *ib.* Zinc white, *ib.* Garancine, *ib.*—Liquid products from the distillation of coal and peat, &c., 42, 43. Enumeration of the principal Exhibitors in this Class, with a notice of their contributions; statement of the awards of the Prize Medal, and of the distinction of the Honourable Mention made by the Jury, 43, 50. See also the various articles referable to this heading.
- CHEMICAL AND PHARMACEUTICAL PRODUCTS (undescribed).—**Specimens thereof referred to, 43–50.
- CHEMISTRY.—**Obtaining casts in relief from an engraving, 407. c Description of this ingenious process, *ib.*
- Chenard Brothers, 481.
- Chenavard and Clerget, 405.
- Cheney, G. H., 507.
- Chennviere, T., 352.
- Chesio, A., 28, 377.
- CHERRY-RAILWAY BRIDGE (Model).—**Referred to, 208.
- Cherdon and Sons, 403.
- Cheriel, G., and Sons, 565.
- CHESHIRE.—**Products from the salt mines of, 13. Annual yield of the salt mines and springs of Cheshire, 44.
- Cheshire, J., junr, 44.
- CHESSMAN, &c.—**Notice of a set of chessmen and chess-board, in gold and silver, and enamelled, by C. M. Weisaupt, 512, 684, 709. Mosaic chess-table, manufactured in the Isle of Man of Manx materials, 689.
- Chetani, S., 687, 694.
- Chevalier, C., 267, 379.
- Cheverton, B.—Machine invented by, for reproducing works of sculpture, 685, 691, 694.
- Chevet, —, 34, 68, 69.
- Chevreul, E. E. (Juror), xlix, 403.
- Chichizola, J. and Co., 365.
- Chickering, J., 333.
- CHICOORY.—**Report of the Jury on the samples of chicory and other substitutes for coffee, 59. The cultivation not extensive or remunerative, *ib.* Sample of chicory from Great Britain, *ib.* From France, *ib.* From Russia, *ib.*
- Childs, C., 193.
- Childs, J., 503.
- CHILL.—**Great development of the mines of copper in Chili within the last few years; large supply to Europe from this Republic, 24. Nature of the ores of this metal worked in Chili, *ib.* Purity of the ore, *ib.* Remarkable specimen of copper pyrites, stated to contain 12 ounces of gold and 240 of silver, *ib.* Specimen of native silver, weighing 154 lbs., *ib.*
- Chilson, Richardson, and Co., 503.
- CHIMNEY-PIECES (STONE, METAL, &c.).—**Carved oak, remarks on a chimney-piece of, 552. Rich chimney-piece in the Louis XIV. style, in gilt bronze, from France, 519. Chimney-piece in Caen stone, showing much skill, 557. Chimney-piece constructed of polyphant freestone, obtained from Cornwall, *ib.* Qualities which the Jury have taken into consideration in making their award, with respect to marble chimney-pieces, 562. Objects exhibited; remarks thereon, awards, &c., 562, 563. Particular reference to the chimney-pieces of statuary marble of Carrara, exhibited by G. Bottinelli, of Milan, 562. Chimney-piece from Belgium, constructed of beautiful Carrara marble; the architectural design of considerable merit, and the details admirably executed, *ib.* Specimens of chimney-pieces from France, *ib.* The English chimney-pieces not remarkable either for design or execution, *ib.* Veined Carrara marble chimney-piece by Messrs. Porzelt and Co., of Cologne, Prussia, 563. Specimens of porcelain chimney-pieces exhibited in the British Department, and from France, 567.
- CHINA.—**China, though richly represented in the Crystal Palace by its silk stuffs and porcelain, has obtained only a solitary Honourable Mention for its mineral productions, 23. Collection of materials employed in porcelain manufactured from China, *ib.* Shipments of Prussian-blue formerly made to China for colouring green teas, 39. Specimens of vegetable wax, 83. Colouring matters or dyeing stuffs, 90. Specimens of cleaned and uncleaned cottons from Shanghai, 95. Samples of rice-paper, 104. Collection of the woods of China, 151, 152.
- Samples of raw silk, 163. General remarks on the exhibition of manufactured silks from this country, 362. China is one of the earliest known silk manufacturing nations of the world, 458. Complete assortment of dyed silks used in her manufactures exhibited, *ib.* Magnificent dresses for the higher classes of Chinese in silk and richly embroidered, 484.
- Observations on the specimens of general hardware manufactures from China, 497. Paper-hangings supposed to have been first made in China, 546. Extensive manufacture of japan ware in this country, 548. Method of applying the lacquer, *ib.* Numerous and interesting specimens of ware, particularly elaborate folding screens, 548, 549, 550. Collection of Chinese furniture, 550, 551. Small series of manufactured jades, 562. Objects carved in jade and quartz rock, 566. Collection of carvings in various kinds of hard coal and in pearl, 602.
- Employment of bees-wax in China for the purpose of candle-making, 626. Description of confectionary from China, and remarks on sugar-conserve, &c., 638. Specimens of writing-desks and work-boxes, 653. Remarks upon the use of umbrellas in China; specimens exhibited, 657. Specimens of two carved bamboo walking-sticks, and of two Chinese sceptres; trade of Canton in canes and bamboos, 665. Remarks on fan-making in China, with specimens exhibited, 667. Remarks on the habit of smoking, and the use of pipes in China, with specimen of an opium pipe, 671. Contribution of a snuff-box, with Chinese carving, 675.
- CHINA AND ANTI-ARTHENWARE.—**See *Ceramic Manufactures*.
- CHINA-GRASS.—**One of the most interesting amongst fibrous materials, 100. Numerous specimens exhibited in various departments of the Exhibition, *ib.* Detail of the process of Messrs. L. W. Wright and Co., for the preparation of China-grass, &c., 100, 101. Specimens showing the different stages of preparation, dressing, and manufacture, 370, 371, 372, 373.—See also *Flax and Hemp*.

- CHINA TEA.—See *Tea*.  
 Chinard, C., 380.  
 CHINE RIBBONS.—See *Ribbons*.  
 CHINE SILKS.—See *Silks, Manufactured*.  
 CHINTZES.—Samples of English and French furniture prints, 457, 458, 459. Remarks on the extravagant decoration of chintzes at the present day; principles by which such decoration should be regulated, 730.—See also *Woven, Spun, &c., Fabrics (Printing or Dyeing)*.  
 Chloza, C. L. and Son, 613.  
 Chirjo and Minn, 400, 451.  
 Chisholme, E., 644.  
 CHITTAGOON.—Collection of woods from, contributed by the Indian Government, 187.  
 Chitty, E., 54.  
 CHLORIDES.—See *Barium, Chloride of. Copper Ore. Iodine. Potassium, Chloride of. Sodium, Chloride of. Zinc, Chloride of*.  
 CHLOROPHORM.—Specimens of, 45, 47. Price thereof in Germany, 49.  
 CHOCOLATE.—Machinery for making, 203.—See also *Cocoa and Chocolate*.  
 CHOCOLATE CONFECTIONARY.—See *Confectionary*.  
 Chocquel, F., 380, 745.  
 Chocquel, L., 380; 459.  
 Chopin, F., 503.  
 Chopping and Maund, 507.  
 Choquat, C., 59.  
 Chosson and Co., 481.  
 Christiani, C. H., 60.  
 Christie, D., 52.  
 Christ J., 479.  
 Christoffe, C. and Co., 518.  
 Christy and Co., 481. See also *Hats*.  
 Christy and Sons, 348.  
 Christy, T. (Juror), xxix, xxxii.  
 CHROMATES.—See *Lead, Chromate of. Zinc, Yellow Chromate of*.  
 CHROME.—Specimens of chrome iron, raw, and purified by stamping and washing, from Norway, 35.  
 CHROME ALUM, CRYSTALS OF, 44.  
 CHROMIC ACID.—Use thereof, in bleaching palm oil, &c., 33. Samples of the acid, 46.  
 CYROMIUM, GREEN OXIDE OF, 45.  
 CHROMIUM, OXIDE OF, 44.  
 CHROMO-LITHOGRAPHY.—Notice of specimens of, including tinted lithography, 688.  
 CHROMO-TYPOGRAPHY.—Awards made for, 688. See also *Printing in Colours*.  
 CHROMOTYPE.—See *Printing in Colours*.  
 CHRONOLOGIUM.—Description of this instrument, exhibited in the Austrian Department, 307.  
 CHRONOMETERS.—Marine chronometers the most important of all machines for measuring time, 336. Invariable rate of going of the utmost consequence, *ib.* No Council Medal awarded from the great number exhibited, *ib.* Principles of construction have been settled for some years without any material alteration, the results of the trials at the Royal Observatory, the only satisfactory plan of testing, *ib.* have not exhibited, *ib.* English makers to whom Prize Medals have been awarded, *ib.* Prize Medals awarded to foreign exhibitors, *ib.* Single point in which any material difference in construction has been made, *ib.* Earliest inventions for this purpose, and the discovery made by Mr. Elffe and Mr. Dent, *ib.* Mr. Loseby's the most ingenious contrivance, *ib.* Method of compensation adopted by Mr. Dent, *ib.* Observations on the chronometer with a glass balance and balance-spring exhibited by Mr. Dent, 336, 337. Difficulties in making these glass springs, 337. Great advantages would result from these difficulties being overcome, *ib.* See also *Watches*.  
 Chuard, —, 296.  
 Chubb and Son, 500, 503.  
 Chuffart, —, 95.  
 Church and Chittenden, 596.  
 Church and Goddard, 198, 204.  
 CHURCH PLATE.—Description of a monstience exhibited by F. Moratilla of Madrid, a choice specimen of the silversmith's art, 515. Rich collection of articles for church use in silver, and silver gilt and enamelled, 518. Beautiful collection of church plate from France, 519.  
 CHURNS.—The speed of the churn first accelerated by the Americans, 239. Doubt as to whether too great speed is compatible with the finest quality, *ib.* Tabular form giving the results of a trial of thirteen different churns, *ib.* Prizes awarded, 239, 242.  
 Chwalla, A., 367.  
 Claudio, J., 551, 666.  
 CIGAR CASES.—Variety of specimens of, 676.  
 CIGAR HOLDERS.—See *Amber. Meerschaum and Meerschaum Pipes*.  
 CIGARETTE MACHINE.—Description of a machine for making cigarettes, 198.  
 CIGARS.—Samples of different varieties and qualities of cigars and cheroots exhibited in the British Department, 60. Samples of cigars from the British Colonies, 61. From Holland, *ib.* From the Grand Duchy of Hesse, *ib.* From Prussia, *ib.* From Germany, *ib.* From Spain, *ib.* From Portugal, *ib.* From Algiers, *ib.* From Russia, *ib.* From the United States, *ib.*  
 CINCHONA BARKS.—Specimens of, 46.  
 CINCHONINE.—Sample of, 47.  
 CINNAMON.—Specimens of, 45, 47.  
 CINNAMON.—The product of cinnamon, cassia, &c., at present confined to the Continent and Archipelago of India, 62. Various samples exhibited; none equal to those from Ceylon, *ib.*  
 CIRBY (France).—Glass-works at, 527.  
 CITRIC ACID.—Samples of, 45, 46, 48.  
 CIVIL ENGINEERING, ARCHITECTURAL AND BUILDING CONTRIVANCES (Class VII).—Tabular classification of objects in the Exhibition into which this Class is divided, viii, ix. List of Jurors appointed for this Class, xxvii. List of exhibitors to whom Council Medals have been awarded, lviii. The like of those to whom Prize Medals have been awarded, *ib.* Add of those of whom Honourable Mention is made, *ib.* Objects comprised in this Class not numerous, and generally speaking not important, 206. Circumstances which have tended to limit the extent and importance of the contributions to this Class, *ib.* Comparatively light labours of the Jury in consequence, *ib.* Opinion that their labours might have been somewhat devoid of interest, but for the circumstance of the Exhibition Building itself, and the Model Lodging Houses erected near it having been brought under their consideration, *ib.* Eulogium passed on the Great Building in which the Exhibition is placed, 206, 207. Commendation of the Model Lodging-houses erected under the auspices of H. R. H. Prince Albert, 207. Observations of the various architectural models and designs exhibited, 207, 208.  
 Clabburn and Son, 379.  
 Clabburn, W. (Juror), xxviii, xxxii.  
 Claes, P., 227, 229, 242.  
 Clair, P., 191, 304.  
 Claraz, A., 483, 602.  
 Clare, G., 239.  
 Clarenbach and Son, 360.  
 Clarenc, R., 58, 163.  
 Clark, —, 273, 425.  
 Clark, B., 480.  
 Clark and Donaldson, 425.  
 Clark, G., 620.  
 Clark, J. and T., 352.  
 Clarke, —, 610.  
 Clarke and Davidson, 676.  
 Clarke, E., 208.  
 Clarke, C. and J., 393, 479.  
 Clarke, Esther, 468.  
 Clarke, J., 426, 451.  
 Clarke, Jang, 463.  
 Clarke, S. P., 343.  
 Clarke, Morgan, and Co., 99.  
 Clarke, R., and Co., 386.  
 Clarke and Restell, 503.  
 Clarke, T. and C. and Co., 563.  
 CLASSIFICATION OF SUBJECTS.—Tabular classification of subjects in the thirty classes into which the Exhibition is divided, v—xxii.  
 Classon, J., 121.  
 Claude, —, 53.  
 Claudet, A. F., 244, 274, 276.  
 Claudet and Houghton, 201, 536.  
 Claudin, F., 221.  
 Claus and Carron, 63.  
 Claussen, P., 97, 197, 204, 370.  
 Clay and Co., 549, 551.  
 CLAY, MANUFACTURES IN.—Number of objects belonging to this class considerable and of great importance; nature of the various exhibits and countries from which sent, 575. Division of this group into various classes; 1st, Bricks and tiles: general remarks thereon; objects

- exhibited; particular remarks, names of exhibitors; awards, &c., 578-582. 2nd. Terra cottas: general remarks; particular remarks on the specimens exhibited; names of exhibitors; awards, &c., 582, 583. 3rd. Gas retorts, fire-bricks, &c., and chemical utensils; remarks thereon; objects exhibited, and awards, 584, 585. 4th. Glazed fire-clay goods, 586.
- CLAY PIPES.**—See *Pipes, Smoking*.
- CLAY AND PLASTER, &c., WORKS OF ART IN.**—Notices of the principal, 685, 686.
- Claye, J., 400, 451.
- CLAY, POTTERY, PORCELAIN, &c.**—Porcelain and pottery clays obtained from a deposit near Plympton and in the southern extremity of Dartmoor, 11, 12. Good quality of the clays, 12. High celebrity enjoyed by the English manufactures in earthenware, 13. Plastic clay used in the manufacture obtained in the Isle of Purbeck, *ib.* Samples of pottery clays, *ib.* Objects to which adapted, *ib.* Collection of clays from the Rostellan pits, by J. Deering, 14. Employment thereof in the manufacture of porcelain, fine pottery, and terra cotta, *ib.* Specimens of porcelain and other clays of different qualities from Belgium, 23. Clays exhibited by the Egyptian Government, 24. Specimens of pottery clays from St. Omer, 29.
- CLAY, REFRACTORY (FIRE CLAY).**—Refractory nature of the Stourbridge clay, 11. Purposes for which used, *ib.* Beds in contact with coal generally yield refractory clays, *ib.* Facility with which this clay is worked, *ib.* Samples of fire clay from Belgium, 23. Quartzose conglomerate with a silicious cement, yielding material absolutely refractory, *ib.* Use of the material, *ib.* Objects exhibited, *ib.* Refractory clay, refractory bricks for lining the interior of blast-furnaces from Siegburg, 32. Chemical analysis of the Stourbridge clay of fire clay; purposes to which adapted: various objects made thereof exhibited, &c., 584, 586.
- CLAY-WORKING MACHINES.**—Number of brick and tile machines in the Exhibition, 202. — See also *Tile Machines*.
- Clayton, G., 490.
- Clayton, H., 239, 242.
- Clayton, Mr., 202.
- Clayton, Shuttlesworth, and Co., 172; 234, 237, 242.
- Cleaver, F. S., 613.
- Cleburne, R., 610.
- Clemens, J., 56.
- Clement XIV., Pope, 339.
- Clercq, N. le, 165.
- Clerget, C. E., 639, 703, 727.
- Clesinger, J., 685, 701.
- Clibborn, Hill, and Co., 371.
- CLICHES.**—Collection of, for lithography, from Niederbronn, 28.
- Clifford, G., 44.
- Clinch, J., 374.
- CLOCKMETER.**—Patent, for showing the inclination and trim of ships, 217.
- Clinton, J., 332.
- Cloze, C., 55.
- places whose longitudes are known, *ib.* Intended to be of more general use than those ordinarily constructed, *ib.* Astronomical clocks sometimes called regulators, 337. Little that requires special notice, *ib.* Several of the usual construction, both English and foreign, *ib.* They may now be had of all good clockmakers, *ib.* Reason why, so few Medals awarded, *ib.* Several with new escapements, *ib.* Chiefly on the remontoire principle, *ib.* Advantage of Mr. Gowland's escapement, *ib.* Captain Kater's escapement too complicated for use, *ib.* Pendulum clock, for a regulator, from Switzerland, *ib.* Escapement patented by C. Macdowall, *ib.* Description, *ib.* Extraordinary cheapness thereof, *ib.*
- CLOCKS, TIMEPIECES, &c.**—Large number of ornamental clocks for domestic use exhibited, 339. Many such clocks of various shapes in the English department as well as the foreign, *ib.* Most of them sufficiently good for their purpose, *ib.* Impossibility of distinguishing any of the English ones as manifesting such superiority over the rest as to justify the Jury in awarding them Medals, *ib.* Handsome collection from France, 339, 340. Nearly all escapements in ornamental clocks, invented by M. Berollet, *ib.* Cheap house-clocks from America, *ib.* Small weights or moving force which the American clocks require, 340. Various forms of striking and chiming clocks and alarums, *ib.* Also tell-tale or watchmen's clocks, *ib.* Perpetual almanac clocks, *ib.* Ingenious contrivances displayed for effecting their different objects, *ib.* Gilt, porcelain, and enamel clocks from France, 519. See also *Clocks, Astronomical, Turret Clocks, Watches*.
- CLOD-CRUSHERS.**—Crosskill's clod-crusher, well known as one of the most popular of our new inventions; its principal use, 257, 251. Description of Mr. Gibson's clod-crusher, *ib.* Prizes awarded, 242.
- CLOTH.**—See *Woolen Cloth*.
- CLOTHING.**—See *Wearing Apparel*.
- Clough, R., 358.
- CLOVER-SEEDS.**—Specimens of, in the British Department, 51. Samples of clover-seeds from Canada, *ib.* From Egypt, *ib.* From the United States, *ib.*
- Clowes and Sons, 400, 404.
- CLUTCHES.**—Friction-clutch, for throwing out of gear a single pair of stones in a flour-mill, without stopping the mill, 173. Screw friction-clutch, commended as a good invention, 175.
- Clymer and Dixon, 198.
- COAL.**—Thickness of the coal beds of South Staffordshire and Dudley, 7. Preparation of a column representing a complete section of this coal, by Messrs. Bagnall and Jesson, *ib.* Importance of this specimen as an object of instruction and information, *ib.* Varieties of coal from the Abercarn and Gwythion Collieries (Wales), 9. Documents on the geology of the coal districts of Northumberland and Durham, 10. Block of coal from the Coed Talon Mines, near Mold, in Flintshire (North Wales), 11. Block extracted from the Stavely Works near Chesterfield (Derbyshire), *ib.* Block from the Brymbo Mines, near Wrexham (North Wales), *ib.* Section of thick coal from the Barnsley Mines (Yorkshire), *ib.* Sections of the Scotch coal fields, exhibited by Mr. D. Landale, 13. Basis on which these sections were constructed, *ib.* Number of seams contained in these coal-fields, *ib.* Specimens of coal from Mirzapoor, in the province of Benares, 14. Details of the carboniferous basin of the valley of Damoodah (East Indies), *ib.* Important influence on the industrial progress of India which this deposit is likely to have, *ib.* Coals sent from Labuan, on the north-western side of the island of Borneo, 15. Quality and nature of the coal found in Van Diemen's Land by the Douglas River Coal Company, *ib.* Specimens of coal from the Waitato Mines, New Zealand, *ib.* Large blocks of coal from Nova Scotia possessing all the characteristics of bituminous coal, 16, 17. General remarks on the working of coal in France, 24. Coal and Coke from mines near Ruhrort, on the Ruhr, 32. Coal and coke of great purity, from the mine of St. Victoire-Mathias, Müllheim on the Ruhr, *ib.* Numerous specimens of coal from Turkey, of good quality, leading to the supposition that Turkey possesses, at a short distance from the capital, a considerable coal-field which may become an important source of wealth, 36. Machines, with revolving cutter wheels, intended for cutting coal, 201. See also *Lignite, Minerals*.
- COAL DISTILLATION.**—Liquid products therefrom; their value, 42, 43.
- COAL OF GAS.**—Oils and other products obtained from, 43, 44, 45.
- COAL MINE MACHINERY.**—Apparatus for the extraction of coal, and ascent and descent of mines, 26. Description of apparatus, *ib.* Advantages thereof, *ib.*
- COAL MINE MODEL.**—Model of a coal mine worked by the Hetton Company at Newcastle, 12. Accuracy of the model in all its details, *ib.*
- COAL WASHING APPARATUS.**—System of washing coal introduced into France, 4. Description of purifying apparatus of M. Berard, 4, 5, 26. Superior quality of coke manufactured from coals thus purified, 4. Trifling cost of washing by this system, 5. Specimens exhibited, *ib.* Adoption of the system by mining companies in France, *ib.* Erection of an apparatus at Newcastle, *ib.*
- Coalbrook-dale Company, 175, 498, 499, 500, 502, 685, 706, 707.
- Coates, E. J., 587.
- Coath, T. (Associate Juror), xxviii.
- Coathupe, and Co., 536.
- COATS.**—See *Wearing Apparel*.
- Coats, Mr., 201.
- COBALT.**—Specimens of, from Siegen, 81. Perfect method

- adopted by Mr. Graff in working it, 31. Specimens of the richest and purest ores of Scandinavia furnished by the Tunaberg Cobalt Works, 35. Preparations of cobalt, 45. See also *Nickel*.
- Cobb, T., 198.
- Cobbold, E., 44.
- COBURN CLORUS.—Specimens of, 357, 358. Specimens of dyeing Coburg cloth, 459.
- COCHINEAL.—Nature of this dye explained; samples of the insect and of the colouring matter shown, 88, 166.
- Cochius, E. E., 44.
- Cochols and Colin, 478.
- Cochran, J. W., 201.
- Cochrane, A., 507.
- Cochrane, J., 503.
- Cockburn, Messrs., 77.
- Cocker, Harding, 199, 204.
- Cocker and Sons, 503.
- Cockeg, S., and Son, 10, 489, 503.
- Cockrell, C. R. (Juror), xxii.
- Cocherill, —, 158.
- Cockerill, J., 22, 23, 172.
- COCKS.—Improved water-cock for connecting pipes without breaking joints, 184. Hermetic tap, from France, a good and simple contrivance, not likely to get out of order, *ib*.
- COCOA AND CHOCOLATE.—Samples of, exhibited in the British Department, 58. Sample of inferior cocoa from the Mauritius, 59. Samples of cocoa from Barbadoes and Trinidad, *ib*. Extensive collection of chocolates from France, *ib*. Samples of chocolate from Switzerland, *ib*. From Spain, *ib*. From Prussia, *ib*. From the Netherlands, *ib*.
- COCOA-NUT FIBRE.—Various specimens of manufactures from cocoa-nut fibre, 101, 601.
- COCOA-NUT OIL.—See *Oil*.
- COCOA NUTS.—Samples of, from Ceylon and the Mauritius, 57.
- Cocu, A., 376.
- COD-LIVER OIL.—Extracted by steam heat, and rendered colourless without the use of charcoal, 48. Samples of this oil, 43, 45, 47, 48, 49.
- Coed Talon Mines (Flint), 11. See also *Coals*.
- COFFEE.—Observations on the samples of coffee, 58. Many good samples exhibited, *ib*. Some of excellent description from British Colonies, *ib*. Samples of R. Snowden's patent purified coffee-nibs, *ib*. Samples of coffee from the East Indies, 58, 59. From Java, 59. From Borneo, *ib*. From Ceylon, *ib*. From Norfolk Island, *ib*. From St. Helena, *ib*. From Demerara, *ib*. From Trinidad, *ib*. From West Africa, *ib*. From Portugal, *ib*. From France, *ib*. From Turkey, *ib*.—See also *Chicory*.
- COFFEE-LEAVES.—Dr. Gardner's pulp and coffee leaves worthy of notice, 58. Afford a really palatable drink when infused as tea is, *ib*.
- Coffey, J., 296.
- Coffey, T., 203.
- COFFIN FURNITURE.—Specimens of, 507, 508.
- Cohen and Orr, 60.
- Colnet and Son, 44, 165.
- Coimbator.—Collection of the woods of, contributed by the Indian Government, 131.
- Coimbra, the Nunnery of, 641.
- COINING PRESSES.—Examples thereof in the Exhibition, 200.
- COINS.—Series of French coins of legal currency, 247.—See also *Die-sinking, Works in, &c. Medals and Coins*.
- COIN-WEIGHING MACHINES.—Observations on the want which has called these machines into existence, 260. Practice at the Bank of England in weighing coin, *ib*. Difference in the weighing-machines, and inconvenience arising therefrom, *ib*. Machine invented by Mr. Cotton, the Governor of the Bank, which removes all difficulties, *ib*. Description thereof, 260, 261. Saving resulting from its use at the Bank, 261. Ingenious machine constructed by Captain Smith, *ib*. Description thereof, *ib*. Machine from France, 261, 263.
- COKE.—Superior quality of coke manufactured from coal washed by M. Berard's purifying apparatus, 4. Specimens exhibited, 5.—See also *Coal*.
- Colborne, Lord (Juror), xxxi.
- COLICUM, OPTIC EXTRACT OF.—Samples of, 50.
- Colgate, W. and Co., 78.
- Coleman, R., 226, 227, 228, 242.
- Coletta-Lefebvre, 676.
- Collin, J. R., 27, 561, 566.
- Colina, Simon de, 404.
- Colladon, Professor D. (Juror and Associate), xxvii.
- Collard, Messrs., 325, 329, 333.
- Collas, A., 613, 688, 691, 702.
- Collas, M. A. C., 44, 83.
- Collen, —, 278.
- Collette-Doucet, F. L., 23.
- Collard and Comte, 364.
- Collie, —, 279.
- Collier and Son, 507.
- Collin, C. E., 222.
- Collinge, C., and Co., 172, 208, 507.
- Collins, Florence, 689.
- Collins, Robert Nelson, 44.
- Collinson, Rev. J., 103.
- Collis, G. R., 5207.
- Collet Brothers, 259.
- Colla, R. and L., 278.
- Colman, J. and J., 77.
- Colmar, T. de, 310.
- COLOGNE.—Fine specimen of glue from, 165.—See also *Eau de Cologne*.
- Colonization Assurance Corporation (Australia), 71, 76, 83, 90, 93, 148.
- COLOURED GLASS.—See *Glass*.
- COLOURING MATTERS.—See *Dyes and Colours*.
- COLOURS, ARTISTS'.—Specimens of, 47, 48, 50.—See also *Colours for Encaustic Painting, Water Colours*.
- COLOURS FOR DYERS, CALICO PRINTERS, &c.—Samples of, 45, 46, 47, 50.
- COLOURS FOR ENCAUSTIC AND FRESCO PAINTING.—Specimens of, 48.
- COLOURS, MINERAL.—Samples of, 43, 45.
- COLOURS, PAINTERS'.—Specimens of painters' colours exhibited, 43, 44, 45, 46.—See also *Mineral Colours, White Paints*.
- COLOURS, PAPER STAINERS.—Samples of, 46, 48.
- COLOURS FOR PAINTING ON PORCELAIN.—Set of, exhibited, 44.
- COLOURS, PRINTING IN.—See *Lithochromy, Printing in Oil Colours*.
- Colquhoun, Lieut.-Col. J. N. (Juror), xxvii, xxxi.
- Colt, S., 221.
- COLUMNS (MARBLE).—General remarks on the marble columns, pedestals, &c., exhibited; objects exhibited, awards, &c., 563. Fusts of columns from Tuscany, *ib*. Marble columns from Belgium, *ib*. Two columns of large size and great beauty from a quarry in Devonshire, *ib*.
- Colville, Anna, 44.
- Colvin, J. R., 122.
- Combe, F., 647, 648.
- Combes, C. (Juror), xxvii.
- COMBS.—Specimens of ivory combs from Austria, France, and the United States, 599. Specimens of tortoise shell and iron combs exhibited in the British Department, and also in the French Section of the Exhibition, 600.
- Comius, J., 226, 242.
- COMMUNION SERVICES (SILVER, &c.).—Fine communion services, of silver gilt, and in the mediæval style, well engraved and enamelled, 516. See also *Church Plate*.
- COMPASSES, ASTRONOMICAL.—Description of the instrument, 255. Purposes for which intended, *ib*. It has rendered good service in magnetic districts where instruments constructed with magnetic compass have failed, *ib*.
- COMPASSES, DRAWING.—Specimens of, 254.
- COMPASSES, MARINERS'.—Experiments tried with one of Mr. Dent's to ascertain the effect of the discharge of guns thereon, 218. Undisturbed state thereof during the experiments, *ib*. Various descriptions exhibited, *ib*. Ingenious self-detector compass, 253. Particulars in which it differs from the ordinary compass, *ib*. Cone compasses and brass gimbal compasses for use in small boats, 281.
- COMPASSES, MINERS'.—Specimens of the miners' compass, 254. Miners' compass from Belgium, used in determining the co-ordinates of a mine, *ib*.
- COMPASSES, POCKET.—Specimens of, 281.
- COMPASSES, PRISMATIC.—Purposes to which adapted, 281.
- COMPOSITE CANDLES.—See *Candles*.
- COMPOSITION PRINTING ROLLERS.—See *Printing Rollers*.
- CONCAN.—Government and mercantile yards of Bombay chiefly supplied with timber from the, 132.
- CONCENTRATED ALUM.—See *Alumina, Sulphate of*.
- CONDIMENTS.—See *Spices*.
- COND COMPASSES.—See *Compasses, Mariners'*.
- Conderg, Ida Von.
- CONFRECTIONARY.—This species of preparations consisted of

fruits preserved with sugar, and confections, comprising sweetmeats made both from sugar and from chocolate, 636. Simplicity of ancient confections, honey and the juice of the sweet (or sugar) cane being the principal, *ib.* Remarks as to the intimate connexion which so long existed between the preparation of conserves and the compounding of drugs, 636, 637. Sugar in ancient times more commonly employed by physicians for the disguising of disagreeable medicines, and in the pharmaceutical preparation of syrups, electuaries, and confections, 636. Not till the seventeenth century that, the art of making sweetmeats became established as a fashionable feminine accomplishment, and taught publicly both in France and England, 637. Description of the manufacture of confits and other bonbons, 637, 638. Description of the manufacture of chocolate, 638. Remarks on the exhibits from America, the British Colonies, China, Egypt, India, and the various countries on the Continent of Europe, 638-641. Note on the large sugar confectionary trade of France, 638, 639. Enormous extent of the confectionary trade of the United Kingdom, 640. Classification of exhibitors according to the various countries; list of awards; names of exhibitors and articles exhibited, 641, 642.

CONFECTIONERS' ORNAMENTS.—General excellence of the fancy ornaments exhibited, 453.

CONFECTIONERS' MOULDS.—Varieties of well-made jelly and cake moulds, 682.

Congrève, Sir W., 403.

CONGREVE MATCHES.—See *Chemical Matches*.

Coninck, A. de, 162.

Connell, Mr., 15.

Conrad, F. W. (Juror), xxvii.

Conrad, W., 44, 63.

Constable, W., 173.

Constantin, J. M., 604, 643, 644.

Constantine, Mining Commission of the Province of, 29.

Constantine Province (Algeria).—Observations on the iron mines there, 29. Scarcity of fuel, *ib.* Geological collection and sundry ores from, *ib.*

Constantinople, Porcelain Factory at, 543.

Contigand Son, 613.

Cook, E. W., 157.

Cook, T. A., 44.

Cook, W., 507.

Cooke, —, 288.

Cooke, E. W., 315.

Cooke, H., 198.

Cooke and Sons, 451.

Cookes and Sons, 546, 550, 694.

COOKING APPARATUS.—Specimens of, 504, 506, 50C, 509.

Cooksey, H. R., 507.

Cooksons, Messrs., 527.

Coombe and Co., 302, 503.

Copney, C., 71.

Cooper, Sir Ashley, 344.

Cooper and Bursill, 203.

Cooper, D. and J., 352.

Cooper, J. (Juror), xxviii, xxxi.

Cooper, M., 394.

COOPER'S WORK.—Collections of articles in cooper's work of all kinds rewarded with Prize Medals, 602.

Coorehan, A. J., 371.

Cootals, Government of, 154.

COPAL.—Fine sample of copal, from Angule, Portugal, 76.

Cope and Collinson, 503.

Cope, Hammerton, and Co., 364.

Copeland, Fanny, cxx.

Copeland, Alderman W. T., 536, 540, 687, 694, 734.

Copenhagen Royal Porcelain Manufactory, 542.

Copland, Barnes, and Co., 56, 64.

Copland, O. M., 103, 378, 653.

Copplestone, T., 82.

Copney, W., 44.

Coppel, A., 490.

Coppens, F. (Juror), xxx.

COPPER AND COPPER ORES.—Specimens of tin and copper ores, from Cornish mines, 12. Products obtained by the mechanical preparation and fusion of the ores, *ib.* Important modifications introduced by Richard Taylor in the mechanical preparation of copper ores, *ib.* Chiefly applicable to the pure ores called *lakers*, *ib.* Objects exhibited, *ib.* Details of the operation, *ib.* Improvement in the washing of copper by Mr. Taylor's invention, *ib.* Collection of ores of copper from mines in Perthshire, *ib.* Copper ore obtained from South

Australia, 15. Beautiful specimens exhibited by the Barossa Range Mining Company, *ib.* Series of ores from the Burra-Burra mines, *ib.* Yield of copper from these ores, *ib.* Smelting of these ores originally at Swansea, *ib.* Construction of an establishment lately on the spot by Messrs. Graham and Hallett, *ib.* Presence of phosphate and chloride of copper among the specimens exhibited, *ib.* Geological series from the copper mines of Kawaii, New Zealand, *ib.* Specimens of cupiferous pyrites and blue carbonate of copper, *ib.* Copper ores from the Great Barrier Island mines, *ib.* Specimens from Brodie's mines, *ib.* Richness of the ores of copper from Lake Superior and Lake Huron, 16. Products from the Bruce mine, *ib.* Existence of copper ore in Nova Scotia, *ib.* Blocks of native copper discovered at Lake Superior of surpassing richness, 17, 18. Specimens of copper ore from Boston, Massachusetts, 18. Notice, from the Report of Mr. Jackson, on the deposit of native copper in Lake Superior and the Isle Royale, 18, 19. Copper ore and copper pyrites obtained in Chili, 24. Specimens thereof, *ib.* Specimens of copper ore from Algiers, 29. Grey copper ore from the Mouzaia mines, Algiers, *ib.* New process of separating the silver mixed with the metal adopted at the mining works at Mansfeld, 31. Specimens of copper ore from Tuscany, 35. Specimens of rather rich copper pyrites from Turkey, *ib.* See also *Mineralog. &c. Ores*.

COPPER MANUFACTURES.—Contributions not numerous, 498. Improvement in form, &c., of the copper manufactures of the United Kingdom, *ib.* Copper culinary utensils giving way to vessels of iron, *ib.* List of Prize Medals awarded, 503 *et seq.*

COPPER, NITRATE OF.—Samples of, 45.

COPPER, OXIDE OF.—Specimens of, 45.

COPPER-PLATE PRESSES.—Messrs. Guig's copper-plate press, 199. Patent steam press for printing the impressions to be transferred to earthenware or china, *ib.*

COPPER, SULPHATE OF.—Method of preparation, 47. Samples thereof, 44, 45, 48, 50.

COPPER WIRE ROPES.—See *Wire Ropes*.

COPPER, WORKS OF ART IN.—Notice of the principal, 684.

COPPERAS.—Manufactured from the pyritous schists of the coal formation; antiquity of the process, 42. Specimens of copperas manufactured by Spence's patent process, 45. Other specimens of copperas, 43, 45.

Copock, J., 44.

Copah, H., and Sons, 479.

CORAL.—Fine examples of red and black coral exhibited, 164. Awards to the exhibitors, *ib.*

Corcoran, B., and Co., 202, 503.

CORCAGE, &c.—Limited extent of the collection exhibited, 370. Impossibility of forming any idea of the progress made of late years in these manufactures, *ib.* Specimens exhibited, 372, 373. See also *Rope and Cordage*.

Corderant, A., 536.

Cordier, C., 685, 701, 707.

Cording, J. C., 596.

Cordonnier and Co., 551.

Cordova, Agricultural Board of (Spain), 84.

Cordova, Province of (Spain), 34, 84.

CORK.—Small number of specimens exhibited, 103. Good quality of those contributed, *ib.* Samples of the various uses which may be made of cork veneered or cut into fibres, exhibited by Messrs. Esdaile and Margrave; Prize Medal awarded, 601. See also *Cork Wood*.

Cork, City.—Materials used in the manufactory of pottery and glass from, 14.

CORK WOOD.—Resemblance of this wood to cork, 103. Might possibly be employed as a substitute for cork in some of its applications, *ib.* Specimens exhibited, *ib.*

Cornaldi, D., 375.

CORN CRUSHERS.—See *Linseed and Corn Crushers*.

CORN MILLS.—See *Grinding Machines*.

CORNELIAN, WORK IN.—Tea service of coloured cornelian from Oberstein, Prussia, 517.

Cornelius and Co., 503.

Cornelius, Director, 685, 738.

Cornell, Lyell, and Webster, 364.

Cornet, J., 243, 242.

CORNETS-A-PISTON.—Superiority of M. A. Séa's cornets-a-piston, 332.

Cornillon, J. H., 520.

Cornish Mines.—Specimens of tin and copper ores therefrom, 62.

Cornwall.—Samples of various cerealia cultivated in Cornwall, 52.

Corridi, Professor F. (Juror), xxiv.

- Corridi, G., 44.  
**CORROSIVE SUBSTANCES**—Specimens of, 45.  
 Corry, Blain, and Co., 372.  
 Corry, J., and J., 393.  
**CONSIST**—Specimens of, exhibited, 483. See also *Wearing Apparel*.  
 Cort, Mr., 7. See also *Iron*.  
 Corviand Rag, 184.  
 Costa, F., 23, 583.  
 Costoli, Professor A., 685, 704.  
 Cottam and Hallon, 503.  
 Cotterill, E., 503.  
 Cottingham, N. J., 503, 686, 696, 713.  
 Cotton, W., 280.  
**COTTON MANUFACTURES (Class XI).**—Tabular classification of objects in the Exhibition into which this Class is divided, xlii.  
 List of Jurors and Associates appointed for this Class, xxvii.  
 List of exhibitors in this Class to whom Prize Medals have been awarded, lxx. And of those of whom Honourable Mention is made, *ib*. Remarks on the cotton manufactures exhibited, 347, 348. Articles exhibited and prizes awarded, 348, 349.  
 Cotton, Raw.—Unrivalled excellence of the long-staple cottons of the United States, 69. Total quantity of cotton annually imported into Great Britain, 93. Table showing the proportion in which it is imported from different countries, *ib*. Samples exhibited; remarks thereon; names of exhibitors; prizes awarded, &c., 93, 96. Useful collection of the cottons of different countries arranged so as to show the peculiarities of each fibre, 93. Extensive series of cottons imported into Liverpool, exhibited in the Liverpool collection of imports, *ib*. Uncertainty existing respecting the botanical distinction of the various cotton plants of different countries, *ib*. Classification thereof by Dr. Royle, *ib*. Remarks on the important discovery, by Mercer, of the influence of caustic alkali in modifying the fibre of cotton, 94. Large and highly interesting collection of raw cotton from India, *ib*. Statistics relative to the cultivation, consumption, and export of cotton, as regards India, *ib*. Chief varieties of cotton indigenous to India, *ib*. Chief causes of the inferiority of the Indian cotton as compared with the American cotton, *ib*. Promising sample of cotton from Borneo, *ib*. Interesting series of samples of cotton from Malta, 95. Promising specimens of cotton from Port Natal, *ib*. Samples of cotton from the West Coast of Africa, *ib*. Remarks on the various specimens and samples of cotton from the West India Islands, *ib*. Samples of cotton from New South Wales, *ib*. Great superiority of the collection of long-staple cotton from the United States, *ib*. Specimens of cleaned and uncleaned cotton from Shanghai, *ib*. Several good samples of cotton shown in the Egyptian collection, *ib*. Interesting and promising samples of cotton from Algiers, demonstrating in a remarkable manner the progress of that colony, *ib*. Samples of cotton from Portugal, 96. Samples of cotton from Russia, *ib*. Fine sample of cotton from the Society Islands, *ib*. Sample of raw cotton from Spain, the growth of the province of Seville, *ib*. Valuable and interesting series of samples of cotton shown in the Turkish collection of raw produce; general character of these cottons, *ib*. See also *Raw Produce*.  
**COTTON-SEED CAKE**—Sample of, from Edinburgh, a novelty worthy of especial notice, 55. Extensively used as a cattle food, 56.  
**COTTON-SEED OIL**.—See *Oil*.  
**COTTON-SPINNING, &c., MACHINERY**.—Splendid series of nineteen machines, in the British Department, showing the whole of the process of spinning cotton, 195. Other specimens of some of these machines, distinguished by peculiarity of construction, important improvements, or beauty of workmanship, *ib*. Few machines for the manufacture of cotton in the Foreign Department, *ib*. Machine from France, called "L'Épurateur," for opening and cleaning cotton upon a new system, promising great advantage, 195, 196. Large roving frame of excellent workmanship, also from France, *ib*. Well-made "soft-hobbin" frame from Belgium, 196. Drawing frame for cotton from the United States, *ib*. Saw-gin for cotton, also from the United States, *ib*.  
**COTTON, SUBSTITUTES FOR**.—Large number of fibrous substances used as substitutes for cotton, shown in the various collections of raw produce, 109. Nature of these substances, articles exhibited, names of exhibitors, and awards, 100-108.  
**COTTON WASTE**—Specimens of, restored after being used in cleaning machinery, 45.  
**COTTON YARN**.—See *Yarn, Cotton*.  
**COTTONS (coloured woven)**.—General remarks on the coloured woven cottons exhibited, 348. Specimens exhibited, *ib*. See also *Calicos*.

 Graddock, —, 277.  
**CRADLE IN BOX-WOOD**.—Notice of a, by W. G. Rogers, 551, 689, 694.  
**CRAIGLEITH STONE**.—Interesting exemplification of the quality and decorative use of Craigleith stone, 557. Much used for building purposes in Edinburgh, &c. Rather costly at first, but very durable, *ib*. Objects carved in this stone exhibited, *ib*.  
 Craighton, T. R., 190.  
**CRANES**.—Wrought iron tubular crane, 169. Derrick crane, used in the construction of Exhibition Building, 183. Description of its action, *ib*. Model hydraulic crane for unshipping coals and for railway sta-

- stations, docks, and quays, 193. Working model of a patent steam travelling crane for lifting and removing heavy weights in timber-yards, goods-depôts on railways, &c., *ib.* Description thereof, 184. Iron crane for weighing and lifting, constructed on an ingenious principle, *ib.* Patent weighing crane for raising heavy goods, and at the same time obtaining their weight, *ib.* Patent safety apparatus, for preventing loss of life and property when a rope or chain breaks in the shafts of mines, *ib.* Model apparatus for the extraction of ores, and for the free and safe ingress and egress of miners to and from the mines, *ib.* Description of this apparatus, *ib.* Model of an improved hoisting machine for raising and lowering goods, which can be worked by hand or by steam, *ib.*
- CRAFF**—Specimens of, 365, 368.
- CRAIG**—General excellence of the samples exhibited, 371.
- CHAVATS**—Specimens of exceedingly beautiful cravats from France, 482.
- Craven, J., and Son**, 358.
- Crawford, —**, 82.
- Crawford, H. M.**, 390.
- Crawhall, J.**, 196, 204.
- CRAYONS**—Specimens of, 455.
- Creak, J.**, 480.
- CREAM OF TARTAR**—An important article of commerce in wine-growing countries, 47. Samples thereof, 50.
- CREAS**—Specimens of, 372, 373.
- CREASINE**—Specimens of, exhibited, 44.
- CREATININE**—Specimens of, 44.
- Cramer, J.**, 645, 650.
- CREOSOTE**—Prepared from tar, 43. The term "creosote" applied rather indefinitely in Germany, 48. Samples of creosote, 47.
- Crespel, Delisse, T.**, 63.
- Cresson, E. (Juror)**, xlix.
- Cresswell, —**, 283.
- Creswick, T. J. and N.**, 516.
- Creswick, W.**, 447.
- Cruise, A. F. (Juror)**, xxvii.
- Creyke, Lieut. A. S. (Associate Juror)**, xxvii.
- Cribb, J. T.**, 680.
- Crichton, D.**, 197, 204.
- Crichton, J.**, 252.
- CRICKET BATS, &c.**—Implements and appliances used in cricket, 677. Number of contributors, *ib.* Ingenuity of the manufactures, *ib.* Remarkable excellence of the specimens exhibited, *ib.* Improvements effected in the gloves and gauntlets, *ib.* List of Awards and Exhibitors, *ib.*
- Crickett, —**, 250.
- Cristofoli, A.**, 574.
- Cristofori, L. de (Juror)**, xvi.
- Critchley, Brinsley, and Co.**, 365.
- Critche, E.**, 530.
- CRUCIBLES**—Specimens of, 469.
- Crocco, C. (Juror)**, xxv, xxxii.
- Croft, F.**, 375.
- Croizat, J.**, 198, 388.
- Croll, —**, 44.
- Crombie, J., and Co.**, 352.
- Crompton, T. B.**, 427.
- Crook F.**, 507.
- Crook, W.**, 504.
- Crookes, C.**, 719.
- Crosnier, —** Lo, 475.
- Cross, C.**, 197.
- Cross, G.**, 449, 451.
- Cross, S.**, 121.
- Cross, W.**, 382.
- CROSSES**—Cross worked from a single block of granite from Sweden, 556. Cross of large size, sculptured in Gaen stone by the Hon. Mrs. Roy, 557.
- Croskill, W.**, 173, 202, 227, 231, 233, 236, 238, 241.
- Crosley and Sons**, 473, 475.
- Crossman, Esq.**, xxv.
- Croughton, W. F.**, 54.
- Crouplé (Nephew)**, 360.
- Crowley and Sons**, 243.
- CROWN GLASS**—Methods of manufacture of this description of glass; particulars as to improvements, &c., effected therein, 525, 526. Prize Medals, &c., awarded for crown glass, 526, 527.
- Crutchet, V.**, 549, 550, 714.
- Cruchley, —**, 222.
- CRUCIBLES**—Use of crucibles for metallurgical purposes, by copper and brass founders, 14. Excellence of manufacture, and quality of clay, 14. Crucibles made of a mixture of plumbago with clay, intended for fusing steel, 23. Description of the crucible, *ib.* Crucibles of refractory clay only, *ib.* Crucibles manufactured by M. Deyeux of Liencourt, France, 27. Reputation of the plumbago crucibles of Bavaria, 32. Black-lead crucibles, 296. Purposes for which adapted, *ib.* High reputation of these crucibles, *ib.* Very cheap, *ib.* Specimens of fire-clay crucibles exhibited, 584. Samples of fire-clay and brick crucibles from West Prussia, 585. Samples of crucibles manufactured of an admixture of fire-clay and plumbago, adapted for purposes where an intense heat is employed, *ib.* Specimens of black-lead crucibles from Bavaria, *ib.* Plumbago crucibles of good quality from Belgium, *ib.* Plumbago crucibles from the United States, *ib.*
- Crummack, E.**, 599, 600.
- Crutwell, Allies, and Co.**, 12, 13.
- CRYSTAL**—See *Flint Glass*.
- CRYSTAL FOUNTAIN**—Commendation of this work; a Council Medal awarded by the Jury, but withheld by the Council of Chairmen, 532.
- CRYSTAL PALACE (Exhibition Building)**—Remarks on the Exhibition Building as an architectural design, 206, 207, 532, 588, 696. Suggestion for the erection of a statue to Prince Albert on the site of the Exhibition Building, 690.
- CRYSTALLOGRAPHY**—Remarks on the various collections of crystals exhibited, 305.
- CUBA**—Specimens of dye-woods from Cuba, 91. Specimens of several of the textile vegetable fibres of Cuba, 103. Extensive and interesting collection of the woods of Cuba, 154. List thereof, 154, 156.
- Cuhoro, J.**, 650.
- CUDDEAR**—Specimens of, 43, 88.
- CUDDEPARI**—Collection of the woods of, contributed by the Indian government, 127, 128.
- Cuff, R., & M.**
- Cugnot, A.**, 507.
- CULINARY UTENSILS**—Cast-iron vessels, coated inside with enamel, from Charleville, 26.
- Culverwell, W.**, 507.
- CUMBERLAND**—Best plumbago used for the manufacture of black-lead pencils, obtained from the mines of, 450.
- Cumming, A. (Associate Juror)**, xlix.
- Cumming, Rev. J. G.**, 555.
- Cumont-Declercq, —**, 371.
- Cundall and Addy**, 424, 452, 454.
- Cundy, S.**, 564, 689, 696, 713.
- Cunningham, J. S. (Juror)**, xxviii.
- CUPS, SILVER**—Cup of cast and chased silver, of very good shape, representing the history of the horse, in seven medallions, from France, 514. Cup of cast silver, partially gilt, representing subjects of the chaco, also from France, *ib.*
- CURLING STONES**—Specimens of curling stones made of greenstone trap, 556.
- Currer, —**, 412.
- CURTAIN POLES, GLASS**, 537.
- CURTAINS AND HANGINGS**—Principles on which the ornamentation of textile hangings proceeds, 729, 730. Remarks on the French fabrics in this section, 730. Prussian, Austrian, and Russian fabrics, *ib.* False taste displayed in the decoration of chintzes; true principles that should be observed, *ib.* Defective designs of worked and coloured muslins for curtains, *ib.*
- Curtis, —**, jun., 81.
- Curtis Brothers, and Co.**, 91.
- Curtis, J.**, 44.
- CUSSENS and Co.**, 451.
- CUT-GLASS**—Prize Medals, &c., awarded for, 536, 537.
- CUTCH, H. H. the Rajah of**, 89, 95.
- Guthbert, J. S.**, 689.
- Cutler, J.**, 490.
- CUTLERY AND EDGE TOOLS (Class XXI)**—Tabular classification of objects in the Exhibition into which this class is divided, xix. List of Jurors and Associates appointed for this class, xxix. List of Exhibitors in this class to whom Council Medals have been awarded, xciii. The like, of those to whom Prize Medals have been awarded, xciv, xcv. And of those of whom Honorable Mention is made, xcv, xcvi. Extent and general characteristics of this class, 485. Surgical instruments and weapons of war not included under cutlery, *ib.* Number of exhibitors; number British and number foreign, *ib.* Comparative proficiency of the respective countries in the production of these

- articles, 485. Importance of this branch of manufactures in England, *ib.* Wide-spread reputation of English steel wares even in the Middle Ages, *ib.* Blades of Toledo and Damascus scarcely more valued than the cutlery of England, *ib.* Pre-eminence in cutlery maintained by England, *ib.* Excellence of the articles exhibited, *ib.* Mixed collection of cutlery and tools from the Zollverein States, 485, 486. Collection from Austria chiefly consists of simple implements of husbandry, 486. Manufacture of watch-work in Switzerland renders delicate files a matter of necessity, *ib.* Numerous collection of files exhibited, *ib.* Belgian collection distinguished by spiral cutters of superior quality, *ib.* Miscellaneous collection of cutlery and tools from France, *ib.* Woodmen's implements from the United States and Canada, *ib.* Variety of places in the United Kingdom contributing cutlery and edge tools, *ib.* None of the seats of manufacture can compare with Sheffield, *ib.* Assortment of edge tools of great excellence contributed by Messrs. Spear and Jackson, *ib.* Complete assortment of files of various sizes, *ib.* Union of two qualities of cast steel (hard and soft) in the same article, *ib.* No advantage over the combinations of cast and bar steel, *ib.* Superior order of cutlery from London, *ib.* Articles of Mr. Durham deserving of a Prize Medal, *ib.* His consenting to act as a Juror disqualified him from competing, *ib.* Various articles of considerable excellence from Ireland and Scotland, *ib.* Manufacturing tools largely supplied from Birmingham, *ib.* Scythes and files from Stourbridge and Warrington, *ib.* Observations on the articles contributed by the colonies, 486, 487. Various Hindoo and Malay tools in the Indian Department, 487. Extensive assortment of cutlery from France, *ib.* Excellence of the articles exhibited, *ib.* Remarks on the cutlery from Belgium, *ib.* Cutlery well finished but the metal somewhat soft, *ib.* Fair quality of the cutlery from Switzerland, *ib.* Collection of pocket knives, of remarkable cheapness from France, *ib.* Manufacture greatly improved in France, Belgium, and Switzerland, *ib.* General remarks on the contributions from Austria and the southern states of Germany, *ib.* Excellence of the specimens contributed, *ib.* Improvement in the manufactures in these states, *ib.* Observations on the contributions from the Zollverein and Northern States, 487, 488. Small collections from Denmark, Sweden, and Norway, *ib.* Little that requires notice, *ib.* Ordinary quality and description of the articles exhibited, *ib.* Contributions from Russia, *ib.* Character and quality of the articles exhibited, *ib.* Small collections from Spain and Portugal, *ib.* General remarks on the contributions from Turkey, Egypt, and Tunis, *ib.* Scissors from Turkey deserve special notice, *ib.* Very few articles exhibited from China, *ib.* Singular form of razor used for shaving the head in China, *ib.* Contributions from the United States, *ib.* Signal proofs of proficiency in such manufactures, *ib.* Objects exhibited, and awards of Council Medals, Prize Medals, and Honourable Mention for this Class, 488-491.
- CUTTEMUNDOO.**—Specimens of Cuttemundoo, or Kattimundoo, from Vizagapatam, promising to prove a valuable addition to the India-rubber series, 74.
- Cuyere, Madame, 199, 204.
- Cuyper, J. F. de, 1xx, 849.
- Cwm Avon Iron Company (Glamorganshire), 13, 189. See also *Tin-plate*.
- CYANOGEN.**—Is rapidly converted into ammonia, 40.
- CYMBAL.**—Improvements in this class of musical instruments, 332.
- D. —, 103.
- D. De —, of Murcia, 100.
- D. De —, of Saragossa, 100.
- Dabaget-Tampé, 470.
- Dastrique, F., 518.
- Dagre, N. F. Le (Associate Juror), xlix.
- Daguerre, —, 275, 276.
- DAGUERRETYPE APPARATUS.**—General remarks as to the invention, nature, and use of photographic cameras, 274. Improvements made therein, *ib.* Description of Ross's camera, 274. Principles and construction of other cameras exhibited, 274, 275. Machine for cleaning and polishing the plates, 315. Portable mercury box, *ib.* Plate-holders, *ib.* Head-rests, *ib.* Glass and porcelain dishes for preparing sensitive plates, *ib.* Use made of iodine in photography, *ib.* See also *Photographic Glass. Photography*.
- DAGUERRETYPE PICTURES.**—Remarks on the various Daguerreotype pictures exhibited, 276, 278. Great superiority of the Daguerreotypes from America over the English, 277. Characteristics of the Daguerreotype pictures exhibited in the French Department, 278. See also *Photography*.
- Daguet, F., 271, 529, 537.
- Dakin and Co., 202.
- Dalby, J., 358.
- Dalgetty, A., 199, 204.
- Dalglish and Co., 459.
- Dallamoda, T., 562, 564.
- Dalling, —, 358.
- Dalphin, J. E., 339.
- Dalton, Capt., 668.
- Damaiville, —, 66.
- DAMASCENED IRON.**—Specimens of the art of damascening and inlaying iron and copper, from Liège, Belgium, 517. Also from Madrid, *ib.*
- DAMASKS (Linen).**—Large assortment contributed; excellence thereof, 371, 372, 373.
- DAMASKS (Worsted).**—Specimens of, in the British Department, 356, 358. Damasks for furniture, of excellent combinations, from Austria, 356. Specimens of damasks from France and Saxony, 357, 358.
- DAMASK TABLE LINEN.**—Specimens contributed, 371, 372. Faulty taste predominating in the ornamentation of damask table linen; serious revision needed, 730.
- Damiron and Co., 379.
- Damoodah Valley (India).—See *Coal*.
- DAMP DETECTORS.**—Specimens of, 316.
- Danby, C. and T., 469.
- DANDELION, EXTRACT OF.**—Samples of, 50.
- Dandleker, F., 395.
- Dandoy, Maillard, Lucq, and Co., 199, 204.
- Daniel, E., jun., 507.
- Daniell, A. B. (Associate Juror), xxx.
- Daniell, Lieut.-Col. H. (Juror), xxviii.
- Daniell, J., 667.
- Daniell and Wilkins, 330.
- Danneau, —, 202.
- Darcy, E., 445.
- Darier, H., 201, 204.

 Descartes, J., 551.  
 Deschamps, N., 479.  
 Desfontaines, Leroy, and Son, 516.  
 DESIGN, SUPPLEMENTARY REPORT ON, BY RICHARD REDGRAVE, F.R.A., 708-749. See also *Redgrave, Richard*.  
 DESIGNS FOR DECORATION, TAPESTRY, &c.—Notice of the principal objects in this section, 689. Great perfection to which designs for tapestry have been brought in Berlin, 698. Notices of certain of the contributions in this section, *ib.* See also *Ornamental Design*.  
 DESIGNS FOR PRINTED AND WOVEN FABRICS, &c.—Primary law to be observed in regard to such designs, 695. Notices of the principal contributions in this section of the Fine Arts, 689, 695. Remarks on the patterns of the oriental stuffs sent by India, Turkey, and Persia, high character which distinguishes the Indian stuffs, 695. Particulars of the principal contributions to this section of the French Department, 703.  
 Importance of the subject of the consideration of design as applied to garment fabrics, 741. Principal sources of error in this class of design, *ib.* Necessity for the designer carefully attending to texture, lustre, &c., *ib.* Conditions essential to good patterns, 741-743. Simplicity of details in Indian patterns, 743. Comparison between English and foreign garment fabric patterns, *ib.* Geometry essentially required as the basis of ornament, 743, 744. Quality a great source of excellence, 744. The subject of textures and surface, as important considerations in the regulation of design, resorted to,

- 744, 745. Excess of ornament in gold or silver thread prejudicial to the priests' dresses in the North-East Gallery and in the Medieval Court adverted to, 745. The style of ornamentation in some respects better under the old and simple methods of cotton printing, when the resources were few, than at present obtains, *ib.* Circumstances rendering it impossible to comment upon individual works in the Exhibition, *ib.* Less derivative from true ornamental art in woven than in printed goods, *ib.* Remarks on design as applied to shawls, 745-747. The like with reference to ribbons, 747. And to lace, 747, 748. See also *Lace, Designs for. Ribbons, Designs for. Shawls, Designs for.*

- DRAPE OF FUR OR SUMMER CLOVES.—Specimens of, 357.
- DRAWBRIDGES.—Models of, constructed upon the Dutch railway, 208. Peculiar mode of opening, *ib.* Usefulness of the principle of construction, *ib.*
- DRAWING BOARDS.—Manufactured of the best hand-made drawing paper, 447. Nature of the process of manufacture, *ib.* Specimens exhibited, *ib.* Superiority of the English production, *ib.*
- DRAWING INSTRUMENTS.—Remarks on the various drawing instruments exhibited, 305, 306. Fine magazine case of drawing instruments, inclusive of all the recent improvements, 308. Double protractor, for measuring angles and determining heights and distances, *ib.* Tebay's universal planing rule, 306. See also *Elliptographs, Graphic Telescopes, &c.*
- DRAWING PENCILS.—See *Black-lead Pencils*.
- DRAWINGS, INDIAN INK AND OTHER.—Description of a new process for multiplying, 699.
- Dreger, F., 688, 706.
- DRESDEN CHINA.—See *Ceramic Manufactures*.
- DRESS CHAIRS, 193.
- DRESSING CASES.—Elegant variety exhibited, 450. Awards to exhibitors, 453. Specimens of beautiful fittings for dressing cases in silver and silver-gilt, from France, 518-520. Dressing cases are exhibited almost exclusively by British and French manufacturers, who appear to monopolize the supply of these articles, 652. The tasteful and compact arrangement of these articles of very modern date, but in their primitive character they are of considerable antiquity: ancient Roman one discovered in 1794, *ib.* Remarks on the English dressing cases of the sixteenth and seventeenth centuries, 652, 653. The present style of ladies' dressing cases ill adapted for travelling, 653. Gentlemen's dressing cases, on the contrary, made extremely portable, *ib.* Materials of which dressing cases are usually manufactured, with observations on the ornamentation thereof, *ib.* Remarks on the contributions from Austria, France, Saxony, and on those in the British Department, 653, 654. List of awards and names of exhibitors, 655. Articles exhibited, *ib.*
- Dressler, J. H., sen., 31.
- Dressler, —, 410.

- DRIED HERBS AND ROOTS.—Specimens of, 47.
- DRILLING MACHINES.—Drilling machines of various sizes and capabilities, 200. Specimens of two large radial drilling machines, *ib.* Excellent self-acting vertical drilling and boring machines, *ib.*
- DRILLS.—The sower with his seed-ly superseded by a complicated machine, the drill, depositing the seed in rows, and drawn by several horses, 228. Economy of seed, labour, and time, from the use of this implement, 228, 229. Improvements which have taken place in the drill, 229. Description of Hornsby and Son's drill; also of Garrett and Co.'s, and of Hensman and Son's drill, *ib.* Approval of the Woburn drill, *ib.* Simple, well-made drill, exhibited by M. Claes, of Belgium, *ib.* Description of the turnip drills and liquid-manure distributors exhibited, 230. Names of exhibitors, exhibits, and awards, 242. Hand-drills to supersede the use of the bow-drill, 316.
- DRILLS (Linen, Cotton, &c.)—General good quality of the specimens exhibited, 371-373. See also *Cotton Manufactures*.
- Drion, E., 504.
- Drolenvaux, M.—Glass manufactory established by, at Lettenbach (France), in 1730, 525.

 DYES AND COLOURS.—Samples of dyeing materials, 47, 50. New black dyeing material for silk, 47. Extracts of dye-woods, *ib.* Considerable modification which the arts of dyeing and printing in colour have undergone during the last half century, 85. No manufacturing processes have received more important assistance from the labours of chemists, *ib.* Dyeing purely a chemical operation, 85. Vast number of new colouring materials discovered and rendered available, *ib.* Improved modes of applying those already in use, *ib.* Increased use of many vegetable colours, *ib.* Demand springing up for various dyeing stuffs, *ib.* Greater part of the vegetable dye stuffs used in Great Britain derived from foreign countries, *ib.* Table showing the quantity of some of the chief dye stuffs imported in the years 1848, 1849, and 1850, *ib.* Statement of the proportion in which some of the principal dye stuffs are supplied by different countries, *ib.* Series of dye stuffs included in the collection of Liverpool imports, 86. Samples of dye stuffs included in the series of Hull imports, *ib.* Complete illustration of the operations of the dyer and calico printer, *ib.* Specimens exhibiting the various stages of dyeing and printing, *ib.* The arts of dyeing and printing, although involving different processes of manipulation essentially the same, *ib.* Detail of the process of dyeing, *ib.* Also of calico printing, *ib.* Nature and use of mordants in the process of dyeing, *ib.* Complete collection of the various chemical agents employed by the dyer, 87. Enumeration of the more important of these substances, *ib.* Observations on, and descriptions of, the various colouring matters or dye stuffs exhibited, 87, 88. Mixture of tints effected by the combination of several substances, 88. Samples of skein silk by London dyers, *ib.* Series of dyes in fast colours on Lisle thread for glove making, *ib.* Dyed lace cotton resembling the hard-tanned maraboutsilk, *ib.* Extensively used in the manufacture of velvet, gauze, ribbons, and other fabrics, *ib.* Valuable collection illustrating the native vegetable dyes of Scotland, *ib.* Highly complete and instructive series of lichen preparations, *ib.* Specimens of safflower, and good illustrations of its use in dyeing silk, *ib.* Good specimens of dye stuffs, including an interesting series of lac dye, *ib.* Sample of chicory wood, *ib.* Can be used as a blue dye in the place of real wood, *ib.* Price of chicory wood and of real wood, *ib.* Large and highly-valuable collection of dye stuffs from India, 88-90. Little or nothing known of many of these dyes, 90. Several evidently rich in colour, *ib.* Most of them may be easily had in large quantities, and at comparatively low prices, *ib.* Samples of various dyes from Ceylon, *ib.* Samples of lichen, or orchilla weed, from the Cape of Good Hope, *ib.* Specimens of the various descriptions of dye stuffs from British Guiana, *ib.* Trinidad, *ib.* Falkland Islands, *ib.* Australia, *ib.* Van Diemen's Land and New Zealand, *ib.* Austria, *ib.* China, *ib.* Egypt, *ib.* France, *ib.* Algeria, 91. Greece, *ib.* States of the Zollverein, *ib.* Portugal and Madeira, *ib.* Russia, 90, 91. Spain, 91. Tunis, *ib.* Turkey, *ib.* Tuscany, *ib.*—See also *Carmine*. *Madder*. *Wood*, &c.  
 DYED GOONS.—See *Wool-dyeing*. *Woolen*, *Spun*, &c., *Fabrics*.  
 DYNAMOGRAPH.—A dynamograph from Austria, exhibited by the Chevalier de Burg, 163.  
 DYNAMOMETERS.—The invention of these machines, for determining the most favourable conditions for the construction and working of machines, with respect to the economy of power, is due to General Poncelet, 190. Explanation generally of the application of these machines, *ib.* Dynamometers exhibited constructed under the direction of Colonel Morin, 190, 191. Specimen of a cultivator-dynamometer, exhibited by E. H. Batail, 242. Remarks on the various dynamometers exhibited, 304.  
 Eldes and Son, 199.

 Early, J. and Co., 359.  
 Early, T. K., and Co., 204.  
 EARRINGS.—Specimens of turkische earrings from Russia most perfectly set, 517.  
 EASTERN ARCHIPELAGO.—Excellent specimens of gums and resins from, 76. Mats and bamboos from, 664.  
 EARTHENWARE.—See *Ceramic Manufactures*.  
 Easson, A., 372.  
 East and Son, 392.  
 EAST INDIA.—Specimen of minerals and rocks belonging to the crystalline formations of India, 14. Wheat, from time immemorial, a staple crop in the plains of Northern India, 52. Oats also extensively cultivated, *ib.* General sterility of the crops, owing to defects and carelessness in agriculture, *ib.* Causes of the wheat reaching Eng-

- land too dirty and weevil for market, 52. Samples exhibited, *ib.* Quality of the samples of rice from the British East Indies, 53. Flax extensively cultivated off the British East Indies mostly for the sake of the oil expressed from the seed, 56. Betel nuts, 57. Poor nature of the samples of coffee, 58, 59. Mustard-seed, 62. Valuable and important collection of raw produce, 69. Collection of gums and resins, 73. Samples of gutta percha, caoutchouc, and India-rubber, 73, 74. List of the chief gums and resins, 74, 76. Various descriptions of oils, 80-82. Large and highly-valuable collection of dye-stuffs and colouring matters, 83, 90. Little or nothing known of many of these dyes, 90. Several evidently rich in colour, *ib.* May be easily had in large quantities at comparatively low prices, *ib.* Large quantity of tanning materials in the collection, 92. List of the various substances, *ib.* Large and highly-interesting collection of raw cotton, 94, 95. Statistics relative to the cultivation, consumption, and exportation of cotton, *ib.* Chief varieties of cotton indigenous to India, 94. Good samples of hemp, 98. Interesting collection of vegetable fibres: description of these various fibres, 101, 102. Tables showing the comparative strength of various of these East Indian fibres, 101. Principal vegetable fibres contributed from India, 101, 162. Cork wood and similar light and porous woods, 103. Collection of the various woods, the most extensive in the Exhibition, 122. Remarkable for the large number of specimens, and their excellence, *ib.* Valuable practical information to be gained by their examination, *ib.* Importance of Dr. Wallich's collection, *ib.* List of the woods contributed by the Indian Government, 123-133. Samples of raw silk exhibited in the Indian Department, 162.
- Fine and illustrative specimens of horns and antlers, 163. Varieties of specimens of elephants' tusks, 164. Finest quality of pearls produced by the bivalve of the Indian seas, *ib.* Specimens exhibited, *ib.* Fine specimens of shells yielding mother-of-pearl, or nacre, *ib.* Fine examples of cameo shells and coral in the Indian collection, *ib.* Specimens of different kinds of isinglass in the raw state, from India, 166.
- Cotton Yarns, 347. General remarks on the exhibition of manufactured silks from the East Indies, 363. Observations relative to the manufacture of sealing-wax in India, 450. Specimens exhibited, 451. Remarks on the specimen of printed goods from Central India, 453. Cloth of real cashmere wool, 484. Various dresses exhibiting the Indian costume in gold tissue and embroidered, *ib.* Prize Medal awarded for articles in earthenware, 543. Carved furniture, &c., 550, 551, 552. Mosaics, 554. Inlaid work in pietra dura, *ib.* Stone carvings, 558. Specimens of marble, partly manufactured, 562. Number of striking and beautiful manufactures in marble sent by various persons from India, 564. Specimen of marine soap, from Madras, 610. Excellent stearic candles sent from Cossypos, 623, 630. Bleached-wax candles manufactured at Patna, 626. Steels for striking light, 636. Contribution of pine-apples, &c., 639. Artificial flowers and fruits, 642. Specimens of ethnographical models in clay and wood, 649, 650. Miscellaneous collection of mineral, vegetable, and animal substances used by the natives of India, in their various arts and manufactures, as well as in medicine, 650, 651. Desk, and several specimens of boxes, in ivory and sandal-wood, from Calcutta and Bombay, 653. Parasols and umbrellas from Mohrah-gabad and other parts of India, 657. Interesting specimens of decorated sticks, 664. Great variety and costly description of the Indian fans; specimens exhibited, 668. Interesting collection of pipes, 671. Description of some curious snuff-boxes, 675. Contribution of toys, 679. High character of the patterns and colours of the fabrics and stuffs of India, 693.
- East India Company, xxxv, 74, 53, 57, 58, 60, 62, 63, 69, 73, 77, 80, 83, 92, 94, 122, 133, 220, 392, 394, 378, 381, 451, 452, 484, 523, 554, 597, 600, 629, 678, 729, 739, 740, 850, 864.
- Eastman, 790.
- Easton and Ames, 182, 232.
- Eastwood, G., 439.
- EAU-DE-COLOGNE.—Generally considered the perfection of perfumery, 808. Excellent quality manufactured in Paris, 808. Four Parfums in the Exhibition, all going to be the original, 611. Various samples cited, 614, 615.
- Ebart Brothers, 442, 452.
- Ebbw Vale Iron Company.—Use made by the Company of the gases escaping from their smelting furnaces to supply a steam-engine, 8, 9, 189.
- Ebelmen, E. (Juror), xxx.
- Eberstaller and Schindler, 508.
- Ebony.—Dye stuffs extracted from, 87. Dyed samples, *ib.*

- Eggers, F., 386.
- EGYPT.—Observations on the Minerals exhibited by the Egyptian Government, 24. Natron obtained from lakes in Lower Egypt, *ib.* Discovery of sulphur adhering to limestone; importance of the discovery, *ib.* Specimens of gypsum, *ib.* Fine slabs of Oriental alabaster, *ib.* More millets than corn grown in Egypt, 53. Both copiously illustrated in the Exhibition, *ib.* Sample of wheat of admirable quality, *ib.* Barley good, *ib.* Rice abundant and of good quality, *ib.* The best cultivated in the Delta of the Nile, at Rosetta, *ib.* Fine samples of millets, 54. Beans from Egypt worthy of especial notice, *ib.* Samples of clover-seed, *ib.* Samples of oil-cake, 56. Samples of dates, 57. Specimen of the fruit of the doum palm, *ib.* Mustard-seed, 62. Large collection of aromatic seeds used as condiments, *ib.* Collection of raw produce containing good specimens of gum, 76. Series of oils, 83. Collection of colouring matters or dyeing stuffs, 90. Several good samples of cotton shown in the Egyptian collection, 95. Specimens of flax and hemp, 98. Fine specimens of the chief woods of Egypt, 153. Collection of horns of various animals, 163. Specimens of elephant's tusks from Alexandria, 164. Specimens of early essays in mixed fabrics, 374, 375. Chiefly the produce of artisans of other countries, 375. Present state of printing in Egypt, 406. Interesting display of specimens, 406, 407. Statistics of the paper manufacture of this country, 444. Specimens of printing, 452. Curious contribution of printed goods, 458. General remarks on the hardware manufactures, 496. Manufacture of glass in ancient Egypt, 521. Articles of glass contributed from, 536. Specimens of alabaster, 561. Large collection of excellent perfumery, 610. Crude manufactures of the wax candles, 626. Interesting contribution of confectionary and preserves, 638.

- alisier-wood writing-case, 654. Specimens of fans, 668. Description of some pipes and pipe-bowls, 672.
- Egypt, H. H. the Viceroy of, xxxv, 452, 536.
- Egyptian Government, The, 99, 561, 564.
- Ehrenseller, F., 470.
- Eichelsburg, H. D., and Co., 508.
- Richneb, G., 681.
- Elektron, Anten, 371.
- Eife, —, 336.
- Einsiedel, Count G., 504, 697, 707.
- Eippschleid, L., 78.
- Eisenbrandt, C. H., 333.
- Ekaternburg Imperial Polishing Manufactory (Russia), 566.
- Ekins, J., 559.
- ELASTIC CLOTHS—Specimens of, for gloving, 353.
- ELASTIC TISSUES—Specimens of, from France, very well made, 482. Reference to the process of manufacturing elastic tissues from caoutchouc or India-rubber discovered in France, specimens exhibited, 391, 592, 596.
- ELASTIUM—Samples of, 50.
- ELBA, ISLE OF.—See *Tuscany*.
- Electric Telegraph Company, 287.
- Eldon, Karl of, 685.
- ELDON, KARL OF, AND LORD STOWELL, STATUTE OF—Notice of, 685, 683.
- ELPHANTS' TUSKS.—See *Ivory*.
- ELECTRIC CURRENTS, REGULATOR.—Principles and purposes of the apparatus, 289, 290.
- ELECTRIC MAGNETS—Steel best suited for, is that employed to form the balance springs of watches, 293.
- ELECTRIC PRINTING TELEGRAPH.—Observations thereon, 287. Instruments exhibited, 289. Description thereof, 283, 290.
- ELECTRIC TELEGRAPHS AND APPARATUS.—Great variety placed in the Exhibition, novelty of construction, and important improvements in some of them, 245. Large number of ingenious contrivances applicable to every stage of electric telegraph communication, 283. Diligence of the Electric Telegraph Company in possessing themselves of numerous patents, *ib.* Fine collection exhibited by them, 283, 284. Firm standing obtained by the needle telegraph, giving conventional signals, 284. Recent improvements in the galvanometer, *ib.* Perfection of the needle telegraph, *ib.* Form of the needle most generally used, *ib.* History of the electric telegraph from its discovery, detailing the improvements effected, *ib.* Valuable inventions exhibited, *ib.* (Observations on the essential or fundamental points of an electric telegraph, firstly, the generation of the force, 284, 285. Secondly, the insulation of the force, 285, 286. Thirdly, the utilization of the electric force, 286, 287. Gutta percha the most valuable material for the insulation of the wires, 285. Great protection required for submarine wires, *ib.* Specimens of McNair's process of covering gutta-percha wire, *ib.* Construction of wrought-iron chain pipes, with swivel joints for protecting submarine wires, *ib.* Difficulties in the application of this plan, 286. Plan worthy of commendation, which has recently appeared, combining the leading essentials of a submarine wire, *ib.* Description of the principle of construction, *ib.* Electric signals by ignition, *ib.* Illumination shocks, *ib.* Principle of Bain's printing telegraph, *ib.* The galvanometer most successfully pressed into telegraphic service, forms the essential part of the needle telegraphs, 286, 287. Varieties of needle telegraph, 287. Printing, reading, and motive processes, *ib.* The French Government required signals to resemble those of the old semaphore; they have extensive codes, *ib.* Conventional signals preferred in England, *ib.* In Prussia every letter is pointed out, *ib.* Printing telegraphs preferred in America, *ib.* Reading instruments preferred in England, *ib.* Instruments that have obtained a standing are those whose action is direct, and not the result of any extraneous mechanism, *ib.* Description of the several telegraphs exhibited, 287, *et seq.* Specimens of cables designed for the protection of submarine telegraphic wires, 290. Electro-chemical telegraph by Bain, *ib.* Copying electric telegraph by Bakewell, *ib.* Mode of insulation of telegraphic wires, 290, 291. Observations with regard to wires suspended in the open air, 291. Substitution of a large open-mouthed cone, for the old form of cone, *ib.* Lines of rail where this system has been carried out, *ib.* Remarkable for their perfect insulation and good working order, *ib.* Improvements made with regard to the insulation of tunnel wires, 291. Mode adopted in tunnels, *ib.* Introduction of the compound needle by Mr. Walker, *ib.* Principle thereof, *ib.* Construction of bell transformers, *ib.* This application is not generally employed, *ib.* Advantages of the plan, which works well, *ib.* Varieties of turn plates constructed by Mr. Walker, *ib.* Description of the branch double turn plate, *ib.* In daily use, and acts well, *ib.* Lightning conductor for the protection of the telegraph and wires, *ib.* Graphitic battery, description thereof, 291, 292. Movable studs originated by Mr. Walker, 292. Simplicity of the contrivance; it works well, *ib.* Ringing handle for stations where the bell has a distinct wire to itself, *ib.* Object thereof, satisfactory performance, *ib.* Allan's patent needles described, *ib.* Great advantages gained by the combinations, *ib.* Description of, and observations on Dering's electric telegraph, 292, 293. Model of an electro-magnetic telegraph by Alexander, 293. Interesting as representing an early development of the idea of a needle telegraph, *ib.* Specimens of electric-conducting wires for subaqueous purposes, *ib.* All the submarine wires exhibited based upon McNair's wire, *ib.* Apparatus in connexion with the telegraph, *ib.* Gutta-percha pipes for protecting submarine wires, *ib.* Ingenious Prussian electric telegraph, *ib.* Details of construction, and working points in which it differs from other telegraphs, 293, 294. Arrangements provided for facilitating the transmission of electric force to long distances, 294. Swiss electro-magnetic telegraph, *ib.* Applicable to the ordinary use of telegraphs, *ib.* Alarm bell attached, readily put in and out of connexion, *ib.* Pair of electric telegraphs adapted for domestic purposes, *ib.* Electrical apparatus for ringing bells in large mansions, 294, 295.
- ELECTRIC TELEGRAPH ALARM BELLS—Description of Brett's patent, 293.
- ELECTRIC TELEGRAPH (Comic)—Description of, invented by — Smith, 293.
- ELECTRICAL CLOCKS.—See *Turret Clocks*.
- ELECTRICAL INSTRUMENTS.—Very few in number, 281. None adapted for determining the quantity of atmospheric electricity for meteorological purposes, *ib.* Great want of such an instrument, *ib.* Application of steam power to the production of electricity, *ib.* Gutta percha electrical machines, 291, 292. This holds out the hope of obtaining electricity of tension on a large scale by the application of steam power, *ib.* Description of this machine, 292. Gutta percha applied to such a purpose quite new, *ib.* Glass plate electrical machine, with both positive and negative conductors, *ib.* Delicate static galvanometer, *ib.* Description and object of this apparatus, *ib.* Harris's thermo-electrometer, *ib.* Simple and effective electrical machine for medical purposes, *ib.* Hydro-electric chain batteries, *ib.* Arranged to be very portable, designed to be worn on the body for the cure of chronic diseases, *ib.*
- ELECTRO-DYNAMOMETERS.—Weder's electro-dynamometer for measuring the intensity of galvanic currents, 313. General remarks thereon, *ib.*
- ELECTRO-MAGNETIC MACHINES AND APPARATUS.—Application of electro-magnetism to the movement of machines, 282. Discovery of Professor Oersted, *ib.* No great power yet obtained, *ib.* Many important difficulties overcome, *ib.* Objects exhibited, 282, 283. Description thereof, and observations of the Jury thereon, *ib.*
- ELECTRO-PLATING.—Application of sulphuret of carbon to electro-plating, 58. Important position in industry and commerce maintained by the electric process of gold-plating, silver-plating, &c., 511. Introduction of the process into England by Messrs. Elkington, Mason, and Co., *ib.* Remarks on the collection exhibited by this firm, 512. Specimens of electro-plating, after Elkington's patent, from France, 514.
- ELECTROTYPES.—Application of electrotyping to type founding, 411. This an improvement deserving mention, *ib.* Ingenious device for preventing the cast from adhering to the original plate, *ib.* Specimen exhibited, 412, 503. List of awards, 471.
- ELECTRUM—Works of Art in, 685.
- Elfröth, W. H., 312.
- Elhago Aly Elmajdoor, 33.
- Elhonnigne, Daveluynd, 447.
- Elkington, Mason, and Co., 511, 512, 732.
- Ellam, Jones, and Co., 45.

- Ellis, T., and Co., 496.  
**ELLIPSOID**.—Model of an, 313.  
**ELTROMMARE**.—Description thereof, 305.  
 Elliott and Heya, 197.  
 Elliott, J., 490.  
 Elliott and Son, 504.  
 Elliott and Sons, 218, 252, 254, 267, 273, 298, 301, 302, 305, 308.

 Eloffe, M., 28.  
 Elohn, Felix, 22.—See also *Safety Lamps*.  
 Eloisa, Don F. (Juror), xxix.  
 Elscot Colliery, Barnsley, 11.—See also *Coal*.  
 ELVAN STONE.—See *Porphyry*.  
 Elsevir, —, 406.  
**EMAIL ORNAMENT**.—The process of Baron du Tremblay for glazing porcelain, stamped with designs so called, described, 542.  
**EMBOSSED BOOKS FOR THE BLIND**.—See *Blind, Apparatus, and Books for teaching the*.  
**EMBOSSED CALICO**.—See *Bookbinding*.  
**EMBOSSED (REPOUSSÉ) WORK**.—Remarks on the principal contributions in this section, 693.  
**EMBROIDERY**.—Remarks on the progress made in the manufacture of English, Irish, and Scotch sewed muslin embroidery, 464. National importance of this branch of industry evidenced by the number of exhibitors and the varied merits of their productions, *ib.* Retrospective view of the trade, *ib.* First, decided impulse given to the manufacture by the social revolution wrought among the Scotch and Irish peasantry by the introduction of machinery for linen yarn spinning, *ib.* Great benefit resulting to the manufacture by the substitution of lithography for the old, tedious, and expensive system of block printing, *ib.* No great increase in the amount of employment in Ayrshire and other places in Scotland; but in Ulster and the West of Ireland the embroidery trade almost universal, and the principal support of the female population, *ib.* Variation in the wages paid for working according to the prosperity or otherwise of the trade, 464, 465. Estimated amount annually turned over in the manufacture, 465. The market for these industrial productions daily enlarging, both at home and in the colonies; large quantity also taken by the United States, *ib.* Increasing sale in the continental countries, notwithstanding the prevalence of hostile tariffs, *ib.* The home embroidery trade well but not more than adequately represented in the Exhibition; nature of the articles exhibited; foreign productions exhibited, *ib.* Future prospects of the trade decidedly favourable, *ib.* Government schools of design tending largely to develop its growth, *ib.* Embroidery work of every description of very ancient date in France, *ib.* Number of females to whom it gives employment, *ib.* This branch may be placed under two heads, viz., embroidery in colours and fancy work and white embroidery, though these may be subdivided into several parts, *ib.* Lyons and Paris the chief seats of embroidery in colours and fancy work; great variety of tasteful articles manufactured, *ib.* Great extent to which white embroidery is carried on; principal articles manufactured; departments in which chiefly carried on, 466. Great extent to which embroidery is carried on in Switzerland; beautiful specimens produced; statistics relative to this branch of manufacture, 467. Exhibition of embroidery from Saxony, Spain, and Hamburg limited, *ib.* Few articles of embroidery from Austria, and those not suited to the British market, *ib.* List of exhibitors to whom awards were given, and nature of the exhibits, 469, 470, 471, 472. Embroidered ball dress, 492. Specimens of embroidered dresses from Tunis, Turkey, Greece, India, and China, 483, 484. Designs for embroidery, 695.—See also *Designs for Shawls and Yarns*.  
**EMERALD**.—Fine emeralds in the veinstone, from the Muso Mine, New Grenada, 32. Fine specimens of, from the Mayo Mines, New Grenada, 33.  
**EMERY**.—Samples of, from Naxos (Greece), 33.  
**EMERY PAPER**.—Excellent specimens of emery paper and emery cloth, 682.  
 Emmerich and Dörflinger, 322.  
 Ennskillien, Earl of, 581, 582.  
 Emory, T., 581, 163.  
**ENAMELLED WARE**.—Specimens of, 503, 504, 506, 507, 508, 509.  
**ENAMELS and ENAMEL PAINTING**.—Merit in design and colour of the Indian enamels, though for the most part coarse, 511. Specimens of enamels, 516. Specimens of enamels from Switzerland, 517. Specimens of enamels in the British Department, and from France, Hesse, and Switzerland, 520. Notices of the principal works in enamel on porcelain and metal, 687, 688, 694. Observations on a miniature of Charles IX., firing upon the Huguenots, by Westlich (Bavarian Department), 699. Notices of the contributions in the French Department, 702. The like of works in the Austrian Department, 703. Remarks on miniatures on enamel sent from Saxony, 699.  
**ENCAUSTIC PAINTING and FRESCO**.—Notices of the principal works in, 688.  
**ENCAUSTIC TILES**.—Many and important improvements in encaustic tiles, introduced by Mr. Minton, 554. Variety, beauty, and excellence of the encaustic and mosaic tiles manufactured, 577.  
 Enfert, D', Brothers, 165.  
 Enfer, E., 176.  
**ENGAGEMENT REGISTAR**.—Circular slate, with divisions for each day in the month, 315. Use thereof for registering engagements, &c., *ib.*  
 Engel, F., 313.  
 Engel, J., 686, 704.  
 Engeler, H. M., and Son, 600.  
 Engelmann, —, 703.

**ETHNOGRAPHICAL MODELS**.—Description, under this title, of a few collections of small figures illustrative of foreign costumes and manners, 648. High interest which these models possess, apart from their merit as works of art, *ib.* These models confined to one exhibitor in the British Department, and to the Maltese, Spanish, and Indian Sections, 648-650. Remarks on the beautiful group of wax figures exhibited in the Fine Art Court, by N. Montanari, illustrative of

- Mexican town and savage life, 649, 650. Remarks on the figures modelled in clay and plaster, and carved in wood, exhibited in the Indian Court, 649. Figures from Malta modelled in wax, *ib.* Remarks on the models contributed by Spain, illustrative of the dress and manners of that country, *ib.* List of awards, 650.
- Etienne, St. (France).—Test of M. Chuard's gaseoscope in the coal mines of, 296.
- Etteib, Mehse, 57.

- FILICES**.—Specimens of various descriptions, 489, 491.
- FILIGREE WORK**.—Filigree work from India as perfect as that from China, 511. Specimens of, from Malta, 520. Specimens of filigree work from Genoa, 517.
- FILTERS**.—Observations on Ransome and Co.'s filters, 576.
- Finch, J., 541.
- Finch and Willey, 208.
- FINE ARTS, MATERIALS AND PROCESSES APPLICABLE TO THEM**.—Notices of the principal materials and processes applicable to the Fine Arts generally, viz.:—1. Encaustic painting and fresco, 688.—2. Ornamental printing, chromo-typography; gold-illuminated typography, &c., *ib.*—3. Lithography (black), chromo-lithography, gold-illuminated lithography, &c., *ib.*—4. Zincography or other modes of printing, *ib.* Other processes, *ib.*
- FINGER PLATES**.—Protean stone or imitation ivory plates, 638. Specimens exhibited, 650. See also *Door Plates*.
- Finlaison, W., 95.
- Finlayson, Bousfield, and Co., 370, 371.
- Finlayson, F., and Co. 348.
- Fino, J., 600.
- Fiolet, L., 29, 672, 673.
- FIRE ANNIHILATORS**.—Portable machine, by Phillips, for extinguishing fires by chemical application, 297, 298. Mixture used, 298. Detail of experiments tried, and results, *ib.* Principle of action, *ib.* Unattended with any practical difficulties in its use, *ib.* Great advantages on ship-board, *ib.* Annihilator designed by means of a discharge of gas to extinguish fire, *ib.* The Jury had no opportunity of examining this machine, *ib.*
- FIRE ARMS**.—See *Guns, &c. Iron*.
- FIRE-BRICKS**.—Samples of fire-bricks exhibited by Messrs. Cowen and Co., Blaydon Burn, Newcastle-on-Tyne, 584. Great extent of their works, *ib.* Other samples of fire-bricks exhibited, 584, 585. Specimens of glazed fire-clay bricks, 586.
- FIRE-CLAY**.—Specimens of, 23. Articles from Baudoir, Belgium, made of refractory clay, *ib.*—See also *Clay, Refractory*.
- FIRE-CLAY GOODS (glazed)**.—Several exhibitors of glazed fire-clay goods, some of them nearly approximating to the manufacture of porcelain, 586. Objects exhibited and awards, *ib.* Specimens of from Prussia and from the United States, *ib.*—See also *Fire-Bricks*.
- FIRE-ENGINES**.—Carriage fire-engine, from Canada, to be worked by forty men; ingenious construction thereof; great power, &c., 179. Fire-engine without a carriage, and a marine fire-engine from France; description thereof, *ib.* London Brigade carriage fire-engine, worked by twenty-eight men, *ib.* London Brigade carriage fire-engine to be worked by thirty men, *ib.*
- Table showing the relative power of these various engines, 179, 180.
- Firmin and Sons, 504.
- Firth and Sons, 359.
- Fisch Brothers, 471.
- Fischer, A., 21, 489, 504, 698, 788.

- Fishers and Robinson, 468.
- FISHING BOATS**.—Models of various descriptions of, 218.
- FISHING TACKLE, &c.**.—Specimens of deep sea-lines and chaps, 218. Articles under this head almost entirely of British manufacture, 677. Angling very little pursued in any other countries, *ib.* Number of Exhibitors, *ib.* Merits of many articles could not be completely tested within the limits of the Exhibition, *ib.* Creditable execution and high finish of the articles contributed, *ib.* Improvements which combine practical utility with excellent workmanship, effected by Little and Co., 678. Multiplying reel of ingenious arrangement, *ib.* Improved construction of ferules, *ib.* Fine lines for float-fishing from France, *ib.* List of Awards, *ib.*
- Fitch, F. C., 121.
- Fitter, J., 472.
- Fizeau, —, 276.
- Fitzmaurice, Hon. Capt., 220.
- Fitzwilliam, Earl, 11.
- Flacheron-Hayard, 279.
- FLAG-STONES, PAVING-STONES, &c.**.—Classification of the British paving-stones exhibited, 554, 555. Yorkshire flags of great importance in England, 555. Objects exhibited; particular remarks thereon, awards, &c.; models of paving-stones from Belgium, *ib.* Pavement exhibited by M. Desanges, of Paris, manufactured of a stone called Pierre de Tonnerre, *ib.*
- Flaissier Brothers, 473, 475.
- FLANDERS**.—Samples of Flemish flax, meritorious on account of extreme fineness, 370, 374.
- FLANNEL (COTTON)**.—See *Cotton, Manufactures*.
- FLANNELS**.—Wales the original place where this article was made, 358. Welsh flannels still held in high repute, *ib.* Chiefly manufactured in Wales by hand labour, *ib.* Flannels more extensively made in Lancashire than in any other part of the world, *ib.* Machinery more generally used there than elsewhere, *ib.* Saddleworth and its neighbourhood remarkable for the manufacture of Saxony flannels, *ib.* A few white and dyed flannels made in the West of England, *ib.* A few low flannels and coats, commonly called Galways, made in Ireland, *ib.* Production of a few common and low flannels in Canada, *ib.* Considerable merit in the fine light flannels made in France, *ib.* Good assortment of flannels from Belgium, *ib.* The few flannels exhibited from America of good make and finish, *ib.* List of contributors, specimens exhibited, and prizes awarded 358, 359.
- Flather, B., 490.
- FLATTING ROLLERS**.—Highly-finished rolling-mill, adapted for a mill from Prussia, 201.
- Flaud, H. P., 172.
- Flavel, J., 439.
- Flavel, S., 504.
- FLAX**.—Samples of flax from New Zealand, prepared from the leaves of the *Phormium tenax*, 101.
- FLAX-DRESSING MACHINERY**.—The flax manufacture represented in the British Department with the same spirit

- and completeness as the cotton, 136. Machines exhibited, *ib.* No machinery relating to the flax manufacture in the Foreign Department, *ib.*
- Flax, Society for Cultivation of (Ireland), 69.
- FLAX AND HEMP.—Gradual increase in the quantity of flax imported into Great Britain for many years, 96.—Great efforts made during the last few years to extend and improve the manufacture of flax in various parts of the world, *ib.* Flax cultivated in various parts of the British Empire, chiefly in Ireland, *ib.* Marked improvement which has taken place in the quality of the flax itself, *ib.* Chiefly to be traced to the efforts of the Royal Society for the Promotion and Improvement of Flax in Ireland, *ib.* Considerable impetus given to the cultivation of flax by the introduction of the late R. B. Schenck's new process of steeping; detail of this process, 96, 97. Remarks on the different samples and specimens of flax and hemp from various countries; names of exhibitors, and exhibits for which awards have been granted, 97–100. Valuable collection shown by the Royal Society for Improving and Promoting the Growth of Flax in Ireland, 97. Useful and complete series of the principal commercial varieties of flax and hemp met with in the English market, *ib.* Numerous specimens contributed by P. Clausen, illustrating his patent process of making flax-cotton; detail of the process, 97, 98. Samples of various descriptions of flax and hemp exhibited in the British Department, 98. Good samples of hemp from India, *ib.* Samples of Canadian flax, *ib.* Good specimen of flax from Van Diemen's Land, *ib.* Few small samples of flax and hemp of fair average quality from the United States, *ib.* Samples of strong and well-prepared flax from Moravia, Austria, 99. Excellent samples of flax and hemp from Belgium, *ib.* Specimens of flax and hemp in the Egyptian collection of raw produce, *ib.* Very superior flax and hemp contributed by French exhibitors, *ib.* Samples of hemp and flax from the Zollverein States, *ib.* Specimens of both flax and hemp from Portugal, *ib.* Specimens from Rome, *ib.* Large and important series of samples of flax and hemp shown in the Russian collection of raw produce; several of the specimens capital, *ib.* Good samples of flax and hemp exhibited in the Spanish Department, 99, 100. Samples of water-retted flax from Sweden, 100. Six samples of flax and two of hemp exhibited in the Turkish Collection, *ib.*
- Flax and Hemp Manufactures (Class XIV.)—Tabular classification of objects in the Exhibition into which this Class is divided, xv. List of Jurors appointed for this Class, xxviii. List of exhibitors in this Class to whom Prize Medals have been awarded, lxxvii. The like of those in whose favour money awards have been granted, *ib.* And of those of whom Honourable Mention is made, lxxvii, lxxviii. Observations on the progress and position of this important branch of manufacture, 369. Specimens of linen cloth from Egypt, *ib.* These are much surpassed by the European manufacture, *ib.* Cloth made from "China-grass," *ib.* This article a species of flax, *ib.* Handkerchiefs and fine line made from the material, *ib.* Northern continental nations of Europe long celebrated for the production of flax and its manufactures, *ib.* Superiority of those of Flanders, Russia, and Germany, *ib.* Great Britain and Ireland not much noted for the manufacture of linens until the invention of the "spinning-jenny," *ib.* Advantages now possessed by Great Britain in the production of many descriptions of mill-spun yarns and manufactured goods, *ib.* Use of steam power becoming more general on the Continent, *ib.* Ireland is producing both lawns and handkerchiefs very extensively, *ib.* Scotland pre-eminent in low-priced goods of the qualities extensively used at home and abroad, *ib.* Weaving by power-loom coming into very general use in Scotland, and also on the Continent, *ib.* Jacquard loom now much used in making damasks, *ib.* England produces large quantities of mill-spun yarn from flax, *ib.* Texture and durability of linens contributed by English exhibitors deservedly celebrated, *ib.* Division of this Class into two sections:—1st. Flaxen fibre; and 2nd. Woven fabrics, 369, 370. No specimens of prepared flaxen fibre worthy of particular comment, 370. No improvement in the management of flax for manufacturing purposes, *ib.* Samples of Flemish flax meritorious on account of extreme fineness, *ib.* Very few specimens of good flax from Ireland, *ib.* Flax rated on the hot and cold-water principles, *ib.* Specimens of English flax of sound quality, tough and good, *ib.* Excellent assortment of prepared flax from Russia, 370. Remarks on the preparation of flax, by M. Clausen's process, *ib.* Specimens of China-grass in different stages of preparation, dressing, and manufacture, *ib.* Observations on the yarns exhibited, *ib.* Little competition in mill-spun yarns, *ib.* Ireland not adequately represented, *ib.* Specimens from Scotland of fair quality, *ib.* Excellent display of yarns from Belgium and Prussia, *ib.* Samples of linen lacing-threads of great variety and general merit, *ib.* Collection of cordage, &c., very limited, *ib.* Countries contributing woven fabrics, *ib.* Samples of canvas, sailcloth, sacking, carpeting, &c., of great excellence, 370, 371. General excellence of the woven fabrics, heavy and low-priced linens; huckabacks, crash, duck, ticks; low sheetings, brown and fancy-striped linens, dowlas, Holland, Osna-burgs, &c., 371. Extensive and varied exhibition of plain linen of all widths, bleached and unbleached, of excellent quality, *ib.* Observations on the general excellence of the drills, damasks, and twilled linens exhibited, *ib.* Specimens of cambrics, lawns, and printed linens for dressers, &c., *ib.* Management of flax and its products involves a great amount of skill and labour, *ib.* Satisfaction expressed at the excellence of the textile fabrics contributed, *ib.* No Council Medals recommended in this class, *ib.* Awards of Prize Medals, Honourable Mentions, and Money Premiums, 371–373.
- FLAX AND HEMP, SUBSTITUTES FOR.—Large number of fibrous substances used as substitutes for flax and hemp, shown in the various collections of raw produce, 100. Nature of these substances, specimens and samples exhibited; awards and names of exhibitors, 100–103.
- Flaxman.—Influence of his works on English art; their execution hardly equal to the conception, 692.
- Flechev, J. B., 432, 434.
- FLILECY HOSERY.—Samples of, having special reference to medical uses, 473.
- Feischmann, J., 679.
- Fletcher, —, 308.
- Fletcher, H., 682.
- Fletcher, H. T., 372.
- Fletcher, J., 62.
- Fletcher, T., 221.
- Fleury, J. F., 76.
- FLINDERS ISLAND.—Good samples of the Xanthorrhoea resins from, 90.
- FLINT GLASS.—Use made of the black flint in the manufacture of, probably gave rise to the name, 524. Great antiquity of flint glass or crystal, 528. When first introduced into England, *ib.* Results of the patent granted to Sir Robert Mansell in 1635; adoption of a metallic flux, *ib.* Works for its manufacture in France, *ib.* General allusion to the contributions in this from Bohemia, &c., *ib.* See also *Optical Glass*.
- FLOATING LIGHTS.—Revolving floating-lights, 208. These lights are in use and work well, *ib.*
- FLOCK-PAPER.—See *Paper-hangings*.
- Flockenhans and Co., 158.
- Flüge, G., 673.
- Flood, J., 35.
- FLOOR-CLOTHS.—List of awards of Prize Medals and Honourable Mentions for floor-cloth, 475. Specimens exhibited, *ib.* Principles on which designs for floor-cloths should be regulated, 729. Remarks on the examples contained in the Exhibition, 729.
- FLOORING, INLAID.—See *Inlaid Floors*. *Mosaic Pavements*.
- Florange, jun., 551.
- Floreffe, Société de (Belgium), 45.
- FLORENCE COURT (Ireland).—Account of the Florence Court tile and pottery works, 582.
- Flores Calderon and Co., 76, 77.
- Florimond, —, 644.
- FLOUR.—Observations relative to flours and the various preparations therefrom, 54. Samples of flour the produce of the United Kingdom, *ib.* Few samples exhibited, *ib.* Samples of flour from Canada, *ib.* From the Cape of Good Hope, *ib.* From Australasia, 54, 55. From France, 55. From Russia, *ib.* From Austria, *ib.* From Bavaria, 55. From the Netherlands, *ib.* From Spain and Portugal, *ib.* From the United States, *ib.*
- FLOUR-DRESSING MACHINES.—Specimens of machines for cleaning grain and separating the finer particles from the coarser after grinding, 202.
- FLOUID-STEAM-MILL COMPANY (Vienna), 55.
- Flower, —, cxx.
- FLOWER-POTS.—Collection of flower-pots of very admirable

- manufacture, and remarkable both for colour, smoothness, and style, 582.
- FLOWER-STANDS**.—Specimens of, in iron and brass, 508, 505. In silver, 520.
- FLOWERS, ARTIFICIAL**.—Wax flowers and artificial flowers made of other materials, considered under this head, 642. Wax flowers, from their fragility, chiefly restricted in their application to purposes of decoration, *ib.* Less difficulty in making them than in those made of cambric, feathers, or similar materials, *ib.* Important points in the manufacture of the latter description of flowers, viz., durability, the advantageous application of varied materials, and finally, cheapness of production, *ib.* Remarks on the contributions from various countries, namely, Austria, Brazil, the British colonies, and the Channel Islands, France, Portugal, Sweden, &c., and also in the exhibits in the British Department of the Exhibition, 642-644. Classification of the exhibitors according to the various countries; list of awards, names of exhibitors, and articles exhibited, 644-645.
- Flueck, J., 551.
- FLUOR SPAR**.—Remarks on the Derbyshire manufacture of fluor spar; objects exhibited, 566.
- FLUTES**.—Improvements effected in the flute by Boehm of Munich, 332. Also by Mr. J. Clinton, *ib.* Other flutes exhibited, 334.
- FLY-WHEEL**.—Model of a compensating fly-wheel of ingenious construction, 173.
- FODDER**.—Observations on the samples of fodder exhibited, 54.
- Foesa, G., 160, 600.
- Fogarty, J., 508.
- Fogelberg, —, 706.
- Fogliardi, T. B., 162.
- Foley, J. H., 683, 692.
- Folkard, J. W., 403.
- Follet, N., 574.
- Fondet, —, sen., 508.
- Fons, J. P. de la, 504.
- Fontaine, F., 365.
- Fontaine, P., 504.
- Fontaines-Baron, M., 172.
- Fontaine-Moreau, —, de, 195-197.
- FOUNTS**.—Font exhibited by Margetts and Eyles a fine specimen of sculpture in Caen stone, 557. Various marble fountains exhibited, 564.
- Fontyne and Bortor, 277.
- Font-Bod, Viscount de, 57.
- FOOD, SUBSTANCES USED AS (Class III.)**.—Tabular classification of objects in the Exhibition into which this Class is divided, vi, vii. List of Jurors and Associates appointed for this Class, xxvi. List of exhibitors in this Class to whom Council Medals have been awarded, xli. The like of those to whom Prize Medals have been awarded, xli-xliii. And of those to whom Honourable Mention is made, xliii-xlv. Course pursued by the Jury of this Class in conducting their inquiries, 51. Observations respecting the various items falling within the scope of these inquiries, viz.: Common European cerealia, 51-53. Cerealia rarely cultivated in Europe, 53. Millet and other small grains used as food, 53, 54. Pulses and cattle food, 54. Grasses, fodder, plants, and agricultural roots, *ib.* Flours and preparations of the foregoing classes, 54, 55. Oil seeds and their cakes, 55, 56. Hops, 56. Dried fruit and seeds, 56, 57. Tea, 57, 58. Substitutes for tea, 58. Coffee, cocoa seeds, nibs, &c., 58, 59. Chicory and other substitutes for coffee, 59. Fermented liquors, 59, 60. Tobacco, 60, 61. Spices and condiments, vinegar and pickles, 61, 62. Starches, 62. Sugar, 62, 63. Preserved alimentary substances, 63-65. Portable soups, concentrated meats, &c., 65. Cariac, trepang, &c., 65, 66. Honey, 66. Preparations of blood, 66, 67. Isinglass, 67.
- Forbes, H. (Juror), xxvii.
- Forbes and Hutchinson, 379.
- FORGE-PUMPS**. See *Pumps*.
- Ford, D., 536.
- Fordham, —, 54.
- Fordham and Sons, 581.
- FOREIGN FORGES**. See *Forges*.
- FORGES**.—Forges from Plan, Bohemia, 21. Portable forges, 169. See also *Iron and Steel*.
- FORGING MACHINES**.—Specimens of, 200.
- Formento, L., 367.
- Forrer, A., 388.
- Forrest, J., and Sons, 468, 483.
- Forster, F., and Co., 352.

- FRANCE**.—Apparatus of M. Berard for separating foreign substances from coal, 5. Brass manufactures from the works of Messrs. Rivant, of Givet, Ardennes, *ib.* Mineral industry of France at the present time almost entirely concentrated in the working of coal and the production of iron, 24. Evidence existing that, notwithstanding this, its territory is not less rich in metaliferous deposits than several other countries of Europe celebrated for the prosperity of their mines, *ib.* Most of the mines in France were worked on an extensive scale during the dominion of the Romans, and still later under the feudal lords, *ib.* Diminution of these workings when the power of these lords were reduced under a central authority, *ib.* Finishing stroke given to this source of industry by the revolution of 1793, *ib.* Few metal mines now in activity; small and unimportant produce thereof, *ib.* Happy contrast formed to the workings of metal-mines, by the working of coal and the production of iron, *ib.* General remarks on the working of coal in France, *ib.* General remarks on the production of iron, 24, 26. Specimens of coal and iron exhibited, names of exhibitors and awards, 23, *et seq.*
- Production of ultramarine in France, number of manufacturing factories of that article, 41, 42. Present condition of the white lead manufacture in France, 42.
- No bulk of corn exhibited by France, 52. The samples exhibited chiefly intended as illustrations of manufacturing processes, *ib.* Fine samples of rice, 53. Extensive collection of flours and preparations therefrom contributed from France, 55. Reference to the magnificent Gruaux wheat-flour of M. D'Arblay, jun.; peculiar process, by which prepared, *ib.* The contribution of

- dried fruits from France small, except of fruits preserved with sugar, 56. Extensive collection of chocolates, 59. Samples of coffee, *ib.* Mustards, 62. Samples of aromatized vinegar, *ib.* Samples of starch and starch-gum derived from different sources, 78.
- Samples of oils, 83. Colouring matters or dyeing stuffs, 90. Very superior flax and hemp, 99. Samples of cork both in the rough state and when cut by De Bosisow's patent machinery, 103. Specimens of woods, 153. Interesting specimens of preserved woods, *ib.* Illustration of Dr. Boucherie's process, *ib.* Exhibit of wool from France, 159. Specimens of raw silk and cocoons, 161, 162. Gelatines and glues of superior quality, 165. Specimens of albumens, 166. Animal charcoal, bone-black, and ivory-black, *ib.*
- Double turbine, an hydraulic machine of frequent use in France but almost unknown in England, 172. Description thereof, *ib.* Double pump with large cylinders and six-inch valves mounted on carriage to be used in excavations, 174. Carriages, viz.: a buggy drag and a town berlin, 193.
- Cotton spinning machinery, 195. "L'Epurateur" for opening and cleaning cotton, *ib.* Spinning-frame, *ib.* Woollen manufacturing machinery, 196. Fulling machine for cloth, *ib.* Shearing machine, *ib.* Jacquard-loom, employing paper instead of card, 197. Stocking or hosiery-frames, *ib.* Circular hosiery-frames, *ib.* Hosiery machines, *ib.* Machine for manufacturing paper, 198. Machine for numbering and printing tickets, *ib.* Heekles, *ib.* Rollers for spinning machinery, 199.
- Card clothing machine, *ib.* Forging machine, 200. Machine for making nails, 201. Press for bending and cutting hooks and eyes, *ib.* Machine for planing and moulding wood, *ib.* Brickmaking machine for hollow bricks, 202. Dressing machine for millstones, *ib.* Chocolate-making machine, *ib.* Kneading machine, *ib.* Apparatus for grinding and preparing potatoes, *ib.* Vacuum sugar apparatus, 203. Wire cloth for paper-makers, 204. Machine for engraving cylinders, *ib.* Machine for mincing meat, *ib.*
- Agricultural implements, 226, 238, 242.
- Improvements introduced by France in naval architecture, 210. Number of steam vessels built at Creuzot for the Rhone in 12 years, 215. Improved capstan adapted to the use of chain cables, 217. Objects connected with ship building from France, *ib.* Apparatus for saving life, 219. General remarks on the manufacture of small arms, 220. This country more advanced in the manufacture than any other nation, *ib.* Specimens of small arms, 221.
- Nautical instruments of various descriptions, 252, 253. Surveying instruments, 254. Dividing machines, 254. Balances of various constructions, 258, 259. Coin-weighing machine, 261, 262. Air-pumps, of different construction, 263. Telescopes, 264. Microscopes, 267. Achromatic glasses for telescopes, 269. Optical glass, 270. Lenses and prisms, 271. Superiority of the spectacles exhibited in the French Department over those in the British, 273. Description of the various cameras exhibited in the French Department, 275. Specimens of photographic glass, *ib.* Daguerreotype pictures, 278. Electrical instruments, 289. Chemical apparatus, 290. New safety lamp, *ib.* Assay furnaces and crucibles, *ib.* Galvanic battery, 297. Barometers of original construction, 301. Description of an instrument called a manometer, *ib.* Series of delicate and accurate thermometers, 302. Description of a planimeter, 304. Dynamometers, *ib.* Models of crystals, 305. Pentagraphs, 306. Uranographic apparatus, 307. Georamas and panoramas, 308. Calculating machines and rules, 310, 311. Printing machine for the blind from, 311.
- Harps exhibited by Mr. Erard, 330. Harps by Domesy, *ib.* Bow or stringed musical instruments, *ib.* Brass musical instruments, 331. Wind instruments, 332. Harmoniums à Percussion, *ib.* Melodiums, *ib.*
- Collection of turret clocks and ornamental house clocks, 338, 339. Watches and watch-making machinery, 340. Collection of surgical instruments, 345. Anatomical models of great excellence, 345, 346.
- Cotton yarns, 347. Various specimens of cotton manufactures from France, 348. Woollen cloths; principal seats of manufacture thereof, 351, 352. Worsteds stuff goods, 356-358. Considerable merit in the fine light flannels made in France; specimens exhibited, 358. Large proportion of merino yarns exhibited, 359. The mule in universal use on the Continent, for spinning short-stapled wools, 359. This the chief cause why the French have been able to take the lead in merinos and mousseline-de-laine fabrics, *ib.* Samples of yarns, 359-361. Remarks on the silk manufacture of France, 363. Specimens of ribbons, 364. Specimens of manufactured silks, 365-368. Flax and hempen manufactures, 371, 372. Large quantities of mixed fibres produced in France, 374. Particularly successful in the finer and richer descriptions, *ib.* Objects exhibited, 375, 376. Specimens of shawls of various descriptions, 379-381.
- Feather ornaments, feather screens, and feather brooms, 387. Specimens of perukes and ladies' fronts, 388. Horse hair and "vegetable silk" damask, *ib.* Various kinds of leather, 390-3-3. Parchment and vellum, 394. Saddlery and harness, *ib.*
- History of printing in France; specimens of typography exhibited, 404-406. Specimens of type founding, 410. Specimens of stereotyping, 412. Apparatus and books for teaching the blind, 423. Specimens of book-binding, 425. Specimens of vellum-bound ledgers and account books, 426. History and statistics of the paper manufacture of France, 432, 433. Specimens contributed, and list of makers, *ib.* Specimens of playing cards, 447. Samples of drawing boards, *ib.* Envelopes, 448. Fancy stationery articles, lace-papers, *ib.* Enamelled papers, *ib.* Scrap-books, 449. Portfolios, *ib.* Albums, *ib.* Pocket-books, 450. Cartonage-paper boxes, *ib.* Blacklead pencils, *ib.* Sealing wax, 451.
- Specimens of printing and dyeing fabrics, 457, 458. Causes of the superiority in the finer classes of French goods, 457, 458. Articles exhibited, 458, 459. Lace and embroidery, 465, 467, 470. Upholstery, fringes, trimmings, and coach laces, 470. Carpets and floor-cloths, 474, 475. Specimens of hosiery, 478. Boots and shoes, 479, 480. Kid and other gloves, 481. Specimens of hats, *ib.* Shirts, cravats, braces, corsets, and other wearing apparel, 482, 483.
- Cutlery and tools, 489-491. General hardware, 495. Works in the precious metals and articles of jewellery, 513, et seq., 520. Description of the jewels manufactured by G. Lemonnier, of Paris, for the Queen of Spain, 515. Works in gilt bronze, 515, 516, 519. Relief of the introduction of the glass manufacture into France, 523. Important privileges granted by the Government with the view of inducing persons of capital and education to enter into the business, *ib.* Modifications of these privileges from time to time; their injurious effect, *ib.* Introduction of the cylindrical process of glass-blowing into France, 525. Particulars as to the manufacture of plate-glass in France, 527. The like as to flint-glass, 528. Articles of glass contributed from France for which Medals, &c., have been awarded, 536, 537. Remarks on the contributions of France to the Ceramic Department of the Exhibition; Medals, &c., awarded, 542. Considerable reputation acquired by ornamental cabinet work in the time of Louis XIV., 544. The manufacturers have since continued to produce works of great beauty, *ib.* Art of inlaying woods greatly advanced in the last century by Reissner, *ib.* Invention of bulb work by M. De Boule, *ib.* Specimens of marqueterie and mosaic inlay, 545, 550, 551, 552. Carved Furniture, 545, 550, 551. Billiard tables, 546, 550. Cabinets with mechanical action, 546, 550, 551. Painted window-blinds, 546, 551. Wax painted cloths, 546, 552. Perfection of the manufacture of paper-hangings in France, 546. Many important improvements introduced in that country, *ib.* Beautiful specimens exhibited, 548, 550, 551, 552. Considerable success obtained in the manufacture of japan ware, 549. Employment of carton-pierre for architectural decoration; ornaments and decorations in this material, 549, 550. Revival of the manufacture of embossed leather hangings, 550. Process of manufacture, *ib.* Specimens exhibited, 550, 551, 552. Mirror and other frames, 550, 551. Articles of furniture, 550, 552.
- Works in terra cotta, 554, 583. Pavement manufactured of a stone called Pierre de Tonnerre, 555. Objects constructed in Tonnerre stone, 558. Slates, rough and manufactured, 559. Interesting collection of marbles, 561. Marble chimney-pieces, 561. Miscellaneous objects in marbles, 564. Specimens of inlaid works in marble, 563. Articles in malachite, 571.
- Specimens of hydraulic and other cements, 574. Specimen of asphalt adopted for pavement, 576. Specimen of "metallic sponge," a curious and ingenious com-

- trivance for a pavement, 577. Machine for manufacturing tubular bricks, 580. Specimens of a new kind of tile, 581. Porcelain chimney-pieces, 587.
- India-rubber manufactures; specimens of leather-soled India-rubber shoes, 595, 596. Application of gutta-serena to the manufacture of surgical instruments and apparatus, 598. Specimens of turning and carving in ivory, 599. Tortoiseshell and horn combs, 600. Brushes, *ib.* Manufactures in cork, 601. Soaps and perfumery, 610, 613, 615. Statistical account of the manufacture of stearic candles in France, 623. Specimens of stearic and other candles, 629. Blacking and varnish, 631. Sliding-boxes and taper-stands for lucifer matches and amadou, 635. Preserved fruits and confectionery, 638, 639, 641. Cambric flowers, &c., 642, 643, 644, 645. No contributions of stuffed animals from France, 647. Remarks on the French cabinet war, 654, 655. Account of the manufacture of parasols and umbrellas in France, 658, 659. Specimens exhibited, 661. The like as to walking-sticks, 665, 666. Account of fan-making in France, 667, 668. Specimens exhibited, 669. Extensive manufacture of clay-pipes, 672. Specimens exhibited, 673. Collection of snuff-boxes, 676. Statistical account of the toy trade of Paris, &c., 679. Specimens exhibited, 680, 681.
- Great encouragement bestowed by the French, as a nation, on the fine arts, 700. Protection afforded by the Government, *ib.* Beneficial results arising therefrom, *ib.* Notices of the principal works of art contributed by France: viz., Sculpture on a large scale, 700, 701. Sculpture on a small scale, in metal, 701. Sculpture in ivory, *ib.* Sculpture in wood, *ib.* Process of M. Collas for reducing sculpture by machinery, 702. New process of painting, *ib.* Enamels on porcelain and on metal, *ib.* Painting on glass, *ib.* Inlaid works in metal, *ib.* Designs for woven and printed fabrics, *ib.* Designs for painted windows, *ib.* The Government Manufactory of Gobelins and Beauvais tapestry, *ib.* Lithography, 703. Lithocromy, *ib.* Printing in colours from wood blocks, *ib.* Designs generally and works in ornament, *ib.* Castings in bronze, 706, 707.

Model of two furnaces, showing the operation, *ib.* Power of this gas in working a 60-horse engine without other fuel, 9. Greater durability of the boilers under this system, *ib.* Samples of the pig and other iron produced at this establishment; good quality thereof, *ib.*
- Furness, W., 201, 204.
- FURNITURE AND UPHOLSTERY (Class XXVI.).
- Tabular classification of objects in the Exhibition into which this Class is divided, xxi. List of Jurors and Associates appointed for this Class, xxx. List of Exhibitors in this Class to whom Council Medals have been awarded, cvii. The like of those to whom Prize Medals have been awarded, cviii. And of those of whom Honourable Mention is made, cxix.
- Importance of the principles of sound construction being well carried out, 544. If carving or other ornament be introduced, it should be by decorating the construction, and not overlaying it, *ib.* Articles of furniture too often crowded with unnecessary embellishment, *ib.* Great beauty of many of the ornamental works exhibited, *ib.* Regret that there are not more specimens of ordinary furniture for general use, *ib.* Cabinet furniture first became an article of general luxury about the beginning of the 16th century, *ib.* Inlaid and richly carved furniture manufactured in Italy at this period, *ib.* Great excellence of the works exhibited from Italy, particularly in the carved examples, *ib.* Elaborately carved work from Tuscany, *ib.* Elegant inlaid table from Sardinia, *ib.* Ornamental cabinet work acquired considerable reputation in France, in the time of Louis XIV., *ib.* Its manufactures have since then continued to produce works of great beauty, *ib.* The art of inlaying woods greatly advanced in the last century by Reissner, *ib.* In buhl work the French have greatly excelled, *ib.* Germany long established for cabinet work of a high class, *ib.* Excellent example presented in the Ebony cabinet of M. Gröger, of Vienna, *ib.* Cabinet work of a useful description carried to a high state of perfection in Great Britain, 545. Prominent excellence, substantial quality and finished workmanship, *ib.* Mahogany first employed for cabinet furniture in England about 1720, *ib.* Circumstances attending the introduction of mahogany for furniture making, *ib.* Impossibility of giving a description of the various details of the manufacture of cabinet work, *ib.* Marqueterie inlay one of the most beautiful and interesting, *ib.* Account of the process employed, *ib.* Tarsia work, for the art of inlaying woods, practised from a very early date in Italy, *ib.* Extensively employed in the decoration of wall panelling, *ib.* Admir-

- able specimens of marqueterie exhibited, 545. Process employed in the manufacture of buhl inlay, *ib.* Many beautiful specimens of this work in the Exhibition, *ib.* Mosaic inlay applied to furniture, *ib.* Description of the process, *ib.* Good specimens of this work in ivory and metal, *ib.* Extraordinary table of Senor Perez of Spain, executed entirely in minute portions of wood, *ib.* Same principle carried out in a table by Nye of Tonbridge Wells, *ib.* Principles of manufacture of parqueterie for floors, *ib.* Specimens showing the perfection to which this art has been brought, *ib.* Novelty of the introduction of porcelain inlay in furniture like marqueterie, *ib.* Beautiful examples exhibited, *ib.* Many pieces of furniture owe much of their attraction to the metal ornaments with which they are mounted, *ib.* Many magnificent examples of carved furniture exhibited, *ib.* Grand buffet of M. Fourdinois, of Paris, of the highest merit, *ib.* Great excellence of various specimens from France, *ib.* Grand collection of Austrian furniture, *ib.* Considerable fancy and excellent workmanship displayed, *ib.* Various examples of carved furniture in the British Department, 545, 546. Ingenious specimens of cabinet work in which mechanical action is introduced, 546. Secret mechanism skilfully carried out, *ib.* Curiously inlaid chairs and furniture in the Austrian Collection, *ib.* Excellent billiard-tables, *ib.* Those of British manufacture of simpler construction than the foreign, but solid and of excellent workmanship, *ib.* List of awards, 550-552.
- Remarks on the examples of Domestic and other furniture contained in the Exhibition, especially as regards "design," 720. Alterations observable in English furniture; contrast with its former high repute, *ib.* Principles which should serve as general rules for the designer and ornamentist of furniture; considerations to be attended to in construction, 720, 721. Cabinet work and furniture of all kinds, 721, 725. The lavish and purposeless decoration observable in many examples in the Exhibition condemned, 721. In France a modification of the Renaissance principally used, *ib.* Popularity of the ornamental style of Louis XV., *ib.* Certain of the articles in the Exhibition in this department criticised, 722. Ornamentation of the cases of musical instruments; false taste observable in some instances, 723. Inlays of metal, mother-of-pearl, or tortoiseshell, in furniture; specimens exhibited, *ib.* Furniture in papier maché, *ib.* Unsuitableness to uses and false construction of some of the furniture in the Exhibition; special reference made to the Austrian state bed, &c., 724. Objections to the use of the arch in wooden furniture, *ib.* Sham construction, such as where portions which are intended for support are made to move from under the parts intended to be supported when opening the doors of the furniture, *ib.* Question of the education of the art-workman with reference to furniture considered, 724, 725. Superiority of the French workmen in art-knowledge, 724. Remarks on furniture as connected with ornamental design continued; as to hardware, viz., grates, fenders, fire-irons, stoves, gas-fittings, &c., 725-727. Carpets, 727-729. Curtains and hangings, 729, 730. Damask table-linen, 730, 731. Concluding remarks as to the subordination of details to general effect, 731.
- FURNITURE SILKS.—See *Silks, Manufacture*.
- FURS AND SKINS.—Articles made from the fur of the common hare, 352. Table of the imports and exports of skins adapted for furs, 383. Description of the process of preparing the skins from the raw state and rendering them fit for ornamental dress, 383, 384. Successful process adopted in Paris and London of dyeing the inferior skins to imitate the more perfect specimens, 384. Permanence of colour in the dyed sable frequently found of equal durability to that of skins of the natural colour, *ib.* Complete collection of all the skins known to be used for ornament or dress, formed by the contributions to the Exhibition, *ib.* Choice collection exhibited by the Hudson's Bay Company, and also by the Central Committee of Nova Scotia, *ib.* Beautiful and extensive collection of skins and specimens of taxidermy, furnished to the Exhibition by several members of the nobility and other gentlemen, under the superintendence of Messrs. Nicholas and Son, of Oxford Street, *ib.* Minute of the Jury on the valuable articles exhibited by this firm, *ib.* Brief account of the animals that are captured for their fur, the skins of which are exhibited in various parts of the building, 384-386. Injury done to furs by various species of moths, 386. Moisture also a cause of the decay of furs, *ib.* Precautions which should be adopted to preserve them uninjured, *ib.* List of exhibitors, nature of the exhibits for which prizes were awarded, 386, 387. See also *Leather, &c.*

 GLASS (Class XXIV.)—Tabular classification of objects in the Exhibition into which this Class is divided, xxi. List of Jurors and Associates appointed for this Class, xxix. List of Exhibitors in this Class to whom Council Medals have been awarded, cv. The like of those to whom Prize Medals have been awarded, *ib.* And of those of whom Honourable Mention is made, cv, cvi.  
 Materials from the Rostellan Pits, Middleton, Cork, used in the manufacture of glass, 14. Specific gravities of flint and crown glass manufactured by Messrs. Chance and Co., of Birmingham, 269.  
 Inquiry into the origin and progress of the glass manufacture, 521. Process of manufacture described by Pliny, *ib.* Among the Egyptians, as detailed by Sir Gardiner Wilkinson, *ib.* Glass supposed to have been used by Archimedes, *ib.* Specimen of glass in the British Museum from Nineveh, *ib.* The Barberini or Portland Vase referred to, *ib.* Introduction of glass into Italy; works for its manufacture established in the neighbourhood of Rome, 522. Early period of Venice becoming a seat of the manufacture; great attention bestowed upon it, *ib.* Causes of the decline of the Venetian monopoly, *ib.* Introduction of the art into Bohemia, *ib.* And into France; injurious effect of the exclusive privileges granted to manufacturers, 522, 523. Particulars as to excise and customs duties imposed on glass in England; modifications thereof at different periods; effect of the duties on manufacture, consumption, and price, 523, 524, 526.  
 Brief details of the method of manufacture, 523, *et seq.* Use made of borax or borate of soda as an agent; its expense a bar to its general adoption, 524. Discovery of borate of lime on the western coast of America; its suitability as a flux, *ib.* The first chemists have directed their attention to the fabrication of glass; the production of a good composition dependent, however, on the observance of certain principles, *ib.* Character of the silica used in England; sources of supply, *ib.* The like as to the alkali, *ib.* Means used of imparting colour to glass, *ib.*  
 Classification of glass manufactures, 524, 525. Details as to the origin, methods of manufacture, &c., of each description of glass in England and foreign countries, viz.:—Window glass, 525, 526. Crown-glass, 526. Cast plate, rough plate, pressed plate, rolled, &c., 527. Bottle-glass, water-pipes, and tubing, 528. Glass for chemical and philosophical purposes, *ib.* Flint-glass or crystal, with or without lead, *ib.* Optical glass, flint or crown, 528, 530. Allusion to glass used in lighthouse apparatus, with special reference to the Eddystone and other lighthouses, 530, 531.  
 General observations of the Jury on the subject embraced by their Report, 530, 531. Points at issue to which it is important to call the attention of the manufacturer, viz.:—The composition of the "metal," 531. The practical difference prevailing as to the finishing and polishing, *ib.* Results of the removal of taxation in increasing the demand; fabrication of an inferior article, *ib.* Answer to the objection that the French and Belgian manufacture will not stand the test of time, *ib.* The question of price left untouched by the Jury, *ib.*  
 Principle on which the award of medals has been made, 531, 532. Names of individuals from whom the Re-

porter has received assistance in drawing up the Report, 532. Effect of the instructions of the Executive Committee in regard to the award of the Medals; *ib.* Individuals to whom Medals have been awarded; Grounds of these awards stated, 532, 533.  
 Principles on which the manufacture of glass paintings should proceed stated, 533. The works of the first half of the 16th century to be taken as the true standards, 534. Remarks on the character of the specimens of glass paintings exhibited, 534, 535. And with special reference to particular compositions, 535. List of Awards, 536, 537.  
 Critical remarks on the examples of glass manufactures contained in the Exhibition, 734, 735. Principles which should govern the design and decoration of objects in glass, 735. False taste displayed in glass-cutting; extreme to which it is carried, *ib.* Draining glasses should be sparingly adorned, *ib.* Faults committed in the manufacture of glass for ornament, particularly in regard to colouring and gilding; special reference to the specimens of Bohemian and Hungarian glass, 735, 736. Chandeliers and candelabra, 735. Remarks on the glass fountains of Messrs. Osier, *ib.* And on the Candelabra exhibited by the same firm, 736. Various objects in the Exhibition noticed, *ib.*—See also *Arsenic. Bottle Glass. Crown Glass. Mosais. Optical Glass. Painted Glass. Plate Glass. Quartz. Sand. Sheet Glass. Window Glass.*  
 GLASS FOR CHEMICAL AND PHILOSOPHICAL PURPOSES.—Particular qualities required for glass of this kind, 525.  
 GLASS-CUTTING MACHINES.—New contrivances for cutting and trimming glass shades, 201.  
 Glass, G. M., 165.  
 Glass-makers.—Close combination existing amongst the workmen employed in glass-making in France, and also in England; evils resulting from this system, 525.  
 GLASS, Painted or Stained.—See *Painted Glass.*  
 GLASS-PAPER.—Excellent specimens of glass-paper and glass-cloth, 682.  
 GLASS PIPES, TUBING, &c.—Prize Medals, &c. awarded for, 536, 537. New kind of patent joint for connecting glass pipes conveying gases or fluids, 587.  
 GLASS SHADES (for ornaments, &c.)—Formerly the manufacture thereof almost entirely restricted to the Continent; owing to Messrs. Chance they are now made in England nearly to the exclusion of those of foreign make, 526. Awards made for glass shades, 536, 537.  
 GLAZIERS' DIAMONDS.—Use of, dates from the 16th century, 523.  
 GLAZING, EARTHENWARE.—Process of Messrs. Pratt for colour-printing under the glaze, 534. Process of Baron du Tremblay, called "email orbrant," 542.  
 GLAZING PAPER.—See *Paper, &c.*  
 Glen and M'Indoe, 380.  
 Glenisson and Vangenechten, 454.  
 Glenton and Chapman, 508.  
 GLOBES.—Remarks on the terrestrial and celestial globes exhibited, 308. Slate globes, *ib.* Process of globe-making, as exhibited by Fletcher, very interesting, *ib.* Model and globe of the moon, *ib.* Angular terrestrial globe for the solution of geographical problems, *ib.* Lunarian, with a contrivance for showing the phases of the moon, *ib.* New method of illustrating the effect of the earth's diurnal motion upon the plane of a pendulum's oscillation, *ib.* Tissue-paper and India-rubber globes, *ib.* Terrestrial and celestial, from Prussia, France, United States and Austria, *ib.*  
 Glover, T., 504.  
 GLOVES.—Specimens of coloured cotton gloves, 378. Large amount of the population of the United Kingdom employed in the manufacture, 480. Valuable and highly important contributions to the Exhibition, *ib.* Specimens contributed by France, many cities of the Zollverein, Denmark, and Switzerland, *ib.* Great talent of the French dyers of kid skins, *ib.* Highly interesting contribution forwarded by the Associated Glovers at Arague, 481. Skill and energy of the English manufacturer greatly called forth since the alteration of the tariff, *ib.* Places in England at which gloves are chiefly made; estimated value of the yearly produce; total of hands employed in England, *ib.* List of Awards, &c., *ib.* See also *Leather.*  
 GLUE.—Specimens of, exhibited, 434, 44. Remarkable progress in the extraction of glues from waste remnants of hides, skins, &c., 165. Specimens exhibited and awards, 165, 166.  
 GLUTEN PREPARATIONS.—Fine collection of gluten prepara-

- tions, chiefly of scientific interest, 54. Samples of gluten and other products from France, 55.
- GLYCERINE**—Samples of, 45.
- G. M., Senora**, 472.
- Gniffin, Professor**, 41.
- GNEISS**.—Block of gneiss from the island of Elba, covered with noble crystals of felspar, 35.
- GOATS' WOOL**.—See *Wool*.

- Golab Singh, Maharajah**, 378.
- Golay, F. A.**, 517.
- GOLD**.—Re-opening of the mines of Reichenstein, in Silesia, in consequence of the application by M. Guettler of a method invented by Professor Plattner, for separating gold from the waste arsenical ores, 5. Quantity of gold contained in the ore at Reichenstein, *ib.* Nature of the process for the separation of gold from the ores, *ib.* Process equally applicable to the vast quantity of refuse accumulated near many other old works, *ib.* Pyrites of gold from Labuan (Borneo), 15. Existence of spangles and pyrites of gold in several rivers of the East of Cagayan, 16. Specimens collected by the Chaudron Mining Company, *ib.* Series illustrating the process of separating gold from arsenical pyrites, 30. Profitable re-opening of the auriferous mines of Reichenstein, in Silesia, admitted by this process, *ib.* Immense revenue yielded annually by the gold mines of Russia, 34.
- GOLD-LEAF**.—Specimens of, from France, 29. Collection of gold-leaf of all colours, 516.
- GOLD AND SILVER EMBROIDERY**.—Preparation for restoring, 48.
- GOLD**.—Works of art in, notice of the principal, 604.
- GOLDRETERS'-SKIN**.—Peritoneal or serous membrane, separated from the intestinal tube of the ox, 165. Attenuated by being beaten with a hammer, and subsequently prepared to resist traction, *ib.* Instructive series of this material in various conditions, *ib.*
- Goldenberg, G. (Juror)**, xxix, xxxii.
- Goldenberg, G., and Co.**, 489.
- Golding, R.**, 56.
- Goldschmidt and Son**, 520.
- Golosuts**.—Specimens of, in the British Department, and from France, Prussia, and Russia, 479, 480.
- Gomes, J. L.**, 57.
- Gomez, Alcaide**, 166.
- Gampertz, Dr.**, 472.
- Gonella, Professor T.**, 303.
- GONGS**.—Large and the gongs exhibited by the East India Company, 332.
- GONIOMETER**.—Improved Wollaston's goniometer, 255.
- Gonsales, G.**, 157.
- Gooch, —**, 237.
- Good, —**, 308.

- Grandjean, P. H.**, 517.
- Grange, F.**, 34.
- Grangemouth Coal Company**, 582.
- Grangoir, J. M.**, 454, 508.
- GRANITES**.—Collection of granites and marbles exhibited by Messrs. W. J. Freeman, remarkable for their variety of colour and beauty of polish, 8. Extension of the use of slabs of granite and porphyry in private houses resulting from the economy in the use of the machinery employed by Messrs. Freeman, for cutting and polishing them, *ib.* Power of the machines employed by them in quarrying hard stones, *ib.* Objects exhibited illustrating their power, *ib.* Collection of granites from the Vosges, 27, 28. Fine slab with large pink crystals of felspar, 28. Fine specimens of the granites of Cornwall, 556. Highly interesting specimen of Swedish granite, *ib.*
- GRANITE, WORKS IN**.—Report on the large monumental works chiefly constructed of granite; objects exhibited, remarks thereon; awards, &c., 556. Remarks on the smaller miscellaneous works in granite, porphyry, &c., exhibited; names of exhibitors, exhibits and awards, 556-558. Headstone of Aberdeen granite, a beautiful specimen of material, admirably worked, 556. Bust and pedestal of blue Peterhead granite, *ib.* Slab of granite from Craignair, *ib.* Pedestals, slab and chimney-piece of granite exhibited; remarks thereon, 565. Works in Scotch granite exhibited, *ib.*
- Grant, Captain**, 76.
- Grant, D.**, 508.
- Grant, J.**, 159.

 HARDWARE (Class XXII).—Tabular classification of objects in the Exhibition into which this Class is divided, xx. List of Jurors and Associates appointed for this Class, xxix. List of Exhibitors in this Class to whom Council Medals have been awarded, xvi. The like of those to whom Prize Medals have been awarded, xvi-c. And of those of whom Honourable Mention is made, c-ciii. The scope of Class XXII., iron and general hardware co-extensive with the employment of the baser metals in manufacture, 492. This Class forms a nucleus round which various other Classes, to the number of seven or eight are distributed, *ib.* Range of the Class limited rather with respect to the number of objects embraced by it than to their nature, *ib.* Difficulty experienced in arriving at an exact definition of the limits of this Class, *ib.* Sculptures in metal reviewed by this Jury, *ib.* Objects included in this Class considered with reference to material: 1st, brass manufactures, 492, 493. 2nd, copper, zinc, tin, pewter, &c., 493. 3rd, iron work, *ib.* 4th, steel manufactures, *ib.* Various other articles fabricated of mixed materials coming under the usual denomination of hardware, *ib.* Large proportion of the articles of mere utility and convenience, *ib.* Advantages might have resulted from the addition of a comparison of prices, *ib.* Rule adopted by the Jury for determining the merits of inventions and improvements on existing contrivances, *ib.* Practical reasons against making experiments to ascertain the merits of lamps for oil or camphine, *ib.* Contrivances for preventing smoke, *ib.* Kitchen-ranges and gas-stoves, *ib.* Improvements in the manufacture of steel pens, *ib.* Large proportion of articles in this Class in which use is combined with ornament, *ib.* Number of articles solely or chiefly ornamental, *ib.* Number of Exhibitors in this Class, 493, 494. Proportions in which foreign countries have contributed, 494. British hardware manufacture chiefly pre-eminent for excellence of workmanship and mechanical skill, *ib.* Inferiority of British hardware in point of taste, 494, 495. Causes to which attributable, 494. In proportion as tasteful design becomes an element in the perfection of manufactures, mechanical execution must be subservient to its due execution and development, *ib.* Effects which the substitution of machinery for hand labour must produce in hardware manufactures, 495. Artistic ignorance of workmen not an evil peculiar to this country, *ib.* Necessity for the artificers and designers of ornamental hardware having more unrestrained intercourse, *ib.* Position of the ornamental hardware manufactures of the United Kingdom not discouraging, *ib.* Vast commercial advantages reaped by this country from unobscured machine-made wares, *ib.* Due adjustment of the mechanical and the artistic elements of perfection in manufacture a problem yet to be solved, *ib.* The industry of the United Kingdom owes its existence entirely to private enterprise, *ib.* Manufactures of France patronised and supported by Government influence and resources, 496. Pre-eminent excellence of the national ornamental manufactures of France, *ib.* Hardware manufactures of France and the United Kingdom representatives of opposite systems, *ib.* Actual merit of works, independently of the circumstances under which produced, the grounds on which the awards are made, *ib.* Metallurgy and knowledge of alloys date from remote periods in Egypt, Persia, Turkey, Tunis, and India, *ib.* Productions of the Oriental nations of the rudest description, though excellent in material, 497. Contributions from China too incomplete to give an adequate idea of the hardware manufactures of that country, *ib.* Stagnant traditional industry in metals prevailing in Greece and Italy, *ib.* Few contributions from Spain, giving evidence of the desire and power to improve this branch of industry, *ib.* Ample proofs of activity from Austria, States of the Zollverein, and Belgium, *ib.* Flourishing condition of iron manufactures in Austria, *ib.* Manufacture of jews'-harps represented solely by Austria, *ib.* Various descriptions of wire from Austria deserving of notice, *ib.* Character of the articles from the States of the Zollverein, *ib.* Active state of commercial enterprise in these States, *ib.* Description of the contributions from Belgium, *ib.* Ore of Belgium and Silesia abundantly and easily worked, *ib.* Very few articles in the Department of the United States, *ib.* Those exhibited display energy, ingenuity, and perfect adaptation, *ib.* General remarks on the brass, copper, zinc, and tin manufactures, 497, 498. Observations on the iron and steel manufactures, ironmongery, &c., 499-501. List of Awards in this Class, 501-509. Extract from the Minutes of the Jury of Class XXII., 510. With respect to making experiments to ascertain the merits of the various lamps exhibited, 510. General remarks on the articles of hardware, such as gates, fire-irons, gas-fittings, &c., in the Exhibition, as connected with ornamental design, 725-727. Candle-

- stick by Messrs. Hardman, after a design by Mr. W. Pugh, 725. English and French designs in hardware equally fair, *ib.* Exaggerations of ornament in candelabra, *ib.* Superior design and workmanship of the English in grates, 726. Burnished figures objectionable in metal works, 727.

 HYDRAULIC CEMENT.—Samples of; method of preparation, 49. See also *Cement, Roman, &c.*  
 HYDRAULIC MACHINES.—General neglect of those elementary principles of scientific knowledge on which the perfection and the usefulness, in an economical point of view, of such machines always depend, 176. The success with which the principles of mechanical science, in their application to practical questions, are beginning to be cultivated in France, shown in the superiority of the French hydraulic machines, *ib.* See also *Centrifugal Pumps, Pumps, Water Rams.*  
 HYDRAULIC PRESSES.—Large hydraulic press used for raising the tubes of the Britannia Bridge, 183. Construction thereof, *ib.* Weight of this press, *ib.* Model of a powerful hydraulic press, capable of lifting 3,000 tons, *ib.* Hydraulic press for packing cotton of other material in bales, *ib.*  
 HYDROCHLORATES.—See *Morphia, Hydrochlorate of.*  
 HYDROCHLORIC ACID.—Samples of, 47. Price thereof in Germany, 49.  
 HYDRO-ELECTRIC CHAIN BATTERIES.—Designed to be worn on the body for the cure of chronic diseases, 282.  
 HYDROMETERS.—Capable of ascertaining the specific gravities of all fluids, 296. Accuracy and efficiency obtained, *ib.* Silver hydrometer from Wurtemberg, 297.  
 HYGROMETERS.—Specimens of Daniell's and of Regnault's hygrometers, 301.

 Ingram, T. W., 505.

- INK.**—Specimens of ink for the blind, 422. Specimens of writing-ink, 455.—See also *Printing Ink*.
- INLAIN FLOORS.**—General remarks on the examples of inlaid floors in the Exhibition, 716, 717.—See also *Parquetrie*.
- INLAIN WORKS IN FURNITURE.**—Various specimens of great excellence exhibited, 544-546. Awards to exhibitors, 550, 552. Admissibility of plays of metal, mother-of-pearl, or tortoiseshell in furniture, 723. Remarks on specimens in the Exhibition, *ib*.
- INLAIN WORKS IN METAL.**—Notice of the principal works in the French Department, 702. In the Belgian Department, 765. In the Spanish Department, *ib*. Critical remarks on specimens of inlaid work in the precious metals, 740.—See also *Mosaics*.
- INLAIN WORKS IN PIETRA DURA.**—Great perfection to which this kind of art has been carried in Tuscany, 704. 'No first-rate specimen contributed' to the Exhibition, *ib*. Remarks on the table-tops of G. Bianchini, *ib*.
- INLAIN WORKS IN WOOD.**—Notice of works of this class in the Spanish Department, 705.
- INSTITUTE for Trades, Prussia.**—The foundation thereof has greatly promoted manufactures on which the fine arts exercise influence, 697.
- INSTRUCTIONS from the Council of Chairmen to the Juries, xxiii.**
- INTASLIOS.**—See *Dis-sinking, Works in*, &c.
- INVALID COUCHES,** 552.
- IODIDES.**—See *Iron, Iodide of*. *Potassium, Iodide of*.
- IODINE.**—Preparations of iodine, chloride of potassium, and other salts of kelp, 38. Extension of the manufacture thereof by Messrs. Coumanier, of Cherbourg, *ib*. The whole iodine produced, excepting that used in photography, is still consumed in medicine, *ib*. Increase in the home production about 1840, *ib*. Price of the pure dry article, *ib*. Samples of iodine, 44, 50.
- IODOFORM.**—Specimens of, 46.
- Ionian Islands.**—Bred currants from, 56.
- Iraç Oğli,** 367.
- Ireland.**—Marbles from Ireland, 13. Irish stones for decorative sculpture, *ib*. Valuable collection of flax shown by the Royal Society for the Improvement and Promotion of the Growth of Flax in Ireland, 97. Variety of woollen cloths and friezes from Ireland, 351. A few low flannels and coatings, called Galways, made in Ireland, 358. Specimens of good flax from Ireland very few in number, 370. Great and general depression of the glass manufacture of Ireland caused by the extension of the duties on glass thereto, 523. Existence of a highly crystalline, yellowish marble, adapted for the use of the sculptor in this country, 564. Specimen exhibited, *ib*.
- Ireland, Edwin,** 689.
- Ireland, Royal Flax Improvement Society,** 96, 97, 371, 373.
- LAIDENET FILMS.**—Various applications of to purposes of decoration, 314. Process adopted to render the film and its reflected colours permanent, *ib*.
- Irish Work Society,** 469.
- IRON CASTINGS.**—Importance of this branch of industry, 400. England distinguished above other nations for the exuberance and cheapness of supply of iron, *ib*. Contributions from France, Belgium, Prussia, and Austria, *ib*. Excellence thereof, *ib*. Cast-iron bedstead exhibited in the state in which it comes, from the mould, *ib*. Castings from France light and graceful, *ib*. High order of the specimens from the Royal Prussian Iron Foundry, *ib*. Busts from Spain and Belgium, *ib*. Castings in the United Kingdom might be more largely employed for purposes of use and ornament, *ib*. Existing obstacles to its more extensive use, *ib*. Iron susceptible in casting, of the most perfect and sharp impressions, *ib*. Cost of public monuments might be reduced by substituting iron for bronze, *ib*. Causes of the superiority of the contributions of the continental nations, *ib*. List of awards, 502.—See also *Castings in Iron*.
- IRON, CYANIDE OF.**—Specimens of, 48.
- IRON, IODIDE OF.**—Specimens of, 43.
- IRON ORES.**—Iron ores from Uitenhage (Cape of Good Hope), 15. Magnetic iron ores from South Sherbrooke (Canada), 16. Iron ores obtained from the mines of Marmora (Canada), *ib*. Iron ores from Canada of different kinds, *ib*. Existence of iron ore in Nova Scotia, 16, 17. Existence of magnetic iron ore and hematite iron in the island of Trinidad, 17. Abundance of magnetic iron ore, and specular iron ore or oligist occurring in many of the States of the American Union, *ib*. Superabundance of fuel for working iron-making establishments, *ib*. Presence of iron ore in certain localities of America on a larger scale than in either Sweden or Elba, 18. Iron ores and me-
- tallie iron from Reading (Pennsylvania), 19. Iron ores from Troy (New York), *ib*. Specimens of spathic iron ore from New York, *ib*. Specimens of iron ores from Algiers, 29. Iron ores from the Royal Iron Foundry at Malapané (Upper Silesia), 31. Ores of iron from the mines of Misen, near Siegen, *ib*. Specimens of iron ores from various mines in the neighbourhood of Hamm (Upper Silesia), *ib*. Spathic iron ores from the mines of St. Georges de Hurtières (Sardinia), 34. Specimens of specular iron ore from Tuscany, 35.—See also *Minerals*, &c.
- IRON, OXIDE OF.**—An important mineral amongst the iron ores of Canada, 16. Worked in large masses, *ib*. Products from the works of the Hon. J. Ferrier, at St. Maurice, *ib*.
- IRON PAPER.**—A particular kind of sheet-iron so called, manufactured by the Baron Von Kleist; purposes to which applicable, 4, 20.
- IRON PYRRITES.**—Process for decomposing common salt by means of, to produce carbonate of soda, described, 41.
- IRON, SALTS OF.**—Specimens of, 45.
- IRON AND STEEL, AND MANUFACTURES THEREFROM.**
- Great Britain.**—Increase in the production of iron in England from the discovery by M. Cort of the process of puddling with coal, 7. Present amount produced in England, *ib*. Manner in which distributed throughout the country, *ib*. Chief causes of the development of the iron trade proved by the collection of N. Blackwell, *ib*. Ores from the coal measures furnish the larger part of those used in the iron works, *ib*. Counties in which the carboniferous or mountain limestone contains important veins of hematite iron, *ib*. Thick beds of argillaceous carbonate of iron contained in the lias and oolite, now the object of extensive operations, *ib*. Specimens of iron illustrating the makes of different localities in Great Britain, 9. Specimens of these decarbonized into refined metal, and manufactured into the different descriptions of bar-iron, *ib*. Correct and instructive exemplification of the extent and variety of the iron manufacture of Great Britain given by this collection, *ib*. Extraordinary round bar of iron rolled at the works of John Bagnall and Sons, of West Bromwich, *ib*. Extraordinary cylindrical iron tube, drawn by a patent process at the works of Solty and Johns at Smithwick, *ib*. Ores of iron, pig-iron, slag, bar-iron, &c., from the Low Moor iron-works and the Bowling Iron Company, 10. Bent and twisted specimens of the latter Company, illustrating the uses to which they may be applied, and their respective qualities, *ib*. Productions of pig and bar iron and steel; raw materials, such as iron, coal, and flux employed in their production, 12, 13. Samples of patent rolled iron for ship-building purposes, 174. Rolled keel-iron, *ib*. Specimens of iron of the manufacture of the Patent Shaft and Axletree Company, Wednesbury, *ib*. Specimens of iron from the Coalbrook Dale Company's Works, Staffordshire, 174, 175. Observations of the specimens of sheet iron exhibited, 501. New use on sheet iron, prepared by a coating which imparts to it a surface that takes the mark of slate pencil, *ib*. Singular illustration of the pliability of sheet iron, *ib*.
  - Colonies.**—Method adopted at Salem (Madras) by the Indian Iron and Steel Company for working iron and steel, 14. Ores and products obtained in the various stages of manufacture, exhibited, *ib*. Description of the forges used by the Company, *ib*. Pig and bar iron from the works of the Marmora Iron Company (Canada); good quality of the products, 16. Resources of New Brunswick, with regard to the manufacture of iron and steel, *ib*.
  - Austria.**—Specimens illustrating the iron manufactures of the Baron Von Kleist, at Neudeck (Bohemia), 4. Specimens of iron ores and pig iron from the Tauerburg Works in Carnia, 20. Manufactured iron and nails, *ib*. Most of the products exported to Italy, *ib*. Increase of the quantity of iron manufactured, *ib*. Excellence of the products of these works, *ib*. Products of the works of the Count Von Egger in Carinthia, *ib*. Objects exhibited, *ib*. Puddling and heating furnaces heated with wood fuel, *ib*. Regularity and economy observed, *ib*. The works of Count Von Egger the first works in Austria which adopted the English methods, *ib*. Iron and steel works in Styria possessed by the Austrian Government, *ib*. Objects exhibited by the Imperial Depot of Iron Mines and Iron-works at Vienna, 20, 21. Excellent quality of the hollow iron

- manufactured at the foundry of A. Töpper, of Scheibbs (Lower Austria), 21. High reputation enjoyed by M. Töpper for the able direction of his establishment and the excellence of its produce, *ib.* Economy observed, *ib.* Use of the gases of the furnaces in some of the operations, *ib.* Objects exhibited, *ib.* Assortment of different qualities of iron and steel from the Murar Foundry (Upper Styria), *ib.* Excellent quality of the pig iron, bar iron, steel, and iron wire, from St. Aegide (Lower Austria), *ib.* Collection of ores, pig iron, slags, iron and steel, from the community of Râde meisten, at Vordenberg (Styria), *ib.* Excellent quality of the products of the foundries of Prince Fürstenberg, in Bohemia, especially in boiler-plates, *ib.* Use of turf fuel at the works of Count Von Bouquoi, at Kallich (Bohemia), *ib.* Fine quality of the bar and sheet iron, *ib.* Method of puddling and reheating iron carried on by reverberatory furnaces at the Deraé Foundry of Count G. Andrassy, in Hungary, *ib.* Great economy in the manufacture of iron by this method, *ib.* • Collection of products from the foundry, *ib.*
- 4. *Belgium*.—Pig iron and specimens of iron from Ardennes (Namur), bearing the mark [M B R], made with charcoal, 22. Part of the iron intended for gun-barrels, *ib.* Not a single gun manufactured of this iron has ever burst at the proving-house, *ib.* Superior quality of the sheet iron and iron wire manufactured by J. M. Orban and Son, *ib.* Rolled coke iron of great length without joint, *ib.* Roll of galvanised iron wire of great length and strength, *ib.* Excellent quality of sheet iron, manufactured at Liège, with wood fuel, *ib.* Excellence of an assortment of common and polished sheet iron and steel from Huy (Belgium), *ib.* Specimens of pig and rolled iron produced at the works of the Pommereuil Smelting Company, *ib.* Pig and wrought iron, wheel tire for locomotives, manufactured iron, especially rails, from the works of the Cockerill Company at Seraing (Liège), 22, 23. Admirable construction of the Company's machines, 23. Iron ores and bar iron from Couvin (Belgium), *ib.* Excellent quality of iron exhibited by the Marcenelle and Couillet Smelting Company, *ib.* Machines as well as the raw produce exhibited, *ib.*
- 5. *France*.—Iron from the Bigny foundries, Cher (France), 26. Excellence of the products, *ib.* Good quality of iron from the works at Bruniquel, department of Tarn and Garonne (France), *ib.* Moulded cast iron from the works of Messrs. Dietrich, at Niederbronn, *ib.* Excellence of the products, *ib.* Objects exhibited, 26, 27. Clichés for lithography, 26. Hollow iron and tubes manufactured by Messrs. Gaudillot and Co., Paris, 27. Purposes for which used, *ib.* Model of manufacture, *ib.* Great power of resistance of the double tubes, designated without joint, *ib.* Description thereof, *ib.* Iron and steel, produced by means of metallic sponges, from France, 28. Nature of the process, *ib.* Iron is obtained directly from the ore, *ib.* • Remarkable properties of the metallic sponge, *ib.*
- 6. *Russia, Spain, and Sweden*.—The working of iron and its manufacture, joined to the working of copper, the principal part of the mineral industry of Russia, 33. Cast and wrought iron from Spain, 34. Ores of iron, and cast and wrought iron, from Sweden, 35.
- 7. *Zollverein*.—Samples of cast and wrought iron, and of sheet iron of different thicknesses and length, from the works of the Royal Iron Foundry at Malapane, 31. Iron of various descriptions and qualities from Hochelstein in Rhenish Bavaria, *ib.* Spathic iron and laminar white pig iron, from the Royal Forges at Lohe and Stahlberg, near Siegen, *ib.*—See also *Furnaces, Iron ores, Tin-plate*.
- IRON STONE-WARE**.—See *Ceramic Manufactures*.
- IRON, SULPHATE OF**.—Preparation thereof by the combination of sulphuric acid with the residuary oxide of iron of burnt pyrites, 42, 47. Samples of sulphate of iron, 21, 43, 44, 46, 49, 50.
- IRON, SUPERPHOSPHATE OF**.—Samples of, 45.
- IRON-WIRE ROPES**.—See *Wire Ropes*.
- IRON, WORKS OF ART IN**, 684.—See also *Castings in Iron*.
- IRONMONGERY (INCLUDING GRATES, FENDERS, LOCKS, &c.)**.—Pre-eminence may be justly claimed for the iron and steel manufactures of the United Kingdom, 499. Advantage afforded by a material so cheap and abundant indicated by the vast extent and variety of its uses, *ib.* No branch of industry employing iron need ever languish on account of scarcity, dearth, or uncertainty of supply, *ib.* Highly satisfactory state of these branches of industry in the United Kingdom, 499. Promising condition in respect to taste of these manufactures, *ib.* Ornamental grates and fenders by Messrs. Heale and Co., and Messrs. Stuart and Smith, *ib.* • Remarkable progress of this manufacture, *ib.* Ornamental grates and fenders chiefly manufactured in London, Edinburgh, and Sheffield, *ib.* Commoner description of grates made in various parts of the kingdom, *ib.* Observations commendatory of the School of Design in Sheffield; services it has rendered to ornamental art, *ib.* Very few articles contributed by Continental manufacturers, *ib.* Numerous examples of the ordinary kitchen range, *ib.* Sound and substantial workmanship, *ib.* Jury not qualified to form an opinion on the actual working merits of the various contrivances, *ib.* Inconvenience of many of the ranges from their massiveness and wide space assigned for fuel, *ib.* Attention of the manufacturers might be advantageously directed to produce a compact and economical range, *ib.* No cooking stove or apparatus of first-rate manufacture from the Continent, *ib.* Contrivances recently invented for cooking and heating by gas, *ib.* Economy the chief advantage, 499, 500. Probable future importance of these contrivances, 500. General remarks on iron castings, locks, and general ironmongery, 500, 501. Inferiority of the ironmongery of France, 501. Attributable to the restrictions imposed on the importation of the raw material, *ib.* Manufacture of tin plates, &c., in the United Kingdom more than doubled since 1844, *ib.* Healthy and growing appearance of this branch of industry in this country, *ib.* Enamelled ware of Paris and the coating of tin by the new process, deserving of notice, *ib.* Process of enamelling extensively used, *ib.* Great activity of the trade of Germany and the States of the Zollverein, *ib.* Contributions from Westphalia, *ib.* Westphalia long celebrated for ironmongery and tin goods, *ib.* Common wares exported to this country, *ib.* Objects exhibited and awards, 501, 503, *et seq.*—See also *Hardware*.
- Isabellenhütte Smelting Works (Dillenburg)**.—Preparation of nickel and manufacture of German silver at these works, 53. Arsenic obtained, and various alloys manufactured, *ib.*
- Isaieff, P.**, 353.
- Isle, Rouget De l'**, 275.
- ISLE OF WIGHT**.—See *Wight, Isle of*.
- Isler and Otto**, 602.
- ISHMAEL** (Sculpture).—Remarks on this work by G. Strazza, 703.
- ISINGLASS**.—Has little claim on the attention of the Jury as an alimentary substance, 67. Favourable report of the East Indian isinglass, made from the air bladder of a siluroid fish, *ib.* Sample of finely-prepared Russian isinglass, *ib.* Raw material owes the greater part of its commercial value to its special organization, 166. Care necessary to be taken in order to obtain the best quality, *ib.* Products of Russia hold the first rank, *ib.* Specimens exhibited and awards, *ib.* Specimens from India of different kinds of isinglass in the raw state, 166.
- Isodore and Brandt**, 388.
- Ismayor, J. M.**, 678.
- Istche (The Girl)**, 484.
- Kaligsohn, Marcus**, 321.
- ITALY**.—Observations on the silk productions of this country, 363. Remarks upon the typographic productions, 399. Statistics of the paper manufacture, 442. Specimens of general hardware and iron manufactures, 497. Inlaid and richly carved furniture, manufactured in Italy at the beginning of the sixteenth century, 544. Great excellence of the works contributed, *ib.* Art of inlaying woods practised from a very early date, 545. Extensively employed in the decoration of wall panelling, *ib.* Mosaics, 554. Interesting collection of Italian marbles, forwarded by the Royal Technological Institute of Tuscany, 561. Specimens of marble and labaster manufactures, 564. Works in serpentine, 566. The Italian sculpture of the present day does not possess any one general character, 703. See also *Rome, Sardinia, Tuscany*.
- ITALY, ANCIENT**.—Introduction of the glass manufacture into, 522. Uses to which it was applied; specimens that have been discovered, *ib.*
- Ivanoff, P.**, 160.
- IVORY**.—Fine ivory, distinguished by the decussating curved lines on the surfaces of transverse fractures of the tusk, peculiar to the African and Asiatic elephant, 164. Best is obtained from the wild animals, *ib.* Deteriora-

- tion of the length and quality of the tusks by the domestication of the elephant, 184. Numerous and instructive collection of tusks exhibited, *ib.* Awards to the exhibitors, *ib.*
- IVORY, ARTICLES IN.**—General remarks on, 529. Various specimens of turning and carving in ivory, exhibited in the British Department, and also from Austria, France, and the United States, *ib.* Notices on some of these articles, exhibitors, awards, &c., *ib.*—See also *Ivory Carving*.
- IVORY, ARTIFICIAL.**—See *Prolean Stone*.
- IVORY, BLACK.**—See *Charcoal (Animal)*.
- IVORY, BRITISH.**—Specimen of this substance exhibited by Mr. H. Brown; an important and valuable discovery, in many cases calculated to supersede real ivory; Prize Medal awarded to the inventor, 599.
- IVORY CARVING.**—Collection of ivory small wares, 682. Carvings by R. C. Lucas, 686, 694. Notice of a cup by Hagen of Munich (Bavaria), 686, 699. The like of a goblet by Hefyl of Darmstadt (Hesse Darmstadt), 686, 700. The same of a cup by Lautz of Paris (France), 686, 701. Ornaments by Bigotti (Tuscany), 686, 704.
- IVORY, VEGETABLE.**—Nature of this substance; considerable quantities imported into this country; objects made therefrom exhibited, 601.
- JACKS.**—Traversing screw-jack useful for railway purposes, 184. Hydraulic lifting-jack, constructed on the principle of the hydraulic press, *ib.*
- JACKSON, C.**, 172.
- JACKSON, C. T.**, 18.—See also *Copper*.
- JACKSON, E. and W.**, 267.
- JACKSON, G. (Juror)**, xxviii.
- JACKSON and Graham**, 473, 546, 551, 728.
- JACKSON, J. (Juror)**, xxx, xxvii.
- JACKSON and Matthowman**, 373.
- JACKSON, P. R.**, 183, 187.
- JACKSON and Son**, 714.
- JACKSON and Sons**, 549.
- JACKSON, W.**, 308.
- JACKSON, W. H. and S.**, 341, 342.
- "JACKSON'S ESSAYS,"** Quotation from, 403.
- JACOBBERG**, 687, 702.
- JACOBI and Bering**, 367.
- JACOBS and Dupuis**, 480.
- JACONOTS.**—Specimens of printed, 459.
- JACOTOT, Madame**, 387, 702.
- JACQUARD LOOMS.**—Description of Mr. Barlow's double jacquard loom, 196, 197. Jacquard loom of the most beautiful workmanship and mechanism, for weaving silk flowered damask of the richest quality, 197. Other jacquard looms exhibited, *ib.*
- JACQUAIZ**, 406.
- JARQUET, H. and Co.**, 162.
- JARQUIN, J. J.**, 197, 204.
- JADE.**—Small series of partly manufactured jade, recently forwarded from China by Dr. Bowring, interesting on account of the material, 562. Large number of works in jade, exhibited from India and China, 566.
- JADENOFFSKY, B. R.**, 160.
- JAEGOR, C.**, 46, 90.
- JAEGOR, W. and Co.**, 162.
- JAHN and Bolin**, 517.
- JAILLON, Moirier, and Co.**, 628.
- JALEY, —**, 700.
- JAMAICA.**—Contribution of artificial flowers from, 642.
- JAME, Bianchi, and Duseigneur**, 161, 364.
- JAMES and Aubrey**, 13.
- JAMES and Co.**, 144.

- JAPAN, WARE.**—Specimens of japan ware, 506. Interesting series of articles under this head, 548. Includes the products of India, China, France, Germany, and England, *ib.* Two classes of ware; works lacquered upon wood or metal grounds, and those formed of papier maché, *ib.* Superiority of the latter description, *ib.*
- Derives its name from the lacquered ware manufactured in Japan, 548. Introduced into Europe towards the end of the seventeenth century, *ib.* Superior description of the ware of that country, *ib.* Extensive manufacture of the ware in China, *ib.* Method of applying the lacquer pursued in China, *ib.* Little is known of the fine lacs of Sen-tchou and of Neun-king; the price is very high, *ib.* Interesting specimens of ware from China, particularly a very elaborate folding screen, *ib.* Celebrity obtained by England for her Japan ware executed in papier maché, *ib.* Invention of papier maché, as applied to this particular manufacture, by Clay, in 1760, *ib.* Messrs. Jennens and Bettridge, of Birmingham and London, the largest manufacturers in England, *ib.* Many improvements introduced by them, *ib.* Application of pearl to Japan ware, *ib.* Numerous examples exhibited, 548, 549. Patent obtained in 1832 for producing papier maché articles by pressure between dies, 549. Considerable success in this manufacture obtained in France, *ib.* Art of japanning carried on in Holland, Belgium, the Zollverein, and Austria, *ib.* Mode of manufacturing the papier maché Japan ware in this country, *ib.* Redundancy and inappropriateness of much of the ornament applied to the European specimens of Japan ware, *ib.* Attention directed to the better examples of this work from Japan and China, *ib.* List of Awards, 550, 552.

 LAC-DYE Samples of lac-dye, 47, 49. Manner in which obtained, 88. Colouring matter extracted, *ib.* The dye inferior to that from cochineal, *ib.* Dye and dyed samples exhibited, *ib.*

LACE:—

1. *British Lace*.—Proofs furnished by the Exhibition of lace from Nottingham that her manufacturers and artisans have been progressing in the same ratio as those in most other branches of industry during the last half century, 460. Important and rapid improvements in the machinery used for the production of lace, *ib.* Nature of the machinery in use before the introduction of the bobbin-net machinery, *ib.* First successful machine made and patented by John Heathcoat, in 1809, *ib.* Great and rapid progress of improvement, in this machine since that period, *ib.* Consequent increase in the trade and reduction in the price of the produce, 460, 461. Repeated attempts made since 1831 to apply the Jacquard machine to the bobbin-net for the purpose of ornament; successful application thereof in 1839, 461. New sources of manufacture, which gradually developed themselves of the successful application of the Jacquard machine; important benefits which have resulted therefrom, *ib.* Capability of our local artists at the present time in producing designs equal to the French, Swiss, &c., owing to the establishment of a School of Design at Nottingham, *ib.* Statement of the most important articles, amongst the infinite variety, manufactured by the bobbin-net machines, *ib.* Further development of the ingenuity and extension of the trade of the locality which must result from the various and numerous specimens of Nottingham manufactures in the Great Exhibition, *ib.* Description of the machines at present in use, *ib.* Number of bobbin-net machines in full operation; number of hands to which

they give employment, 462. Total capitals employed; annual amount of business returns, *ib.* Observations on the warp machine used, as well as the bobbin-net machine for making lace, *ib.* Articles originally made by this machine, *ib.* Improvements which have been made therein from time to time, *ib.* Invention of what is called the Mechlin net, the point net entirely superseded thereby, *ib.* Introduction of an imitation of Mechlin lace, known as "two-course" net, *ib.* Also introduction of a kind of silk lace, known as "blonde," *ib.* Importance obtained subsequently by these two kinds of lace, *ib.* Enormous wages received by the workmen for making blonde, *ib.* Disappearance of the Mechlin lace on the introduction of the bobbin-net, *ib.* Production of what was called "Mock-twist" in imitation of the bobbin-net, *ib.* Reference to the tating trade which sprang from these various inventions, *ib.* History of the various degrees of favour and encouragement which these different descriptions of lace received during a period of years, *ib.* Great improvements which have been made in dressing silk lace, 463. English-dressed lace now little, if at all, inferior in whiteness and brilliancy to the best specimens from Lyons, *ib.* New kinds of manufacture which have been attempted from the warp within the last few years, *ib.* Number of warp machines now in operation; various branches in which they are employed, *ib.* Estimated number of persons employed in the warp trade; capital invested; estimated annual return, *ib.* Mode of manufacture of the description of lace termed "Honiton," *ib.* Progress made in the manufacture; beautiful specimens exhibited, *ib.* District in which the Honiton lace is made; extent of the district; number of persons employed in producing it, *ib.* Distinction between "pillow" of "thread" lace and Honiton lace; mode of manufacture of "pillow" lace, *ib.* Considerable number of women and children employed in its manufacture in the counties of Beds, Bucks, Northampton, and Oxford, *ib.* Falling off in the demand for white-thread lace, and increased requirement for black lace, *ib.* Benefits afforded to the lower classes by its manufacture, *ib.* Considerable merit possessed alike by "British point," "tambour," and Limerick laces; similarity in their mode of manufacture, 463, 464. Prospects of these branches of the British lace at the present time highly encouraging, 464. Articles exhibited; list of exhibitors to whom Prize Medals have been awarded, and of whom Honourable Mention has been made, 468, 469.

2. *Foreign Lace*.—High position of France as a lace-making country fully sustained in the Exhibition by its contributions of some of the most exquisite work, principally hand-made, 465. General remarks on the bobbin-net and lace made by machinery in France, *ib.* Principal towns noted for the production thereof, *ib.* Manufacture of bobbin-net first introduced into France by English workmen in 1817 and 1819, *ib.* Articles fabricated in France up to 1845 the same as those known in the English market, *ib.* Improvement of this branch by the application of the Jacquard system to the bobbin-net machine, *ib.* Articles now manufactured in a superior style, *ib.* Species of lace manufactured at Lyons and at Cambrai, *ib.* Large number of females to whom the manufacture of lace by hand gives employment in France, 466. Average individual earnings, *ib.* Different descriptions of French lace manufactured by hand, *ib.* Lace trade spread over a great part of France, extending from north to south, *ib.* through fifteen departments, *ib.* Peculiarity of style of each district; although made in the same way and with the same material, they are instantly recognized, *ib.* Principal places where the manufacture is carried on; short notice of the productions of each of these places, 466, 467. This branch of industry one of the most important and most interesting, both as regards commercial relations and in a moral point of view, 467. The long-enjoyed celebrity of Switzerland for lace and muslin embroidery well sustained in the Exhibition; progress she is making therein, *ib.* Small assortment of lace from Saxony, mostly of a manufacture peculiar to the country and of limited sale in the English market, *ib.* The exhibition of lace from Spain limited, *ib.* Articles of lace exhibited from Austria few, and of a class not suited to the British market, *ib.* The description of lace peculiar to Belgium admirably sustained by some of the exhibitors in this department, *ib.* Valuable display of Valenciennes edgings and laces of Mechlin and other goods of the most costly and

- superb character, 467, 468. Observations on the different descriptions of lace manufactured at Brussels, Mechlin, Valenciennes, and Grammont, 468. Specimens exhibited; names of exhibitors; Prizes and Honourable Mentions awarded, 470-472.
- LACE, DESIGNS FOR.**—Notice of the principal designs for lace, 689. Critical remarks on the application of design to the patterns of lace, 747. Ornamental working a peculiarity essential to lace, *ib.* Principles on which such ornamentation should proceed stated, *ib.* In what the great excellence of the French and Belgian lace consists, 748. Just appreciation of *quantity* in the ornamental arrangements, of Brussels and Valenciennes lace, *ib.* Honiton lace too solid and equal in effect, *ib.* Observations on the designs for lace contained in the Exhibition, *ib.* Fewer errors in the designs for lace than prevail in other manufactures, *ib.*
- LACE FRAMES.**—Single tier Jacquard bobbin-net machine, making figured laces, combining all the recent improvements, 191. Double tier bobbin-net machine, *ib.* Warp-loom machine of excellent workmanship and design, *ib.* Frame for gassing lace, *ib.* Laco-dressing machine of superior construction, *ib.*
- LACE PAPERS.**—Pierced paper and cardboard, 448. Improved manufacture thereof, *ib.* Variety of specimens exhibited, *ib.* Mode of perforating paper and cardboard by machinery, *ib.* Large quantities exported, *ib.* Examples applied to bordering note paper and valentines, *ib.* Awards, 453, 454.
- Lacey and Phillips, 314.
- Lachapelle and Levarlet, 360.

 Leach, J., and Sons, 359.  
 Leach, M. and H., 55.  
 LEAD, ACETATE OF.—Samples thereof, 43, 45, 46, 47, 48.  
 LEAD, BORATE OF.—Production of a borate of lead of remarkable purity, by Mr. Faraday, 529.  
 LEAD, CARBONATE OF.—See *White Lead*.  
 LEAD, CHROMATE OF.—Introduction of the yellow discharge (chromate of lead) upon Turkey red cloth, by Dayiel Koechlin, of Mulhouse; improvement in the manufacture of bichromate of potash to which it led, 39.  
 LEAD, IODIDE OF.—Specimens of, 46.  
 LEAD AND LEAD ORE.—Presence of a small proportion of silver in most of the ores of lead, 4. Mode adopted by Mr. H. L. Pattinson for separating the silver from lead by cupellation, *ib.* Adoption of the system in various lead works in England, *ib.* Introduction of the system into France, Spain, and Prussia, within the last three or four years, *ib.* Objects exhibited by Mr. Pattinson, illustrating the process, *ib.* Method of condensing the sulphur fumes produced in the reduction of lead ores adopted by the Duke of Buccleuch at his works at Wanlock (Dumfriesshire), 8. Model of the furnaces and of the products obtained at the works, exhibited by his Grace, *ib.* Description of the condenser, and its working and results obtained, *ib.* Series of products from the lead mines of Mr. Joshua Byers, in the county of Durham, 9. Series exhibited by Mr. T. Sepwith, illustrating the production of lead, with specimens and sections of mines, 10, 11. Magnificent specimen of lead ore from Snailbitch, near Shrewsbury, 12. Specimens of lead ore and argentiferous lead from mines in Perthshire, 13. Collection showing the process of obtaining lead at Bleyberg, Galicia, 21. Specimens of lead ore from Algiers, 29. Products of the mines and foundries of the Mining Company in Eschweiler, Stolberg, 31. Lead ores from the mines of Count Julius of Lippe, *ib.* Specimens of rare lead ores from Stolberg, such as wilhemite, chloro-phosphate of lead, and crystalline carbonate of lead, *ib.* Specimens of lead ore and manufactured lead from the mines of Bracal (Portugal), 33. Specimens of argentiferous lead from Sweden, 35. Specimens of lead ore and metallic lead obtained from them, from Turkey, *ib.* Products illustrating the processes of separating lead from its ores, and its subsequent conversion into white lead, 48.  
 LEAD, NITRATE OF.—Samples thereof, 45, 47, 50.  
 LEAD, OXICHLORIDE OF.—Mode of preparation thereof, according to the process of Mr. Pattinson, 49. Specimens of Pattinson's patent, 43.  
 LEAD, OXIDE OF.—Use thereof in the form of stannum in glass making, 523, 528. How obtained, 524.  
 LEAD PIPE.—Specimens of, 31, 504. See also *Lead Tubing*.  
 LEAD, RED DICHROMATE OF.—Samples thereof, 49.  
 LEAD, SALTS OF.—Specimen of, 49.  
 LEAD TUBING.—Establishment at Villach, Carinthia, for the manufacture of sheet lead and lead tubing, 21. Great length and perfection of the tubing exhibited, *ib.* See also *Lead Pipe*.  
 LEAD WIRE.—Spun lead or lead wire for horticultural purposes, 27. Resists atmospheric influences, *ib.* Tenacity of the wire, *ib.*  
 LEAD, WORKS OF ART IN.—Remarks thereon, 684.  
 LEAD, YELLOW CHROMATE OF.—Specimen of, 49.  
 Leadbetter, J., 508, 647.  
 Leadbetter, J., and Co., 373.  
 Leake, F., and Co., 550, 552.  
 Leal, F. M. C., 47, 84.  
 Leal, R., 162.  
 Leale and Albrecht, 508, 682.

 Learoyd, J., 375.  
 Learoyd, W., 375.  
 LEATHER.—Interest resulting both to manufacturers and artisans from the exhibition of the various descriptions of leather brought from every country, 388. Many of the improvements in this branch of trade introduced from other countries, *ib.* Mode of preparation of Russian leather, *ib.* Cause to which the peculiar softness of French curried leather may be attributed, *ib.* Reason of the superiority of the English sole leather, *ib.* Chemistry hitherto done less in this branch of manufacture than might have been expected, *ib.* Way in which much has been effected by mechanical means within the last fifty years, *ib.* Short account of several descriptions of skins used for tanning and leather dressing; specimens thereof both in the English and Foreign Sections of the Exhibition, 388, 390. Remarks on the various kinds of leather exhibited, 390 *et seq.* Rough tanned and sole leather; number of exhibitors in this subdivision; sole leather in England mostly tanned with oak bark; specimen in the Australian Division tanned with mimosa bark; leather from New York tanned with the bark of the hemlock; simple method of tanning sole leather practised in some of our colonies; considerable increase in the importations of tanned hides and skins from foreign countries since the abolition of the duties thereon; articles exhibited, names of exhibitors and awards, 390, 391. Curried leather: description of the operation of currying leather; pre-eminence of France in their mode of tanning and currying calf leather; excellent leathers of this class from Switzerland; number of exhibitors in this class; names of the exhibitors to whom prizes have been given; articles exhibited, &c., 391. Varnished leather: great perfection to which varnished and enamelled leather has been brought during the last twenty-five years; mode of preparation, number of exhibitors; articles exhibited and awards made, 391, 392. Morocco and dyed sheep-skin leather; number of exhibitors and countries whence exhibited; excellence attained in the manufacture; specimens of Morocco from Turkey, Tunis, and Egypt, show the manufacture in its origin; objects exhibited, exhibitors to whom awards have been made, 392. Alum and gloving leather: alum or white leather manufactured principally for the purposes of the glove maker; common method of making this leather; specimens of excellent kid leather from France; articles exhibited under this head; names of exhibitors, prizes awarded, &c., 392, 393. Oil or chamois leather: quality of this leather and mode of manufacture; articles exhibited, 393.  
 LEATHER, INCLUDING SADDLERY AND HARNESS, SKINS, FURS, FEATHERS, AND HAIR (Class XVI.).—Tabular classification of objects in the Exhibition into which this Class is divided, xv-xviii. List of Jurors and Associates appointed for this Class, xxviii. List of Exhibitors in this Class to whom Prize Medals have been awarded, lxxx-lxxxii. And of those of whom Honourable Mention is made, lxxxii, lxxxiii. Enumeration of the different heads under which the Jury have distributed the articles exhibited in this Class (Class XVI.), 383. Importance among the manufactures of England of the manufacture of the skins of animals into the various useful articles to which they are applicable, *ib.* The hides, skins, and furs, upon which this labour is employed mostly the produce of our own country, *ib.* Immense quantities are also imported from North and South America, Europe, and the East Indies, *ib.* Table showing the number of unmanufactured hides and skins annually imported into Great Britain for tanning and leather dressing; large portion re-exported in the raw state, *ib.* Remarks on the various articles comprised in this Class, 384, *et seq.* 1st. Skins and manufactured furs, 385-387. Objects exhibited; names of exhibitors, and awards, 386, 387. 2nd. Feathers; objects exhibited and awards, 387. 3rd. Artificial hair; names of exhibitors and awards, 387, 388. 4th. Woven hair for furniture and other purposes; names of exhibitors

- and awards, 388. 5th. Leather; general remarks, 388-390. Rough tanned and sole leather; objects exhibited, prizes awarded, 390, 391. Curried leather; exhibitors and awards, 391. Varnished leather; exhibitors, objects exhibited, prizes awarded, 391, 392. Morocco and dyed sheep-skin leather; objects exhibited and awards, 392. Alum and gloving leather; exhibitors, exhibits, and awards, 392, 393. Oil or chamber leather; exhibits and awards, 393. 6th. Dyed sheep-skin rugs, names of exhibitors, objects exhibited, and awards, 394. 7th. Vellum and parchment exhibitors and awards, 394. 8th. Saddlery, harness, and portmanteaus; objects exhibited, names of exhibitors, and prizes awarded, 394, 395.
- LEATHER-CUTTING MACHINES**—Specimens of, exhibited, 302.
- LEATHER, EMBROIDERED**—Specimens of articles in leather, embroidered with gold, 472.
- LEATHER, STAMPED**—Revival of this manufacture at Paris, 549. Improvements upon the old leather hangings, *ib.* Simple process by which the old leather hangings were made, *ib.* Manufacture at the present time by means of hydraulic pressure, 550. Collection of specimens, exhibited, 550, 551, 552.

 LIFE-BOATS, RAFTS, &c.—Encouragement given by the Duke of Northumberland for the construction of life-boats, 217. Essentials necessary to accomplish the objects for which they are designed, *ib.* Numerous models contributed, *ib.* Excellence thereof, *ib.* Various models of apparatus for saving life, by means of rafts, &c., 219.  
 LIFE-BUOY, &c.—Buoyant mattresses and air-tubes for saving life, 219.  
 LIGHTHOUSES AND THEIR APPARATUS.—Design for a lighthouse, 208. Remarks relative to the principles and construction of Mr. Chance's design for a lighthouse; and also on certain apparatus for lighthouses, exhibited, 271. General sketch of the apparatus now employed; and of the improvements effected therein, by Fyfe, 530, 531. Models, &c., of apparatus exhibited by Commissioners of Northern Lights, by *ib.* and by Mr. Wilkins, 530. Particulars as to the principal European lighthouses, *ib.*  
 LIGHTNING-CONDUCTORS.—Description of Sir W. S. Harris's system of lightning-conductors for the navy, 210, 211. Account of the lightning-conductors used for the purposes of the electric telegraph, 291, 292. Specimens of lightning-rods from the United States, 312, 313. Metals used in the composition, *ib.* Fastenings and glass insulators to afford greater convenience for their attachment, *ib.*  
 Lignac, Martin de, 65.  
 LIGNITE.—Worked on the banks of the Tamaki River (New Zealand), 15. Specimens thereof exhibiting a passage to cannel coal, *ib.* Recent discovery of lignite on the shores of the Peticodiac (New Brunswick), 16. Collection of lignites from Austria, Styria, and Hungary, 21. Extensively used for various purposes, *ib.* Employed in puddling furnaces for iron, *ib.*—See also *Jet*.  
 Lillikrenzes, —, 98.  
 LIMA (South America).—Peachwood or Nicaragua wood, obtained from, 87.  
 Lima, E., 102.  
 Lima, F., 402.  
 LIMBS, ARTIFICIAL.—Excellent collection of arms, legs, &c., 345.  
 LIME, ACETATE OF.—Specimen of, 47.  
 LIME, CHLORIDE OF.—Specimen of, 47.  
 LIME, PHOSPHATE OF.—Discovery of nodules of phosphate of lime, 11. Tolerably plentiful in the gault of Surrey, *ib.* Large quantity consumed for agricultural purposes, *ib.* Their value as manure. Samples of phosphate of lime from Burgess, Canada, 16.  
 LIME, SULPHATE OF.—Specimen of, 46.  
 Limelette, F., 505.  
 LIMESTONE.—Samples of argillaceous limestone from New Zealand adapted for the manufacture of Roman cement, 15. Magnesian limestone, till lately seldom used in the vicinity of London, a stone of great beauty and value, remarkable for its durability, 557. Used in the external work of the Houses of Parliament, *ib.* Specimen exhibited by Mr. Grissell, *ib.*  
 Limner, Luke (Mr. Leighton), 424, 689, 741.  
 Limoges, D., 54.  
 LIMOGES WARE.—Notice of a work, a revival of this style of art, 703.

 Locks.—Wolverhampton still sustains its ancient reputation for the manufacture, 500. Advantages of the peculiar division of labour adopted, *ib.* Advanced state of the manufacture both here and on the Continent, *ib.* Present condition of lock-making traceable to English ingenuity and invention, *ib.* Collection of locks on the British side deserves the place of pre-eminence, *ib.* Bank lock from New York remarkable for ingenuity of principle, *ib.* Objection to locks with ponderous keys, *ib.* Smallness of key in proportion to size and strength of lock remarkable in the locks of Messrs. Bramah and Messrs. Chubb, *ib.* Inferiority of the locks from France, 501. Specimens exhibited and awards, 503.  
 Lockwood and Keighley, 353.  
 Locomotive Engines.—Inside cylinder tank locomotive engine, 169. Model of tank locomotive engine, *ib.* Outside cylinder locomotive engine, of good construction and workmanship, from Belgium, 172. Working model of a locomotive engine and tender, 173. Trigger for shutting off steam from locomotives, *ib.* Large amount of heated surface obtained in the engine called the "Liverpool," patented by Mr. T. E. Crampton, 186. The evaporation resulting from the vast amount of heated surface is stated to yield a steam power equal to 1,140 horses, *ib.* Improved locomotive engine for railways of light traffic, *ib.* Light locomotive engine coupled to a four-wheeled carriage, which supports the end of the engine in case of accident, *ib.* Detailed description of the construction, power, speed, weight, &c., of a locomotive engine, constructed at the Great Western Railway Company's Works at Swindon, *ib.* First-class passenger locomotive engine, *ib.* Locomotive tank engine, *ib.* Working model of a locomotive engine made by a boy fourteen years old, 187. Miniature model of a locomotive engine made by a boy living by the side of a railway; the passing of the trains being the only information within his reach, *ib.*

**MACHINERY** (Classes V. and VA.).—List of Classes of objects included in Group B. Machinery, iii, v. Tabular classification of objects in the Exhibition into which these classes are divided, vii, viii. List of Jurors and Associates appointed for this Class, xxvi. List of exhibitors to whom Council Medals have been awarded, liv. The like of those to whom Prize Medals have been awarded, liv, lv.  
 The machines on which the Jury of Class V. has had to adjudicate generally of the Class called Prime Movers, that is, those more directly connected with the development of power than with its application, 167. Still where the application of the power to the result is direct and immediate, this Jury has considered the mechanical expedients by which it is made, *ib.* In the consideration of this class of machines, the Jury has been chiefly guided by the principles of mechanics as distinguished from those of mechanism, *ib.* The machines referred to the Jury were divided by the Commissioners into seven Classes, viz., (A.) Steam engines and boilers, water and wind-mills, and various other prime movers, 167, 168. (B.) Separate parts of machines, specimens of workmanship, 167. (C.) Pneumatic machines, *ib.* (D.) Hydraulic machines, cranes, &c., pile drivers, &c., *ib.* (E.) Locomotives and railway carriages, &c., 167, 168. (F.) Railway machinery and permanent ways, 168. (G.) Weighing, measuring, and registering machines for commercial and not for philosophical purposes, *ib.* Total number of objects exhibited; number in each of the seven subdivisions above enumerated, *ib.* Proportions in which they were contributed by different countries, *ib.* Division of the Jury into Sub-Juries; number of meetings of the Jury and Sub-Juries, *ib.* Period at which the awards were made and confirmed, *ib.* Table containing a general statement of the number of the awards in the several countries which have contributed to the Exhibition, together with the numbers of exhibitors and exhibits in each country, and the proportions which those bear to the Medals awarded, 168, 169. Observation of the Jury that the machines sent from foreign countries could not be expected adequately to represent the mechanical capabilities of those countries, from the difficulty of transport of such machines as those included in Class V., 168. Opinion of the Jury that the machines referred to their examination from Great Britain, although numerous, and in some respects remarkable, do not duly represent the engineering resources and skill of Great Britain, *ib.* Opinion that any future exhibition would afford conclusive evidence of this fact, *ib.* Objects exhibited, and names of the exhibitors who were excluded from the competition for Medals on account of the parties being members of the Jury, 169. Remarks in detail with regard to objects comprehended under Section (A.) before mention (E.), 164–187; Section (F.), 187–189; Section (G.), 189–191. Remarks on carriages generally, not including those connected with rail or tram-roads, 192, 193. Observations on the various working parts of machinery exhibited, 399.—See also *Manufacturing Machines and Tools*, *Rotation of Machinery*, and likewise under the names of the respective machines.

**MAGNESIA, FLUID**.—Samples of, 45, 47.  
**MAGNESIA, SULPHATE OF**.—Preparations thereof from seawater, by the process of M. Balard, 39. Application of this sulphate to the conversion of chloride of sodium into sulphate of soda, 46. Double chloride of potassium and magnesium likewise obtained, *ib.* Production of sulphate of magnesia from the residuary mother liquor from which alum and copperas have been extracted, 42. Samples of this sulphate, 44, 47, 49.  
**MAGNETIC SALTS**.—Specimens of, 45.  
**MAGNETICAL INSTRUMENTS**.—Photographic apparatus for the self-registration of the changes of position of the magnet, 280. Principle of the apparatus, 380, 381. Chemical solutions for the preparation of the paper, 281. Fox's dipping needles furnished with needles of various lengths, *ib.* Pocket compasses, *ib.* Magnetic

- sun-dials, 281. Prismatic compass, *ib.* Description of a magnetic-electric induction machine, 287.
- MAGNETIC ORES**—Obtained from the mines of Marmota (West Canada), 16. Remarkable thickness and extent of magnetic ores in the Adirondac Valley, New York; 18. See also *Iron Ores*.
- MAGNETS**.—Very few magnets exhibited, 279. Powerful steel magnets, 280. Exhibitors applying themselves to further improvements, *ib.* Attention paid by—Hearder to ascertain the receptive and permanent magnetic powers of cast iron, *ib.* Series of experiments commenced by Dr. Scoresby in 1832; general results thereof, *ib.* Hearder's experiment upon the magnetic properties of cast iron, *ib.* Observations of the Jury on, and description of, the magnets exhibited, *ib.* Powerful permanent magnets from the Netherlands, *ib.* Cast-iron compound horse-shoe permanent magnet, *ib.* Carbonised cast-iron magnet, *ib.* Powerful compound linear bar magnets, 288.
- Magnin, J. V.**, 52, 55.
- Magnus, C.**, 571, 572.
- Magnus, S.**, 59.
- Magpoor, the Mahadajah of**, 657.
- Mahillon, C.**, 331, 334.
- Mahler, H. (Juror)**, xxviii.
- MAHOGANY**.—Beautiful specimens of mahogany, 121, 127, 156. Excellent Spanish mahogany may be raised in the East Indies, 127. History of the introduction of mahogany for the manufacture of furniture, 545.—See also *Tinifer*, *ib.*
- Mahon, Viscount (Juror)**, xxviii.
- Maille and Segond**, 62.
- Maillet, E.**, 520.
- MAIN-SPRINGS**.—See *Watches*.
- Mair, J., Son, and Co.**, 348, 381, 469.
- Maire and Co.**, 47.
- Maitland, Capt.**, 122, 128.
- Maitland Mines (Cape of Good Hope)**, 164.
- Maitre, A.**, 449.
- MAIZE**.—Fair sample of maize exhibited by the Truro Local Committee, 53. Maize of fair quality from the Cape of Good Hope, *ib.* Samples from New Zealand and from Norfolk Island, *ib.* From the West India possessions, *ib.* Inferior quality of the East Indian maize, *ib.* Varieties of maize from Austria, *ib.* A more important crop in North America than in any other civilized country, *ib.* Fine samples from America, *ib.* Samples from Demerara, 55.—See also *Milk*.
- MAIZE-FLOUR**.—Sample of maize-flour, commonly called *corn meal* or *corn flour*, from the United States, 55.
- Majo, S. de**, 635.
- MAJOLICA WARE**.—Garden pots and vases modelled in imitation of, 540. Remarks on a species of majolica-ware for vases, &c., exhibited by Messrs. Minton, 716, 717.
- Major and Gill**, 348.
- Makepeace, E.**, 645.
- Makin, W.**, 489.
- MALABAR**.—Collection of woods from the Malabar forests, 132. Soap composed of cocoa-nut oil, and soda from, 610.
- MALACCA**.—Tin ore, sulphurets of antimony, and specimens of ochre from, 14. Cinnamon from, 62.
- MALACHITE**.—Remarks on malachite decorations exhibited in the Russian Department, 554, 714. Malachite has been long employed in Russia for inlay work, 569. Difficulty of working it, *ib.* High value of good specimens, *ib.* The most important locality at present known for the finer kinds is in the copper ground of Nijny Tagilsk, on the Siberian side of the Ural Mountains, *ib.* Description by Sir F. Murchison of an enormous mass of malachite in a mine at this place belonging to MM. Demidoff, *ib.* Inlaying or veneering for decorative purposes by no means a modern application of this material, 570. First establishment of a manufactory at St. Petersburg by MM. Demidoff, *ib.* The works sent by MM. Demidoff to the Exhibition reproduced at this manufactory, *ib.* The working of malachite on a large scale extremely tedious and laborious, *ib.* Detailed description of the method of working and cementing malachite, 570, 571. Value of the malachite, 571. Objects exhibited by MM. Demidoff; remarks of the Jury on their extraordinary richness and beauty, the excellence of the production, and the application of various new methods of manufacture; award of a Grand Medal for these objects, *ib.* Remarks on the specimens of malachite goods exhibited from Paris and Derbyshire, 571. Beautiful set of twelve malachite and onyx table ornaments, 555.
- Malandrinus, A.**, 90.
- MALAPANE IRON FOUNDRY (PRUSSIA)**.—High character of this foundry for the quality of their cast and wrought iron and steel, 31.
- Malatinsky, E.**, 482.
- MALAY**.—Collection of the woods of, 137, 138.
- Malcolm, J.**, 373.
- Malherbe, L.**, 221.
- Mallin and Sons**, 508.
- Malingie, —**, 159.
- Malat, J. B.**, 505.
- Mallet Brothers**, 470.
- Mallet, —**, 347, 348.
- Mallett and Barton**, 469.
- Malloch, —**, 307.
- MALMÖ ISLAND (SWEDEN)**.—Extensive stone quarries in the island, 556. Specimens of stone from, *ib.*
- Malo-Dickson and Co.**, 372.
- MALT**.—Few samples of malt exhibited, 52. Sample of porter malt, prepared by a patent process, by S. R. Poole, containing in consequence a larger proportion of saccharine matter, *ib.* Samples of, from Ipswich, *ib.* From New Zealand, *ib.* From Van Diemen's Land, *ib.* Sample of malt made from maize, from the United States, 55.
- MALTA**.—Sample of white wheat from, 52. Interesting series of cottons, 95. Specimens of raw silk, 153. Cotton yarns, 347. Specimens of filigree work, 520. Specimens of carved stone, 554. Vases and other objects carved in the soft stone of Malta, 558. Specimens of inlay work in marble, 569. Basket of rich shell-flowers, 642. Ethnographical figures modelled in wax, 649.
- Malvieux, C. T.**, 83.
- Mane and Co.**, 406, 452.
- Mamede, B. G.**, 520.
- Man, Capt. H.**, 102.
- Manby, Capt. W. G.**, 219.
- MANCHESTER**.—Plan pursued in causewaying the streets of Manchester; use of, made of concrete and pitch, 42.
- Manchin and Morel**, 412, 454.
- Mancu, S.**, 84.
- Manderson, —**, 13.
- MANDRILLS**.—Specimens of radial drill mandrills, 303.
- MANNESE**.—Ores of manganese, from Nova Scotia, 17. Chiefly employed in the manufacture of chlorine, and the chlorides, 31. Specimens from Prussia and Nassau exhibited, *ib.* Is used in glass making, 523.
- MANGROVE BARK**.—Obtained from India, 85. Colour extracted, *ib.* This one of the colours introduced by Dr. Bancroft, for the exclusive use of which he obtained an Act of Parliament, *ib.*
- Maniac, E.**, 404.
- MANILLA**.—Fine specimens of shells yielding mother-of-pearl from, 164. Economical Society, 103, 126, 601.
- MANIOCA FLOUR**.—Samples of, from Trinidad, Ceylon, and Angola, 62.
- Manley, General G. (Juror)**, xxxi.
- Manlove, Alcott, and Co.**, 203, 204.
- Manly, J., jun.**, 508.
- Mannesmann, A.**, 489.
- Mannheimer, W.**, 32, 673.
- MANOMETER**.—Description of an instrument exhibited in the French Department, called a manometer, 301.
- MAN'S CATHEDRAL**.—Painted windows in, referred to, 534.
- Mansard, —**, 542, 734.
- Mansell, J.**, 404, 448.
- Mansell, Sir R.**.—Patent obtained by, in 1835, for making flint-glass; results to which it has led, 528.
- Mansell, T.**, 200, 202.
- Mansfeld Mining Works**.—Working of copper in, the States of the Zollverein, exclusively represented by the combined Mining Works of Mansfeld, 31.
- Mansfield**, 609, 649.
- Mansq R.**, 57.
- MANTEL-PIECES**.—Cheap and useful combination of iron and glass in the construction of mantel-pieces, 587.—See also *Chimney-Pieces*.
- Manton and Son**, 221.
- Manuel, C.**, 96.
- MANUFACTURES (generally)**.—List of classes of objects included in Group C. Textile fabrics, iii, v, xiii, xviii. The like of objects included in Group D. Metallic, vitreous, and ceramic manufactures, *ib.* The like of

- objects included in Group E. Miscellaneous manufactures, *ib.*
- MANUFACTURING MACHINES AND TOOLS (Class XV.)**—Tabular classification of objects in the Exhibition into which this Class is divided, viii. List of Jurors and Associates appointed for this Class, xxvi, xxvii. List of exhibitors in this Class to whom Council Medals have been awarded, lvi. The like of those to whom Prize Medals have been awarded, lvi-lviii. General remarks on the articles exhibited in this Class, 194, 195. Number of exhibitors, 195. Subdivision of the articles into sections, *ib.* (A.) Machines for conversion of raw material into a continuous thread, and subsequent processes. 1. Cotton, 196, 196. 2. Wool, 196. 3. Flax and hemp, *ib.* 4. Silk, *ib.* (B.) Weaving of all kinds. 5. Looms, 196, 197. 6. Lace frames, 197. 7. Stocking or hosiery manufacture, *ib.* 8. Head machines, sewing machines, &c., 197, 198. (C.) Paper and printing. 9. Paper making, cutting, and folding, 198. 10. Type printing, *ib.* 11. Numbering, paging, and ruling machines, *ib.* 12. Lithographic and copper-plate presses, 199. (D.) Working parts of machines, *ib.* (E.) Engineers' tools for metal, wood, and other materials. 13. Lathes, *ib.* 14. Planing machines, 200. 15. Slotting machines, *ib.* 16. Shaping machines, *ib.* 17. Drilling and boring machines, *ib.* 18. Other machine tools for metals, 200, 201. 19. Machines for working in wood, (excepting lathes), 201. 20. For working in stone, coal, clay, leather, &c., 201, 202. (F.) Grinding and cleaning flour and other vegetable products. 21. Mills for grinding, 202. 22. Machines for cleaning and separating the products, 202, 203. (G.) Manufacture of sugar, 203. (H.) Apparatus for brewing and manufacturing chemistry, *ib.* List of awards, 203-205.
- MAPLE SUGAR**—Samples of, from America, where it is abundantly used for common purposes, 63.
- Mappin Brothers**, 489.
- Mapple, H.**, 598.
- Mapplebeck and Lowe**, 505.
- MARS**.—Various kinds of maps executed in consequence of surveys made for naval, military, or geological purposes, 222. Accurate surveys executed under the superintendence of the Admiralty, *ib.* Drawings of great accuracy executed by the Hydrographical Board under Admiral Beaufort, *ib.* Publication and sale of these maps at a very cheap rate to the officers of the merchant service, *ib.* Science and practice of hydrography owes much to France, *ib.* Brought to perfection by the celebrated Beautemps Beaupre, *ib.* Objects exhibited and awards, 222, 223. Remarks on the Ordnance survey of Great Britain, *ib.* Great forwardness of this vast enterprise, *ib.* Encomium due to the establishment, at Southampton for the execution of the plates, *ib.* Numerous sheets of the new map of France, *ib.* Collection of maps from Austria, 223. Invention of an excellent process for colouring maps by the foreman of the Lithographic National Press of France, *ib.* Simplicity and ingenuity of the process, *ib.*
- MARBLE, GEOLOGICAL**.—One of the most useful means of advancing mineral industry, 2. Importance of the map prepared under the superintendence of Sir H. T. de la Beche, *ib.* Observations on the geological survey of England, undertaken by Sir H. de la Beche, 223. Geological map of France, *ib.*
- MARBLE, RELIEF**.—Specimens of model or relief mapping in its various stages, 309. Tools necessary for use, *ib.* Manner in which the work is executed, *ib.* Cheap, simple, and generally applicable method of surface modelling, *ib.* Model in relief of Mount Sentinel, *ib.* Plastic material and apparatus used in its construction, the artist's own invention, *ib.* Relief model of the Isle of Wight, *ib.* Geographical and geological features accurately delineated, *ib.* Specimens of letter-press relief, coloured maps, 452.
- MARBLE**—Specimens of, from the Woodyhide Quarries. Specimen of Purbeck marble, 13. Specimens of marbles of Ireland, *ib.* Black marble, produced in large masses and at a low cost at Namur, 23. Block exhibited, *ib.* Collection of marbles from the Pyrenees, by Messrs. Dervillé and Co., of Paris, 27. Collection of marbles of the Vosges, *ib.* Rough, sawn, and polished marbles, from the works of M. Seguin, Paris, 29. Fine specimens of marbles of Silesia, 32. Fine series of marbles from Greece, 33. Specimens of the marbles of Naxos, from the marble manufactory of Dietz, *ib.* Specimens of marbles from Portugal, *ib.* Fine series of marbles from Spain, 34. Magnificent series of marbles and alabaster from Tuscany, 35.—See also *Granites*.
- MARBLE, ARTIFICIAL**.—Specimens of artificial marble, from Austria and Prussia, 574.
- MARBLE, IMITATION**.—Various specimens of great excellence, 546. Awards to exhibitors, 551. Observations of the Jury on the imitations of marble executed in stone, slate, &c.; objects exhibited, 571, 572.
- MARBLE, INLAID WORK IN**.—Specimens of, from Derbyshire and Devonshire, and also from Malta, 568. Description of the two principal methods of producing marble mosaic; objects exhibited and awards, 568, 569.
- MARBLE, MANUFACTURE IN**.—Italy pre-eminently the country where this manufacture has been found most congenial to the artistic feeling of the people, 560. France, Spain, Portugal, and parts of Germany and Belgium, have, however, of late years, employed for their own use, and in their own style, many useful marbles with which they abound, *ib.* Manufactures have also arisen in England and Ireland, which have done much to raise the character of marble decoration, *ib.* The quarries of Parian and other antique sculpture marbles in Greece, Italy, and Asia Minor now exhausted or concealed by rubbish, *ib.* Mode of cutting and polishing marble, 560, 561. Derbyshire the chief seat of the marble manufacture of England, 561. Most important marbles of Derbyshire; particular purposes for which each description is used, *ib.* Observations on the Devonshire marbles, *ib.* Remarks on the series of manufactured marbles sent from various places; names of the exhibitors; specimens exhibited and awards; 1st. General collection of marbles; 561, 562. 2nd. Chimney-pieces, 562, 563. 3rd. Columns, pedestals, &c., 563. 4th. Slabs, table-tops, and tables, 563, 564. 5th. Miscellaneous objects in marble, 564, 565.
- MARBLE ORNAMENTS**.—Remarks on the various ornaments in black and other marble exhibited, 564.
- MARBLE, WORKS OF ART IN**.—Notices of the principal, 685, 686. See also *Sculpture, Models, &c.*
- Marcel**, —, 405.
- Marcelin**, —, 545, 551, 717, 723.
- Marcel**, —, 737.
- March, E.**, 583, 586.
- Marchand, J. B.**, 505, 520.
- Marchand**, Professor, paper by, in the Chemical Gazette, advertised to, 40.
- Marchesi, G. B.**, 311, 423.
- Marchesi, L.**, 686, 703.
- Marchesi and Ossoli**, 578.
- Marchetti, L.**, 544, 551.
- Marchin Commercial Commission (Belgium)**, 23.
- Marcelline and Couillet Smelting Company**, 23, 175, 308.
- Marcos, J.**, 91.
- Marc, C. J., and Co.**, 217.
- Marechal and Guynon, Messrs.**, 686, 702, 715.
- Mareschal, J.**, 204.
- Marg, E.**, 362.
- Marguetts and Eyles**, 557.
- Marguerie**, —, 552.
- Marguerita, Señora**, 472.
- Marieette de Chassagny**, —, 687, 688.
- Marin, J. E.**, 302, 655.
- Marimanoff and Annakoons**, 166.
- MARINE BAROMETERS**.—Specimen of a marine barometer, 301.
- MARINE BOILERS**.—Model of a telescope chimney for marine boilers, 173.
- MARINE ENGINES**.—Connecting-rod for an 800-horse power marine engine, 169. Case of models of engines for shallow river navigation, *ib.* Pair of 12-horse power oscillating cylinder direct-acting engines for river navigation, 172. Pair of 140-horse power vibrating cylinder engines, from Belgium, for the navigation of the Rhine; description thereof, *ib.* A small donkey-engine for a steam-boat, from Belgium; use thereof, *ib.* Pair of horizontal cylinder direct-acting marine engines, of 700-horse power, for driving the screw propeller, *ib.*
- MARINE GLASS**.—Most successfully used as a substitute for pith in the seams of decks, 212. Also for uniling large timbers for naval purposes, *ib.*
- Marion, A.**, 431, 448, 454.
- MARKING INK**.—Specimen of, 48.
- Markwick**, —, 165.
- Marling, S. S., and Co.**, 353.
- Marling, T. (Juror)**, xxviii.
- Marmora Iron Company (Canada)**, 16.—See also *Iron Ores*.
- Marmora Mines (Canada)**.—Importance of the mines of

- Marmora; magnetic ores obtained therefrom, 16.—See also *Iron Ores, Lithographic Stones*.
- Marnas, — (Associated Juror), xxix.
- Marcolletti, Baron, 540, 684, 704.
- Marques, R., 491.
- Marquart, Capt., 122, 137.
- Marquart, Dr. L. C., 38, 47.
- Marques, —, 643.
- MARQUERIE WORK.—One of the most beautiful and interesting inlays, 545. Account of the process employed, *ib.* Admirable specimens exhibited, *ib.* Awards to Exhibitors, 550.
- Marr, W., 505.
- Marratt, J. S., 253, 264, 303.

- Meade Brothers, 277.
- MEAL MILLS.—Remarks on the mills for grinding fine meal exhibited by Messrs. Harwood, by Messrs. Crosskill, and by E. H. Bentall, 238. Prizes awarded, 238, 242.
- MEAS, C. and G., 505, 510.
- MEASURING INSTRUMENTS AND MACHINES.—Various machines for standard measures of length exhibited; two of them extremely beautiful, 246. Gauge for measuring thickness and weight, 315. Principles of construction and action, *ib.* Convenient for use, *ib.* Standard bar measure, 256. Description thereof, *ib.* Bessel's (Prussian) standard measure; description thereof, *ib.* Standard yards prepared for Her Majesty's Commissioners for the restoration of the standard of length, *ib.*
- MEAT-MINCEING MACHINE, 204.
- MEATS, PRESERVED.—See *Alimentary Processes*.
- MECHANICAL FIGURES.—Piece of mechanism to illustrate the different proportions of the human figure, 312. Mechanical arrangements, *ib.* Dimensions of the figure, *ib.* Excellence of the workmanship, *ib.* Intended application, *ib.* Possible applications, *ib.*
- MECHANICAL ORGANS.—See *Barrel Organs, &c.*
- MECHANICAL TOYS.—Collection of, 681.
- Mechl, J. J. (Juror), xxx, (Exhibitor), 450, 605, 654.
- MECHLIN LACE.—See *Lace*.
- MECKLENBURG SCHWERN.—Balances from, 260. Splints for lucifer matches, 635.
- MECONIC ACID.—Samples of, 47.

- MEDALS, AND MEDALLIONS, AND COINS.**—Notices of the principal works of a medallist character, 315, 686, 693. Notices of the principal works of art in this section contributed by Prussia, 698. No contributions from France to this Section, 701. Remarks on the works of this Class in the Belgian Department, 705.
- MEDIAEVAL ARCHITECTURE.**—Numerous objects sculptured in Caen stone, imitative of English Mediaeval architectural decoration, 557.
- MEDIAEVAL COURT** (in the Exhibition).—Remarks as to the fitting up of the, by Mr. Pugin, 687, 696. General remarks on the articles of furniture in the Mediaeval Court, 723. Good taste displayed in the hangings of the Mediaeval Court, 730.
- MEDINA CEMENT.**—See *Cements, Roman, &c.*
- Medina Del Campo,** Mayor of, 52.
- MEDITERRANEAN,** The.—Preparation of various salts from the sea-water of, by the process of M. Balard described, 39.
- Mec, Cornelia,** 472.
- Meek,** —, 448.
- MEERSCHAUM PIPES.**—High estimation in which these pipes are held, 669. Meerschaum a mineral of somewhat rare occurrence, *ib.* Variable constituents of the compound, *ib.* Qualities of pure and good meerschaum, *ib.* Meerschaum met with in various localities in Spain, Greece, and Moravia, *ib.* Largest quantity derived from Asia Minor, *ib.* Elegantly carved bowls of pipes, *ib.* The art especially cultivated in Pesth and Vienna, *ib.* Beautiful specimens of meerschaum exhibited, *ib.* Processes of preparing meerschaum for pipe-making, *ib.* Frequent attempts made to imitate meerschaum, 670. Use of the meerschaum parings in making massa pipe-bowls, *ib.* Specimens of composition pipe-bowls and cigar-tubes from Austria, *ib.* Mode of distinguishing these pipes from real meerschaum, *ib.* Numerous collection of pipes from Austria and other German States, 671. Samples of carved bowls from Sardinia, 672. List of Awards, Exhibits, and successful Exhibitors, 672, 673. Specimens of mountings for meerschaum pipes, 620. Specimens of meerschaums from the environs of Thebes, 33.

- METAL WORM** (for architectural purposes).—Remarks on the examples of exterior and other metal work, such as gates, balconies, flower vases, tazzas, &c., in the Exhibition, 719, 720.
- METALLIC LAVA.**—See *Lava, Metallic.*
- METALLIC MEMORANDUM BOOKS.**—Prepared paper used for these books, 449. Description of the process of preparation, *ib.* Pencil marks become almost as permanent as ink, *ib.* Numerous good specimens exhibited, *ib.*
- METALLIC SPONGE CEMENT.**—A curious and ingenious contrivance for a pavement, invented by A. Chenot of France, 577.
- METALLIC, VITREOUS, AND CERAMIC MANUFACTURES.**—List of classes of objects included in Group D, Metallic, Vitreous, and Ceramic Manufactures, iii.
- METALLOGRAPHY.**—Specimens of a new art termed, 503.
- METALS.**—See *Brass Manufactures. Copper. Iron. Zinc. Platinum.*
- METEOROLOGICAL CLOCKS.**—Description of a meteorological clock exhibited by Hall, 300.
- METEOROLOGICAL INSTRUMENTS.**—Greatly increased attention paid to meteorological researches upon a systematic plan, 298. Surprising and lamentable to perceive instruments of so ordinary and inefficient a construction, *ib.* Greater part ill adapted and totally unfit for meteorological observations, *ib.* Barometers elegant and decorative articles of furniture; little attention paid to their essential as philosophical instruments, *ib.* Elliot and Sons' barometers are fairly models of chaste design and excellent wood carving, *ib.* Observations on thermometers, 299. Mostly fitted with scales of ivory, *ib.* Ivory most unsuited to a graduation of any kind, *ib.* Bulbs of those exhibited nearly all too large, *ib.* Nothing new in the self-registering thermometers, *ib.* No attempt made to improve the working of the instrument, *ib.* Very few thermometers in the English portion graduated on their stems, *ib.* Superiority of that method, *ib.* Instruments in the Foreign Department generally pretty good, *ib.* Injurious effects of bad instruments, *ib.* Little attention paid to the construction of meteorological instruments in London, *ib.* Essentials of good barometers and thermometers, *ib.* First, his thermometers the best in the Exhibition, *ib.* Messrs. Negretti and Zambra the best in the English Department, *ib.* Observations in detail on the various articles exhibited, *ib.*—See also *Barometers, Thermometers, &c.*

 Mica.—Large sheets of, from Boston, 18. Used for doors of stoves, *ib.*  
 Michaels, Major J. L. (Juror), xxvii.  
 Michel, A., 47.  
 Michel, G., 208.  
 Michellin, T., 470.  
**MICROSCOPES**.—Rich collection of microscopes exhibited, 265. All varieties from the simplest forms to the most elaborate, *ib.*. The microscope second only in importance to the telescope, *ib.*. Great assistance afforded by it to geology and medical men, *ib.*. Steady and progressive improvements traced, *ib.*. Valuable suggestions of Sir David Brewster, *ib.*. Low-priced instruments exhibited deserving of high commendation, *ib.*. Advisable that the angle of aperture should not be extended to its utmost possible limit, *ib.*. Requisite qualities of microscope stands, 466. These desirable points are admirably attained, *ib.*. For purposes of delineation Næpht's form of prism is more advisable than that of Wollaston's, *ib.*. Observations of the Jury on the various microscopes, microscope stands, and microscopic apparatus exhibited, 266-269. Observations on the illustrations of the uses of the microscope as shown by M. Leonard in his correct representation of many different substances, &c., when highly magnified, 267, 268. Thin glass for the microscope introduced by Messrs. Chance, 533.  
 Middlemore, W., 394.  
**MID-LOTHIAN COAL-FIELD**.—Number of seams of coal contained in this coal-field, 13.

**MINERAL FUEL**.—Observations of the Jury on two blocks of mineral fuel from Tuscany, apparently of good quality, 35.  
**MINERAL PAINTS**.—See *Paints, Mineral*.  
**MINERAL SUBSTANCES, MANUFACTURES IN, FOR BUILDING, &c.** (Class XXVII.) Tabular classification of objects in the Exhibition into which this Class is divided, xxi, xxii. List of Jurors and Associates appointed for this Class, xxx. List of exhibitors to whom Council Medals have been awarded, cix. The like of those to whom Prize Medals have been awarded, cix, cx; and of those of whom Honourable Mention is made, cx xlii. Great variety of articles manufactured in stone, marble, and clay comprised in this Class, 553. These articles grouped into two principal divisions, *ib.* The one including all dressed, carved, sculptured, and polished work in solid material, whether stone, marble, granite, or other mineral substance; and whether solid, wrought, or inlaid in stone, *ib.* The other, including modelled and moulded work in clay, cement, certain kinds of glass and pottery, and artificial stone, *ib.* Classified arrangement into groups of each of these divisions, *ib.* Reference to the most interesting of the British and Foreign exhibits, 554. Principles by which the Jury have been guided in their recommendation of objects for the Council Medal; objects for which Council Medals have been awarded; names of exhibitors, and remarks and explanations on the various exhibits, *ib.* Report on Division I.: Works in Solid Materials. Group 1. Manufactures in unpolished Stone, A. Flag-stones, paving-stones, &c., 554, 555. B. Chiselled, carved, and sculptured stone work not polished, 556-558. C. Manufactures in slate, 558, 559. D. Manufactures in various kinds of stone and other minerals, 559, 560. Group 2. Polished and Inlaid Work in Stone, &c. E. Manufactures in marble and alabaster, 560-565. F. Works in ornamental stone, granite, and spar, 565, 560. G. Mosaics or inlaid work in stone, 566-571. H. Enamelled slate and other imitations of marble, 571, 572. I. Mineral Manufactures in Plastic Material and Artificial Compounds. Group 3. Manufactures in Cement and Artificial Stone, &c.—I. Masses and incrustations, 572-577. K. Glass and porcelain mosaics, 577, 578. Group 4. Manufactures in Clay, 578, *et seq.* L. Bricks and tiles, 578-589. M. Terracottas, 582-584. N. Gas retorts, fire-bricks, &c., and chemical utensils, 584-586. O. Glazed fire-clay goods, 586, 587. Appendix: experiments on the strength of Portland cement, 587-589.  
**MINERAL WATERS**.—Samples of artificial and other, 45, 49.  
**MINERAL AND VEGETABLE PIGMENTS (undecorated)**.—Samples of, 45.  
**MINERALOGICAL SPECIMENS AND FOSSILS**.—Minerals and fossils collected by Mr. J. Tennant, with a view to promoting mineralogy in colleges and for educational purposes, 11.  
**MINES**.—See *Mining, Quarrying, &c. Safety Fuses. Ventilation of Mines*.

MINING PUMPS.—See *Pumps*.

MINING, QUARRYING, METALLURGICAL OPERATIONS, AND MINERAL PRODUCTS (Class I.).—Tabular classification of objects in the Exhibition, into which this Class is divided, v. vi. List of Jurors and Associates appointed for this Class, xxi. List of exhibitors in this Class to whom Council Medals have been awarded, xxxv. The like of those to whom Prize Medals have been awarded, xxxv-xxxvii; and of those of whom Honourable Mention is made, xxxvii, xxxviii.

Importance of the mineral kingdom, 1. Immense utility of the products, *ib.* Copper mines of Cornwall profitable to the adventurers, *ib.* Abundance of the ores, *ib.* Collection of minerals exhibited incomplete, *ib.* Contributions of native silver from Sweden and Norway, *ib.* Large amount of mercury supplied to the whole world by Spain, *ib.* Specimens of minerals from Spain give no evidence of the mineral wealth of the Peninsula, 1, 2. Several copper works and gold-washings of Russia unrepresented, 2. Iron the only important object from Russia, *ib.* Great interest of the objects of mineral industry from Austria, Belgium, France, and the States of the Zollverein, *ib.* Collection of metals of the United Kingdom sufficiently complete, *ib.* Collections of ores valuable for instruction, *ib.* The mineral has everywhere followed the development of other industries, *ib.* Methods of working acquiring a certain uniformity of system, *ib.* Wherever fuel is abundant it is more wastefully used in the working of metals, *ib.* Geological maps one of the most useful means of advancing mineral industry, *ib.* Importance of the map prepared under the superintendence of Sir H. T. De la Beche, *ib.* Interesting collection from Canada, *ib.* Model showing the mechanical preparation of copper ores, *ib.* Duke of Devonshire's crystals obtained from New Granada, 2, 3. Granite rock from Kilba, 3. Native silver from the Descubridora Mine, Chili, *ib.* Lead from the Laxey Mines, *ib.* Magnificent lump of galena from the mines of Snailbitch, near Shrewsbury, *ib.* Motives by which the Jury have been influenced in awarding the prizes, *ib.* List of awards of Council and Prize Medals and Honourable Mentions, 3-6, 7, *et seq.* Great Britain the most favoured country in the world for the development of mineral industry, 6. Fuel distributed equally throughout the three countries, *ib.* Remarks on the coal formation of the British empire, *ib.* Ores of iron abundantly distributed in several of the coal basins, *ib.* Quantity of cast iron produced in England in the years 1836, 1840, 1844, 1845, 1848, 1849, 1850, *ib.* Quantity of coal raised in England in 1850, *ib.* Proportions of the coal and iron exported to the colonies and foreign countries, *ib.* Native copper discovered on the shores of Lake Superior, *ib.* This may at some future time lead to competition with the Cornish mines, *ib.* England divides with Saxony and the Indian Archipelago the monopoly of the trade in tin, *ib.* Annual production of copper in Cornwall, *ib.* Lead mines of England by no means of secondary importance, *ib.* Statement of the quantity of lead raised in England, 6, 7. Further remarks in detail on the objects in the British Department to which Prize Medals and Honourable Mention have been awarded, 7-14. The like in regard to objects from the British Colonies, viz., East India, 14, 15. Ceylon, 15. Australia and Van Diemen's Land, *ib.* New Zealand, *ib.* Cape of Good Hope, *ib.* Canada, 15, 16. New Brunswick and Nova Scotia, 16, 17. Island of Trinidad, 17. And in regard to objects from foreign countries, viz., United States of America, 17-19. Austria, 19-21. Belgium, 21-23. China, 23, 24. Chili, 24. Egypt, *ib.* France, 24-29. Algiers, 29. Zollverein States, 29-33. Greece, 33. New Granada, *ib.* Portugal, *ib.* Rome, *ib.* Russia, 33, 34. Sardinia, 34. Spain, *ib.* Sweden and Norway, 34, 35. Switzerland, 35. Tuscany, *ib.* Turkey, 35, 36.

MINIUM.—See *Lead, Oxide of*.

MISCELLANEOUS MANUFACTURES AND SMALL WARES (Class XXIX.).—Tabular classification of objects in the Exhibition into which this Class is divided, xxi. List of Jurors and Associates appointed for this Class, xxx. List of exhibitors in this Class to whom Council Medals have been granted, cxli. The like of those to whom Prize Medals have been awarded, cxlii-cxv. And of those of whom Honourable Mention is made, cxv, cxvi. Number of exhibitors in this Class, 603. Articles comprised in this Class, subdivided into sections, 603, 604. Principles by which the Jury have been guided in making their awards, *ib.*

Remarks in detail on the various articles falling within the scope of their inquiries, with list of awards made in each section. A. Manufactures, depending upon chemical principles: I. Soap and perfumery, 605-615. II. Candles, 615-630. III. Protein stone or artificial ivory, 630. IV. Blacking, 630-632. V. Chemical matches, 632-635. VI. Confectionary, 636-642. B. Manufactures relating to natural history: I. Artificial flowers and fruit, 642-645. II. Taxidermy, 645-648. C. Articles connected with education: I. Educational models, 648. II. Ethnographical models, 648-650. III. Collections of produce, 650-652. D. Manufactures for personal use: I. Dressing-cases, writing-desks, work-boxes, &c., 652-655. II. Parasols and umbrellas, 655-661. III. Walking-sticks, 661-666. IV. Fans, 666-669. V. Pipes and amber manufactures, 669-674. VI. Snuff-boxes, 674-677. E. Manufactures relating to amusements: I. Manly games, 677. II. Fishing-tackle, 677, 678. III. Toys, 678-682. F. Miscellaneous, 682.

MIXED FABRICS (Class XV.).—Tabular classification of objects in the Exhibition into which this Class is divided, xv. List of Jurors and Associates appointed for this Class, xxvii. List of exhibitors in this Class to whom Council Medals have been awarded, lxxix. The like of those to whom Prize Medals have been awarded, *ib.* And of those of whom Honourable Mention is made, lxxix. Reports on the mixed woven fabrics of various materials, shot with either cotton, linen, wool, silk, mohair, or other substances, 374. Division of the articles composing this Class into sections, *ib.* Difficulty in ascertaining the origin of many of these fabrics, *ib.* Varieties made in Yorkshire, Gloucester, and Norfolk, *ib.* Introduction of spun silk with wool dates from the revocation of the Edict of Nantes, in 1685, *ib.* Tabinets or poplins produced in Ireland ever since 1771, *ib.* Novelties being constantly introduced, *ib.* Valuable experiments of this character adopted within the last 10 years, *ib.* Introduction of alpaca and mohair, *ib.* Great importance of this class of manufactures, *ib.* Rapid development of the alpaca and mohair manufactures, *ib.* Chief craze of searching for and adopting most of the new and important materials according to England, *ib.* State of the manufacture in the several foreign countries, 374, 375. In most descriptions of this manufacture the hand-loom alone is made use of, 375. Number of exhibitors; objects exhibited and awards, 375-377. General remarks on the shawls of various descriptions, 377 *et seq.* Objects exhibited and awards made by the exhibitors, 379-382.

Moberly and Co., Messrs., 42.

Moberly, W., 47.

MODELS, ANATOMICAL.—Beautiful models of anatomy exhibited, 345. Models can never supply the place of actual dissection, *ib.*

- MOZAICS AND INLAID WORKS.**—Ornamental inlay applied to furniture, 545. Description of the process, *ib.* Specimens exhibited, and Awards, 550, 552. Importance of the objects exhibited from Italy and India, 554. Remarks on the Cavalier Barberi's Roman mosaic, 554, 577. The art of mosaic originally applied only to the combination of small dice-shaped stones (*versere*) in patterns, 566. Now understood to include all kinds of inlaid and veneered work in whatever material, *ib.* Statement of the Jury that they have only to consider those specimens in which marble and gems are the materials principally made use of, 567. Division of these specimens into three classes:—1st. Florentine mosaic, or work in gems (*pietra dura*). 2nd. Derbyshire mosaic, imitation of Florentine, but in marble. 3rd. Russian mosaic, or inlaid work in malachite. Objects exhibited; remarks thereon, and Awards, 567-571. The art of inlaying manufactured cement, glass, or porcelain, different in all respects from inlaying marble or gems, 577. Remarks on the manufacture of Roman and Venetian mosaic; mode of preparation; objects exhibited; names of Exhibitors; Awards, &c., 577, 578. Remarks on the manufacture of clay and porcelain mosaics; Exhibitors' exhibits, and Awards, 578. Notices of the principal objects of art in this division, viz.:—1. In stone, 687. 2. In tiles, *ib.* 3. In vitrified materials, *ib.* 4. In wood, *ib.* 5. In metal, *ib.* High proficiency to which the artists of Rome have attained in this class of art, 704. Notices of the principal works in the Exhibition, *ib.*
- MOZAIC PAVEMENTS.**—General remarks on the examples of mosaic pavement contained in the Exhibition; principles on which this class of design should proceed, 716, 717.

 MUSIC PRINTING.—History of music printing from 1400 to the present time, 408. Specimens of music and notes types exhibited, *ib.* Marked improvement in the types of M. Derrieg of Paris, *ib.* Difficulties to be surmounted before music printed by letterpress can equal that printed from engraved plates, *ib.* Good work produced by transfers of engraved music on lithographic stones, *ib.* Cost of printing by lithograph greater than by letterpress, *ib.* Awards to exhibitors of music type, &c., 451, 454.  
 MUSICAL INSTRUMENTS (Class XA).—Tabular classification of objects in this Class, xi. List of Jurors and Associates appointed for this Class, xvii. List of Exhibitors to whom Council Medals have been awarded, lxx, lxxi. The like of those to whom Prize Medals have been awarded, lxxi, lxxvii. And of those of whom Honourable Mention is made, lxxvii. List of Exhibitors in favour of whom money awards were made, lxxviii. Report of the Jury of Class XA on musical instruments, 324, *et seq.* Unfeigned satisfaction and pleasure which they have derived during their inspection, from becoming acquainted with some of the most beautiful specimens of musical instruments of all kinds ever manufactured, 324. Report of the Jury on the organs exhibited, 324-326. On pianofortes, 326-330. On harps, 330. On bow instruments, *ib.* On brass instruments, 330, 331. • The wind instruments (wood and metal), 332. On harmoniums, &c., *ib.* On instruments of percussion, *ib.* On automatic instruments, 332, 333. Miscellaneous articles in connexion with musical instruments, 333. Awards, 333-335. See also *Brass Instruments. Stringed Instruments. Wind Instruments. And likewise under the name of each Instrument.*  
 MUSLINS.—Specimens from Glasgow, Switzerland, and France exhibited, 348. Details thereof, 348, 349. Specimens of printed muslins, 459. Specimens of muslin window curtains, 470, 471. Remarks on worked and coloured muslins intended for window curtains; principles to be observed in their ornamentation, 780. Defective designs in the Swiss muslins, *ib.* The English manufactures in better taste, *ib.*

 NASSAU.—Specimens of wax fruits from, 643. Assortment of clay pipes, 671, 673.  
 Nast, H., 15, 42.  
 NATAL.—Specimen of red ebony from, 140. Promising specimens of cotton, 95.  
 Natchet, —, 367.  
 NATHON.—Obtained from lakes in Lower Egypt, 24.  
 Nattore, Rajah of, 564.  
 NAUTICAL INSTRUMENTS.—Azimuth compass, from the Compass Department of the Admiralty, 218. Excellence of this instrument, *ib.* Marine compass of Mr. Dent undisturbed by the motion of the ship or firing of the

- guns, 218. Description of this and other instruments exhibited by Mr. Dent, *ib.* Instrument for registering the magnetic course of a vessel as actually steered, *ib.* Compass in spirits, *ib.* Such instruments found very valuable in heavy seas, *ib.* This instrument recommended by its cheapness, *ib.* Compass of new and ingenious invention from the United States, *ib.* Instruments for measuring the rate of a vessel through the water, *ib.* Instruments for measuring the depth of the sea, 219. Exhibitors of nautical instruments few, and but little novelty displayed, with the exception of those exhibited by Ericsson and St. John of the United States, 252. Observations on the nautical astronomical instruments exhibited, *ib.* Various other nautical instruments, 252, 253.
- NAVAL ARCHITECTURE, MILITARY ENGINEERING, ORD-  
NANCE, ARMOUR AND ACCOUTREMENTS (CLASS VIII).—**  
Tabular classification of objects in this Class, ix, x. List of Jurors and Associates appointed for this Class, xxvii. List of exhibitors to whom Council Medals have been awarded, xix. The like of those to whom Prize Medals have been awarded, lix-lxi. And of those of whom Honorable Mention is made, lxi. List of exhibitors to whom Money Awards were made, *ib.* Very little improvement effected in the Navy until after the general pacification in 1814, 209. Improved method of naval construction brought forward by Sir H. Seppings, *ib.* Introduction of semi-circular or elliptical-shaped sterns, *ib.* Enlargement of the upper decks, space gained thereby for working the guns, *ib.* Additional solidity introduced in the construction, greater durability obtained, *ib.* Advantage of caps and hammers being adapted to the great guns, *ib.* Introduction of complete batteries of 68-pounders, *ib.* Combination of larger masts rendered more economical, easy, and solid, *ib.* Improvements introduced by Sir W. Symonds, *ib.* Series of experiments and researches undertaken by Mr. J. Scott Russell to ascertain the form of least resistance at a high velocity, *ib.* Theory of stability examined by the Rev. H. Moseley, 210. Stowage of ships much improved of late years, *ib.* Substitution of iron tanks for water casks at the suggestion of General Bentham, *ib.* Modes invented for preserving meat, *ib.* Preservation of gunpowder from humidity, *ib.* Great improvement in the French Navy, *ib.* Series of improvements of the highest importance to the safety of ships, *ib.* Introduction of chain cables into the Navy by Sir S. Brown, *ib.* Means devised by M. Barbotin, Captain in the French service, by which the chain cable can be worked on the capstan, *ib.* Remarkable improvements recently made in anchors, *ib.* General remarks on Sir W. S. Harris's lightning-conductor, *ib.* Important advantages resulting from its introduction into the Navy, *ib.* Substitution of iron for wood in ship-building, *ib.* Advantages of iron ships over wooden vessels, *ib.* Iron vessels not, however, suited for war purposes, *ib.* Economy resulting from the invention of the block machinery by the late Sir J. L. Brunel, *ib.* Improvements in the construction of large blocks, *ib.* Rope-making likewise improved, 211. Operation of laying the ropes by mechanical power owing to British ingenuity, *ib.* Cordage exhibited by the Commercial Marine of France superior to the British, *ib.* Improved texture of sail-cloths, *ib.* Large number of models contributed by the Admiralty and merchant builders, *ib.* Opinion that some record of these ships should be preserved, in order to indicate the present state of naval architecture in Great Britain, *ib.* Principal dimensions and calculated elements of a complete series of sailing ships in the Navy from a first-rate man-of-war to a small brig, 211, 212. Increased width, or breadth of beam, of ships, introduced into the Navy within the last twenty years, 211. Breadth of beam, when carried to excess, contributes to make ships roll quickly and also deeply, *ib.* Principal dimensions and calculated elements of the experimental frigates of the Royal Navy, 211, 212. Experiments made with these vessels to test their sailing qualities and results, 211. Principal dimensions and calculated elements of the experimental brig of the Royal Navy, 211-212. General observations on paddle-wheel steam ships, 211-215. Application of the screw propeller to ships of war of recent date, 215. Table of the principal dimensions and calculated elements of ships of war fitted with screw propellers, 216. Enumeration of awards for naval purposes, and objects connected with the naval service, 215-219.

Ohle, E. F., 31.

**OIL CAKE.**—Samples of, from Great Britain, 55, 56. From Canada, 56. From Belgium, *ib.* From Hamburg, *ib.* From Austria, *ib.* From the Netherlands, *ib.* From Danbeck, *ib.* From Egypt, *ib.* From Cardinia, *ib.* From the United States, *ib.*

**OIL-CAKE BRUISERS.**—Remarks on Nicholson's and on Hornsby's oil-cake bruisers, 238. Prizes awarded, 238-242.

**OIL COLOURS, PRINTING IN.**—See *Printing in Oil Colours.*

**OIL LEATHER.**—See *Leather.*

**OILS (Various).**—Apparatus for the distillation of oil from schist, by M. Maehly, 39. Valuable oil for lubricating purposes procured by the distillation of cannel coal, 43. Specifications of oil for watches and fine machinery, 44. Great importance of oil, 79. Number of purposes to which applied in arts and manufactures, *ib.* Divided into two classes, the fat or fixed oils, *ib.*; and the essential or volatile oils, *ib.* The first of these classes is again divided into fluid and solid oils, *ib.* Quality depends in part on the nature and goodness of the seed, or nut from which expressed, *ib.* Quality also influenced by the process employed in extraction, *ib.* Many descriptions of oil admirably suited for various purposes, but little used on account of price, *ib.* These tend to regulate the price of oils generally in the market, *ib.* Price of tallow to some extent regulated by that of palm and cocoa-nut oil, *ib.* Use of oil for the lubrication of fine machinery, *ib.*; also in wool-spinning operations, *ib.* Good specimens of new oils always of considerable practical interest, *ib.* Of the six principal vegetable oils, namely, palm, cocoa-nut, castor, olive, linseed, and rape, the four first are imported in the state of oil only, *ib.*; the two last chiefly as seed, *ib.* Quantities of these oils, also whale and spermaceti, imported into Great Britain in 1850, *ib.* Quantity of tallow imported, *ib.* Valuable series of specimens of cotton seed, and the oil and cake obtained from it, after the expression of the oil, *ib.* Oil of cotton-seed made in small quantities for a considerable number of years, *ib.* Good samples of rape, olive, and almond oil, 80. Rape oil better suited for the lubrication of machinery than any other oil, *ib.* English grown rape yields oil of superior quality to any foreign seed, *ib.* Various descriptions of oils exhibited; Prize Medals and Honourable Mentions awarded, 80, *et seq.* Valuable series of oils included in the collection of Liverpool imports, 80. General remarks on the several descriptions of oil and vegetable butter from India, 80-82. Samples of eighteen descriptions of oil from Ceylon, 82. Nine specimens of myrtle or berry wax from the Cape of Good Hope and New Brunswick, 82, 83. Excellent material for the manufacture of candles, 83. Interesting collection of oils and oil-seeds from Western Africa, *ib.* Good samples of cocoa-nut oil from the Mauritius, *ib.* Specimens of laurel and crab or carapa oil from British Guiana, *ib.* Crab and cocoa-nut oil from Trinidad, *ib.* Samples of olive oil from South Australia and New South Wales, *ib.* Specimens of oils from America, *ib.* Series of samples of oils from Austria, *ib.* Samples of good vegetable oils in the Belgian collection, *ib.* Vegetable wax from China, *ib.* Physical character thereof, *ib.* Series of Egyptian oils worthy of Special Mention, *ib.* Collection of samples of oil from France, 83, 84; also from Algeria, 84. Samples of oils from the States of the Zollverein, *ib.* Fair samples of oil from Holland, *ib.* Large number and excellent specimens of oils in the Portuguese collections, *ib.* Samples of the empyreumatic volatile oil, obtained by the destructive distillation of birch bark, from Russia, *ib.* Employment of this substance in the preparation of Russia leather, *ib.* Specimens of oils from Sardinia, *ib.* Fine samples of oil in the Spanish collections, *ib.* Samples of common fixed oils and volatile oils used in perfumery from Tunis, *ib.* Good specimens of linseed and rape oil from Sweden, *ib.* Numerous and interesting series of oils included in the Turkish collections, 84, 85. Good samples of olive oil, from Tuscany, 85. Class of substances under this head, likely to be of great commercial importance, 168. Properties differing from the finest vegetable oils, *ib.* Some of them can be supplied in large quantities and at a moderate cost, *ib.* Specimens exhibited, names of exhibitors, and awards, *ib.* See also *Cod-liver Oil.* *Lavender Oil.* *Long-leaved Oil.* *Shale-oil Oil.*

**Oil Seeds and Cakes.**—Remarks on the collection of oil seeds and their cakes, 55, 56.

**OLDENBURG CASTLE.**—Model of, 700.

Oldfield and Co., 563.

**OLIVE-OIL.**—See *Oils (Various).*

**OLIVES AND OLIVE-OIL.**—Observations on the exhibition of olives and olive-oil, 57. Magnificent olives from Spain, *ib.* Those from Portugal also admirable, *ib.*

Olivier, —, 408.

Ollerdiessen, P., 99.

Olmo, J., 57.

**OLONETZ, IMPERIAL FOUNDRIES FOR CANNON.** 33.

Omori, E., 470.

Onions, J. C., 509.

Onajow, As P., 63, 73, 122, 127.

**ONYX.**—Articles manufactured from onyx and agate from Oberstein, in Prussia, 517.

Opdenhoff and Hartung, 580.

**OPERA-GLASSES.**—Observations on the opera-glasses exhibited, 273.

Opigez and Chazelle, 482.

**OPIMUM.**—Specimen of French opium, 43.

**OPTICAL GLASS.**—Observations, in detail, on the disc, exhibited by Mr. Chance, stating the dimensions of the disc, its weight, its state as to tension, &c., 270. Remarks on the other optical-glasses and discs exhibited, 270, 271. Great difficulties attendant upon the manufacture of optical-glass; in what they consist, 528. Attention which has been given to the subject by John Dollond; prizes in vain offered by the Academy of Sciences at Paris, 529. Solution of the difficulty, by Guinand, *ib.* Commission, composed of Messrs. Herschel, Faraday, Dollond, and Roget, instructed to pursue the inquiry as to the manufacture of flint-glass, *ib.* Death of M. Guinand; his invention not divulged; works carried on by his widow and sons, *ib.* Experiments conducted by M. Bontemps, *ib.* Success of Messrs. Chance in producing discs of large dimensions, *ib.* Mode of detecting defects by means of polarization of light, discovered, by Mr. Ross, 530. Lighthouse lenses, &c., 530, 531. Council Medal awarded for optical-glass, 536. Honourable Mention, 537.

**OPTICAL INSTRUMENTS.**—Importance of the telescope, 263. Few telescopes exhibited, *ib.* The larger are for the most part good, *ib.* Commendation of a telescope exhibited by Wray, with a solid substance, instead of flint-glass, *ib.* Samples of optical-glass, *ib.* Object-glasses made of English glass, *ib.* Noble piece of apparently pure flint-glass, *ib.* Pure glass, both crown and flint, contributed by Daguet, *ib.* No lenses or prisms from British contributors, *ib.* The only specimens from France, *ib.* Collection of most delicately-constructed instruments adapted for physical investigation, *ib.* Large number of microscopes exhibited, *ib.* English microscopes stand pre-eminent, *ib.* Two lighthouses exhibited, *ib.*; the glass of neither pure, *ib.*

Orban, J. M., and Son, 22.

Orchard, —, 300.

**ORCHIL.**—Nature of the colouring matter obtained therefrom, 88. Various specimens exhibited, 88, 90.

**ORCIN.**—Prepared from lichens, 50.

**ORDAIN STONE.**—Pinnacle made of Ordain stone from Belgium, 553.

**ORDNANCE.**—Effectiveness of the artillery of Great Britain, 219. Some of the rare qualities due to the exertions of General Congreve, *ib.* Employment of rockets, in the army, as projectiles due also to General Congreve, *ib.* Difficulties in the use of, at first, these have been overcome, *ib.* Attempts made by the French, Germans, Prussians, &c., to use this weapon in warfare, *ib.* Cannon and their carriages, 219, 220. Small arms, 220-222. See also *Cannon.*

**ORDNANCE DEPARTMENT OF GREAT BRITAIN,** 222.

Orduna, V., 366.

**ORES (Various).**—Ores obtained from the crystalline rocks of the island of Ceylon, 15. Ores exhibited, the result of explorations in New Zealand, *ib.* The coal of Waikato, and the copper mines of Kawaii, already the object of practical workings, *ib.* Ores from Mount Tiflisk (Algiers), 29. Sundry ores from the provinces of Algiers and Constantine, *ib.*

Organ, J., 13, 565.

**ORGANS.**—Explanations of the various improvements illustrated in the organs exhibited by Messrs. Hill and Son, by Mr. R. Willis, and by M. M. Ducreux, of Paris, 324, 325. Remarks on the various organs exhibited, 324-326. Explanation of Gray and Davidson's ingenious and simple contrivance for combining the great organ with the swell organ, 325. Beautiful specimen

- of a chamber organ from Florence, 326. Description of Schuler and Sons' organ possessing two manuals, *ib.* Small choir organ, by Holditch; peculiarity of the stops, *ib.* Enharmonic organ, invented by Lieut.-Colonel T. P. Thompson, M.P.; built by Robson, *ib.* See also *Bagrel Organs*.
- ORGANINE.—Specimens of, 356, 364.
- ORISSA (East Indies).—Collection of the woods of, contributed by the Indian Government, 127.
- ORLEANS CLOTH.—Specimens of, exhibited, 558. Specimens of dyeing in Orleans cloth, 459.
- ORNAMENTAL WOODS.—See *Timber, &c.*
- ORNAMENTS FOR INTERIOR DECORATIONS.—See *Carton-Pierre, Papier-Maché*.
- ORT, —, 425.
- ORNAMENTAL DESIGN.—General remarks on ornament and ornamental design, 708, *et seq.* Liability of the public taste to vitiation, 708. Distinction between design and ornament, *ib.* Renaissance style, 709. Louis-Quatorze style, *ib.* Ancient styles of ornament; necessity for discrimination in the adoption thereof, *ib.* Two classes of ornamentists; the traditional, who superstitiously reverence the remains of past ages, and those who pay no deference to authority, *ib.* Governing principles in modern ornamentists; incongruities and incompatible combinations, 709, 710. Ancient and modern ornamentation compared, 710, 712. Want of unity between the designer and the manufacturer; the former not appreciated by the latter, 711. Taste for design little diffused in England, *ib.* Circumstances to be considered in comparing the progress of this country in ornament and art-workmanship with Continental nations, 711, 712. Ornamentation indebted to artistic design, 712. Artistic design as developed in the Exhibition, *ib.*
- Consideration of the subject of ornamental design classified under various heads, *viz.* :—Decoration of buildings, 712-720. Domestic and other furniture, 720-731. Domestic utensils and objects of personal use, 731-741. Garment fabrics, 741-748.
- Extension of education for art-workmen expedient; instruction at Government schools of design, 748, 749. French public establishments—Paris, Lyons, &c., 749.
- ORRERIES, PLANETARIUMS, &c.—The time, ingenuity, and expense devoted to orreries, planetariums, and astronomical machines wasted, 306, 307. Remarks on the orreries exhibited, 307. Observations on the various planetariums exhibited, *ib.*
- Orsetti, C. T., 85.

- PAINTED CLOTHS FOR FURNITURE, &c.—General remarks on this class of manufacture, 729.
- PAINTED OR STAINED GLASS.—Observations as to the standards by which glass-painting should be judged, 533. Rules to be observed by the artist in this department of the Arts; effective styles of composition for such work, *ib.* The works of the first half of the sixteenth century to be taken as the true standards, 534. Conditions of a good painting of glass; tests afforded by ancient and modern examples, 534, 535. Difficulties opposed to successful imitations, 535. Remarks as to particular specimens of glass-painting in the Exhibition, *ib.* Notices of the principal works in stained glass, &c., 686, 687.
- Connection between Gothic architecture and stained glass, 714. Principles on which the production and application of painted glass proceeded in the early ages, 714, 715. Different views of the art which have sprung up with its rival; application of pictorial art to glass pictures, 715. Notices of the principal works in the respective styles in the Exhibition, *ib.* Fault in modern painted glass of having a prevailing tint or hue; this often the case with French glass, 715, 716. Doubts whether the subject of *leading* has had the attention it deserves, 716.
- PAINTED GLASS, DESIGNS FOR.—Notice of, 689, 702.
- PAINTERS' COLOURS.—See *Colours, Painters'.*
- PAINTING.—Reasons for excluding works of art in this department from the Exhibition, 691.
- PAINTING ON CHINA.—Notices of the principal works of merit in painting on china, 687, 688, 694, 695, 706.
- PAINTING ON GLASS.—Two distinct styles of painting on glass, 694. Characteristics of each explained, *ib.* No examples in the Exhibition from the Royal Manufactory at Munich, or from Messrs. Boissière, of Bonn; high character of the works produced at those establishments, 695. Remarks on the works of art contributed to this department: 1st. Ecclesiastical or archæo-æonic style, *ib.* 2nd. Pictorial style, *ib.* Remarks on a work in this section in the Bavarian Department, 699. The like on works in the French Department, 702. Of works in the Austrian Department, 703.
- PAINTING ON TILES.—New process of monochrome painting on tiles described, 694.
- PAINTS, MINERAL.—Composed to dry under water and to remain attached to metals exposed to heat, 43. Mineral substances used in the manufacture of paints, 44.
- PALAM-COTTAN (East Indies).—Collection of the woods of contributed by the Indian Government, 130.
- Palhuber, V., 552.
- Palis, A., 615.
- PALISSE WARE.—Remarks on examples of, 734.
- Palling, W., 553.
- PALM LEAVES.—Great use thereof to the inhabitants of the tropics, 601. No part of the family of palms seems to be useless; new use developed at every stage of their growth, *ib.* Samples of manufactures from the fibres of the palm; prizes awarded, *ib.*
- PALM OIL.—See *Oil*.
- PALM SUGARS.—Exhibited chiefly as curiosities, 639.
- Palmella, Duke of, 33, 99.

- PANICONOGRAPHY.—Method of reproducing, by means of

- his press, any lithographic or other drawing, description of the process, *ib.*
- PANZIE DECORATIONS.**—Handsome specimens of, 546.
- PANICUM.**—Samples of different species of panicum from India, 54.
- Papazzi, A. (Jurat),** xxxi.
- Panna and Alexis,** 158.
- Passe and Hanschild,** 348.
- PANTALON STRUTS.**—Specimens of these cloths, 375, 376.
- Paoletti, F.,** 55.
- Paolides, B.,** 16c.
- Papavoin and Chatel,** 196, 199.
- Pape, J. H.,** 334.
- PAPER AND PAPER-MAKING.**—The introduction of paper dates from the arrival of the Arabs in Spain and Sicily, in this part of Europe, and from the time of the Crusaders as regards the southern portion, 426. Originally invented in China, *ib.* History of the origin and progress of the manufacture, 426, 427. Establishment of a paper-mill at Nuremberg, in Germany, in 1390, 426. Introduction of paper-making into France dates from the fourteenth century, 427. In England the manufacture was introduced much later, and was imported from France, *ib.* Improvements made in paper-making by Baskerville in 1750, by wove mounds, *ib.* High reputation maintained by Holland for its hard-sized hand-made laid writing-papers, *ib.* Invention of machines for making continuous paper, *ib.* Subsequent English improvements, *ib.* Mode of drying, finishing, and cutting paper, invented by Mr. Crompton, *ib.* Rapid manufacture of fine writing-paper, 428. Strong and firm paper required for newspapers, *ib.* Use of gelatine for sizing paper, *ib.* Insertion of the water-mark and maker's name in continuous paper, so as to resemble hand-made paper, *ib.* Improved mode of finishing paper by means of cast-iron rollers, the invention of Mr. Barratt, *ib.* Patent for inserting the water-mark, &c., into continuous paper, obtained by M. Jequier in 1831, *ib.* Peculiar construction of strainers invented by Mr. Ibotson in 1830, *ib.* Most countries have adopted these strainers, *ib.* Superiority of English-made writing-paper, *ib.* Thinnest post writing-papers best manufactured on the continent, *ib.* Considerable quantity of this thin paper imported in England, notwithstanding the high protective duty, *ib.* Drawing-papers and strong account book blue-laid papers, of English make, unrivalled, *ib.* Filtering-paper, for chemical purposes, invented by M. Journef, *ib.* Fires proof cartridge-paper, invented by M. Merimee, *ib.* Advantages thereof, *ib.* Sizing in the vat offers many advantages, *ib.* Gelatine preferred in this country for sizing writing-papers, *ib.* Introduction of high glazing for paper consequent on the use of steel pens, 428, 429. Glazing now carried on at most paper-mills, in all countries, 429. Different processes of glazing, *ib.* No difficulty in glazing paper in long lengths, *ib.* Bleaching paper, different modes employed, *ib.* Use of steam as a motive power, *ib.* Advantages possessed by England from the cheapness of its fuel, particularly for steam-drying, *ib.* Price of labour in England and on the continent, *ib.* Doubts as to whether the cost of manufacture of paper be not as cheap in England as in other countries, *ib.* The price of rags mainly regulates the price of paper, *ib.* Paper-machines introduced in different parts of the world in proportion to the progress of civilization, *ib.* Account of the number of paper-mills in England, Scotland, and Ireland, and the number of beating-engines employed; amount of duty, quantity imported and exported, 429, 430. Number of machines and vats employed at paper-mills in the United Kingdom in the last ten years, *ib.* Annual value of paper manufactured in this country, 430. List of the principal sizes of writing-papers made in England and France, *ib.* Account of the quantity of rags, &c., for making paper imported in the year 1850, showing the countries from which imported, *ib.* Enormous quantity of material for paper-making produced by the waste of Manchester cotton-mills and the spinning-mills in the United Kingdom, 431. But few of the English paper-makers exhibit, *ib.* Specimens contributed, *ib.* Increase in the consumption of letter and note paper on the introduction of the penny postage, *ib.* Prices of writing-papers, *ib.* Patent cutting-machine of the late G. Wilson, a powerful auxiliary in enlarging the sphere of this branch of the paper trade, *ib.* The new sizes and improved mode of putting up writing-paper in packets due to Mr. De la Rue, *ib.* Exhibitors of writing-paper in packets, 431, 432. Remarks relative to the paper-manufacture of France, 432. Species of paper made in the Sandwich Islands from vegetable substances, *ib.* Every fibrous plant is capable of being converted into paper, *ib.* Algorine paper of the dwarf palm, *ib.* First paper-machine established in France in 1815, *ib.* List of the French paper-makers contributing specimens, *ib.* Present statistics of the French paper-making trade, *ib.* Table showing the import and export of paper, rags, &c., in France, 432, 433. State of paper-making in Belgium, 433. Rapid progress of the trade, *ib.* Statement of the paper exported from Belgium in 1849, *ib.* Statistics relative to the manufacture of paper in Belgium, 434, 435. Specimens exhibited and names of exhibitors, 435. Samples from Rome, *ib.* From Denmark, *ib.* Increase of paper-making in the German Zollverein, within the last few years, *ib.* Activity of the trade, *ib.* Imports and exports of paper in the States of the Union, *ib.* First machine established in Berlin in 1818, *ib.* Printing keeps pace with paper-making, *ib.* Number of establishments in the various States of the Zollverein, 436. Lithographic printing much more on the increase than the other branches of printing, *ib.* List of paper-mills, specifying the number of vats and paper-makers in each of the States of the Zollverein, together with the number of persons employed in the year 1846, *ib.* Imports and exports of raw materials for paper-making in the Zollverein in 1850, 437. Table showing the imports and exports of paper in the Zollverein States in 1850, 438, 439, 440. Table showing the weight of books imported into and exported from the Zollverein States in 1850, 440, 441. Specimens of paper exhibited from the Zollverein, and names of the contributors, 442. History of paper-making in the United States of America, 443. Only since 1830 any great impulse given to it, *ib.* Introduction of machinery about 1820, *ib.* Amount of import duty on all kinds of paper, *ib.* Improved finish of paper by the introduction of iron and paper calenders, *ib.* Observations on the paper-making of Austria, *ib.* Raw materials and mills, *ib.* Annual amount of paper exported, *ib.* State of paper-making in Denmark, 443, 444. Number of paper-mills and machines employed in the manufacture in Sweden, 444. Statistics of the paper-manufacture of Spain, *ib.* Netherlands, *ib.* Sardinia, *ib.* Tuscany, *ib.* Hamburg, *ib.* Switzerland, *ib.* Saxony, *ib.* Italy, *ib.* Sicily, *ib.* Roman States, *ib.* Turkey, *ib.* Egypt, *ib.* Statement of the price of white rags in the various countries, *ib.* List of awards, 451-455.
- PAPER BOXES.**—See *Cartonage Paper Boxes.*
- PAPER, COLOURED.**—Process of manufacture of plain surface coloured papers, 448. Purposes for which used, *ib.* Variety of specimens exhibited, *ib.* Awards to exhibitors, 451-454.
- PAPER-CUTTING MACHINERY.**—Admirably constructed and useful machines for cutting paper, card-boards, books, &c., 198. Machine for cutting sheets of card-board into packs of cards, *ib.*
- PAPER, ENAMELLED.**—Advance of chemistry as applied to colour-making exemplified in the preparation of enamelled papers, 448. Purposes for which used, *ib.* Process employed in the manufacture, *ib.* Specimens exhibited, *ib.* Awards to exhibitors, 453, 454.
- PAPER, FANCY.**—Varieties of paper under this head, 448. Use thereof, *ib.* Numerous specimens exhibited, *ib.* Names of exhibitors and awards, 451-455.
- PAPER-FOLDING MACHINERY.**—Two machines for gumming and folding envelopes, exhibited in operation in the British Department, 198. Effective machine for folding printed sheets, *ib.* Machine for making cigarettes, *ib.*
- PAPER-HANGINGS.**—Wool, flock, and paste colours for the manufacture of paper-hangings, 44. Manufacture of considerable importance, 546. Carried on in most of the principal cities in Europe, *ib.* Large number of artists, designers, and operatives employed, *ib.* Difficult to determine the period when invented, *ib.* Supposed to have been first made in China, *ib.* Three kinds, the flock, the metal, and the coloured, *ib.* Each invented at a different time as an imitation of a distinct material, *ib.* History of the invention of flock-paper, mode of manufacture, *ib.* Establishment of paper-hanging manufactories in England, *ib.* Imposition of a duty of 1½d. per square yard in 1712, *ib.* High reputation of English paper-hangings in the early part of the last century, 547. Perfection of this branch of manufacture in France, *ib.* Many important improve-

- ments introduced, 547. Protective duty of 12d. per yard imposed up to 1846, reduction thereof to 2d., *ib.* The high duty acted almost as an exclusion to foreign makers, *ib.* Great progress in the art in England since the reduction of duty, *ib.* Process of manufacturing ordinary paper-hangings, also flock and metal papers, *ib.* Great perfection attained by English manufacturers in the preparation of metal papers, *ib.*
- Introduction of steam-power to machines for printing paper-hangings, *ib.* Quantity of printing machines are capable of performing daily, *ib.* Machine-printing not equal to block-printing, *ib.* Statistics of paper-hangings in the year 1851, *ib.* Beautiful specimens exhibited, 547, 548. List of exhibits, exhibitors, and awards, 550, 551.
- Principles on which decoration in regard to paper-hangings should proceed, 717, 718. Reciprocal adaptation of colours and patterns, 717. The same laws which govern design for paper-hangings should regulate hangings of other fabrics, tapestries, &c., 717, 718. Remarks on the examples in this department of art-decoration in the Exhibition, 718, 719.
- PAPER-MAKING MACHINERY.—The machinery employed in paper-making chiefly represented in the Exhibition by models, 198. Explanation of some of these models, *ib.*
- Complete suite of paper-machinery, of full size and excellent workmanship, in the French Department, *ib.*
- PAPER AND STATIONERY, PRINTING AND BOOKBINDING, (Class XVII.)—Tabular classification of objects in the Exhibition into which this Class is divided, xvii. List of Jurors and Associates appointed for this Class, xxviii.
- List of exhibitors in this Class to whom Council Medals have been awarded, lxxxi. The like of those to whom Prize Medals have been awarded, lxxxi-lxxxv. And of those of whom Honourable Mention is made, lxxxv, lxxxvi. Also of those in whose favour money awards have been granted, lxxxvi. Outline of the objects falling within this Class; proceedings of the Jury, 396, 397. Remarks in detail upon the several matters falling under their observation, viz., Printing, 397-423; Book-binding, 423-426; Paper, 426-444; Playing Cards, 444-447; Message Cards, 447; Drawing Boards, *ib.*; Envelopes, 447, 448; Fancy Stationery, &c., 448-451. List of awards, 451-455.
- PAPER, TINTED.—For printing cheques upon, 48.
- PAPER WEIGHTS.—Ornamental paper weight from Switzerland, 681.
- Papi, C., 506.
- PAPIER-MACHE.—This material, used for architectural works, differs in some respects from the ordinary material, 549. Mode of preparing the material, *ib.* Manner in which the ornaments are made, *ib.* Specimens of this manufacture exhibited, *ib.* Various articles in papier-maché, 551. General remarks on the articles of furniture in papier-maché in the Exhibition, 723. See also *Japan Ware*.
- Papillon, J. M., 403.
- Papworth, —, 475.
- PAPYROGRAPHY.—Several examples of cut-paper ornaments, 682. Beautiful paper transparency, representing Chertsey Castle, Monmouthshire, by S. Herbert, *ib.* Close resemblance to the porcelain pictures, *ib.*
- PARACHUTES.—See *Aerial Machines*.
- PARAFFIN—Samples of, 50.
- PARAMATTAS—Specimens of, 377.
- PARASOLS.—See *Umbrellas and Parasols*.
- PARAVAGUS and CASOLE, 154.
- PARCHMENT—Specimens of white and discoloured, 453. See also *Leather. Vellum and Parchment*.
- Pardoe, Hoomans, and Co., 475.
- Parent, —, 491, 406, 449.
- Parey, C. F. W., 472.
- PARIAN.—Great importance of the material called Parian, Carrara, or Statuary Porcelain, 538. Is a modification of "Biscuit," *ib.* Does not possess a sufficient amount of novelty to be entitled to the Council Medal, 538. Articles of merit in Parian referred to, 540, 541.
- PARIAN CEMENT.—Large and handsome screen of Parian cement, representing the various qualities of the material, 575.
- Paris Chocolate Company, 58, 638, 641.
- Paris, E., 38, 506.
- Pariseau, J. and F., 140.
- PARK-GATES, IRON.—Notice of the works of this description in the Exhibition, 719. Cast-iron gates by the Coalbrookdale Company, *ib.*
- Parke and Sons, 306.
- Parker and Brown, 158.
- Parker, C. E., and Co., 196, 203.
- Parker, J., 480.
- Parker, J. H., 401.
- Parker, Rev. Dr., 151.
- Parker and Sons, 490.
- Parker's CEMENT.—See *Cements (Massive and Incrusted)*.
- Parkes, H. W., 506.
- Parkes and Son, 281.
- Parkin and Marshall, 491.
- Parkinson and Frodsham, 336, 340, 342.
- Parlanti, E., 472.
- Parlett, O'Halloran, and Co., 82.
- Parmentier, P., 372.
- Parnuit, Dautresme, and Co., 353.
- Paroissien, A., 635.
- PARQUETERIE FLOORS.—Principles of manufacture of parqueterie for floors, 545. Specimens, showing the perfection to which the art has been brought, *ib.* Awards to exhibitors, 550, 551.
- Parr, Captain, exx.
- Parr, Curtis, and Madelcy, 195, 199, 200, 204.
- Parrott, W., 48.
- Parson, W., 221.
- Parsons, P. M., 187, 202.
- Partridge, N., 459.
- Partridge, R., 635.
- Partsch, A., jun., 673.
- Pascal, Michael, 666, 701.
- Pashkoff, A. and M., 31.
- Pask, J., 331, 334.
- Pass, A. de, 166.
- Passmore, W., 394.
- Pastor, B., and Co., 23, 585.
- Pastorelli, D., 602.
- Patta, G., 600.
- "PATE TENDRE" WARE.—Specimens exhibited, 542.
- Patek and Philippe, 341, 342.
- PATENT FUEL.—See *Warlick's Patent Fuel*.
- Patterson, —, 195.
- PATES—Samples of, from Prussia, 55. See also *Maccarolis*.
- Patrian, C., 376.
- Patrick, —, 239.
- Paton, J. and D., 382.
- Pataux-Drion and Co., 526, 536.
- PATTERNS FOR PRINTED AND OTHER FABRICS, &c. — See *Designs for Printed and Woven Fabrics, &c.*
- Patterson, J., 359.
- Patterson, Jamieson and Co., 348.
- Pattiala, the Rajah of, 668.
- Pattinson, H. L. (Juror), xxi. xxxi (Exhibitor)—Method adopted by Mr. Pattinson for separating silver from lead; objects exhibited illustrative of this process, 42. Description of his process for making white lead, 42.
- Pattinson, Messrs., 42.
- Pattinson, W. W., 48.
- PATTINSON'S PATENT OXICHLORIDE OF LEAD—Samples of, 43.
- Patton, J., 520.
- Paturel-Lupis and Co., 159, 357, 359, 361.
- Paublan, —, 506.
- Paul Brothers, 509.
- Paulay, J., 162.
- PAULHAUT JONGHE (East Indies)—Collection of the woods of, contributed by the Indian Government, 130.
- Pauli, O., 48.
- Hauwels, —, 585.
- PAVEMENT.—Use of gas-tar mixed with gravel, &c., for paving for streets, &c., 42. Specimens of asphalt pavement, 576, 577. Specimens of mosaic pavement, composed of tesserae of vitrified clay of several colours and shapes, 578. Slabs of cement, prepared for pavement imitation of marble mosaic, from Rome, *ib.* See also *Flag-Stones, &c.*
- Pawson, Son, and Martig, 353.
- Paxon, W., 308.
- Paxton, Joseph (afterwards Sir Joseph), Associate Juror, xxvii, 206, 532, 688, 696.
- Payen, A. (Juror and Associate), xxvi, xxvii, 634.
- Payen, A. B., 379.
- Payne, —, 56, 122.
- Payne, A. L., 52.
- Payne and Sons, 62.
- Peace, Alderman Co (Juror), xxix.
- Peace, H., 489, 491.
- PEACHWOOD OR NICARAGUA WOOD—Samples of, from Lima, South America, 587. Dyes extracted *ib.* Specimens of dyeing on silk, wool, and cotton, *ib.*
- Peacock, G., 48.

- Peake, T., 581.  
 Peal, N., 480.  
 Peale, C. W., 18.  
 Pearce, W., 565.  
 PEARL-ASH.—Use thereof in glass-making, 524.  
 PEARL BARLEY.—Samples of, from Russia, 53. From Lille (France), 55. From the United States, *ib*.  
 PEARL SAGO.—See *Sago*.  
 PEARLS.—An excretion of superimposed concentric laminae of a peculiarly fine and dense nacreous substance, consisting of naphrane and carbonate of lime, 164. Finest quality produced by the bivalve of the Indian seas, *ib*. Fine specimens exhibited in the Indian and Ceylon collections, *ib*. Pearls of an inferior description formed in a fresh-water bivalve, *ib*.  
 PEARLS, ARTIFICIAL.—Specimens of, from France, 518.  
 PEARSE, A. and F., 615.  
 Pearse, Clara, *cxix*.  
 Pearson and Co., 349.  
 Pearson, J., 481.  
 Pearson, W., 560.  
 PEAS.—Samples of peas exhibited in the British Department, 54. Samples of, from Canada, *ib*. Samples of green sugar peas from Russia, *ib*.  
 Pease, H., and Co., 357, 359, 361.  
 Pease, J., 585.  
 PEAT.—Products from the distillation of peat, 43-45, 48.  
 PEDESTALS (Marble).—Bust pedestals in marble sent by the Royal Dublin Society, 563. Two black marble pedestals from Galway, one prepared for polishing, and the other finished, *ib*.  
 Peel, J., 602.  
 Peet, T., 103.  
 PEGMATITES.—See *Porcelain*.  
 Peill and Co., 158, 353.  
 Peldrian's Heire, 372.  
 Pelliot, E. (Juror and Associate), xxvi, xxx.  
 Pelikan, J., 537.  
 Pelsler, C., 95.  
 Pell, R. J., 149.  
 Pellatt, Apsley, and Co., 536, 736.  
 Pellet Brothers, 65.  
 Pells, J. Z., 583.  
 Peltouf and Co., 162.  
 Peltreuf, F., *jan*, 330.  
 PENANG.—Collection of the woods of, 138.  
 PENCIL-CASES.—Specimens of pencil-cases and pen-holders in various styles, 520.  
 Penesd, J., 65.  
 Peninsular and Oriental Steam Company, 378.  
 PENINSULAR-MAW.—Welsh paving stone from, remarkable as being both the hardest and toughest material for road stuff yet discovered, 555.  
 Penn, J. (Juror), xxvii.  
 Penn, J., and Son, 172.  
 Penney, H., 80.  
 Penny, C., 449.  
 Penny, J., 395.  
 Penrose, F. C., 306.  
 PENS, METALLIC.—Specimens of, 503, 506.  
 PENTAGRAMS.—Description of this instrument; principle of one, exhibited in the French Department, 306.  
 Pens, J., 491.  
 Peplow, W., 480.  
 PEPPERS.—Samples of, 62.  
 Péard and Mineur, Messrs., 22.  
 Percival, Dr., 95.  
 Percy, Dr. J. (Associate Juror), xxvi.  
 Perez and Co., 544, 551, 687, 705, 723.—See also *Pinto, Perez, and Co*.  
 PERMUNENT.—Use thereof from the earliest times, 608. Its application in Ancient Egypt, *ib*. Extent of this trade in the remotest parts, *ib*. The free use of soap in modern times has superseded the necessity for its lavish employment, *ib*. Principles by which perfumery may be defined, *ib*. Eau-de-Cologne generally considered the perfection of perfumery, *ib*. Differences in the quality of perfumes, *ib*. Particular interest of several of the perfumes or essences exhibited, 608, 609. Series of artificial organic compounds, possessing qualities which permit of their substitution for natural volatile oils and essences, 609. Extensive use of winter green oil in perfumery, *ib*. Chemical analysis of this oil, *ib*. General remarks on, and modes of preparation of various artificial essences, namely, pear oil, *ib*. Apple oil, *ib*. Fine apple oil, *ib*. Cognac oil and grape oil, *ib*. Artificial oil of bitter almonds, *ib*. Inferiority of the American spirituous perfumery, 609. Eau-de-Cologne of excellent quality, from Austria, *ib*. Interesting and excellent collection of perfumery from Egypt, 610. Extensive use of perfumery in France, *ib*. Importance of the manufacture, *ib*. Spirituous perfumery prepared in great perfection by the manufacturers of Paris, *ib*. Mode of preparation of essential oils, *ib*. Number of perfumers in Paris, *ib*. Quantity exported from France in 1850, *ib*. Perfumers of Germany in great force, 611. Four Farinas in the Exhibition, all claiming to be the original, *ib*. German perfumery generally very good, *ib*. Extent of the manufactures of perfumery in Russia, *ib*. Small quantity of tooth powder and hair oil from Switzerland, *ib*. Collection of Tunisian perfumery, *ib*. Mode of preparation, *ib*. Ottos of Tunis prized as being more fragrant than those made in Eastern countries, *ib*. Importance of this branch of commerce in Tunis, *ib*. Large collection of perfumery from Turkey, *ib*. Specimens of perfumery, the manufacture of Great Britain, 612, 613. Statement of the number of exhibitors from the various countries, 613. List of awards, exhibits, and exhibitors, 613-615.  
 Perigal, —, 314.  
 PERIPHAN.—Model of this instrument designed for the simple elucidation of solar and lunar phenomena, 307.  
 Perkins and Brown, 158.  
 Perkins and Co., 446.  
 Perkins, H., 63.  
 Perreux, —, 257.  
 Perrinet, —, 331.  
 Perron, E., 59, 641.  
 Perrot, Petit, and Co., 387, 645.  
 Perry and Co., 506, 537, 736.  
 Perry, E., 506.  
 Perry, J., 199, 204, 509.  
 Perry, G., and Brothers, 179.  
 PERSIA.—Beautiful manuscripts from, 406. Typographic press not unknown in that country, *ib*. Remarks on the hardware manufactures, 496. Collection of inlaid and japanned work-boxes, &c., 654. Specimens of pipes, &c., 672.  
 PERSIAN BERRIES.—Dye stuff extracted therefrom, 88.  
 Persoz, J. (Juror and Associate), xxvi, xxix, 41.  
 PERSPECTIVE.—Description of an apparatus, in illustration of the laws of perspective, 314.  
 PERTSHIRE.—Collection of ores of copper and lead from various mines in, 13.  
 PERSES.—See *Wigs*.  
 Pesol and Mennot, 357.  
 Peter's, St. (Rome), Royal manufactory, 577, 704.  
 Peterhoff Imperial Manufactory (Russia), 567.  
 Peters, R., and Son, 599.  
 Peters and Sons, 193.  
 Peters, T. C., 158.  
 PETERSBURG, ST.—Establishment of a Malachite manufactory at, under the direction of M. Leopold Joffrand, 570. Fluted columns of Malachite in some of the churches, 571.  
 Petersburg, St., Imperial China Manufactory, 542, 687.  
 Petersburg, St., Imperial Forge of Alexander at, 33.  
 Peterson, O. (Juror and Associate), xxvi, xxx.  
 Peterson, J., 56.  
 Peterson, T., 56, 80.

 Pictor and Harlow, 506.  
 Pfaff Michel, 334.  
 Pfoiffer, J., 21.  
 Pfennigberger, J., 367.  
 Pfendmenges Brothers, 376.  
 Pfendmenges and Kleinjung, 376.  
 Pfeuffer, C., 686, 698.  
 PHAETONS.—Park and Pony Phaetons, 193.  
 PHARMACEUTICAL APPARATUS.—See *Chemical Apparatus*.  
 PHARMACEUTICAL PLANTS, DRIED.—Specimens of, 46.  
 PHARMACEUTICAL PREPARATIONS AND PRODUCTS (undescribed), 45, 47, 49.—See also *Chemical, &c. Products*.  
 PHARMACEUTICAL PROCESSES AND PRODUCTS.—See *Chemical and Pharmaceutical Processes and Products*.  
 PHOENICIA.—Manufacture of glass, 521.

- PHOSPH. HYDRATE OF**—Samples of, 48.  
**Philibert, L. and F.**, 159.  
**Phillip**, —, 600?  
**PHILIPPA OF HAINAUT, MONUMENT OF (Model)**, 689, 696, 713.  
**Philippe and Canaud**, 641.  
**PHILIPPINE ISLANDS**—Extensive and interesting collection of the woods of, 156.  
**Phillips**, —, 302.  
**Phillipsville, Beauregard de**, 29.  
**Phillippon, G.**, 90.  
**Phillips**, —, 238.  
**Phillips Brothers**, 520.  
**Phillips, C.**, 582.  
**Phillips, W. H.**, 246, 297, 298.  
**Phillips Smith, and Co.**, 13.  
**Phillips, W.**, 17, 12.  
**PHILOSOPHICAL INSTRUMENTS (Class X.)**—Tabular classification of objects into which this Class is divided, x. List of Jurors and Associates appointed for this Class, xxvii. List of exhibitors to whom Council Medals have been awarded, lxiii. The like of those to whom Prize Medals have been awarded, lxiii-lxv. And of those of whom Honourable Mention is made, lxv. Duties of the Jury very heavy, 243. Beneficial advance effected by the exhibitors of astronomical instruments by the use of as few parts in their construction as possible, *ib.* Mainly observable in the British Department, *ib.* Workmanship of those exhibited by Germany deserving of high praise, *ib.* Application of electro-magnetism to the registration of astronomical observations; results obtained thereby, *ib.* Numerous exhibitors of nautical instruments, *ib.* Little novelty of construction, with the exception of those of America, by Ennisson and St. John, *ib.* Improvements in surveying and levelling instruments exhibited by Austria, *ib.* Large number of exhibitors in optics, *ib.* Improvement of optical-glass in England, France, and Switzerland, *ib.* British microscope by far the best exhibited, *ib.* Pre-eminence of France in physical optics generally, *ib.* Number of photographic cameras exhibited, *ib.* Attention at present paid to their improvement both in England and France, *ib.* Observations of the Jury on the utility of the photographic process, as regards its application to art and science, and indirectly to literature, 243, 244. Remarks on the collection of photographic pictures brought together in the Exhibition from England, France, Austria, and America, 243-245. Prominent position of America as regards daguerreotype portraits, 244. No opportunity afforded for inquiry into the comparative importance of the different classes of instruments, 316. Each country characterized by some peculiar excellence, *ib.* Science will receive a fresh impulse, *ib.* Means of self-education opened to the artisan, *ib.* Probable effects of the concentration of science, *ib.* Promotion of science one great result of the Exhibition, *ib.*—See also *Astronomical Instruments, Chemical Apparatus and Utensils, Mathematical Instruments, Nautical Instruments.*  
**Philp, J. (Juror)**, xxviii, xxxi.  
**Philp and Whicker**, 345, 489.  
**PHILORDZIN**—Specimens of, 44.  
**Phoenix Company, Ghent**, 196, 205.  
**PHOSPHATE OF COPPER**—See *Copper Ore*.  
**PHOSPHATE OF LIME**—See *Lime, Phosphate of*.  
**PHOSPHORUS**—Samples of, 44, 48, 49.  
**PHOSPHORUS, RED OR ALLOTROPIC**—Specimen exhibited of the allotropic phosphorus of Schröter, 33. Method of preparation and uses to which applied, *ib.*  
**PHOSPHORUS, RED OR AMORPHOUS**—Specimen of, 50.  
**PHOSPHORIC ACID**—Phosphorous acid is highly injurious to health of workmen exposed to it, 38. Price of phosphoric acid in Germany, 49.  
**PHOTOGRAPHIC GLASS**—Specimens of, 275.  
**PHOTOGRAPHIC SELF-REGISTERING MAGNETIC, &c., APPARATUS**—Description thereof, for the self-registration of the dry and wet-bulb thermometers, 300. Similar apparatus for the variations of the reading of the barometer, *ib.*  
**PHOTOGRAPHY**—Rapid as have been the discoveries connected therewith, and great the improvements, much still to be done to enable it to rank among the sciences of the age, 276. Regret expressed by the Jury that in the whole exhibition they have observed only one instance (that of M. Claudet) in which the study appears to have been in any way followed up so as to afford exhibitable results, *ib.* Nature of some of the improvements which have taken place in this art, 275, 276. Fine collection of photographs exhibited, 275. Many fine calotypes or sun pictures exhibited, 276. High rank held by Mr. Talbot in their production, *ib.* Observations on the photographs exhibited, 276, et seq. 16. Daguerreotype pictures, 276-278. Sadly. Talbotypes, calotypes and sun pictures, 278, 279.—See also *Daguerreotype Apparatus, Daguerreotype Pictures*.  
**PHOTOMETERS**—Description of this apparatus for determining the illuminating power of gas, 315.  
**Pianello, D.**, 34.  
**PIANOFORTE CASES**—Specimen of a case of inlaid Japan, 531. Remarks on the ornamentation of pianoforte cases; false taste observable in some instances in the Exhibition, 523.  
**PIANOFORTES**—General remarks upon pianofortes by Mr. Thalberg, 326-328. Early history of the pianoforte, 329. Improvements that have been made therein, *ib.* Pianofortes exhibited by Messrs. Broadwood; details as to their nature and construction, *ib.* Description of the instruments exhibited by Mr. Erard in the British and also in the French Departments, *ib.* Pianofortes exhibited by Messrs. Collard and Collard, 329, 330.  
**Picard, E.**, 689, 702.  
**Picault, G. F.**, 489.  
**Piccio, M. H.**, 48.  
**Pichard, A. F.**, 520.  
**Pick**, —, 267, 273.  
**Pickard, G.**, 431.  
**Pickering**, —, 401.  
**PICKLES**—Samples of, 62. The Van Dierck's Liquid Sauces and pickles worthy of notice, 62.  
**Pickthorn, Esther**, cxx?  
**PICTURE FRAMES**—Formed of various common English woods, 121.  
**Piece, L.**, 597.  
**Piepenstock and Co.**, 186.  
**Pierce, W.**, 566, 562.  
**Pieri, Count G.**, 162.  
**Pieris, T. A.**, 76, 82.  
**PIERRE DE TONNERRE**—Pavement exhibited from France; manufacture of a stone so called, 555.  
**Pierret**, —, 310, 342.  
**PIETRA DURA, WORKS IN**—Examples of inland work in pietra dura from India, 554, 568. This manufacture consists of certain kinds of hard stone inlaid in a slab of marble; pseudo gems which are used in this work; mode in which the work is performed, 567. Principal articles exhibited; countries from which sent; names of the exhibitors, awards granted, &c., *ib.* Fine specimens of true Florentine mosaic in pietra dura, from Tuscany and Russia, *ib.* Remarks on works in pietra dura, by Bianchini, Boschetti, &c., 687, 723.—See also *Inlaid Works in Pietra Dura*.  
**Piette, L.**, 431, 442, 454.  
**Pig Iron**—See *Iron and Steel*.  
**Piglia, J.**, 90.  
**Pigot and Newton**, 373.  
**Pigott and Co.**, 501.  
**Pigouchet**, —, 304.  
**Pike, W. and J.**, 13, 14.  
**Pillaut**, —, 440.  
**PILLERSEE AND TENEBACH IMPERIAL FOUNDRIES**, 21.  
**Pillischer**, —, 267, 295.  
**Pim, Brothers and Co.**, 376.  
**Pinan, J.**, 99.  
**Pin-Bayard**, 357, 380.  
**Pinches and Co.**, 448, 454.  
**PINK SALT**—Specimens of, 44, 50.  
**Pinto, A. P. (Juror)**, xxx.  
**Pinto Basto, J. F.**, 160.  
**Pinto, Perez, and Co.**, 48.  
**Piper, T. F.**, 483.  
**PIPERIN**—Specimens of, 48.  
**PIPES, SMOKING**—Samples of tobacco pipes, 541. Materials principally employed in the manufacture of pipes for smoking, 663. Different kind of clays more used than any other substance, *ib.* Various descriptions of woods used for tubes, *ib.* Extensive use of mother-of-pearl, horn, ivory, and bone, for tubes and mouth-pieces, *ib.* The precious metals and costly gems are not excluded from a share in the formation of pipes, *ib.* High estimation in which meerschaum pipes are held, *ib.* As also amber mouth pieces, *ib.* Remarks on meerschaum pipes and the processes of manufacture, 669, 670. Extensive use of amber, different descriptions thereof, and mode of preparation, 670, 671. Numerous collection of

- pipes from Germany, Austrian and Prussian contributions the most extensive, 671. Specimens of pipes from the British Colonies and in the Indian collection, *ib.* Habit of smoking very general in China, *ib.* Chinese pipes contributed, *ib.* Specimens of pipes in the Egyptian Court, 672. Numerous and well-manufactured clay pipes from France, *ib.* Extensive nature of the French trade in tobacco pipes, *ib.* Contributions of pipe and mouth-pieces from Persia and Sardinia, *ib.* Numerous rich examples of the narguilé or water-pipe in the Turkish collection, *ib.* Various tubes from Turkey, mode of manufacture, *ib.* Choice collection of amber mouth-pieces and cigar-tubes in this collection, *ib.* Examples of pipes and tubes from Tunis and Tuscany, *ib.* Pipes in the British Department unimportant, *ib.* Specimens exhibited, *ib.* Process of making clay pipes described, *ib.* Number of exhibitors and countries from whence contributions have been received, *ib.* List of awards, 672-674.
- PITZAHUAC**.—Remarkable yellow resinous substance, somewhat resembling gamboge, called, 76, 90. Contributed from Mexico, *ib.*
- Pignea**, —, 454.
- Piscon, J.**, 334.
- Pistols**.—See *Arms (Pistols, &c.), Inland. Guns, &c.*
- Pistons**.—Spring rings for pistons, of good workmanship, 173.—See also *Pistons*.
- Pistor, W. and G.**, 221.
- Pistrucci, B. (Juror)**, xxv, xxx, 577.
- Pitangers**, —, 420.
- PITCH-OIL**.—Purposes for which employed in timber, 42.
- Pitoux, V.**, 165.
- Pittman J. (Associate Juror)**, xxviii.
- Pitts, W.**, 740.
- Piver, A.**, 610, 615.
- Pizzala**, —, 3015.
- Plagniol, A.**, 273, 275, 278.
- PLATING MACHINES**.—Plating machines of the usual construction from Belgium and Prussia, 197.
- Plambeck, C. F. H.**, 551.
- PLANETARIUMS**.—See *Orerries, &c.*
- PLANIMETERS**.—Ingenuity of these machines, adapted to the determination of areas of plane surfaces by mechanical means, 246. Description of Sang's planimeter, 303. Detailed description of a planimeter from Tuscany, by Gonella, *ib.*
- PLANING MACHINES**.—Excellent specimens of, exhibited, 200. Varieties of construction, *ib.*
- PLANISPHERES**.—Double planisphere, designed to assist navigators in great circle sailing, 253. Description thereof, *ib.* Pedestal planisphere exhibited, 307.
- Plan**, —, 307, 316.
- PLANTAIN MEAL**.—Samples of, of good quality from Demerara, 65. Samples from Demerara and Madras, 62.
- Planting**, —, 406.
- PLANTS ANATOMIZED**.—Beautiful collection of anatomized plants, flowers, and leaves, process by which prepared, 157.—See also *Pharmaceutical Plants*.
- PLASTER, CEMENT, &c.**.—Statement of the most essential features of distinction between plasters and cements, 575. Various specimens exhibited; awards, &c., 575, 576.—See also *Cement, Roman, &c.*
- PLASTER, CLAY, &c., WORKS OF ART IN**.—Notices of the principal, 685, 686.
- PLASTIC ART**.—See *Sculpture, Models, &c.*
- PLASTIC CLAY**.—See *Clays*.
- PLASTIC MATERIALS AND ARTIFICIAL COMPOUNDS (Manufactures)**.—Manufactures included under this head: groups into which divided, 572. 1st. *Manufactures in cement, artificial stone, &c., ib.* Hydraulic cements, 573-575. Blasters and scagliola, 575, 576. Artificial stone with silica base, 576. Bituminous cements and mastics, 576, 577. Metallic sponge cement, 577. 2nd. *Glass and porcelain mosaics, &c.* Roman and Venetian mosaics, 577, 578. Clay and porcelain mosaics, 578. 3rd. *Manufactures in clay, 578, et seq.* Bricks and tiles, 578-582. Terra cotta, 582-584. Gas retorts, bricks, and chemical utensils, 584-586. Glazed fire-clay goods, 586.
- PLATE GLASS**.—New variety of window glass, termed "patent plate," introduced by Messrs. Chance in 1840; description thereof, 526. Extension of the process to France by Messrs. Patoux and Co., of Aniche, *ib.* The progress of manufacture of plate glass not rapid in France, 527. Works established at Tourlaville, near Cherbourg, in 1838, *ib.* Improvements effected by Abraham Thèveré; works established at St. Gobain; opposition experienced, 527. Contributions from the three great works at St. Gobain, Crey, and Montluçon, *ib.*
- Period of the introduction of plate glass into England, 527. Formation of "The British Plate Glass Company in 1773," ib. Establishment at South Shields, founded by the Cooksons in 1728; now carried on by Messrs. Swinburne, *ib.* Works of Messrs. Hartley of Sunderland; "The Thames Plate Glass Company" and others referred to, *ib.* Application of the steam-engine and other machinery to the manufacture, *ib.* Difference of opinion prevailing as to the finishing and polishing of plate glass, 531. Prize medals, &c., awarded for plate glass, 536, 537.**
- PLATED WARE**.—Specimens of plated articles, carefully executed and durable, 516.—See also *Precious Metals, Works in the, &c.*
- PLATILES**.—Assortment of bleached, 372.
- PLATINA ALKEMICS**.—Samples of, 296.
- PLATINUM**.—Manufacture of platinum, illustrated by a complete collection, 10. Series of metals and metallic products, including palladium, iridium, rhodium, and uranium, *ib.*
- Plattner, Professor**, 5, 30.
- Playfair, Dr. Lyon**, xxv.
- PLAYING CARDS**.—General remarks on the subject of their invention, 444. Probable original processes for colouring cards, 444, 445. Complete change made in the honours of modern French cards, 445. Attempts made by Messrs. De la Rue to introduce modern costumes for court cards, and failure thereof, *ib.* Ancient cards of France, England, Spain, &c., *ib.* Cards known in China from an early period, *ib.* Circular cards in the Indian Department, *ib.* Cheap cards made in Germany and the Netherlands, *ib.* History of the progress of card making and playing in England, 445, 446. Apple-gate's machine for card-printing, 446. Excellent playing cards from Russia, surpassing most continental cards, *ib.* Manufacture of playing cards only allowed in London, Westminster, and Dublin, *ib.* Duty on cards, *ib.* Re-issue of second-hand playing cards, *ib.* Reducing the duty would prevent smuggling and forgery, *ib.* Duty and export axes printed at Somerset House, *ib.* Stamp regulations of the playing card trade, *ib.* Annual amount of the duty, *ib.* General mode of painting playing cards, *ib.* Improvements in the manufacture effected by Messrs. De la Rue, 447. Specimens exhibited and names of exhibitors, *ib.* Marked advance in the manufactures from foreign countries, *ib.*
- Pleischl, A.**, 509.
- Plenty, J. and E.**, 218.
- Pliny**, quoted in relation to the manufacture of glass, 521.
- Plomdour, N.**, 221.
- Plomley, W.**, 508.
- Plon Brothers**, 426, 412, 453.
- Plouquet, H.**, 647, 648.
- PLOUGHS**.—Various improvements which have taken place in England within the last twelve years in the construction of the plough, particularly with regard to the mould boards, 225, 226. Reference to the inventions and improvements of Messrs. Ransome, and of Messrs. Howard, and of Mr. Bushy, 225, 226. Skill acquired by ploughmen who scarcely receive the credit due for it; correctness of eye acquired by ploughmen, 226. Impracticability of the spade superseding the use of the plough in the preparation of wheat land, *ib.* Result of a trial of various prize ploughs with Bentall's dynamometer, on 25th July, 1851, on Mr. Mechi's farm, before Colonel Challoner, Mr. Johnson, and Mr. P. Pusey, reported by Baron Martens, *ib.*, note. Report of Mr. J. V. Shelley on the result of the trial of ploughs at Pusey, by Mr. W. Miles, M.P., and Mr. J. V. Shelley, assisted by Mr. T. P. Outhwaite, 226, 227. Ploughs suited for common and for deep ploughing distinctly for some time been separately encouraged by the Royal Agricultural Society, 227. Exhibitors; prizes awarded &c., 242.
- PLOUGHS, DRAINING**.—Detailed description of the mode in which drains are formed by J. Fowler's draining plough, which, but for the American reaping-machine, would have formed the most remarkable feature in the agricultural department of the Exhibition, 240.
- Plows, W.**, 557, 569.
- Plummer, H. L.**, 310.
- Plummer, R.**, 196, 204.
- PLUMS**.—Specimens of, 365-368, 376, 576.

**PLYMOUTH BREAKWATER**—Model of, 208, 689, 696.  
**PLYMPTON (Devon)**.—Porcelain clay obtained from a deposit near Plympton, 11, 12.  
**PNEUMATIC BATTERY**.—For igniting gunpowder in blasting operations, 296.  
**PNEUMATIC GOVERNOR**.—Patent, pneumatic governor for regulating the speed of steam engines, 173.  
**POCKET BOOKS**.—This branch of trade very limited till 1828, 449. Improvements effected in that year by Messrs. De la Rue, and great stimulus imparted to the manufacture, *ib.* Considerable export trade in these articles, *ib.* Solidity of English workmanship, *ib.* Number of hands employed in the manufacture in the United Kingdom, *ib.* Specimens exhibited, 449, 450. Awards to exhibitors, 453, 454.  
**POCKET COMMUNICATOR**.—Description of, by means of the electric telegraph, 289. Object for which designed, *ib.*  
**Pocock and Rawlings**, 353.  
**Poidehard, N.**, 162, 364.  
**Pollén Brothers**, 556.  
**Polly, De, and Co.**, 536.  
**Poinsonon**, —, 600.  
**POINT LACE**.—See *Lace*.  
**Poirier, I.**, 506.  
**Poirier, P.**, 480.  
**Poisart (Uncle), and Co.**, 629.  
**Polak, F.**, 471.  
**POLARISCOPE**.—Bio's apparatus for the polarization of liquids, 315. Reflecting and oxyhydrogen polariscope, *ib.*  
**Pollakoff and Zamiatin**, 366.  
**POLISH OATS**.—See *Oats*.  
**POLISHING STONES**.—See *Hones*.  
**Pollak, A. M.**, 635.  
**Pollock, J.**, 394.  
**Polycarpo, A.**, 346, 431.  
**POMEGRANATES**.—Samples of dried, said to be used for dyeing yellow, 91.  
**Pommercol Smelting Company (Belgium)**, 22.  
**Poncelet, A. (Juror)**, xxvi.  
**Poncelet, General J. V. (Juror)**, xxv, xxvi, 190.  
**PONCHOS**.—Specimens of this fabric, 356, 358.  
**Pond and Co.**, 509.  
**Ponomareff, Madame**, 33, 34.  
**Ponson, C.**, 366.  
**Pontifex, G.**, 103, 140.  
**Pontifex and Wood**, 48, 203.  
**Ponting, T. C.**, 48.  
**Pook, S. M.**, 217.  
**Poole, Messrs.**, 336.  
**Poole, S. R.**, 52.  
**Pooley, H., and Son**, 191.  
**POOLOO'S CHINESE CEMENT**.—Sample of, 47.  
**Poore, J. B.**, cxv.  
**Boortman and Visser**, 49.  
**Pope, J.**, 95.  
**Pope and Plante**, 479.  
**Pope and Son**, 173, 509.  
**Popelin-Ducasse**, 70.  
**Popinoff, Sophia**, 492, 490.  
**POPPLINS**.—Specimens of, 375, 376.  
**Popoff, A.**, 163.  
**Poppleton, R.**, 360.  
**POPPY CAKE**.—Specimen of, from the East Indies, 55, 56.  
**PORCELAIN**.—Materials employed in Porcelain manufacture at the great works of Kiaing Tsin Chin, in China, 23. Nature of the specimens exhibited, *ib.* White porcelain ware from Limoges, 28. Kaolins and pegmatites used in the preparation, *ib.* Superiority of the porcelain due to the purity of the clay, *ib.* New patented application of coloured and moulded porcelain for architectural decoration, especially adapted for door-cases and niches, 537. Invention of a vitreous marble paste, in a kind of porcelain, *ib.* Remarks on the high character of the works in biscuit or porcelain, exhibited by Messrs. Minton, Copeland, and others, as works of art, 694.—See also *Ceramic Manufactures. Clay, Pottery, &c. Mosaics*.  
**PORCELAIN FOR CHEMICAL PURPOSES**.—Manufacture thereof lately established by Messrs. Minton, 540. The laboratory hitherto dependent upon foreign manufactories, *ib.* Articles of semi-porcelain for chemical purposes by Grainger and Co., 541. Products of the Royal Saxon China Manufactory referred to, 543.  
**PORCELAIN GLAZES**.—Use of boracic acid in the preparation of, 38. Vessels made with the salt-glaze ware used in the manufacture of sulphuric acid, *ib.*

**PORCELAIN FOR PICTURE PAINTING**.—Specimen of, 542.  
**PENGUPINE QUILLS**.—Examples of articles of clothing and furniture, ornamented with the quills obtained from the North American porcupine, 600.  
**PORPHYRY AND WAXES HERZIN**.—Remarkable beauty of polish of a collection of porphyry slabs from Cornwall, 8. Moderate price of these slabs, from the mechanical contrivances used in polishing, *ib.* Specimen of porphyry, described as Elvan stone, from the New Quay quarries (Cornwall), 13. Great variety of porphyries in the Vesges, 27. Slabs and pedestals of Cornish porphyry exhibited, 565. Few examples of foreign porphyries in the Exhibition; objects exhibited, 565, 566. Works in Swedish porphyry, 565.—See also *Granites*.  
**PORT ADELAIDE**.—Pre-eminence of Port Adelaide for wheat and barley, 53.  
**PORT NATAL**.—See *Natal*.  
**PORT PHILLIP**.—Samples of good wheat from, 52.  
**Portelli, A.**, 520.  
**Porter, W. H.**, 564.  
**PORTFOLIO**.—Number of manufacturers contributing, 449. High degree of perfection in the manufactures of Germany, *ib.* Offenbach the principal seat of manufacture, *ib.* Improvement effected by De la Rue and Co., *ib.* Variety of specimens exhibited, *ib.* Awards to exhibitors, 453.  
**PORTLAND CEMENT**.—Numerous objects in Portland cement exhibited; prizes awarded, 573, 574.—See also *Cements Roman, &c.*  
**PORTMANTEAUX**.—Portmanteaus of very ingenious and clever contrivance exhibited, 394.—See also *Bedchamber*.  
**PORTUGAL**.—Large number of specimens of marbles from Portugal, 33. Two excellent series thereof exhibited, *ib.* Lithographic stones of even grain, and very compact, *ib.* Specimens of lead ore and manufactured lead, *ib.* Cerealia illustrating the agricultural resources of Portugal, 52. All of fair but none of particular merit, *ib.* Sample of Carolina rice from Portugal, 53. Samples of beans, peas, &c., 54. Samples of flour, 55. Olives and olive oil, 57. Valuable series of coffees from various of the colonies of Portugal, 59. Mustard seed, 62. Samples of capers, *ib.* Fine sample of copal from Angola, 76. Samples of starch from Estramadara and Evora, 79. Large number and excellent specimens of oils, 84. Important collection of dye stuffs, 90. Good samples of sumach, 93. Samples of cotton, 96. Specimens of flax and hemp, 99. Samples of vegetable fibres, 103. Specimen of Portuguese cork, *ib.* Comparatively small number of Portuguese woods contributed, 153. Specimens of Snow-white wax, 163. Samples of glues, 166. Specimens of animal charcoal, in powder, *ib.*  
**Surgical instruments**, 346. Cotton manufactures, 348. Variety of woollen cloths, 352. Primitive character thereof, *ib.* General remarks on the silk manufactures of Portugal, 363. Specimens of mixed fabrics, 374. Good copies of French and English fabrics, *ib.* Fair promise of excellence, *ib.* Objects exhibited, *ib.* Observations on the sealing-wax manufacture of this country, 451. Specimens exhibited, *ib.* Observations on the printed goods, 458. Specimens of carpets, 475. Cutlery, 491. Articles of jewellery, 520.  
**Glass wares**, 536. Earthenware, 542. Interesting series of Portuguese marbles of great variety and beauty, 561. Interesting specimen of mosaic, 569. Fine specimens of terra cotta jars, 584. Specimens of refractory bricks, 585. Specimens of cooper's work, 602. Creditable collection of soaps, 611. Remarks on the quality and arrangement of preserved fruits from Portugal, 639. Specimens exhibited, 641. Remarks on the contributions of cambric raves and wax fruits, 643. Specimens exhibited, 644, 645. Inlaid ebony writing-case, 654. Parasols and umbrellas, 659.  
**Portugal, His Majesty the King of**, 654.  
**Porzelt and Harperath**, 563.  
**POTASH, ACETATE OF**.—Price thereof in Germany, 49.  
**POTASH, BIGARBONATE OF**.—Samples of, 469.  
**POTASH, BICARBONATE OF**.—Great advantage to which this preparation was exhibited, 39. Process adopted prior to 1820; price at which then sold, *ib.* Improvements effected in the manufacture described, *ib.* Names of the earliest great manufacturers, *ib.* Circumstances which first increased the demand and stimulated the improvement of the manufacture, *ib.* Its use in dyeing wool, *ib.* Statement of the amount manufactured by one maker in Scotland from 1825 to 1850, with the price per pound, *ib.* Samples of bicarbonate of potash, 45, 47, 50.

- POTASH, CARBONATE OF—Sample of, 46. Price thereof in Germany, 49. Use thereof in glass-making, 524.
- POTASH, CHLORATE OF—Samples of, 45, 50.
- POTASH, CHROMATE OF—Samples of, 45.
- POTASH, NITRATE OF.—Method of preparation, 46. Samples thereof, *ib.* See also *Sulphate*.
- POTASH, PRUSSIAN OF.—Great purity in which these important salts were exhibited, 9. Considerable quantity of Prussian blue formerly exported by Messrs. Bramwell to China for colouring green teas, *ib.* Former and present price per lb. of Prussian blue, *ib.* Prussiate of potash not known in commerce in a crystallized state till 1825, *ib.* Improvement in the process of manufacture introduced by the late Charles Macintosh in 1824, *ib.* Statement showing the quinquennial production from 1825 to 1850, 40. Number of Prussiate works in the United Kingdom, *ib.* Amount and value of the product, *ib.* Attempt made a few years ago to introduce the air process into the manufacture; details thereof by Mr. F. R. Hughes, of Borrowstownness, *ib.* Introduction of red prussiate of potash in calico-printing in 1842-43, 41. Successful employment of red and yellow prussiates in "de-laine" printing and in wool-dyeing, *ib.* Red prussiate is sent from Germany to England, whilst yellow prussiate is imported into Germany from England, 46. Price of the prussiate in Germany, 49. Samples of prussiate of potash, 43-46, 49, 50.
- POTASH, SALTS OF—Specimen of, 44.
- POTASH, SULPHATE OF—Samples thereof, 44, 50. Price thereof in Germany, 49.
- POTASH-ALUM.—Process by which obtained, 43.
- POTASSIUM, CHLORIDE OF—Preparation thereof from seawater by the process of M. Balard, 39. Samples of chloride of potassium, 44, 50. See also *Iodine*.
- POTASSIUM, CYANIDE OF—Specimens of, 47. Price thereof in Germany, 49.
- POTASSIUM, FERROCYANIDE OF—Specimens of, 45, 48.
- POTASSIUM, IODIDE OF.—A form of iodine; used in medicine, 38. Samples of the iodide, 43, 44, 46, 48.
- POTATO FLOUR—Samples of; starches and sagos derived from, 54. Samples of potato flour from Belgium, 55. Samples from Prussia, *ib.*
- POTATO STARCH.—See *Starch*.
- POTATOES.—Chemical products from, 46. Specimens of alcohol procured from potatoes, 47.

- Precious Metals, Works in, Jewellery, &c. (Class XIII).—Tabular Classification of objects into which this Class is divided, xx. List of Jurors and Associates appointed for this Class, xxix. List of exhibitors to whom Comfess Medals have been awarded, ciii. The like, of those to whom Prize Medals have been awarded, ciii, civ. And of those of whom Honourable Mention is made, civ. Considerable place occupied in the Exhibition by the works in all kinds of precious metals, 511. Difficulty of forming from them an exact idea of the relative production of different countries in the various branches of this class of manufactures, on account of the paucity of objects exhibited from several countries, and the hurried manner in which some of the collections exhibited have been formed, *ib.* General observations on the contributions from various countries, *ib.* The exhibitions of India, Turkey, Egypt, and Tunis show that these nations have remained stationary from a very early period of manufacture, *ib.* Mutual service which must be rendered by European nations by the means afforded by the Exhibition for comparing their productions, *ib.* General remarks of the Jury on the objects exhibited by various individuals and firms; names of the exhibitors, general class of exhibits and awards, &c., 511, *et seq.*
- Critical remarks on the works in precious metals in the Exhibition, 776, *et seq.* Intimate union between the ornamentist and the artist in such manufactures, 736. Their separation, however, marked with sufficient distinctness for the purposes of description, 736, 737. Errors fallen into in consequence of such separation, 737. Sculptures in the precious metals misapplied; bad taste displayed in testimonials and prizes, &c., *ib.* Superior artistic taste displayed by the French herein, *ib.* Ample encouragement in Great Britain for the application of more skilled labour, *ib.* Defects in English works on account of the separation of artist from workman, 737, 738. Use of enamelling as an ornamental addition to the surface of the precious metals, 738, 739.
- Principles which should govern the construction and ornamentation of domestic utensils in the precious metals, 739. The like in regard to jewellery used for personal adornment, *ib.* Remarks on various works, viz., the tea-service of Eck and Durand, *ib.*; centre-piece by Messrs. Garrard, *ib.*; Messrs. Hunt and Roskell's plateau, *ib.*; other works, 739, 740. View intended to be enforced in these remarks that art gives value to the metal, not the metal to art, 740.
- Inlaid work and chisings; superior workmanship of the Indian specimens, 740.
- Remarks on works in plated metal, *ib.*
- PRECIOUS STONES, ARTIFICIAL—Specimens of, from France, 518.—Specimens in the British Department, 520.
- Prieiswerck, D., and Co., 368.
- Prelat, F., 221, 519.
- Preller, C. A., 360.
- Preller, E. (Associate Juror), xxviii, xxxi.
- Prendergast, J., 78.
- Preschel, F., and Co., 635.
- PRESSURE GAUGE.—Model of machine for determining the pressure exerted by each wheel of a locomotive, from France, 259.
- Preston, —, 97.
- Preston, F., 299, 201.
- Pretot, L. H. E., 451.
- Pretsch, P., 279.
- Price's Patent Candle Company, 604, 621, 622, 624, 629.
- Prideaux, J. S., 501.
- PRIME MOVERS (for Steam Engines).—Apparatus by which any number of prime movers may be connected or disconnected at pleasure, so as to work the same machine, 473.
- Prin, A., 391.
- Prince Biquet, Le, 544, 545.
- PRINCE OF WALES' ISLAND.—Collection of the woods of, 138.
- PRINCE OF WALES' SHIELD.—Notices of, 514, 685, 627, 698, 738.
- Prins, C. C., 78.
- Printsep, W. (Juror), xxviii.
- PRINTED GOODS.—See *Woven, Spun, &c., Fabrics (Printing of Dyeing)*.
- PRINTING.—Vast and important advantages which have resulted from this discovery, 397. Great costliness of manuscripts in former periods, *ib.* In all countries printing denotes the state of civilization, *ib.* Influence of printing on social progress, *ib.* History of the growth and extension of the art, *ib.* Improvements effected owing to the exertions of Ibarra in Spain, Baskerville and Bulmer in England, the Foulies and

the Ruddiman in Scotland, Bodoni in Italy, and the Didot family in Paris, 397. Great improvements in the typographical art, invented by Charles, third Earl of Stanhope, 398. Application of steam-power to printing, by Messrs. Bauer and Koenig, *ib.* Simplification of this machine in 1814, and rapid printing of the "Times" newspaper, *ib.* Koenig's machines superseded by Cowper's in 1816, *ib.* Cowper's machine the cause of many pictorial illustrations which characterize so large a portion of modern publications, *ib.* Adoption of this machine by the Universities of Oxford and Cambridge, also by the Religious Tract Society, *ib.* Number and description of the presses employed in printing the "Times" newspaper at the present period, *ib.* Invention of Applegath's new cylinder press, capabilities thereof, *ib.* Distribution of the ink by means of the inking-roller instead of the old printing-balls, 398, 399. Magnificence of the Austrian typographical specimens, 399. State of printing in Russia, specimens exhibited, *ib.* Honourable position maintained by printing in Saxony, *ib.* Excellence of the specimens contributed, *ib.* Introduction of printing into Rome soon after its discovery, *ib.* Foundation of the printing office of the Vatican by the Pope, *ib.* Beautiful Oriental types possessed by this office, *ib.* Very few publications issued, *ib.* Improvements introduced into the typography of Italy, 399, 400. Very few typographical productions exhibited from Italy, 400. Flourishing condition of the trade in books in the Cantons of Switzerland, *ib.* No specimens of typography contributed by that country, *ib.* First book in the English language printed by Caxton in 1474, *ib.* Nature of the types used, *ib.* Very little progress made in the art of printing up to the time of Buxley in 1733, *ib.* Great improvements in both types, paper, and ink effected by Baskerville in 1750, *ib.* Fresh progress in the art made at the end of the last century by W. Bulmer and T. Bensley, *ib.* Elegant editions brought out by C. Whittingham at the commencement of the present century, which have rendered the Chiswick Press so celebrated, *ib.* Means of satisfying the present demand everywhere numerous and powerful, *ib.* Printing at Messrs. Clowes', Spottiswoode's, the large London newspapers, &c., *ib.* Great advantages resulting from the maintenance of the ancient customs of the printers of England, that all persons should serve a seven years' apprenticeship, *ib.* Government patronage indispensable in most of the countries of Europe, *ib.* England a striking instance of the development of art without such support, *ib.* Printing of the Holy Scriptures in all languages by the Tract and Bible Societies, *ib.* Large number of important and popular publications issued in England proving the immense resources of the country, *ib.* High merit of the Clarendon Press and the Pitt Press in the Universities of Oxford and Cambridge, 401. Numerous specimens of printed English books exhibited, *ib.* Great English publishers not represented, *ib.* Table showing the rate of wages and number of journeymen and apprentices in seventy-nine towns in the United Kingdom, 401, 402. Statistics of the London daily newspapers, showing the number printed in each year from 1845 to 1850 inclusive, 402. Present state of the London book trade, *ib.*

History of printing in France, 404, 405. Remarks on the specimens of typography exhibited from France, 405, 406. Regret expressed at the absence of specimens of the typographic productions of Spain and Portugal, 406. Observations as to the state of printing in Belgium, *ib.* Specimens exhibited, *ib.* Few specimens from the printers of the Netherlands, *ib.* Continuation of the voluminous publication of the "Lives of the Saints," commenced by Bollandus, *ib.* Ingenious machine for composing types, on an entirely new system, from Denmark, *ib.* Specimens of printing bank notes from Sweden, *ib.* Superior merit thereof, from their varied combinations and the difficulty thrown in the way of forgery, *ib.* Specimen of printing from Russia, *ib.* Establishment of a printing-office at Athens at the time of the independence of Greece, *ib.* No specimens of typographical productions of Greece, *ib.* Europe might have possessed the art of printing ever since 1310 had she been acquainted with the work by Kâschid-ed-din, descriptive of the process of printing as known to the Chinese, *ib.* Beautiful manuscripts from Persia, *ib.* Typographic press not unknown in that country, *ib.* Present state of printing in Egypt, *ib.*

Interesting display of specimens from that country, 406, 407. Peculiar paper used, 407. Collection of newspapers from America, nothing remarkable either in the printing or low cost of price, *ib.* Specimen-book in the Canadian collection, containing a large number of beautiful types, also stereotype plates, *ib.* Observations on the specimens of printing from Australia, *ib.* New process relating to galvanoplastic, galvanographic, galvanoclyptic, and chemotype printing, *ib.* Description of these processes, *ib.* General remarks on pannelography; nature of the process, 407, 408. History of music-printing from 1490 to the present time, 408. Specimens of music and music-types exhibited, *ib.* Marked improvement in the types of M. Derrier, of Paris, *ib.* Difficulties to be overcome before music printed by letter-press can equal that printed from engraved plates, *ib.* Good work produced by transfers of engraved music on lithographic stones, *ib.* Cost of printing by lithograph greater than by letter-press, *ib.* Printing in the Zollverein States keeps pace with paper-making, 435. Number of establishments in the various States, 436. Lithograph much more on the increase than the other branches of printing, *ib.* Table showing the weight of books imported into, and exported from, the Zollverein States in 1850, 440, 441. List of awards, exhibits, and exhibitors, 451-455. Notice of specimens of ornamental printing, including chromo-typography, 688. See also *Galamography. Lithography. Printing in Colours. Printing in Gold. Types and Type-founding.*

PRINTING FOR THE BLIND.—See *Blind, Apparatus, &c., for Teaching.*

PRINTING, CALICO, &c.—See *Calico Printing. De Laine Printing. Designs for Printed and Woven Fabrics, &c.*

PRINTING IN COLOURS.—Hugo di Carpi the original projector of printing chiaro-oscuro, by surface block printing, 403. Jackson's essays on the invention of engraving and printing in chiaro-oscuro, published in 1854, *ib.* Directions published at various times for making coloured inks for printing, *ib.* Mr. Savage's receipts incorrect, *ib.* Great impulse given to coloured surface printing during the existence of the state lotteries, *ib.* Great improvement made in the art, *ib.* Novelties produced by J. Whiting, *ib.* Establishment of the printing office of Beaufort House for all descriptions of ornamental printing, and particularly for protection against forgery, *ib.* Compound plate printing by machinery, *ib.* Revival of ornamental printing by Mr. De la Rue in 1832, *ib.* Rapid and successive improvements which have taken place since that period, *ib.* Beauty and perfect execution of Baxter's process, *ib.* Objects exhibited as specimens of this branch of industry, list of exhibitors, *ib.* Notice of specimens of printing in colours, 688, 696, 703.—See also *Chromo-typography. Lithochromy.*

PRINTING, EARTHENWARE.—Process of Messrs. Pratt for coloured printing under the glaze, 541.

PRINTING IN GOLD.—General remarks on Wiltaker's process of printing in gold, 403. Description of the process adopted, 403, 404. Process similar to that now used by bookbinders in block gilding, 404. Introduction into England, about 20 years ago, of the process of printing in gold from copper plates, *ib.* Description of this process, *ib.* Printing in gold by letter-press, applied by Messrs. Vizetelly and Co., *ib.* Works of this description executed by De la Rue and Co., *ib.* Printing of the "Sun" newspaper in gold on Coronation day, *ib.* Gold printing now applied to numerous purposes in most countries, *ib.* Mode of producing good and bright results by letter-press printing, *ib.* List of exhibitors of printing in gold and silver-bronze, variety of specimens contributed, *ib.*

PRINTING INK.—Every desirable quality presented by the ink of the earliest printed works of the fifteenth century, 412. It is not the same with later impressions in the greater part of which the ink is more or less decomposed, *ib.* Manufacture of ink at the present time good, *ib.* Grinding rendered more perfect by the application of improved machinery, *ib.* Improvements effected by Mr. De la Rue, *ib.* Time the only test capable of deciding the respective qualities of printing inks, *ib.*

PRINTING MUSIC.—See *Music Printing.*

PRINTING PRESSES.—Various printing presses worked by hand, exhibited, 198. Scandinavian press, *ib.* Cylinder printing machine, *ib.* Applegath's printing machine, *ib.* Printing machine in which a stereotype plate is curved to fit the circumference of a cylinder, *ib.*

**PRINTING ROLLERS.**—History of the substitution of rollers for the usual printers' balls, 413. Introduction of composition rollers, *ib.* Prejudice of the workmen against the roller, *ib.* Effects of Mr. Harrild in conciliating the pressmen, *ib.* Extensive list of Messrs. Harrild's manufactory, *ib.* Greater part of the printers of England supplied with their inking-rollers, *ib.* Invention of inking-tables and hand-rollers due to Mr. Cowper, *ib.* Specimens exhibited, *ib.*

**PRINTING TYPE.**—See *Types*, &c.

**Prior, Rev. H. F.**

**PRISMATIC COMPASSES.**—See *Compasses Prismatic*.

**PRISMS.**—See *Lenses and Prisms*. *Optical Glasses*.

**Pritchard, A.**, 267.

**PRIZE MEDALS.**—Total number of Prize Medals awarded, ii. List of Exhibitors to whom Prize Medals have been awarded, showing the Nation, the No. in the Catalogue, Name of Exhibitor, and Objects rewarded; viz:

Ladies' Jury.—cxc.

**PRIZES.**—Decisions come to by Her Majesty's Commissioners relative to Prizes, iv. *Note.* Instructions from the Council of Chairmen to the Juries respecting awards, xxiii, xxiv. Minute of the Royal Commission, on the award of the Council Medal, xxiii, xxiv. List of Jury Awards, xxxv, cxx. See also *Council Medals*. *Honourable Mention*. *Prize Medals*. *Money Awards*.

**Prosser and Hadley**, 201-202.

**Prosser, R.**, 533.

**PROTEAN STONES.**—Various articles, such as door handles, finger plates, &c., included under this head, 630. The material new, derived from gypsum, *ib.* Beautiful objects composed thereof, *ib.* Applicable for many purposes for which ivory and marble are at present used, *ib.* Description of this very ingenious manufacture, *ib.* Process by which these results are obtained, *ib.* Manner in which the colouring is effected, *ib.* Specimens exhibited, awards, and names of exhibitors, *ib.*

**Prout & Co.**, 480.

**Prouty and Meats**, 226-242.

**Prudent, J.**, 273.

**PRUSSIA.**—Samples of potato-flour and sago from Prussia, 55. Also fine series of macaronis and pâtes, *ib.* Samples of dried garden and orchard fruits, 57. Chocolates, 59. Samples of oils, 84, 163. Colouring matters or dyeing stuffs, 90. Fine examples of raw silk, 162. Specimens of common flexible sponge, 164.

**Woolen manufacturing machinery**, 196. Shearing machine, 196. Jacquard and punching machine for Jacquard cards, 197. Type-founding machine, 198. Turning lathe, 199. Coining press, 200. Flattening rollers, 200. Vacuum sugar apparatus, 203.

**Sextants**, 252. Surveying and levelling instruments, 251, 255. Standard measure of length, 256. Balances of various construction, 259. Telescopes, 265. Spectacles, opera-glasses, lenses, &c., 275. Daguerreotypes, 278. Thermo-electric battery and apparatus, 282. Ingenious electric telegraph, 293. Chemical apparatus, 297. Thermometers, 302. Planimeters, 304. Collection of models of crystals, 305. Drawing instruments, 306. Globes, 308. Chronometers, 336, &c.

**Samples of woolen and worsted yarns**, 360. Specimens of linens and damasks, 371-372. Mixed fabrics from Prussia, 374. Objects exhibited, 375-377. Collection of shawls, 380-382.

**State of printing in this country**, specimens exhibited, 393. Examples of paper, 442. Collection of types and specimens, 442. Specimens of stationery paper, 452-455.

**Printed goods**, 456, 459. Varieties of dyed yarns, 458, 459. Specimens of needlework and embroidery, 472. Carpets and table covers, 475.

**Specimens of cutlery, edge tools, &c.**, 489-491. Hardware, iron castings, and iron manufactures, 500.

**Articles of glass**, 536, 537. Remarks on the contributions of Prussia to the Ceramic Department of the Exhibition, 542, 543. Collection of furniture, carton-pierre figures, &c., 550, 551. Specimens of manufactures in porphyry, 565. Chemical utensils and apparatus, 586. Specimens of glazed fire-clay goods, *ib.* Improved employment of threads of elastic tissue, 596. Examples of painting and other brushes, 600.

**Eau-de-Cologne and other perfumery**, and soap, 614, 615.

**Statistical account of the stearic candle manufactures in Prussia**, 623. Collection exhibited, 623. Sample of paste-blackening, 631. Imitation Jucifer-matches, 635.

**Conserved fruits**, 639-642. Umbrella and parasol handles, 659-661. Specimens of walking sticks and sword canes, 665, 666. Collection of pipes, chiefly amber manufactures, 671, 673, 674. Papier-maché snuff boxes, 676. Toys, 679, 681.

**Notices of the principal works contributed by Prussia to the Fine Arts department of the Exhibition**, viz.—Works of sculpture on a large scale, 637. Works of sculpture on a small scale, 698. Designs for tapestry, *ib.* Lithochromy, *ib.* Architectural models, *ib.* Castings in bronze, 706. Castings in iron, 707.

**Prussia, H. M. the King of**—Remarks on the shield presented by, to H. R. H. the Prince of Wales, 514, 683, 697, 698.

**PRUSSIAN BLUE.**—Considerable quantity thereof, formerly made and exported to China for colouring green teas; price formerly and at present, 39. Specimens of, 48.

**Prussian Royal Iron Foundry (Berlin)**, 500, 502, 517.

**PRUSSIAN POTASH.**—See *Potash*, *Prussiate of*.

**Psyche, K. (Juror)**, xxx.

**Puckridge, F.**, 165.

**Puggard, T.**, 52.

**Pugh, J. W.**, 363.

**Pugh, D.**, 552.

**Pugin, A. W. (Juror)**, xxxi, 502, 687, 696, 716, 718, 725.

**Puissant, F.**, 506.

**Pulham, J.**, 582.

**Pulis, G.**, 52, 95, 163.

**Pullman, R. W. and J.**, 393.

**PULSES AND CATTLE FOOD.**—Observations on the exhibition of, 54.

**PUMICE STONES.**—From the banks of the river Waikato, New Zealand, 15. Specimens of artificial pumice stone from Austria, 575.

**PUMPS.**—Inconvenience resulting from the wearing out of the pistons of mining pumps, 12. Invention for adapting the pistons of pumps in mines by J. Arthur, *ib.* Model shewing the arrangement of the apparatus, *ib.* Notwithstanding the great antiquity of the pump, and its extensive use, considered in a mechanical sense it is one of our worst machines, as a means of producing a given result with the least possible expense of power, 178. Amount of power lost in lifting and forcing pumps, *ib.* Causes of this loss of power, 178, 179. Pumps exhibited, 179. Common suction pump, the suction air chamber being made of glass, showing its action, *ib.* Small pumps called fire syringes, *ib.* Description of a pump for taking the surface water only of a well, and at the same time filtering it, *ib.* Double pump, with large cylinders and six-inch valves from France, *ib.* Peculiar fountain pump, nature of its peculiarity, *ib.* Revolving pump, and various jets d'eau, ingenious in combination and arrangement, *ib.* Deep-well force-pump, remarkable for the facility with which the valves can be removed to be repaired, *ib.* See also *Centrifugal Pumps*. *Valves for Pumps*.

**PUNCH-CUTTING.**—See *Types and Type-founding*.

**PURBECK ISLAND.**—Plastic clay used in the manufacture of earthenware, obtained from Purbeck Island, 13, 14.

**PURBECK STONE.**—Purbeck stone and Purbeck marble exhibited in a sculptured form by only one person, 557. Not much used at present, except for restorations, *ib.*—See also *Marbles*.

**Purcell, F.**, 472.

**Purdie, —**, 59, 62.

**Purdy, C. W.**, 506.

**Purdy and Feudl**, 330, 334.

**Pinger, J. B.**, 678.

**PURSE TRIMMINGS.**—Specimens of, 507, 508.

**Pusey, P. (Juror)**, xxv, xxvii.

- Putnam, G. P., 426.  
 Puttealla, Rajah of, 378.  
 Puzin, —, 470.  
 PUZZUOLANA.—Specimens of, from Santorin, Greece, 33. Modification of puzzuolana by a mixture of burnt and unburnt stone, 574. Specimens of a very fine natural cement of the nature of puzzuolana from Greece, *ib.*  
 PYROXYLUM.—Prepared from lichens, 50.  
 Pyson, —, 400.  
 PYRENEAN.—Collection of marbles from the quarries at the, 27. Great variety and beauty of polish, *ib.* Numerous series of small specimens of woods of the Upper Pyrenees, 153.  
 PYRITES.—Separation of pyrites or schist from coal by Mr. Berard's purifying apparatus, 4. Description of the apparatus, 4, 5. Existence of pyrites in the island of Trinidad in sufficient abundance, to be employed in the manufacture of sulphur, 17. Manufacture of alum and coppers from the pyritous schists from the coal formation, 42.—See also *Copper and Copper Ores*.  
 Pyre and Sons, 509.  
 PYROGALLIC ACID.—Samples of, 47.  
 PYROMECNIC ACID.—Specimens of, 47.  
 PYROMETERS.—Use of this instrument, description of the construction of, Ericsson's pyrometer, 302. Description of a pyrometer exhibited in the Austrian Department, *ib.*  
 PYROXANTHIN.—Specimens of, 43.  
 Quain, —, 344.  
 Quanonne, C. and J., 623, 630.  
 QUARRYING.—See *Mining, &c.*  
 QUARTZ.—Specimens of pure quartz and other materials used in the manufacture of glass from Rome, 33. Number of objects caused in quartz rock (rocks crystal) from India and China, 566.—See also *Jasper*.  
 QUEEN, HER MAJESTY THE.—Notice of a portrait of, by Ducluzeau, after Winterhalter, 687, 694, 702. Portraits of the Queen, the Prince of Wales, and H. R. H. Prince Albert, on a jewel case, 687, 694. Zinc statue of Her Majesty by the Vieille Montagne Company, 707.  
 Queen Libusa, Statue of—notice thereof, 699.  
 Quennessen, —, 296.  
 QUERCITRON BARK.—Specimens of, 87. Dye stuffs exhibited, *ib.* Dyed samples shown, *ib.*  
 Querini, G., 162.  
 Quesnel, —, 707.  
 Quetelet, L. A. J. (Juror and Associate), xxvii, xxxi.  
 QUICKSILVER.—See *Mercury*.  
 Quilliam and Creer, 555, 569.  
 QUILLS.—Application of the quills of birds to the manufacture of brushes, possessing the qualities of cheapness and durability, 601. Their application also to the making of articles of dress and baskets, *ib.*—See also *Porcupine Quills*.  
 QUILTINGS.—See *Cotton Manufactures*.  
 QUINIDINE.—Specimens of the alkaloid "quinidine," 50.  
 QUININE.—Specimens of salts, sulphate and citrate of quinine, with other samples of quinine, 45, 46.  
 QUININE, HYDRODATE OF.—Samples of,  
 QUININE, SULPHATE OF.—Specimens of, 44, 45.  
 Quinn, —, 148.  
 QUINQUENGRONE (Normandy)—Bottle glass manufactory at, established in 1294, 528.  
 QUIRIN, ST., GLASS WORKS (France)—Referred to, 527.  
 RaBourdin, —, 482, 596.  
 RACE CUPS.—Large ewer, for a race cup, representing Hercules combating the horses of Diomedes, 512. Groups for racing prizes in good taste, and carefully executed, 513.  
 Râchid-ed-din, —, 406.  
 RACKETS.—Small selection contributed, 677. The manufacture of such as are used in the game of Tennis better understood in France than in England, *ib.* Awards made, *ib.*  
 Radcliffe, —, 173.  
 Radloe, A. (Juror), xxviii.  
 Radmeister, Community of, 21.  
 Raesner, C., 425.  
 Raffles, Sir B., 83.  
 Ragan, W., 552.  
 Ragg, —, 498.  
 Ragg, J. (Associate Juror), xxix.  
 RAGS.—See *Paper, &c.*  
 RAILS, RAILWAY.—Wrought-iron permanent way for railways; the rail made to form its own continuous bearing, 187. Sections of railway bars of all the forms used in railways, 189. Railway bars 70 feet in length, of skilful workmanship, *ib.*  
 RAILWAY-BREAKS.—Description of a carriage-break exhibited; a good example of what is termed the glodge-break, 187.  
 RAILWAY CARRIAGES.—Articulated railway carriages, 169. Eight-wheeled double railway carriage for first and second-class passengers, 186. Railway carriage constructed of Moulmein-teak, varnished, 187. Patent covered railway wagon for the conveyance of merchandise by railway, *ib.* Excellent adaptation of corrugated iron to the construction of railway carriages, *ib.* Application of papier maché to the construction of railway carriages, *ib.*  
 RAILWAY-CARRIAGE AXLES.—Patent railway-carriage axles, 174. Illustrations of their process of manufacture, *ib.*  
 RAILWAY SLEEPERS.—See *Timber Seasoning*.  
 RAILWAY-TRAIN ALARMS.—Electro-magnetic, 283. Simplicity of the arrangement, *ib.*  
 RAILWAY TRAVERSING FRAME.—Description of the construction and application of a traversing frame to remove carriages from one line of rail to another, 187.  
 RAILWAY WRAPPERS.—Excellent specimens of railway wrappers and Windermere-rugs, 359.  
 RAIN GAUGES.—Different descriptions of, exhibited, 302.—See also *Anemometers, Atmospheric Recorder*.  
 RAKES, HORSE.—Utility and economy thereof, 232.  
 Ralph, F., 448.  
 Ramay, —, 700.  
 Rambouillet National Sheepfold, 159.  
 Rampendahl, H. F. C., 552.  
 RAMS' HEADS.—Ram's head richly ornamented, exhibited by M. McGregor, of Perth, 520. Ram's head richly mounted, the ornaments being silver thistles, exhibited by W. Baird, of Glasgow, *ib.*  
 Ramsay, G. H., 559, 584.  
 Ramsay, R., 403.  
 Ramus, J. M., 685, 701.  
 Rand, J., and Sons, 357, 359, 361.  
 Randall and Dicks, 393.  
 Randell and Sanders, 801.  
 Randoing, J. (Juror), xxviii, xxxi; (Exhibitor), 352.  
 Randolph, W., 645.  
 Randon, L., 470.  
 Rangel, A. P., 602.  
 Rankin, K. and J., 202.  
 Ranniger, J. L., and Son, 393.  
 Ransauer, A., 348.  
 Ransome and Parsons, 576.  
 Ransomes and May, 173, 187, 198, 204, 225-229, 234-236, 242, 246.  
 Rao Scindia, H. H. the Maharajah, 81, 378.  
 RAPESEED CAKE.—Specimens of, 56.—See also *Oil Cake*.  
 RAPESEED OIL.—See *Oil*.  
 Rapp, C. F., and Son, 480.  
 Raschle and Co., 348.  
 Ratajinsky, —, 55.  
 Ratzersdorfer, H., 517.  
 Rau, C. H. (Juror), xxviii.  
 Rau and Co., 506.  
 Rauch Brothers, 442, 453.  
 Rauch, C., 697, 707.  
 Raucher, L., Jun., 166.  
 Raub, —, 449.  
 Ravagli, P., 162.  
 RAW PRODUCE AND MATERIALS (Vegetable and Animal Kingdoms).—List of classes of objects included in Group A. Raw materials, iii, v. Several collections of especial value amongst the numerous samples of raw produce from the animal and vegetable kingdoms of various countries, *ib.* Importance of such selections in a statistical and scientific, as well as in a commercial point of view, *ib.* Valuable and important collection of the raw produce of the Indian empire, *ib.* Valuable and important collection of the raw produce of the Turkish empire, *ib.* Valuable and extensive collection of raw products, illustrating the natural resources of Spain, *ib.* Unrivalled excellence of the long staple cottons of the United States, *ib.* Peculiar value and excellence of the felting wools exhibited in the Austrian Department, *ib.* Complete and well-arranged collection of the vegetable productions of Scotland, *ib.* Large portion of the commerce of the country fairly represented by the Liverpool collection of imports, *ib.* Persevering and successful efforts of the Royal Society for the Improvement of the Cultivation of Flax in Ireland, *ib.* Remarks on Mercer's process for modifying

- the fibre of cotton, 69. Ingenuity of the invention of M. Pôpelin-Ducarre for preparing charcoal in cylindrical masses, called "Charbon de Paris," 70. Description of a new kind of wool, called "Manchamps-Sierino," introduced by J. L. Graux, of Juviscourt, France, *ib.* Remarkable progress made in France in the economical extraction and preparation of pure gelatines and glues from the waste parts of animal bodies; specimens exhibited by its chief originator, L. F. Grenet, *ib.* Council Medals awarded for collections of raw produce, 69, 70. Various countries from which collections of raw produce have been exhibited, for which Prize Medals have been awarded; names of exhibitors, 70, 71.—See also *Animal and Vegetable Substances, &c.*
- Rawlings, J., 689.

Redgrave, R. (Juror and Associate), xxix, xxxi.  
Redgrave, Richard, R. A. (Analysis of Supplementary Report by, on Design).  
Circumstances which led to the preparation of this Report; objects embraced by it, 708. Definition of "design" and of "ornamental decoration," *ib.* Remarks in illustration of the principles to be observed in construction and ornament, 708, *et seq.* Ecclesiastical architecture of the middle ages, 708, 709. Renaissance style, 709. Louis Quatorze style, *ib.* Traditional ornament, *ib.* Two classes of ornamentists; the traditional who superstitiously worship the past, and those who pay no deference to authority; results of the labours of each class, 709, 710. Governing principles in modern ornamentists, 710. Incongruities and incompatible combinations, *ib.* Ancient and modern ornamentation compared, *ib.* The designer not appreciated by the manufacturer, 710, 711. Want of union between the designer and the mechanic employed to carry out the design, 711. Taste for design little diffused in England, *ib.* The question of design nearly overlooked in the Exhibition itself, *ib.* Circumstances to be considered in comparing the progress of ornament and art-workmanship in this country with continental nations, 711, 712.  
Classification of the subjects to be considered in this Report into various heads, 712, viz.:—  
1. Decoration of buildings; architectural decoration generally, 712, 714. Stained glass decoration, 714, 716. Inlaid floors, mosaic pavements, encaustic tiles, &c., 716, 717. Paper and other hangings, 717-719. Exterior and other metalwork, 719, 720.  
2. Domestic and other furniture, 720, 721. Cabinet work and furniture of all kinds, 721-725. Hardware, comprising grates, fenders, fire-irons, stoves, gas-fittings, lamps, &c., 725-727. Carpets, 727-729. Curtains and hangings, 729-731.  
3. Domestic utensils and objects of personal use, 731. Porcelain and potters' ware, 731-734. Glass, 734-736. Works in the precious metals, 736-740. Bookbinding, and the "design" applied to that branch of industry, 740, 741.  
4. Garment fabrics, 741-745. Shawls, 745-747. Ribbons, 747. Lace, 747, 748.  
Concluding remarks: necessity for extension of education for art-workmen; instruction at Government schools of design, 748, 749. Expediency of a well-arranged distribution of the means of instruction for the whole kingdom, in accordance with local wants and manufactures, 749. Especial attention to the great public establishments of France essential as a means of gaining information as to the knowledge of art by workmen, *ib.*

 RUSSIA.—Immense revenue yielded annually from the gold mines of Russia, 33. Reasons for this important source of riches to the country possessing little interest, *ib.* The working of iron and its manufacture, joined to the working of copper, the principal part of the mineral industry of Russia, *ib.* Objects exhibited, *ib.* The collection of Russian cereals the finest in the Exhibition, forming a most attractive and prominent display, 52. Character and nature of the samples exhibited, 52, 53. Large quantities of rice of good quality cultivated in the southern provinces, 53. Samples exhibited, *ib.* Beautiful samples of red and white millet, 54.

- Samples of green sugar peas, 53. Proverbial goodness of the flours of this country, 55. Excellence of the collection exhibited, *ib.* Sample of unripe hops; their high quality, 56. Samples of mustard, 62. Samples of starch and dextrine, 79.
- Samples of the empyreumatic vegetable oil, obtained by the destructive distillation of birch bark, 84. Collection of colouring matters or dye stuffs from, 90, 91. Collection of tanning materials, 93. Samples of cotton, 95. Large and important series of flax and hemp, 99. Small number of woods contributed, 158. Examples of wool of a good and valuable quality, 158, 159. Raw silk, 162. Good specimens of bed-feathers and down, 163. Isinglass, the product of Russia, holds the first rank; specimens exhibited, 166.
- Machine for spinning silk directly from the cocoon, 196. Large sextants, 252. Levelling instruments, 255. Microscope from Russia; an indifferent instrument, 267. Spectacles, 273. Apparatus for assaying precious metals, 297. Practical utility of the instrument, *ib.* Drawing instruments, 306. Calculating machine, 310.
- Small quantity of woollen cloths, 351. Their good quality, *ib.* Specimens of worsted stuff goods, 356, 357. Description of an article of a novel and unique character made from camels' hair spun by hand, 358. Observations on the worsted yarns, 359. General remarks on the exhibition of the silk manufactures of this country, 363. Specimens of manufactured silks, brocades, &c., 365-368. Specimens of canvas, 371, 372. Specimens of shawls, 379. Samples of furs, 386, 387.
- Specimens of printing, 406. Types, 410. Excellent specimens of paper and printing, 453, 454. Observations on the printed goods and dyed yarns, 458. Specimens of gold embroidered leather, 472. Boots, shoes, and slippers, 480. Cutlery, 489. Brasses and malachite, 503, 505-507.
- Beautiful productions from Russia as regards the setting of precious stones, 511. Magnificent articles of jewellery exhibited by Koemmer and Zeffgen of St. Petersburg, 515. Articles of silver from Moscow, *ib.* Beautiful exhibition of jewellery from St. Petersburg, rich, and perfectly set, 517. Articles of glass, 37. Porcelain, 548. Collection of paper-hangings, 548, 551. Ornamental furniture, 550, 551. Observations as to the objects in malachite and jasper and hard porphyry, 554, 560-571. Interesting group of objects manufactured from the jasper and quartz works of Siberia, 566. Fine specimens of true Florentine Mosaic in *pietra dura*, 567, 568.
- India-rubber clogs and waterproof pillow, 596. Collection of bowls, dishes, plates, &c., formed of the hair of the rabbit, hare, &c., felted and afterwards varnished, and resembling papier-mâché, 600. Specimens of soaps, 611. Samples of well-made brown Windsor soap, &c., from Warsaw, *ib.* Account of the stearic candles manufactured in Russia, 623. Excellent quality of those exhibited, 629. Wax-light productions, 626. Excellent quality of those exhibited, 630. Remarks on a collection of fruits and marmalades, 639. Contribution of well-made but very expensive papier-mâché snuff-boxes, 670.
- No specimen of sculpture on a large scale contributed by Russia, 706. Notices of works of art on a small scale, *ib.* Specimens of lithochromy, *ib.*
- Russia, Empress of, 567.
- Russian Imperial Cabinet, 386.
- Ryan, J., 509.
- Ryder, W., 200, 204.
- Rye.—Samples of rye from Belgium, 52. Potentum of half-ripe rye from Russia, a novelty to England, though extensively consumed in Russia, 53.
- Ryffel and Co., 366.
- Ryhner and Sons, 368.
- Ryles, —, 367.
- Ryder, A., 395.
- Saanto, A., 49.
- Sabatier, H., 278.
- Sabin, R., 380.
- SACCHAROMETERS.—Description of Duboscq-Soleil's saccharometer, 272.
- SACKING.—Excellence of specimens exhibited, 370, 372, 373.
- Sacks, W., 61.
- Sacré, E., 259.
- Sadd, W., 309.
- SADDLERY AND HARNESS.—General character of the articles exhibited under the subdivision of saddlery, harness, and portmanteaus highly creditable to the Exhibitors, 394. List of Exhibitors, Exhibits, and Awards, 394, 395. See also *Leather*, &c.
- SADLERWORTH (York).—Remarkable for the manufacture of Saxony flannels, 338.
- Sadler, Fenton, and Co., 98, 372.
- Sadler L., 166.
- SAFES (Iron).—Large number of iron safes and treasure chests, 500. Equal merit as far as chances of security offered, *ib.* Ornamentation and expensive polished work might be dispensed with, 501. Expense necessarily considerable, *ib.* Specimens exhibited, awards, &c., 503.
- SAFETY FUSES (for Mines).—Description of the safety fuse for mining purposes invented by Messrs. Brickford, Smith, and Davey, 9. Great service of these fuses, *ib.*
- SAFETY LAMPS.—Advantages of M. Mueseler's safety lamps, 22. Extensive use thereof, *ib.* Description of the lamp, *ib.* Superiority over the Davy lamp, *ib.* Difference between the lamp of M. Eloi and that of M. Mueseler, *ib.* Experiments made with M. Eloi's lamp showing its value, *ib.* Ingenious lamp from France, 296. Extinguishes itself when the gas becomes explosive, *ib.* Is inexpensive, *ib.*
- SAFFLOWER.—Beauty of this colouring matter, 88. Extensively used in dyeing silk and cotton, *ib.* Various specimens exhibited, 88, 91.
- SAFFLOWER CARMINE. Samples of, 49.
- SAFFRON.—Specimens of roots, flowers, &c., of, 49. Samples of saffron, 90, *ib.* 91.
- SAGO.—Samples of sago made from potato, 54. Samples of sago from Prussia, 55. Samples from Angola, the Eastern Archipelago, Borneo, and Ceylon, 62. Sample of sago cake from the Moluccas, *ib.*
- Sagra, Ramon de la (Juror), xxvi, xxxi, (Exhibitor), 103, 154.
- Said Aga, 673.
- SAILCLOTH.—Power-looms for making; peculiar arrangements thereof, 196. Specimens of cotton sailcloth, from the United States, of great strength, 319. General excellence of the specimens of sail-cloth exhibited, 370, 372.
- St. Etienne, Madame, 54, 61.
- St. Helena.—Contribution of willow-tree snuff-boxes from, 675.
- St. Pelayo, The Nunnery of (Spain), 641.
- Sainte and Co., 81, 630.
- SALT-AMMONIAC.—Method of preparation, 46. Samples thereof, 48, 50.
- Sale, J. N., 459.
- Sales, Pollard, and Co., 60.
- SALICIN.—A new discovery, produced from willow bark, 47.
- SALICYLIC ACID.—Samples of, 47.
- Sallivsky, Madame, 557.
- Sallandrouze de Lamorlanx, 473.
- Salin, Prince, 106.
- SALMON.—Samples of fresh salmon, preserved in tin cans, from New Brunswick and Nova Scotia, equal to the English salmon, 61.
- Salmon, W. J., 261.
- Salomons and Sons, 469.
- Salshausen Salt Works, 32.
- SALT, Common.—Products from the salt mines of Cheshire, as purified, by W. Worthington, 13. Salt is obtained from the evaporation of saline springs in most of the States dependent on the Zollverein, 32. The works are conducted by the Government, *ib.* Specimens exhibited, *ib.* Specimens from the Royal salt mines of Volterra in Tuscany, obtained from the evaporation of brine, 35. Effect of the abolition of the Excise duty on salt upon the manufacture of carbonate of soda, 41. Samples of common salt and of salt used for domestic purposes, 44, 45.—See also *Salts*, *Chemical*, *Salts of Sea-Water*.
- Salt and Mayo, 506.
- Salt and Meur, 589.
- Salt, T. (Juror), xxviii, xxxii; (Exhibitor), 357, 360, 361.
- SALT BUSTER.—Sample of, from Spain, 65.
- Salter, S., 200, 688, 696.
- Salter and Co., 323.
- SALTETRIE (Nitrate of Potash).—Specimens of, 48, 49.
- SALTS, CHEMICAL.—Samples of various chemical salts, (un-described), 44, 46, 47, 49, 50.—See also *Ammonia*, *Salts of Pink Salt*.
- SALTS OF SEA-WATER.—Various salts prepared from seawater by the process of M. Balard; Council Medal awarded for the same, 39. Saline products of the seawater of the Mediterranean enumerated and described, *ib.*

- Saluce, A., 49.  
 Sambuc, E., 162.  
 Samoiloff, L. (Juror), xxviii.  
 Samuels, D., 121.  
 Sampson, B., 238, 242.  
 SANITARY PURPOSES.—Earthenware for, 541.  
 Sanchez Pescador, 506.  
 SANDS (for glass-making and other purposes.—Purity of the sand at Stoppe, near Aylesbury, 12. Use thereof in the manufacture of glass, *ib.* Specimens of sand and glass, *ib.* Sands from Cornwall employed for building or agricultural purposes, 13. Advantageous use of white quartzose sands in the manufacture of glass, 16. Specimens from Canada, *ib.* Specimens of pure sand used in the manufacture of glass from Rome, 33.  
 Sandell, J., 636.

 Seville Brothers, 199, 204, 372.  
 SCULPTURE, MODELS, AND PLASTIC ART (Glass XXX).  
 Tabular classification of objects into which this Class is divided, xxii. List of Jurors appointed for this Class, xxiii. List of Exhibitors in this Class to whom Council Medals have been awarded, xxvii. The like, of those to whom Prize Medals have been awarded, xxvii, xxviii. Of those of whom Honourable Mention is made, xxviii, xix. And of those in whose favour money awards have been made, xxix.  
 Date of the first meeting of the Jury of this Class, election of Deputy Chairman; nomination of Sub-Committees, 683. Course of action pursued by the Jury in the distribution of their awards; principles by which they have been guided, 683, 684. Growing taste for objects of art; increasing estimation in which they are held, 684.  
 Works recommended for the Council Medal, 684.  
 Works to which Prize Medals have been awarded, or to the Exhibitors of which Honourable Mention is made, viz.:  
*Sculpture and Fine Art*.—In metals simple, as gold, silver, copper, iron, zinc, lead, &c., 684, 685. In metals compound, as bronze, electrum, &c., 685. In minerals simple, as marble, stone, gems, clay, &c., 685, 686. In elaborate mineral materials, as glass, porcelain, &c., 686. In woods and other vegetable substances, *ib*. In animal substances, as ivory, bone, shells, *ib*.  
*Works in Die-Staking, Intaglio*.—Coins, medals, and models of a metallic character in any material, 686. Impressions struck from dies for ornamental purposes, *ib*. Gems, either in cameo, or in intaglio, shell cameos, *ib*. Seals, &c., *ib*.  
*Architectural Decorations*.—Integral, in relief, colour, &c., 686. Adventions, as stained glass, tapestry, &c., 686, 688.  
*Mosaics and Inlaid Works*.—In stone, 687. In tiles, *ib*. In vitrified materials, *ib*. In wood, *ib*. In metal, *ib*.  
*Enamels*.—On metals, 687. On china, 687, 688. On glass, 688.  
*Materials and Processes applicable to the Fine Arts generally, including Fine Art Printing, Printing in Colour, &c.*—Encaustic painting and fresco, 688. Ornamental printing, chromo-typography, gold-stamped typography, typography combined or uncombined with embossing, *ib*. Lithography (black), chromo-lithography, gold-

illuminated lithography, lithography combined or uncombined, with embossing, *ib.* Zincography or other modes of printing, *ib.* Other processes applicable to the fine arts generally, *ib.*

**Models.**—In architecture, 688, 689. In typography, 689. In anatomy, *ib.*

**Designs.**—Special Committee of the members of this Jury appointed to examine and report on the various designs for decoration, tapestry, embroidery, mixed fabrics, &c.; Medals and Honourable Mentions awarded, 689.

Opinion of the Jury that a permanent industrial museum should be established, 689, 690. And that a statue be erected to Prince Albert on the site of the Exhibition Building, 690.

**Supplementary Report by Dr. Waagen.**—Comprehensiveness of the Exhibition of the Works of all Nations, 691. The productions of the fine arts not procluded, painting alone excepted, *ib.* Close connexion of the fine arts with manufactures, *ib.* A fuller revival of the alliance that subsisted between them in the middle ages much to be desired, *ib.* Great value of the processes of M. Collas and of Mr. Cheverton for reproducing works of sculpture, *ib.* Order in which it is proposed to notice the productions of each nation in this Report, *ib.*

**United Kingdom.**—Little encouragement afforded by the Government to the fine arts, 691, 692. Notices of the principal works of sculpture and plastic art, on a large scale, contained in the Exhibition, 692, 693. Sculpture and works of plastic art on a small scale, viz: works in metal, embossed, (repoussé) work, 693. Medals and coins, 693, 694. Works in ivory, 694. Works in "biscuit," *ib.* Carvings in wood, *ib.* Graphic representations on plane surfaces, viz: new processes of painting, *ib.* Enamels on porcelain or metal, *ib.* Painting on glass, 694, 695. Works in niello, 695. Designs for printed and woven fabrics for embroidery and for book covers, *ib.* Architectural designs, *ib.* Various processes of printing, viz: lithochromy, 696. Printing in oil-colours, *ib.* Zincography, *ib.* Fac-similes of printing executed by the hand, *ib.* Architectural designs, viz: the Exhibition Building, *ib.* Models, *ib.*

**The Zollverein: Prussia.**—Great efforts made in Prussia by successive monarchs and administrations to encourage the fine arts, 697. Happy results to which these efforts have led, *ib.* Remarks on the principal works of sculpture and of plastic art of a large scale exhibited by Prussia, *ib.* Sculpture on a small scale, 697, 698. Medals, 698. Graphic representations on plane surfaces, designs for tapestry, *ib.* Lithochromy, *ib.* Architecture, models, *ib.*

**Bayaria.**—Works of sculpture on a large scale, 698. And on a small scale, 699. New processes of painting, *ib.* Enamels on porcelain and on metal, *ib.* Painting on glass, *ib.* Various processes of painting, *ib.*

**Saxony.**—Sculpture and works of plastic art on a large scale, 699. Enamels on porcelain, *ib.*

**Saxe-Gotha.**—Painting on china, 699.

**Wurtemberg.**—Sculpture on a large scale, 699.

**Hesse Cassel.**—Chess-board and pieces, 700.

**Hesse Darmstadt.**—Ivory carving, 700.

**Oldenburg.**—Architectural models, 700.

**France.**—Great encouragement ever bestowed by the French government and nation on the fine arts, 700.

Beneficial results thereof, *ib.* Notices of the principal works of sculpture and of plastic art on a large scale contributed by France to the Exhibition, 700, 702.

Works of sculpture on a small scale; in metal, 701.

In ivory, *ib.* In wood, *ib.* Process of M. Collas for reducing sculpture by machinery, 702. Graphic representations on plane surfaces, viz: new processes of painting, *ib.* Enamels on porcelain and on metal, *ib.*

Painting on glass, *ib.* Inlaid works in metal, *ib.* Designs for woven and printed fabrics, *ib.* Designs for painted windows, *ib.* The Government manufactory of Gobolins and Beauvais tapestry, *ib.* Different kinds of printing, such as lithography and lithochromy, 703.

Printing in colours from wood blocks, *ib.*

**Austria.**—Remarks on the principal works of sculpture on a large scale, 703. Enamel painting, *ib.* Painting on glass, *ib.* Lithochromy, *ib.*

**Italy.**—Observations referring to the Italian sculpture of the present day, 703.

**Sardinia.**—Works of sculpture on a large scale, 704.

Coins, *ib.*

**Tuscany.**—Works of sculpture on a large scale, 704. On a small scale, *ib.* Inlaid works in pietra dura, *ib.*

**Rome.**—Sculpture on a large scale, 704. Cameos, *ib.* Mosaics, *ib.*

**Belgium.**—General diffusion of talent and feeling for the fine arts in this country; their consequently free development; characteristics of the Belgian school of sculpture, 705. Remarks on the works of sculpture on a large scale, *ib.* Medals, *ib.* Inlaid works in metal, *ib.*

**Switzerland.**—Architectural models, 705.

**Spain.**—Inlaid works in wood, 705. In metal, *ib.*

**Denmark.**—Works of sculpture on a large scale, 706. On a small scale, *ib.*

**Russia.**—No specimen of sculpture on a large scale exhibited by Russia, 706. Plaster casts of engravings, *ib.* Painting on porcelain, *ib.* Lithochromy, *ib.*

**United States of America.**—Sculpture on a large scale, 706.

**FINE ART CASTING.**—High importance of the art of casting sculpture in metals, 706. Notices of the principal works in this section from the different countries, viz: Castings in bronze, 706, 707. Castings in zinc, 707. And in iron, *ib.*

**SCYTHES.**—Specimens of, 489, 491.

**SEA-LEAD.**—See *Sounding Instruments.*

**SEA-WATER.**—Products of, 48.—See also *Salts of Sea-Water.*

**SEA-WEED.**—Preparations of, 44.—See also *Kelp.*

**Seabrook, W.,** 35.

**SEALING-WAX.**—Used in Europe since the earliest ages, 450.

Asserted to have been invented by a Frenchman in 1640, *ib.* Jonas or Jones, the first manufacturer in England, *ib.* Improvements effected by Champagne about 1780, *ib.* Materials of which composed, *ib.*

Varieties of wax used, *ib.* Wax used for the Great Seal of England, 451. Great Seal and Privy Seal of Scotland, *ib.* Exchequer Seal, *ib.* Excellent specimens exhibited, *ib.* Awards to exhibitors, 452, 455.

**SEALS.**—Impressions of, 315. Executed by machinery, *ib.* Notward made by the Jury of Class XXX. in respect to seals, &c., 686.

**Seah, J.,** 581.

**Scamier, T.,** 367.

**Searight, J.,** 166.

**Searle, C.,** 503.

**SEAWEDS, DRIED.**—Specimens of, 157.

**Secchi, F.,** 162.

**Seebass, A. R.,** 509.

**Seeger, F.,** 574.

**Seel, J. jun.,** 297.

**Seel, G.,** 472.

**Seely, J.,** 574.

**Seeling and Becker,** 449.

**Seeman, C. and H.,** 373.

**Seer, Messrs. L.,** 16.

**Segolia, —** 98.

**Seghers, B.,** 166.

**Segnier, Baron A. (Juror and Associate),** xxvii, 260, 261.

**Seguin, A.,** 29, 562.

**Seguin, J.,** 470.

**Seif, J. A.,** 476.

**Seigl, J., and Co.,** 373.

**SEIGNETTE SALT.**—Price thereof in Germany, 49.

**Selby and Johns,** 9.

**SELENIUM.**—Specimens of, exhibited, 43.

**Selicka, J.,** 449.

**Self, H.,** 179.

**Selivanoff, —** 53.

**Sellers, J.,** 491.

**Selopsis Brothers,** 45.

**Senenoff and Paleyeff,** 160.

**Semmens, J. and T. W.,** 218.

**SEMOLA.**—Sample of, 51.

**Semovilla, R.,** 91.

**Senchal, —** 198, 202.

**Senigaglia and Carminati,** 162.

**SENTIS, MOUNT (Switzerland)** Model in relief of, 309.

**Sentis, Son, and Co.,** 360, 361.

**Supplings, —** 137.

**SEPIAETHRAL MONUMENTS.**—Series of large monumental works, chiefly constructed of granite, 556. Objects exhibited, *ib.* Sepulchral monument of the decorative period in Caen stone, 557. Singular monument of new form (that of a three-sided prism) in Caen stone, *ib.* Tomb of Bishop Walsh, 687, 693. Design for a gothic tomb and canopy in wrought iron, 689, 695.

**SERAMPOR (East Indies).**—Collection of woods from, contributed by the Indian Government, 127.

**SERAPHINES.**—Observations on this class of musical instruments, exhibited, 332. Seraphine exhibited by Deutschmann, of Austria, *ib.*

**Sericulture, Central Society of (France),** 69, 160, 161.

**Sérionne, L. de, and Co.,** 507.

Serlay, C. G. de, 422, 454.

SERPENTINE, AND WORKS THEREIN.—Block of serpentine from the Lizard Rock, Cornwall, 13. The serpentines of England not harder than the commoner marbles, and worked in the same way, 562. Fine and well-selected group of objects, manufactured in the serpentine of the Lizard, *ib.* Vase and groups of figures in Italian serpentine, 566.

Serret, Hamoir, and Co., 63.

Serkedello and Co., 49.

SESAMUM—Specimens of, 56.

Setzer, J., 49.

Seville, Province of, 84.

SEVRES PORCELAIN MANUFACTORY.—Is supported by national funds, and carried on as a school of national design; circumstances qualifying the grounds on which a Council Medal is awarded for its productions, 311, 542. Remarks on the articles exhibited for this manufactory, 542. General good taste displayed in the painting of china in the manufactory of Sevres, 687. Great perfection to which the art of painting in enamel has been carried at Sevres; notices of the principal works contributed to the Exhibition, 702.—See also *Ceramic Manufactures*.

Sewell, Evans, and Co., 363.

Sewell, T. R. (Juror), xxvii, xxxi; (Exhibitor), 197.

SEWING MACHINES.—Large machine for sewing sacks, from France, 198. Effective and ingenious machines for sewing with two threads, exhibited in the American and in the English Department, *ib.*

SEWING SILKS—Specimens of, exhibited in the British Department, 364.

SEXTANTS—Specimens of, 252.

Seyd Omar, 89.

Seymour, R. and J., 520.

Seyrig, —, 203.

Seyssel Asphalt Company, 577

Sezgo, —, 21.

Shabelsky, Colonel, 53.

Shadob't, G., 267.

Shaft and Axletree (Patent) Company, 174.

Shalders, W., 179.

SHALES—Specimens of, 50.

Shand and Mason, 179.

Shand and Muckart, 77.

Shanghai, Her Majesty's Consul at, 83, 90, 95, 665.

Shanks, A., 200.

SHARPING MACHINES.—Description of, 200. Specimens exhibited, *ib.*

Sharp Brothers and Co., 195, 199, 200, 203, 489, 541.

Sharp, D. W., 260.

Sharp, S., 267.

Sharp, T., 562, 685, 693.

Shaw, —, 426.

Shaw, C., 599.

Shaw, G. (Juror), xxix.

Shaw, J., 429.

Shaw, J. W. and H., 353.

Shaw, S., 491.

Shaw and Son, 280.

Shaw, W., 198.

SHAWLS.—General remarks on the Kashmir shawls from the East, and imitations thereof, 377, *et seq.* History of the shawl manufacture, 377, 378. Number of contributors of the descriptions called woven, printed, embroidered, and tartans, 378. Collection of woven shawls exhibited, 378, 379. Excellence of the collection of Kashmir shawls exhibited from India, 378. Awards of Council and Prize Medals for woven shawls, 379, 380. Honourable Mentions for this section of the class, 380. Observations on the shawls of barège, orape, gauze, &c., and other descriptions, *ib.* Rapid progress in the manufacture, *ib.* Increasing taste and demand for this style of garment, *ib.* Introduction of many kinds of lighter fabrics, *ib.* Denominations under which these descriptions are generally traded in, *ib.* Importance of the trade, *ib.* France has taken the lead in the perfection of these goods, *ib.* Work more expensive in France than in England, *ib.* Austria shows evidence of an active endeavour to produce imitations of the designs of France, *ib.* Foundation of a future trade in these fabrics with the States of the Zollverein, *ib.* Prize Medals and Honourable Mentions awarded for this division of the class of shawls, 380, 381. General remarks on the shawls embroidered with wool, silk, thread,

gold, silver, &c., 381. Origin of this description of manufacture traceable to Eastern nations, *ib.* Most perfect workmanship and greatest variety of design still existing in the East, *ib.* Evidence of the antiquity of embroidery, *ib.* Specimens of embroidery from China unsurpassed by that of any other nation, *ib.* Regret expressed that no embroidery is exhibited from Japan, *ib.* Russia most probably derived her excellence in embroidery from Tartary, *ib.* India stands pre-eminent in the exhibition of embroidered shawls, *ib.* Persia not fairly represented, *ib.* Handsome display from Turkey, *ib.* Embroidered gauze shawls from Greece, *ib.* This country does not appear to maintain the character she formerly held for this kind of work, *ib.* No originality in this fabric from Egypt, *ib.* Embroidery of shawls and scarfs carried to great perfection in Paris, Paisley, and Vienna, *ib.* Demand for such goods not very great, *ib.* Process naturally expensive, *ib.* Valuable collection of embroidered scarfs and handkerchiefs, illustrating the progress of manufactures in Turkey, *ib.* Special notice of the East India Company's collection of embroidered shawls, *ib.* Prize Medals and Honourable Mentions awarded for this description of shawls, *ib.* Observations on the tartan plaids, shawls, and scarfs, 382. Ancient date of this manufacture, *ib.* Endeavours made to trace its introduction into the British Isles and Scotland, *ib.* Great difficulty found in the derivation of the word tartan, *ib.* A woollen fabric of this description appears to be clearly traced from the northern tribes of Europe, very far east, *ib.* Scottish manuscript of 1520 gives a list of the colours of the plaids of the different clans, *ib.* The wearing of this distinctive dress prohibited by Act in 1747; Act repealed in 1782, *ib.* Revival of the trade on the visit of George IV. to Scotland in 1822, *ib.* Tartan shawls very popular in 1828, *ib.* The manufacture actively taken up by the Galashiels weavers, *ib.* Extensive manufactories opened at Paisley, *ib.* This example followed by most foreign countries, *ib.* Specimens from Canada and North America, *ib.* In this article it will probably be long before Scotland can be surpassed in design, fabric, or cheapness, *ib.* Prize Medals and Honourable Mentions awarded for tartans, *ib.*

SHAWLS, DESIGNS FOR.—Notice of objects in this section, 649. Disapproval of the introduction of landscapes in such designs, *ib.* Principles by which such designs should be guided, 650. High character of the designs on India shawls, *ib.* Notice of the principal contributions in this section of the French Department, 702. Critical remarks on the exhibited designs for shawls, 715, *et seq.* Success which has attended the efforts of the French designers, 745, 746. Principles of excellence in the designs of shawls from India and the East; the form called the Italian pine a distinguishing characteristic of Cashmere patterns, 746. Other forms and colours in Cashmere and Indian shawls, *ib.* Success that would attend the use of geometrical leading forms, *ib.* Perfect flatness essential, but utterly disregarded in European shawls, *ib.* Circumstances connected with floral ornament deserving of attention, *ib.* Mistakes committed by designers of shawl patterns, 746, 747.

SHAWLS, LACE.—Specimens of, 468, 470, 471.

Shea, Captain, 602, 675.

SHEARING MACHINES.—See *Woolen Manufacturing Machinery*.

Shears and Son, 509.

Sheepskins, Rev. R., 256.

SHEET GLASS.—Methods of manufacture of this description of glass; particulars as to improvements effected therein, 525.

SHEET-IRON.—See *Iron*.

SHEETINGS.—Remarks on the excellence of the samples contributed, 371, 373.—See also *Cotton Manufacture*.

SHEET-PILE.—Beautiful industry still exhibited in the steel manufactures of Sheffield, notwithstanding the increase of these manufactures on the Continent, 10.

Sheffield School of Design, 723.

Shekhoun, Alex., 472, 480.

SHELL-CAMERON.—Nature of the shells adapted for cambo-cutting, 164. Specimens exhibited, 164, 686.

SHELL-LACE.—See *Lace*, *Law Dip.*

SHELLS.—Collection of fresh-water shells from America, 18. Various kinds of work in shells from different countries, prizes awarded, 600.

Sholley, J. W. (Juror), xxvii, 226.

Shumkina, Government of (Russia), 93.

Shenk and Co., 449.

- Shepard and Perfect, 358.  
 Shepari, J., 537.  
 Shepherd, C., 339, 342.  
 Shepherd, Hill, and Spink, 199, 205.  
 Sheppard, A., 52.  
 Sherwin, Cope, and Co., 198.  
 Sherwin, J., 506, 509.  
 "SHIELD OF FAITH" (belonging to the Prince of Wales)—  
 Notice thereof, 514, 685, 697, 738.  
 Shier, Dr., 78, 92.  
 SHIP-BISCUITS.—Samples of French ship-biscuits, prepared  
 by baking the dough in high-pressure steam, 55.  
 SHIP-BUILDING.—List of the chief woods employed in, 104.  
 Models of various contrivances connected with the  
 construction and moving of ships, 207. Model descrip-  
 tive of a novel arrangement of the frame timbers in  
 ship-building, 218. Increase of the strength of the  
 fabric thereby, *ib.*—See also *Naval Architecture*.  
 SHIPS' LIFTS.—Apparatus for shutting and securing, 208.  
 SHIPS' LOGS.—Patent perpetual, for indicating the speed and  
 leeway of ships, 217.  
 SHIPS' SOUNDING-LEADS.—See *Sounding Instruments*.  
 SHIPWRECKS.—APPARATUS FOR SAVING LIFE FROM.—Appa-  
 ratus for saving life by effecting a communication to  
 and from a ship in peril and the shore, 219.  
 SHIRT FRONTS.—Produced by the loom, in imitation of  
 needlework, 347.  
 SHIRTINGS.—Specimens of printed cotton, 459. See also  
*Cotton Manufactures*.  
 SHIRTS.—Specimens of drawers and shirts of excellent  
 quality, 478. Specimens of shirts exhibited, 482.—See  
 also *Wearing Apparel*.  
 SHOES.—See *Boots and Shoes*.  
 SHOLA.—Close resemblance of this substance to rice-paper,  
 103, 104. Obtained from the vicinity of Calcutta, *ib.*  
 Uses to which applied in India, *ib.* Specimens exhibited,  
*ib.*  
 Shönborn, Count F. von Erwein, 21.  
 Shoullard and Co., 506.  
 Shore, Messrs., 202.  
 Shtange and Verfel, 506.  
 Snydham, Harriett, cxx.  
 Söalte, J. H., 376.  
 SWORDS, METALLIC.—Specimens of, 208.  
 Sibell and Mott, 426, 454.  
 SIBERIA.—Malachite chiefly found in an available state for  
 inlaid work in a very few localities in Siberia, 569.  
 Most important locality at present known, *ib.*  
 Sibley, S., 158.  
 Sibthorpe, F. L., cxx.  
 SICILY.—Samples of raw silk from, 162. Statistics of the  
 paper manufactures of, 444.  
 SIKLES.—Specimens off from various countries, 489, 491.  
 SING-ARMS.—See *Swords, &c.*  
 SIDEROARDS.—Various descriptions of, exhibited, 550, 552.  
 Remarks on the "Kenilworth Buffet," by Cooke and  
 Sons of Warwick, 694. Notice of a large sideboard,  
 carved in wood by Fourdnois, 701, 722.  
 Sidi Mahmoud Benyad, 1.

 Siemens, C. W., 173.  
 Siemens and Halske, 293.  
 Sieron, L., 509.  
 Siemeking, Dr., 635.  
 SIGNAL LAMPS.—Specimens of, 509.  
 SIGNALS.—Ingenious system of signals for merchant ships,  
 218.  
 Signoret-Rochas, P., 353.  
 Silbermann, G., 257, 403, 406, 453, 688, 703.  
 SILKS.—See thereof in the manufacture of glass, 523.  
 Sources of supply in England, 524.  
 Silk and Brown, 193.  
 SILK-COTTON.—Specimens of silk-cotton obtained from the  
*Bombax ceiba* from George Town, Demerara, 102.  
 SILK-DYEING.—Specimens of skein dyed silk in various  
 colours, 88, 459.  
 SILK, RAW.—Introduction of the silk worm into Europe in  
 the reign of the Emperor Justinian, 289. The breed-  
 ing of silk worms in Europe confined for six centuries  
 to the Greeks of the lower empire, *ib.* Its subsequent  
 introduction into Sicily, Italy, Spain, France, England,  
 and most of the colonies with a suitable climate, *ib.*  
 Observations on the different species of worm and the  
 character of the silk produced by them, 160, 161.  
 Modes and processes of management and culture, 161.  
 Degrees of excellence realized in the specimens trans-  
 mitted from France, *ib.* Detailed remarks on the  
 specimens of unbleached silk and silk cocoons exhi-  
 bited by Major Court Bronski, of the Château de St.  
 Selves, near Bordeaux, *ib.* Other French exhibitors  
 and prizes awarded, 161, 162. Remarks on the sam-  
 ples of silk transmitted from other foreign countries;  
 exhibitors and awards, 162, 163. Good examples of  
 silk from Spain, 162. Raw silks exhibited from Bel-  
 giuna, *ib.* Sampler of silk from Tuscany, 162. Spec-  
 imens of raw silk from Switzerland, *ib.* Silks from  
 Sardinia, *ib.* Fine examples of Italian silks from  
 Austria, *ib.* Specimens of raw white and spinning silk,  
 produced in Berlin, by means of a hanging spinning  
 line, on the principle of bee-hives, *ib.* Samples of silk  
 transmitted from Russia, *ib.* Silks of a very fine  
 character exhibited in the Turkish Department, *ib.*  
 Specimens of raw silk from Bavaria, *ib.* Specimens  
 from Sicily, *ib.* Fine examples of raw silk exhibited  
 by Her Majesty the Queen of Sweden, 163. Fine  
 samples of silk shown in the Indian Department, *ib.*  
 Samples from China, *ib.* The cultivation of the silk-  
 worm greatly promoted in the Mauritius, *ib.* Spec-  
 imens of raw silk from the Roman States, *ib.* Specimens  
 from Malta, *ib.* Specimens of silk from silkworms  
 reared on the leaves of the white mulberry at Godal-  
 ming, in Surrey, *ib.* Raw silk exhibited in the Cana-  
 dian Department, *ib.*  
 SILK-SPINNING, &c., MACHINERY.—Well exemplified in the  
 British Department by a series of beautifully finished  
 machines, 196. Machine for silk winding in the Zoll-  
 verein Department, *ib.* Machine for spinning silk  
 directly from the cocoon, in the Prussian Depart-  
 ment, *ib.*  
 SILK AND VELVET MANUFACTURES (CLASS XIII.) Tabular  
 classification of objects into which this Class is divided,  
 xiv, xv. List of Jurors appointed for this Class, xxviii.  
 List of exhibitors in this Class to whom Prize Medals  
 have been awarded, lxxiv, lxxv. And of those of whom  
 Honourable Mention is made, lxxvi. General remarks  
 on the duties and labours of the Jury in this Class, and  
 the principles by which they have been guided in  
 making the awards, 362. Observation of the Jury that  
 with respect to the staple of the silk manufacture, the  
 several samples in the Exhibition afford but a faint  
 evidence of the great perfection to which the cultiva-  
 tion of the raw material has arrived in many countries,  
*ib.* France alone has responded heartily to the invitation  
 to exhibit cocoons as well as reeled and thrown silks,  
*ib.* Silk productions of Austria, as shown in the Exhi-  
 bition, *ib.* No novelty in the Exhibition of manu-  
 factured silks from China, *ib.* Goods exhibited by the  
 English manufacturers show the great progress made  
 in quality, design, and cheapness within the last twenty  
 years, 362, 363. Extensive silk throwing mills estab-  
 lished in Essex, 363. Reference to the splendid  
 broadened silks exhibited by Lewis and Allenby of  
 London, *ib.* France, long the cradle and chief seat of  
 the silk manufacture, amply sustains its position in the  
 Exhibition, *ib.* Few articles of comparatively small  
 importance exhibited by Greece, *ib.* Small assortment  
 from Holland, *ib.* Manufactured silks from India in-  
 considerable in quantity and not very novel in character,  
*ib.* Reputation of Italy as the chief producer of the  
 raw and thrown material well sustained by the articles  
 exhibited, *ib.* Exhibits in this Class from Portugal not  
 worthy of especial notice, *ib.* Fair samples of manu-  
 factured silks from Russia, *ib.* Specimens of good raw  
 silk and some ribbons and broad silks of considerable  
 manufacturing merit from Spain, *ib.* No particular  
 feature in the articles exhibited from Sweden and Nor-  
 way, 364. Character of the silk manufactures of Switzer-  
 land, *ib.* Observations on the silk fabrics of Turkey,  
*ib.* Great variety of silk goods from the Zollverein  
 States exhibited, *ib.* List of exhibitors to whom Prize  
 Medals were awarded, 265, 367. Exhibitors who re-  
 ceived Honourable Mentions, 367, 368.  
 SILKWORM GUT.—Specimens of, from the province of Murcia  
 in Spain, 601.  
 Silva, M. A. de, 33.  
 SILVER.—Native silver from the island of St. Ignatius  
 (Canada), 16. Specimens of native silver from America,  
 18. Magnificent specimen of native silver weighing  
 154 lbs. from Chili, 24. Cake of silver obtained at the  
 foundries of Birkenyang and Binschedhammer, near  
 Stolberg, 31. Specimens of silver ore from Sweden, 35.

- Specimens of silver in different states, 35. Also specimens of the rocks in which the veins occur, *ib.*—See also *Leach Minerals*.
- SILVER, NIPPON.—Specimens of, 45.
- Silver, S. W., 219.
- SILVER, WORKS IN.—Specimens of carefully executed, elegant and novel silversmiths' work, 516. Sample of works in silver from Leipzig, 517. Specimens of silver plate adapted to table services from France, 518. Specimens of silver plate for table services in the British Department, 520. Notices of works of art in silver, 684, 685, 698, 701.—See also *Church Plate*. *Precious Metals*.

- Sinclair, Duncan, and Son, 408, 410, 453.
- Sinclair, J., 555.
- SINGAPORE.—Betel nuts from, 57. Samples of arrowroot, 62. Fine specimens of shells yielding mother-of-pearl, 164.
- SINGAPORE COMMITTEE, 58, 81, 82.
- Singer, A., and Co., 578, 586.
- Singer, J., 482.
- Singaglia Brothers, 162.
- Sirol, P., sen., 509.
- Sith, Kemp, and Co., 506.
- Sitoff Brothers, 368.
- Sixtus V., Pope, 339.
- SIZE, PRESERVED.—Samples of suitable for any climate, 44.
- SKATE-LIVER OIL.—Specimens of, 45, 48.
- SKATES.—Specimens of gutta percha skates of various colours and combinations, 598.
- Skelton, S. and R., 509.
- SKIRRYVORE LIGHTHOUSE.—Particulars relating to, 530.
- SKIRREN BECKS.—Variety of specimens exhibited, 450.
- Sklidner and Whalley, 567.
- SKINS.—See *Furs and Skins*.
- Skyvoroff, —, 391.
- SLABS, MARBLE.—Magnificent slab of foreign marble exhibited by the London Marble Working Company, 563. Good slabs of marble from Belgium, *ib.* Specimens of marble slabs from Italy, *ib.* Beautiful slabs of Prussian marble, *ib.* Collection of marbles cut into slabs and table-tops, from Portugal, 563, 564.
- Slack, Sellers, and Co., 489.
- Slagg, H. W., 491.
- SLATE.—Superior quality of the slates from the quarries at Festinog (North Wales), 8. Purpose to which applicable, *ib.* Large size of some of the specimens, *ib.* Doublitic markings observable on the surface, one in its rough state, *ib.* Slates of the Old Delabole Slate Company, 13, 14. And of T. Stirling, jun., *ib.* Specimens of slates from France, 23. The working of slates very active in Belgium, *ib.* Slates from Angers, 28. High reputation enjoyed by these slates, *ib.* Extensively used in France, *ib.* Strength and durability thereof, *ib.* Inferior to the Welsh slates, *ib.* Specimens of slates, rough, for roofing purposes, and also sawn and planed for internal fittings, 34.
- SLATE, ENAMELLED.—Imitation of marbles by means of enamelled slate, 571. Simple and inexpensive process, *ib.* Advantages of the material, *ib.* Strength of slate computed to be about four times that of ordinary stone, 571. For decorative purposes it is preferable to any kind of cement, *ib.* Objects exhibited, 571, 572. Awards to the exhibitors, 572.
- SLATE FLAG.—Beautiful specimens of slate flags from the quarries of Festinog (North Wales), 555.
- SLATE, MANUFACTURES IN.—Collection of split, sawn, and other manufactured slates, displaying much care in collection and arrangement, 558. Remarks on the various manufactures in slate exhibited; names of exhibitors, objects exhibited by them; rewards, &c., 558, 559. Manufactures in slate from the island of Valentia, county of Kerry, Ireland, 558. Valentia slate extremely useful for various purposes, *ib.* Peculiar application of slate in the manufacture of coffins for vaults, illustrated by a model, 559. Slates from France, and manufactures therefrom exhibited, *ib.* Slates of good quality from Chiavari (Sardinia), *ib.*—See also *Marble, Imitations of*.
- SLATE, PLINCH.—Specimens of, from Bertrix, Luxembourg, 23.
- Slater and Wright, 13, 559.
- SLIPPER WEAVING MACHINE.—Frame to enable poor workmen or cottagers to weave slippers easily and rapidly, 197, 198.
- SLIPPERS.—Specimens of embroidered slippers from Turkey, 484.
- SLIPS (for Ships).—Models of slips for hauling up ships, 207. Successful working of these slips, *ib.*
- Slocumbe, C. P., 689, 748.
- SLIPPING MACHINES.—Description of, 200. Number exhibited, *ib.*
- Small-Werpin, A., 585.
- SMALL ARMS.—See *Gun.*
- SMALLS.—Samples of, 45, 46, 48.
- Smart, Sir G. (Juror), xxvii.
- Sheaton, —, 530.
- SHELLING-BOTTLES.—Specimens of shelling-bottles, and mountings for shelling-bottles, from France, 529.
- Smieton, J., and Son, 372.
- Smith, —, 401, 450.
- Smith, Ashbel (Juror), xxvi.

- Smith, J., and Sons, 359, 360.
- Smith, J. A., 13, 30, 6167.
- Smith, J. E., 482.
- Smith, Dr. J. V. (Juror), xxvii.
- Smith, L., 626.
- Smith, Lieut., R.N., 76.
- Smith, M., 197, 205.
- Smith and Meynier, 453.
- Smith, M. A., 680.
- Smith, Nicholson, and Co., 520.
- Smith, O., 59, 602.
- Smith, E. (Associate Juror), xxix; (Exhibitor), 218.
- Smith and Son, 88.
- Smith, T., 574, 602.
- Smith, T. and H., 49.
- Smith, T. and W., 217.
- Smith, W. and A., 676.
- Smith, W. F., 208.
- Smith, W. R. (Juror), xxx.
- Smithers, J., 610.
- Smiths and Co. (Edinburgh), 509.
- Smits, P., 666.
- SMOKING PIPES.—See *Pipes, Smoking*.
- SMITHY, MINE (Salop).—Specimens of lead ores from, Snodder, P., 48.
- Snell, E. (Juror), xxx, xxxii.
- Snell, J., 353.
- Snell, Messrs., 546.
- Snider, J., 417.

- Snowden, R., 58.
- SNUFF.—Samples of Irish snuff, called Lundy Foot, 60.
- Samples of snuff from Portugal, 61.
- SNUFF BOXES.—Beautiful snuff-box of green jasper from Gbersteln, Prussia, 517. Snuff-boxes in dark tortoise-shell, inlaid with gold "de burgos" and "piqué," 520. Snuff-box of silver, waved and engraved, from Portugal, *ib.* Ornamental turned snuff-boxes in ivory, and fancy foreign woods, 602. Boxes equally the extremes of coarseness and of elegance, 674. Remarks relative to snuff-taking by English, Irish, &c., in the seventeenth century, *ib.* Very little information extant concerning the oldest receptacles for snuff, *ib.* Fashionable boxes probably reached the highest degree of variety and luxury in the early part of last century, *ib.* Gold and silver snuff-boxes of that period, *ib.* Impossibility of describing the manufacture of the snuff-box in all its ramifications, *ib.* Great variety of examples exhibited, 674, 675. Papier-maché snuff-boxes, 675. This description chiefly manufactured in Germany and France, *ib.* Ingenious manufacture of Scotch boxes, perfection of hinge and cover, *ib.* Description of the process of manufacture, *ib.* Usual style of ornamentation of these boxes, *ib.* Extensive scale of the manufactory of Messrs. Smith, & Mauchline, *ib.* Beautiful specimens of snuff-boxes from Austria, *ib.* Chinese snuff-boxes, *ib.* Collections of snuff-boxes contributed from the British Colonies, Bavaria, France, Grand Duchy of Hesse, 675, 676. Also from Prussia, Russia, Saxony, Turkey, United Kingdom, and Wurtemberg, 676. Classification of exhibitors and countries, *ib.* List of awards, exhibits, and names of exhibitors, *ib.*
- SOAPS.—Magnitude of the manufacture and importance of the trade, 605. Remarks of Professor Liebig on the consumption, *ib.* Early history of the soap trade, *ib.* Various circumstances which have contributed to the development of this branch of trade, *ib.* Valuable researches of Chevreul, *ib.* Manufacture of soda proved a most powerful stimulus to soap-making, *ib.* Statistics respecting the imports of palm and cocoa-nut oil for soap-making, 606. Theory of the formation of soap, materials employed, 606, 607. Processes chiefly employed in the preparation of soaps, 607. Mottled soap, 608. Floating soap, *ib.* Silicated and wax soaps, *ib.* Properties and action of soap, 607, 608. Impossibility of analysing the varieties of soap exhibited, 608. Comparative trials made of the detergent power of the various soaps, *ib.* Toilet soaps, *ib.* Greater portion of the soaps from America transparent, 600. Mode of preparation, *ib.* Extensive manufacture of soap in Austria, *ib.* Excellent quality thereof, *ib.* Belgium famous for soft soap, 610. Creditable productions from the British Colonies, 610. Marseilles the chief centre of the soap manufacture in France, *ib.* High reputation enjoyed by the olive-oil soap there made, *ib.* Excellent toilet soaps of France, *ib.* Quantity exported from France in 1850, *ib.* Number of French exhibitors, *ib.* State of the soap manufacture of Germany, *ib.* Process of manufacture employed, 610, 611. Number of exhibitors from the Zollverein States, 611. Fair quality of the olive-oil and toilet soaps from Holland, *ib.* Collection of soaps of creditable quality from Portugal, *ib.* Extent of the soap manufacture of Russia, *ib.* Excellent toilet soaps from, *ib.* Large quantity of soap manufactured in Spain, *ib.* Considerable portion annually exported, *ib.* Process of preparation, *ib.* Number of manufacturers, *ib.* Remarks on the manufacture of Turkish soap, *ib.* Primitive make of the samples exhibited, *ib.* Great variety of soaps from Turkey, *ib.* None of these soaps afford a good lather, *ib.* Excellent qualities of the soaps of Tuscany, *ib.* Soap-making carried on to a greater extent in the United Kingdom than in any other country, *ib.* Number of soap-makers, *ib.* Quantity manufactured in Great Britain in 1850, 611, 612. Statistics of the British soap trade, 612. Imposition of an excise duty on soap, amount thereof, *ib.* Ingredients used in British soap-making, *ib.* English toilet soaps in no respect inferior to those of other countries, *ib.* High reputation of Windsor soaps, *ib.* Preparation of toilet soaps, *ib.* Number of British soap-makers exhibiting, 612, 613. Statement of the number of exhibitors from the various countries, 613. List of awards, exhibits, and exhibitors, 613-615. Many of the toilet soaps stated to have some peculiar emollient and whitening effects on the skin, 615.—See also *Soda Soap*.
- Sobralil, Count of, 94.
- Sochet, —, 217.
- SOCIETY ISLANDS.—Fine sample of cotton from, 96.
- SODA.—Use thereof in glass-making, 524.
- SODA, ACETATE OF.—Samples of, 48.
- SODA-ASH.—The soda-ash trade originated at Liverpool by James Muspratt; Newcastle now the principal seat of the manufacture, 41. Samples of soda-ash, 50.
- SODA, BICARBONATE OF.—Samples of, 48, 49.
- SODA, BISULPHATE OF.—Samples of, 45, 50.
- SODA, BORATE OF.—See *Borax*.
- SODA, CARBONATE OF.—Process of preparation of carbonate of soda as invented by Leblanc, described, 41. Improvements in the manufacture effected by the late Charles Tennant, at St. Rollox, *ib.* And by Kestner, of Thun, and Gay-Lussac, *ib.* Former and present price, *ib.* Process of Mr. Longmaid for decomposing common salt by means of iron pyrites; Council Medal awarded, *ib.* The carbonate is adapted for scouring wool, as it removes grease without injuring the animal fibre, 43. Use made of carbonate of soda in glass-making, 524. Price of the carbonate in Germany, 49. Specimens of carbonate of soda, 44, 46, 47, 49, 50.
- SODIUM, CHLORIDE OF.—Preparation of carbonate of soda therefrom, 41.
- SODA, HYDROGEN SULPHATE OF.—Price thereof in Germany, 49.
- SODA, NITRATE OF.—Price thereof in Germany, 49.
- SODA, PHOSPHATE OF.—Samples thereof, 46.
- SODA SALT.—Price thereof in Germany, 49.
- SODA, SELTZER, AND OTHER WATERS.—Samples of, 49.
- SODA, SESQUICARBONATE OF.—Price thereof in Germany, 49.
- SODA-SOAPS.—Specimens of white, mottled, &c., 43, 45.
- SODA, STANNATE OF.—Novelty of this preparation: processes of obtaining it described, 41. Samples of stannate of soda, 44, 47, 50.
- SODA, SULPHATE OF.—Preparation thereof from sea-water by the process of M. Balard, 39. Price thereof in Germany, 49. Use made of this sulphate in glass-making, 524. Samples of sulphate of soda, 45, 47.
- SODA, SULPHITE OF.—Samples of, 46, 47, 50.
- SODIUM, CHLORINE OF.—Samples of, 48.
- Solhne Brothers, 453.
- Soenen, F., 471.
- Soetens, C., 574.
- SOFA, MECHANICAL.—Specimen of a mechanical sofa, 551.
- Sofialoglou's Daughter, 484.
- Sihlke, G., 681.
- SOILS.—Collection of soils from Newbury, 13. Nature of the soil greatly varied by the mixture of London clay, plastic clay, and sand, *ib.* Agricultural importance of the collection of J. W. Roake, *ib.*
- Sokou, —, 98.
- Squiri, —, 565.

- Souffeto, —, 335.
- Soules, Madame H., 483.
- OUNDING APPARATUS (Marine).—Instruments for measuring the depth of the sea, 219. Description, *ib.* Modification of one known in the British navy as

- Ericsson's sounding-lead, 219. Former use of Sir Humphry Davy's water-bottle in polar expeditions, *ib.* Sea-lead, for making soundings at sea, 252. Facility with which soundings can be taken, *ib.* Description of the instrument, *ib.* Well adapted for the measurement of deep soundings, *ib.*
- SOUPS, PORTABLE.—Observations on the samples of portable soups, concentrated meats, &c., exhibited, 65. Valuable properties and cheap price of the American meat-biscuit, *ib.* Sample of biscuit-beef from France, *ib.*
- Souter, W., 458.
- SOUTH AUSTRALIA.—Copper ores from, 15. Samples of olive-oil, 87. Specimens of woollen manufactures, 352. The colonies might soon be made to produce many of their absolute necessities of this description, *ib.* Mala-chite lately found in South Australia, 569. Specimens of yellow soap from South Australia, 610, 613.
- Southey and Co., 491.
- Southorn, W., and Co., 541.
- Southwell, W., 334.
- Sower, C., 410.
- SPAIN.—Insignificance of the mineral collections sent to the Exhibition from Spain, although one of the countries most favoured by nature in regard to the sources of mineral wealth, 34. Specimens of steel, cast and wrought iron, and a fine series of marbles, exhibited, *ib.* Spanish wheats, though generally dirty, unusually fine in quality, 52. Sample of rice from Valencia, 53. Sample of maize, *ib.* Also seeds of *Cenchrus spicatus*, *ib.* Samples of peas, beans, pulses, &c., 54. Samples of flour, 55. Collection of dried fruits, 57. Magnificent samples of olives, *ib.* Chocolates, 59. Samples of mustards and mustard-seed, 62. Valuable and extensive collection of raw produce, 63. Samples of turpentine and spirits of turpentine, 76. Samples of starch, 79. Fine samples of oils, 84. Considerable number of specimens of dyeing materials, 91.
- Sample of raw cotton from Spain, the growth of the province of Seville, 96. Various samples of flax and hemp, 99. Specimens of plantain fibre, 103. Specimens of other vegetable fibres, *ib.* Good samples of cork, *ib.* No woods of Spain contributed, 154. Collections of the woods of Cuba and the Philippine Islands, *ib.* Numerous samples of wood of good quality, 159. Interesting examples of the hair of the rabbit and hare, shaved off the skin by a mechanical process, 160. Good examples of raw silk, 162. Samples of cochineal, 166. Collection of fire-arms and swords, 221. "Guitar, harpa," or harp-guitar, 330.
- Small variety of woolsens, 351. Superiority of those made from the fleece of German sheep, *ib.* Specimens of silks, velvets, &c., 363, 366. Specimen of canvas, 372. Excellent collage, 372. Samples of leather, 392. Statistics of the paper manufacture of Spain, 444. The exhibition of lace and embroidery from Spain limited, 467. Specimens of embroidery, 472.
- Specimens of edge-tools, 491. General hardware manufactures, 497. Specimen of beautiful workmanship in gold and silver, for church service, 511, 515. Specimens of damascened iron and steel, 517. Collection of furniture, 551, 552. Specimens of jet, 560. Fine specimens of terra-cotta jars, 583. Specimens of fire-bricks sent by the Aulencia Company at Madrid, 585. Specimens of silkworm gut, from the province of Murcia, 601. Specimens of manufactured cork, *ib.* Statistical account of the soap manufacture in Spain, 611. Specimens exhibited, 615. Manufacture of stearic candles in Spain, 623. Specimens thereof, 628. Samples of candles made from vegetable wax, from St. Domingo, 626. Fruit preserves, 640, 641. Ethnographical models, 649, 650. Contribution of fans, 668. Notices of the principal works of art contributed by Spain, viz., inlaid woods, in wood, 705; in metal, 705, 706.
- SPAIN, THE GOVERNMENT OF, XXXV.
- SPAIN, H. M. THE QUEEN OF.—Description of the jewels manufactured for the Queen of Spain by G. Lemonnier, of Paris, 515.
- Spalinger, J., 449.
- SPANISH STRIPES.—Specimens of, 352.
- Spanna, J., and Co., 574.
- Sparkes, J., 509.
- SPATEIC IRON ORE.—See *Iron Ores*.
- Spear and Jackson, 486, 488.
- SPECTACLES.—Exhibitors of spectacles have done little more, in the British Department, than exhibit a collection of shop goods, 273. Pleasing contrast to this afforded in the Foreign section, *ib.* Observations on the various specimens exhibited, *ib.*
- SPEED OF VESSELS.—Instrument for measuring, 218. Description, 218.
- Speede, Messrs., 77.
- Speich, P., 552.
- Spelman, J., 427.
- Speluzzi, A., 552.

- Spengler, K., 353.
- SPERMACETI OIL.—See *Oils*.
- SPERMACETI, AND SPERMACETI CANDLES.—Chemical properties of spermaceti closely allied to wax, 626. Description of the process of spermaceti refining at Messrs. Ogleby and Co.'s works at Lambeth, 626, 627. Price of spermaceti, 627. Manner in which spermaceti candles are made, *ib.* Remarkably fine specimens in the English Department, *ib.* Specimens from the United States and New South Wales of less important character, *ib.* Very little spermaceti imported into the United Kingdom, *ib.* Major part obtained by refining sperm oil, *ib.* List of Awards, Exhibits, and Exhibitors, 628, 629.
- SPHERICAL TRIANGULATORS.—Description of this apparatus; for the mechanical solution of trigonometrical problems, 315.
- Spicer Brothers, 421, 453.
- SPICES.—Observations on the spices and condiments, and vinegars and pickles exhibited, 61, 62.
- Spiers and Son, 448, 549, 552.
- Spiglazoff, F., 61.
- Spiller, J., 202.
- SPINDLES.—Specimens of, 199.
- SPIRIT-LEVELS.—Pocket-sight and field-sight levels used by mechanics, 274. Purposes for which adapted, *ib.* Lowness of price, *ib.* Angular spirit-level, *ib.* Adapted for agricultural purposes, *ib.* Spirit-level applicable for levelling machinery, *ib.*
- Spitals, F. (Jury), xxix, 508.
- Spitalfields School of Design, 366.
- Spörlin and Zimmermann, 718.
- SPONGE.—Numerous varieties of the common flexible sponge, 164. Large and fine specimens exhibited, *ib.* Awards to exhibitors, *ib.*
- SPONGIO-PILIN.—Invention of a substance for medical, surgical, and veterinary purposes, called, 165. Specimens exhibited, *ib.*
- Spörlin and Zimmermann, 548, 551, 5718.
- SPORTING WAGGON.—From the United States, 193.
- Spratt, J., 312.
- SPRINGS, CARRIAGE.—Specimens of Baillie's patent volute springs, applicable as bearing springs, buffer springs, and draw-bar springs, 186.
- Spurgin, T., 49.
- Sparin, E. C., 681.
- Spurr, G., 56.
- Squair, R., 54.
- SQUARING THE CIRCLE, INSTRUMENTS FOR.—Principle thereof, 315.

- STANFATE OF SODA.—See *Soda, Stagnate of*.

Stanton Institute for the Blind (Virginia), 423.

Stapfer, J., 367.

STARCH.—Samples of starch, 54. Curious species of starch washed from a species of zania, found wild in St. Domingo, 53. Sample of starch from a West Australian zania, *ib.* General remarks on the various samples of starch exhibited; names of the exhibitors to whom awards have been granted, 77-79. Various samples of rice-starch exhibited; remarks thereon, 77. Samples of starch from various of our colonies and from foreign countries, 77-79.

Stark, R. M., 267.

Starke and Co., 403, 454.

Starr, C., 205, 412, 422, 423, 454.

Statham, W. C., 236.

STATIONERY.—See *Paper and Stationery, &c.*

STATIONERY, FANCY.—Various description of articles belonging to this class of goods, 448. Numerous English and foreign contributors, *ib.* Division of this class into several heads, *ib.* General remarks, and objects exhibited; lace papers, *ib.* Fancy papers, *ib.* Plain-surface coloured papers, *ib.* Enamelled papers, 449. Metallic memorandum-books, *ib.* Scrap-books, *ib.* Portfolios, *ib.* Albums, *ib.* Pocket-books, 449, 450. Cartooning-paper boxes, 450. Black-lead pencils, *ib.* Sealing-wax, 450, 451. List of Awards, 451-455.

STATUES.—See *Sculpture.*

STATUETTES (Silver).—Elegant statuettes in cast silver, from Moscow, 515. Statuettes in oxidised silver, 520.

Staub Brothers, 367.

Stamton, Sir G., 621.

Stavely Coal Works (Derbyshire), 11.

Stavropol, Government of (Russia), 91.

STAYS.—Specimens of, exhibited, 483.—See also *Wearing Apparel.*

STEAM-BOILER FUELING APPARATUS.—Self-acting, 316. "Intended as a substitute for the common force-pump and regulating float, *ib.*

STEAM-ENGINES.—Steam-engine driving Hibbert and Platt's machinery, 169. Six-horse power steam-engine, *ib.* Sixteen-horse power double cylinder direct-acting high-pressure engine, *ib.* Oscillating direct-acting three-horse power portable engine and boiler, from Belgium, 172. New and simple method of reversing the slide of an engine, whereby the direction of its motion may be more easily changed, *ib.* Six-horse power oscillating cylinder direct-acting portable steam-engine, *ib.* High-pressure direct-acting five-horse power steam-engine, *ib.* Five-horse power oscillating cylinder direct-acting steam-engine, 173. Small portable direct-acting engine, *ib.* Short-stroke reciprocating high-pressure engine, *ib.* Pair of elliptic revolving steam-engines, *ib.* Description thereof, *ib.* Vertical cylinder direct-acting engine, *ib.* Five-horse power engine of Penn's patent trunk principle, *ib.* Eight-horse power oscillating steam-engine, *ib.* Six-horse power high-pressure oscillating steam-engine, simple in construction, and of good workmanship, *ib.* Sectional models of steam-engines; excellent models for educational purposes, *ib.* Working model of a double-cylinder engine, *ib.*

STEAM-ENGINES, AGRICULTURAL.—Proof given in the Exhibition that agriculture has not kept pace from the spreading dominion of steam, 253. Reference to the numerous little steam-engines in the Agricultural Department applicable to agricultural machinery, *ib.* Fixed steam-engines long been in use in Northumberland and East Lothian, *ib.* Movable steam-engines been called forth by the Royal Agricultural Society within the last ten years, 233, 234. Reasons why movable engines appear preferable in general to the fixed engines, *ib.* Report of Mr. Carr on the various engines exhibited, and description of some of these engines; results of the trial of these different engines; with remarks of Mr. J. Locke thereon, 234. Engines exhibited, and prizes awarded, 242.

STEAM-ENGINE INDICATOR.—Indicator for ascertaining the power of steam-engines, 315.

STEAM GAUGES.—Various gauges, 515.

STEAM HAMMER.—Steam hammer of Messrs. Nasmyth and Co., 200.

STEAM VESSELS.—Invention of propelling boats by steam claimed by many persons in various countries, 211. The honour of having produced this revolution due to the perseverance and exertions of the American Fulton, *ib.* Not a single steam-ship in the ports of England when the general peace took place in 1814, *ib.* Steam-boats of small size employed in rivers, and along the

coasts for several subsequent years, 211. Voyage made across the Atlantic in 1818 by an American captain, *ib.* Important attempts made to extend the power of steam to long voyages by sea, *ib.* Steam soon applied very generally both in the commercial navy and to ships of war, *ib.* Means taken to procure velocity, *ib.* Successful state of steam communication at the present time, *ib.* Steam navy of Great Britain, *ib.* Exertions of private speculators and of the English Government during the last fifteen years, *ib.* Models of excellent steam ships lately designed and constructed, *ib.* United States cannot compete with Great Britain in the number of their great and regular communications by steamers, 215. Recklessness of the Americans; little care taken to avoid evident peril; frequency of dreadful accidents, *ib.* Much has been done in the British navy, experimentally, for the best application of steam-power to naval architecture, *ib.* Recent introduction of screw-propellers, *ib.* Advantages of the screw over paddle-wheels, *ib.* Model of iron steamers from France, *ib.* Successful application of the screw-propeller to ships-of-war, *ib.* Expectation that the screw will be generally applied to ships in the navy, *ib.* Average speed of screw vessels, *ib.* Principal dimensions and calculated elements of ships-of-war fitted with screw-propellers in the Royal Navy, 215, 216. Awards and objects exhibited, 217.

STEARIN AND STEARIN CANDLES.—Mode of preparation of stearin for candle-making, 618. Fusing points of stearic and margaric acids, *ib.* Transition of the tallow candle to the stearic candle effected, *ib.* General introduction of stearic candles impeded by their price, *ib.* Observations on the manufacture of stearic candles, 619. Difficulties originally encountered in the manufacture, *ib.* Improved wicks invented, 620. Sketch of the main features of the development of the stearic manufacture, *ib.* Sulphuric saponification, experiments and discoveries, 620, 621. Improvements effected in the manufacture of stearin candles, 621. Description of the line process, as practised at Messrs. Ogleby and Co.'s works at Lambeth, *ib.* Description of the sulphuric saponification and distillation process employed at the works of Price's Patent Candle Company, 622. Statistics of the stearic candle manufacture of Austria, 622, 623. Manufacture of these candles in Belgium, Canada, and Denmark, 623. Statistics of this trade in France, *ib.* Stearic productions of Holland, India, Prussia, Russia, Sardinia, Sweden and Norway, Spain, and Turkey, 623, 624. Details of the British stearic candle trade, 624. Prices of stearic candles, *ib.* List of awards and exhibitors, 624-630.

STEAROPTENS.—Prepared from oil of peppermint and other essential oils, 49.

STENTITE. Samples of stentite (the soapstone, or French chalk of commerce), from Milo, Greece, 31. Stentite though little used in this country, is well worthy of attention as possessing valuable properties, and capable of being supplied from America and elsewhere in blocks of large size, 559. Articles manufactured therein exhibited by the Maryland Soap Stone Company, *ib.*

Stegmann, H., and Co., 469.

STEEL. Superior quality of the cast steel of F. Krupp, of Essen, 5, 30. Large dimensions of the objects produced, 5. Objects specified, 6. Great strength and elasticity of this steel, *ib.* European reputation long enjoyed by the steel of Sheffield, 10. Superior industry still exhibited by Sheffield in this article, notwithstanding the manufacturers which have risen up in different parts of the continent, *ib.* Objects exhibited, *ib.* Models of steel works exhibited, *ib.* Buttons of cast steel from India, the material being Wootz, celebrated in India for the preparation of Damascus blades, 11. Cast steel from the works of B. Fischer, of Traisen, Lower Austria, 21. Products sent into all parts of Germany, *ib.* Products of the steel works of J. Pfeiffer, at Spitzenback, Styria, *ib.* Products of the steel works of Count Von Thurn, in Carinthia, *ib.* Steel from Athis Mofs Works (France), 26. Mode of manufacture, *ib.* Exclusively made from Swedish iron, *ib.* Springs and cutlery made from, *ib.* Forged and cast steel from the Bofa Mines, Algiers, 29. The products of Messrs. Gieuanth, of Horhelein, much valued in Germany, the steels being especially in demand, 31. Steel of various qualities from Horhelein, in Rhenish Bavaria, *ib.* Cylinders of cast steel of great hardness from the works of the Royal Iron Foundry at Malapane, in Upper

- Silesia, 31. Specimens of natural and forged steel from Siegen, *ib.* Specimens of forged and refined steel from Crombach (near Siegen), *ib.* Manufacture of steel actively carried on in the States of the Zollverein, *ib.* Ingots of cast steel and forged steel of various kinds from Hagen, *ib.* Low price of the steel of Messrs. Lenikind and Co., of Haspe (near Siegen), compared with other German steels, *ib.* Specimens of malleable iron and steel directly from the pig, *ib.* Samples of steel of excellent quality from the works of the Lencuse-Asturias Company, Spain, 34. Specimens of steel from Sweden, 35. Products of steel from Switzerland, *ib.* Good quality thereof, *ib.* Steel for springs, especially remarkable for its elasticity, *ib.* Ingots of steel called "meteoric steel," from Schaufhausen (Switzerland), *ib.*—See also *Iron and Steel*.
- STEEL PENS.—See *Pens, Metallic*.
- Steele, W. and P., 506.
- STEEL YARDS—Varieties of, from France, 259.—See also *Weighing Machine*.
- Steer and Webster, 489.
- Steen, E., 631.
- STERLING-WHEELS (Ships)—Plans of, of simple construction, 218. Perfect control given to the helmsman over the rudder, *ib.*
- Stevens, A., 726.
- Stefani, W., 472.
- Stelle, J., 335.
- Stein and Schröder, 56.
- Steinbach, J. J., 78.
- Steinbeis, Dr. E. (Juror), xxix.
- Steinbüch, A., 83.
- Steiner, C., 459.
- Steiner, G. and Sons, 162, 368.
- Steiner, H., 42.
- Steiner, T. and Co., 459.
- Steinhell, Professor, 297.
- Stenhouse, A., 77.
- Stephens, E. B., 686, 693.
- Stephens, R. and H., 404.
- Stephenson, Blake, and Co., 410, 453.
- STEREOCHROMY.—A new mode of wall-painting, its advantages over fresco, 688, 699.
- STEREOTYPING.—One of the means of making fac-similes in type-metal of types, wood-cuts, &c., for surface printing, 411. History and origin of the invention, 411, 412. Its gradual adoption by English printers, 412. Previous processes superseded by that invented by Lord Stanhope in 1800, *ib.* Numerous attempts made to substitute for plaster-moulds the employment of sheets of paper with whitening placed between them, *ib.* Failure thereof, *ib.* Stereotype plates of bitumen gave good results, *ib.* Various specimens exhibited, *ib.* Specimens of casts from good matrices produced by a most ingenious process of foreign invention, *ib.* Mode of obtaining these casts, *ib.* List of awards and exhibitors, 431, 433, 435.
- STEREOTYPE PLATES.—Of gutta serena, with specimen impressions, 398.
- Stevens, A., 499.
- Stevens, G. H., 578.
- Stevens, H. (Juror), xxviii.; (Exhibitor), 49, 217.
- Stevens, H. R., 509.
- Stevens and Son, 575.
- Stevens and Thomson, 159.
- Stevens, W., 157.
- Stevenson, A., 530.
- Stevenson, J. C., 49.
- Stevenson, J. and J., 600.
- Stevenson, R., 530.
- Stevenson, T., 531.
- Stevenson, W., 49.
- Stewart and Co., 201, 205, 491.
- Stewart, J. (Associate Juror), xxvii.
- Stewart, Jane, 482.
- Stewart, W., 395, 568.
- Stieff and Harrass, 368, 376.
- Stier, H., 615.
- Stille, A., 491.
- Stillwell and Son, 368.
- STINK-TRAPS, 208.
- Stinnes, A., 32.
- Stirling, M. J. D., 506.
- Stirling, T., jun., 13, 558, 572.
- Stirling, T., sen., 559, 572.
- Stivens and Sons, 676.
- Stobwasser, C. H., and Co., 506.
- Stockil, W., 391.
- STOCKING (OR HOSIERY) FRAMES.—Several of these machines, both English and Foreign, well worthy of remark, 197. Description of four or five of these machines, exhibited in the British, the French, and the Belgian Departments, *ib.*
- STOCKINGS.—See *Hosiery, Wearing Apparel*.
- STOCKINGS, ELASTIC.—Machine-made caoutchouc stockings and belts, 597. Caoutchouc knit stockings for invalids, *ib.*
- Stöck, Dr., 131, 650.
- Stoerquart Brothers, 471.
- Stodart, Messrs., 328, 329, 334.
- Stohmann and Wjstenfeld, 70.
- Stührer, T. F., 214, 506.
- Stöcker Brothers, 506.
- Stoker, J., 308.
- Stokes, J. C., 509.
- Stokes, S. exx.
- Stoll, C., 669.
- Stollberg, Werhigerode Count, 506.
- Stoltz and Son, 201.
- Stone and Kemp, 362.
- STONE SPECIMENS OF, AND WORKS IN.—Specimens of Irish stones for decorative sculpture, 13. Cornices and other objects manufactured therefrom, *ib.* Important specimens of carved stone from Malib, 554. Number of exhibitors of manufactures in unpolished stone, countries from which exhibits have been sent, 554. Many of the most interesting objects of very great, almost national, importance, *ib.* Classification of this group into various sections; 1st. Flag stones, paving stones, &c.; objects exhibited, remarks thereon, exhibitors and awards, 554, 555. 2ndly. Classified, carved, and sculptured stone-work, not polished; general remarks thereon; objects exhibited, particular remarks, names of exhibitors, awards, &c., 556-558. 3rdly. Manufactures in slate; objects exhibited, particular remarks thereon, exhibitors, awards granted, &c., 558, 559. 4thly. Manufactures in various kinds of stone and other minerals; objects exhibited, remarks thereon, and awards, 559, 560. All kinds of earthy mineral substances, as stone, marble, alabaster, granite, porphyry, jasper, quartz, talc, agates, and gems used in a polished state either in constructing or inlaying various objects of decoration and use, included under the head of Polished and Inlaid Work in Stone, 560. Total number of exhibitors of these articles; countries from which the principal exhibits have been sent, *ib.* 6st. Manufactures in marble and alabaster; general remarks thereon; objects exhibited, particular remarks thereon, awards, &c., 561-565. 2ndly. Works in quarzental stone, granite, and spar; remarks on the objects exhibited; exhibitors and awards, 565, 566. Notices of the principal works of art in stone, 685, 696.—See also *Italian Stone, Egyptian Marble, Quartz, Sculpture, Models, &c. Serpentine*.
- STONE, ARTIFICIAL.—Number of exhibitors not large, nor the objects exhibited numerous; countries from which contributions have been sent, 572. Remarks on certain specimens of an artificial stone, invented by Mr. Furse in 1838 for flagging damp places, &c., 574. Specimens of artificial stone from Austria, 575. Remarks on a species of artificial stone recently introduced by Messrs. Haugome and Parsons, of Ipswich, 576. Nature of this stone and materials of which compounded, *ib.* Purposes to which applicable, *ib.*—See also *Cement, Roman, &c. Marble, Imitation*.
- STONE-DRESSING MACHINES.—Specimens of, 201.
- STONE-WARE.—Specimens of stone-ware for breweries, distilleries, &c., 541. Small collection of stone-ware exhibited, 587.—See also *Ceramic Manufactures*.
- Stork, Rev. M., 182.
- STORM INDICATOR.—See *Typhoid*.
- Stoher, Slaughter, and Co., 173.
- Stotzer, F., 389.
- STOUT-BRICK-CLAY.—See *Fire-Clay*.
- STOVES.—General remarks on the collection of steel and iron grates, fenders, and fire-places, 499. Ornamental grates and fenders, *ib.* Kitchen ranges, their material, &c., *ib.* Gas-stoves recently invented, 499, 500. Objects exhibited and awards, 503.—See also *Iron and Steel Manufactures*.
- STOVES, PORCELAIN.—Atmopyre heeds and gas-stove of J. O. Edwards, 508. Porcelain stove exhibited from Frankfurt, 587.

- Stowell and Sugden, 360, 361.  
 Strahl, Otto, 542.  
 Straker, S., 190.  
 Strange, —, 54.  
 STRASBOURG CATHEDRAL, MODEL OF, 208, 689, 703.  
 Stratingh and Co., 42, 49.  
 Stratton, Messrs., 232.  
 Strauss, J., 673.  
 STRAW, MANUFACTURES IN.—Specimens of straw-plait exhibited, 483. Objects exhibited in Indian corn, straw, and straw-works; names of exhibitors, awards, &c., 602.—See also *Wearing Apparel*.  
 Strazza, G., 685, 703.  
 Strickland, Maria, 643, 645.  
 STRINGED INSTRUMENTS.—Remarks on the violins, violoncellos, and other string or bow instruments exhibited, 330.—See also *Harp, Violins, &c.*  
 Ströde, W., 506.  
 Stromeyer, —, Improvements effected by, in the manufacture of bichromate of potash, 39.  
 Strubbe and Baer, 93.  
 Strube and Son, 517.  
 Strudwick, J., 655, f.  
 Strüchers, W. S., 559.  
 Struve and Co., 49.  
 STRYCHNINE—Samples of, 47.  
 Stuart and Smith, 49., 602, 726, 734.  
 Stuart, W., 208, 563, 689, 696.  
 Stubbs, P., 486, 489.  
 Stuckhardt, J., 491.  
 STUFFER, ANIMALS AND BIRDS.—See *Taxidermy (Specimens of)*  
 Stüler, Privy Councillor, 698, 738.  
 Sturges, E., 50.  
 Sturges, J. and E., 38, 49.  
 Sturmy, Maria, cxx.  
 Sturz, —, 401.  
 Stutchburg, J. S., 76, 83, 140.  
 Styles, T., 54.  
 STRYKA.—Iron and steel from the works of the Austrian Government in Styria, 20. Superior quality of the manufactures, *ib.*  
 SUB-MARINE TELEGRAPH.—See *Electric Telegraphs*.  
 SUCRIFIC ACID—Specimens of, 41.  
 Sudekoff, 209 (Juror), xxx.  
 Suermont, T. D. C. (Juror), xxxi.  
 SUGAR.—Limited number of samples exhibited, 62. Deficiency most marked in the contributions from the principal sugar-growing countries, 63. In refined, sugar the British manufactures wholly unrepresented, *ib.* Specimen of sugar from cane grown in England deserving of notice as a curiosity, *ib.* Samples of sugar from our East India possessions, *ib.* From Java, *ib.* From Delnerrara, *ib.* From France, *ib.* From Spain, *ib.* From Austria, *ib.* From Belgium, *ib.* From Russia, *ib.* From Prussia, *ib.* From the United States, *ib.*  
 SUGAR-CANDY.—Fine sample of, from Belgium, 63.  
 SUGAR-OF-LEAD—Specimens of, 47.  
 SUGAR-MAKING APPARATUS.—Centrifugal machines for separating molasses, 203. Sugar-cane mill, a magnificent specimen of mill work, on the largest scale, *ib.* Three superb sets of vacuum apparatus, *ib.*  
 SUGAR-OF-MILK.—Samples of, 46.  
 Sugden, Borrass, and Co., 645.  
 Sugden, Jonas, Brothers, 357, 360, 361.  
 Sulger and Stuckelberger, 365.  
 Sullivan, T., 198.  
 SULPHATES.—See *Alumina, Sulphate of. Ammonia, Sulphate of. Iron, Sulphate of. Magnesia, Sulphate of. Mercury, Sulphate of. Soda, Sulphate of.*  
 SULPHUR.—Specimens of native sulphur and ores from which generally obtained, 11. Products obtained in the preparation of sulphur, *ib.* Sulphur from White Island in Plofty Bay (New Zealand), 15. Process of extracting sulphur from pyrites adopted at Sworzowiec, in Galicia, and at Radoboj, in Croatia, 21. Production of sulphur from pyrites, *ib.* Specimen of sulphur, adhering to limestone from Egypt, 24. No resemblance to the mineral found in Sicily, *ib.* Specimens of sulphur from the Royal Salt mines of Volterra (Tuscany), 35. Samples of sulphur, 45, 49, 50.  
 SULPHUR-FUMES CONDENSER.—Method of condensing the sulphur fumes produced in the reduction of lead ores adopted by the Duke of Buccleuch at his works at Wanlock, Dumfriesshire, 8.  
 SULPHURETS.—See *Antimony, Sulphuret of. Carbon, Sulphuret of.*  
 SULPHURIC ACID.—Manufacture of this acid in earthenware vessels, instead of the leaden chamber, as followed in the works of Javel, near Paris, 38. Material of these vessels, *ib.* The process described, 38, 39. Its introduction into England recommended, 39. Samples of this acid, 45. Price of sulphuric acid in Germany, 49. Sulzberger and Ackermann, 483, 602.  
 SUMACH.—Obtained from Sicily, 88. Name of the plant, *ib.* Specimens exhibited ground for the dyers' use, *ib.* Colouring matter obtained therefrom, *ib.* Samples from Egypt, 90. From Russia, 91. Good samples of sumach for tanning purposes, 92, 93.  
 SUMMER, on MUSK ROOT.—Supposed to be the produce of an umbelliferous plant of Central Asia, 49.  
 Sumner, G., 397.  
 SUN DIALS.—Magnetic sun dials, 281. Adapted to every degree of latitude, *ib.* Various other sun dials exhibited, 281, 307.  
 SUN PICTURES.—Remarks on what are called the sun pictures exhibited by Messrs. Colla, and also by several French exhibitors, 278, 279.—See also *Talbotypes*.  
 SURGICAL INSTRUMENTS (Class Xc).—Tabular classification of objects into which this Class is divided, xi-xiii. List of Jurors appointed for this Class, xxviii. List of exhibitors in this Class to whom Prize Medals have been awarded, lxi. Observations on the present state of the art of manufacturing surgical instruments, 313. Great variety required for use, *ib.* Necessity for instrument makers being able mechanists, *ib.* Progress of improvement in construction necessarily stands in intimate relation to the advance of surgical science, *ib.* Complex character of the instruments formerly in use, *ib.* Many instruments altogether useless from the improvements of the healing art, *ib.* Cauterising irons rendered unnecessary by Ambrose Pare adopting the simple expedient of tying the bleeding end of the divided artery, *ib.* Hopes held out that amputation may be dispensed with, *ib.* Instance in which the genius of John Hunter has enabled surgeons to discard amputation, *ib.* Remarks on the operation of lithotomy, for stone in the bladder, 344. The principal merit of which accorded to the French surgeons, *ib.* Improvements made in the last half century, *ib.* Invention of the stethoscope, *ib.* Stomach pump, a valuable auxiliary in the treatment of poisons, *ib.* Weiss's dilator of the female urethra, *ib.* Water-bed of Dr. Arnott, *ib.* Apparatus for facilitating and improving the treatment of fractures, *ib.* Bed invented by Mr. Harrold, *ib.* Instruments for the cure of aneurism, *ib.* Contrivances in aid of orthopaedic processes, *ib.* Use of caoutchouc for bandages and similar surgical appliances, *ib.* Statement of the instruments deserving notice, *ib.* Collection of artificial limbs, &c., of great merit, 344, 345. Instruments of the House of Savoy of long established reputation, 345. Messrs. Philp and Whicker, the present representatives of that house, *ib.* Their collection disqualified from receiving a Medal, Mr. Philp being a Juror, *ib.* Choice assortment of all instrumental aids exhibited, *ib.* General excellence in the contrivance and execution, *ib.* Beautiful models of anatomy exhibited, *ib.* In human anatomy, models can never supply the place of actual dissection, *ib.* Avaris, 346. Application of gutta serena to the manufacture of surgical instruments and apparatus, by J. M. Cabrol, of Paris, 538.  
 SURVEYING INSTRUMENTS.—Very few instruments in the British Department, and those for the most part of an ordinary kind, 253. Beautiful instruments from Belgium and Germany, *ib.* Improvements introduced in the German instruments, *ib.* Levelling instruments from the Polytechnic Institute of Vienna, with many improvements, *ib.* Objects exhibited, 253-255.  
 SUSOR, H., 491, 480.  
 SUSPENSION BRIDGES.—Patent links for suspension bridges rolled at a single heat, 174.  
 Susse Brothers, 506.  
 Süss, W., 282.  
 Sutcliffe, R., 195.  
 Sutherland, Her Grace the Duchess of, 647.  
 Sutherland, Janet, cxx.  
 Sutorius, C. F., 636.  
 Sutter, J. J., 477, 471.  
 Sutton and Sons, 52.  
 Swaab, S. L., 99.  
 Swaine and Adeney, 394.  
 Swainland, C. (Juror), xxix; (Exhibitor), 380.  
 SWALLOW'S NESTS—Specimens of, of very high quality, 66.

- Used extensively for soup by the Chinese, 66. Model of the mode of attachment to the sea cliffs, adopted by the birds for their nests, *ib.*
- SWAN and Edgar, 363.
- SWAN RIVER COLONY.—Samples of good wheat from, 52.
- Swansea Local Committee, 12.
- Swedish, H. M. the King of, 568.
- Sweden, H. M. the Queen of, 163.
- SWEDEN AND NORWAY.—The working of mines and the production of metals an active branch of industry in Sweden and Norway, 34. Natural causes giving a great preponderance to mineral industry, *ib.* Ores of copper generally poor, but much valued in commerce, from not containing either arsenic or antimony, *ib.* Annual supply, *ib.* Mines of lead of no value, except for the silver the ores contain, *ib.* Considerable profits yielded by the Cobalt mines of Skuterud and Tunaberg, *ib.* Iron mines, both in Sweden and Norway, a prosperous branch of industry, from their intimate bearing on the cultivation of the forests, *ib.* Extraordinary reputation of Swedish iron for the manufacture of steel, 34, 35. Objects exhibited by Sweden and Norway, 35.
- Good specimens of linseed and rape-seed oil from Sweden, 84. Samples of water-rotted flax, 100. Fine examples of raw silk exhibited by H. M. the Queen of Sweden, 163. Inferior description of pearls, 164.
- Observations on the Swedish canon, 223. Number exhibited and description thereof, 223, 224. Balances of various construction, 260. Drawing instruments, 306. Specimens of printing bank notes, 106. Examples of bookbinding, 426. Recent statistics of the paper-making trade of Sweden, 444. Specimen of playing cards, 447. Specimens of embroidery, 472.
- Specimens of cutlery, 489, 491. Locks, 508. Fine specimen of the granites of Sweden, 556. Works in porphyry, 565. Collection of wood carvings, 602. Stearic manufactures in Stockholm, 624. Specimens of candles, &c., 629. Artificial flowers, 634. Writing cases, 634.
- Swift, J. H. (Juror), xxvii.
- Swinburne and Co., 165.
- Swinburne, R. W., and Co., 527, 536.
- Swinburne, W. (Associate Juror), xxx.
- Swindells, Messrs., 33.
- SWITZERLAND.—Description of an improved railway switch, 189.
- SWITZERLAND.—Manufacture of steel developed for some years past in Switzerland, 35. Good quality of the products exhibited, *ib.* Steel for springs remarkable for its elasticity, *ib.* Products exhibited, *ib.*
- Samples of plates of various kinds, 55. Chocolates, 59. Samples of raw silk, 162.
- Press for cutting out watch-hands, 201. Collection of rifles, 221. Discs of tint-glass from, applicable to optical purposes, 271. Planimeter, 304. Drawing instruments, 306. Planctarium, 307. Model in relief of Mount Sentinel, 309. Calculating machine, 311. Chronometers, watches, and watch movements, 339-342.
- Surgical apparatus, 346.
- Muslins, 347. Cotton manufactures, 348. Small and in different lot of woollen productions, 352. Observations on the silk manufactures of Switzerland, 364. Specimens of ribbons, 365. Specimens of manufactured silks, 365-368. Specimens of damasks and drills, 372.
- Samples of tanned and curried leather, 391. Flourishing state of the book trade in the Canton, 400. Specimens of printers' rollers, 413. Statistics of the paper manufacture of Switzerland, 444. Beautiful specimen of albums, 449.
- Interesting contributions of printed and dyed fabrics, 458. Specially worthy of notice, *ib.* No duties on imported prints until within the last twelve months, *ib.* Small fiscal duty now imposed, *ib.* Successful competition of these goods with those of France and England, *ib.* Objects exhibited, 459. General remarks on the exhibition of lace and embroidery from Switzerland, 467. Specimens of lace and embroidery, 470, 471. Specimens of braces, straw-plait, hats, bonnets, and other articles of wearing apparel, 482, 483.
- Specimens of cutlery and edge tools, 489, 490. Cylinder of rolled steel for watch springs, 505. Specimens of watch cases and enamels, 517. Various articles of jewelry, 520. Optical-glass contributed from Switzerland, 537. Specimens of terra-cotta, 542, 583. Collection of carved furniture, 551, 552. Caoutchouc knit stockings, 597. Specimens of coopers' work, 602. Various articles of wood carving, *ib.*
- Specimens of straw work, 602. Contribution of tooth-powder and hair-oil, 615. Chocolate-lozenges, 640. A gold stick head with internal mechanism, 665. Variety of bows and arrows, 677. Collection of toys, 679, 680.
- Notices of the works contributed by Switzerland to the Fine Arts Department of the Exhibition, 705.
- SWORD-HILTS.—Patterns of sword-hilts and mountings from France, 520.
- SWORDS, &c.—Collection of swords, side-arms, and sword-blades, 221.
- Syed, Omar, 81.
- SVENITIS.—Great variety of, in the Vosges, 27.
- Sykes, Colonel, 563.
- Sykes, D., and Co., 353.
- Sykes, J., and Son, 353.
- SYNCHRONOMETER.—Construction and purposes thereof, 315.
- Syrington, H. H., and Co., 348.
- SYPHON VASES.—Patent siphon vases for containing aerated mineral waters, a useful and ingenious contrivance, 587.
- SYRINE.—Acoustic instrument for demonstrating the production of a musical sound by a succession of musical impulses, 303.
- SYRUPS.—See *Lettuce Syrup* of Szunirak, J. F., 21.
- TABACH.—Samples of this substance, 91. Dyes a rich violet colour, *ib.*
- TABARCA (Tunis).—Specimens of timber from, 106.
- TABLE-CLOTHS.—See *Cotton Manufactures*.
- TABLE-COVERS.—Specimens of, 459. Specimens of printed and painted moleskin table-covers, 475. See also *Painted Cloths for Furniture*, &c.
- TABLE CUTLERY.—See *Cutlery and Edge Tools*.
- TABLES.—Various descriptions of, exhibited, 550-552.
- TABLES AND TABLE-TOPS, MARBLE, MOSAIC, AND INLAID.—Two fine Commemorative marble tables, exhibited by Mr. Lambert, of the Ballynahinch quarry, 563. Marble table sent from Canada, *ib.* Table exhibited amongst the East India productions, *ib.* Number of tables of various kinds of marble from Tuscany, *ib.* Collection of marbles, cut into slabs and table-tops, sent from Portugal, remarkable for the beauty and great variety of many of the specimens, 563, 564. Very beautiful and well-executed table-top of yellow marble from the United States, 564. Specimens of mosaic marble tables from Derbyshire, 568. Notices of tables in mosaic and pietra dura, 687. Tables in inlaid wood, *ib.*
- Taborin, P. F., 491.
- Tabordeau, P., 491.
- Taborret, —, 530.
- Tachy, P. A., and Co., 564.
- Tachy, A., and Co., 569.
- TAFFETAS.—Samples of, from various countries, 367-368.
- Tahan, A., 551.
- Tahir, —, 489.
- Taillefer, A., and Co., 509.
- Talbot, Y., 371.
- Talbot and Co., 489.
- TALAVERA WHEAT.—See *Wheat*.
- Talbot, —, 276. See also *Talbotypes*.
- Talbot Brothers, 226, 242.
- TALBOTYPES.—Description of the process for producing negative talbotypes, on glass, 245. Collection of talbotypes amply attesting the superiority of the method of Messrs. Ross and Thomson, *ib.* Observations on the various talbotype pictures exhibited, 278, 279. Method adopted by Messrs. Ross and Thomson for producing these pictures, 278.—See also *Calotypes*. See *Pictures*.
- Tallermann, Mrs., 506.
- TALLOW.—Quantity of tallow imported into Great Britain annually, 79. Specimens of tallow from New South Wales, 163.
- TALLOW CANDLES.—See *Candles*.
- Tamar, —, 406.
- TAMARINDS.—Samples of, from the East Indies, 56. From Java, *ib.* From the West Indies, *ib.*
- TANBOUR LACE.—See *Lace*.

- Tanner and Koller, 348, 471.
- TANNIC ACID.—Samples of, 47.
- TANNING.—Samples of, 46.

- TANNING MATERIALS.**—Number of different substances from time to time introduced for the use of tanners, 91. Nothing superior, or even equal to good oak bark, *ib.* All attempts to hurry the process by the use of concentrated solutions of tan, &c., have proved failures, *ib.* Oak bark by no means the only astringent bark suited to the use of the tanner, *ib.* Other similar substances used with great success in various parts of the world, *ib.* These materials may be employed in conjunction with oak bark, *ib.* The existence of such substances tends to keep down and equalize the price of bark, *ib.* Quantities of the chief tanning materials imported in 1849; countries from which obtained, *ib.* Valuable and instructive series of the various tanning materials imported into England or used by tanners, 91, 92. Illustrations of the process of tanning generally, 92. Useful series of these substances shown in the collections of Liverpool and Hull imports, *ib.* Fine sample of pure Valerian sumach as ground for the use of tanners, *ib.* Tanning materials in the East Indian collection; list thereof, *ib.* Considerable number of those substances new or but little known, *ib.* Samples of tanning-barks from several English colonies, viz., Cape of Good Hope, *ib.*; Canada, *ib.*; British Guiana, *ib.*; Australia, 93; New Zealand, *ib.* Specimens of oak bark from Belgium, *ib.*; from Hesse Darmstadt, *ib.* Samples of Portuguese sumach, *ib.* Collection of tanning materials from the Russian Empire, *ib.* Specimens from Tunis, *ib.* Samples of several important tanning materials in the Turkish collection, *ib.*
- Tanterstein and Cordel, 408.
- Tao Nui, 93, 101, 103, 119.
- TAPERS.**—See *Candles*.
- TAPESTRY, INCLUDING CARPETS AND FLOOR-CLOTHS, LACE, EMBROIDERY, &c.** (Class XIX.)—Tabular classification of objects into which this Class is divided, xvii., xix. List of Jurors appointed for this Class, xxix. List of exhibitors in this Class, to whom Council Medals have been awarded, lxxxvii. The like of those to whom Prize Medals have been awarded, lxxxvii., lxxxix. And of those of whom Honourable Mention is made, lxxxix., &c.
- Preliminary observations of the Jury on the subject of the tapestries, 460. Remarks in detail, viz., British lace: bobbin net machinery, 460-463. Lace made by hand, viz., "Honiton" and "thread" or pillow lace, also "British points" tambour and Limerick laces, 463-464. English, Irish, and Scotch-sewed muslin embroidery, 464-465. France: lace and embroidery, 465-467. Switzerland, 467. Saxony, *ib.* Spain, *ib.* Hamburg, *ib.* Austria, *ib.* Malta, *ib.* Laces of Belgium, 467, 468.
- List of awards made in the various departments of lace, embroidery, trimmings, upholstery, fountains, and coach laces in each country, 468-472. Remarks as to carpets, 472-474. Awards made for the same and for floor-cloths, 474-476.
- Awards made by the Jury of Class XXX. for works in tapestry, 486, 687. Notices of the principal contributions from the Government manufactory of Gobelins and Beauvais tapestry (French Department), 702. See also *Designs for Decoration*, &c.
- TAPICCA**—Sample of, from Angola, 62.
- Taplin, R., 173.
- TARAXICUM, JUICE OF.**—Samples of, 43.
- Tardif, E., 431, 448.
- Tarrant, A., 424.
- TARTANS.**—See *Shawls*.
- TARTAR-EMETIC.**—Samples of, 45.
- TARTAREL QUARRIES (France).**—Importance of these mill-stone quarries at La Ferté, France, 28. Number of workmen employed, *ib.*
- TARTARIC ACID.**—Samples thereof, 46, 48, 49.
- Tasker, H., 491.
- Tate, J., jun., 427.
- TATNISK MANUFACTORY OF ARMS (Russia),** 53.
- Taufeurg Works (Carniola).**—Iron and steel from, 20. Excellence of the manufactures, *ib.*
- Taurines, —, 304.
- Tautz, A., 664.
- TAVOY (East Indies).**—Collection of the wood of, 133-135.
- Tawton, Mary, cxx.
- TAXIDERMY (Specimens of).**—The art of stuffing animals, &c., a very ancient art, though generally supposed to be an invention of modern date; still the methods recently employed differed much from those now practised, 645. Antique processes for preserving animal remains, 645, 646. Comparison between the admirable productions in taxidermy contributed to the Great Exhibition, with the old specimens of the art of animal stuffing to be met with here and there in the museums of natural history, 646. Undoubted superiority of the present processes, *ib.* The works in this class exhibited prove that animal stuffing has been cultivated with unequivocal success, *ib.* General remarks on the specimens exhibited from various countries; objects exhibited; exhibitors and awards, 646-648.

- TEAZES.**—Specimens of, 512.
- Teckenhoff, —, 353.
- TEA.**—The Exhibitors of this article few, and the samples exhibited confined to the productions of the Eastern World which are, however, admirably illustrated, 57. China tea exhibited in abundance and of fine quality, *ib.* Observations of the Jury on the samples exhibited, 57, 58. Samples of China teas, 57. Of Java teas, 58. Of Kemaun teas, *ib.* Of Assam teas, *ib.* Of brick tea, *ib.* Of Tibet, *ib.* Few examples of substitutes for tea, *ib.* Specimen of Nutt or "Parangny tea" exhibited as a curiosity, 58. See also *Green Teas*, *Prussian Blue*.
- TEA SERVICES.**—Complete tea service of silver in the Persian style, of very fine workmanship, in *repousse* work, 512. Curious and elaborately worked tea service exhibited by F. Durand, of Paris, 518.
- TEA TRAYS.**—Specimens of, in earthenware, 541.
- TEA TINS.**—Made of stoneware, 541.
- Tengle, R. and W., 574.
- TEAK-TIMBER.**—Specimens of, 137, 140. Value of this timber for ship-building, 140.
- Teasdel, W., 218.
- TEAZLES.**—Specimen of selected teazles for the use of wool dressers, from Austria, 157.
- Technological Institute, Tuscany, 563.
- Tee, C. (Juror), xxviii., xxxi.
- Tee, C., and Son, 371, 376.
- TEETH, ARTIFICIAL.**—Observations on the collection of, 345.
- Teillard, C. H., 367.
- Teissier de Cress, L. and F., 161, 364.
- TELEGRAPHS, DOMESTIC.**—Designed to supersede the use of bells in mansions, &c., 234. Details of construction and working, *ib.* Not unsightly, *ib.* Less expensive than the ordinary fitting up with bells, *ib.* Bell telegraphs from the United States, for domestic purposes, 235. Readily attached to the usual arrangement for bells, *ib.* Ornamental, but little space required, *ib.*
- TELEGRAPHS, ELECTRIC.**—See *Electric Telegraphs and Apparatus*.
- TELESCOPES.**—Importance of the telescope, 263. Few exhibited, *ib.* The larger for the most part good, *ib.* Apparatus to be used in Gregorian telescopes, *ib.* Description thereof, *ib.* Portable Gregorian telescope, *ib.* Improvements in the telescope effected by Messrs. Varley and Son, 263, 264. Various telescopes exhibited, 264-265. Description of Ross's telescope and the experiments made therewith, 264. Deer stalking, day and night and reflecting telescopes, *ib.* Observations on the various specimens of achromatic object glasses for telescopes exhibited, 269. Observations on the specimens of solid eye pieces for telescopes, exhibited; descriptions thereof, *ib.*
- TELESCOPE STAND.**—Megan wooden stand from France, 264. Less convenient than cast-iron stands, *ib.*
- Telford, W. (Associate Juror), xxvii.

- TEMPER PROGNOSTICATOR**—Description of, constructed by Merryweather, 316.
- Templeton, J. and Co., 473, 475.

- THEINE**.—The identity of theine and caffeine established by Mr. Jöbst, 46.
- THEODOLITES**.—(Transit theodolite invented by Mr. Simms, 253. Extremely portable, *ib.* Range of the telescope unlimited, *ib.* Description of the instrument, *ib.* Transit theodolite by Dollond, *ib.* Well-made portable theodolites by G. Yates, *ib.* Seven-inch theodolite, reading to 15", by Marriott, formed of the smallest number of pieces, with a view of preventing flexure and insuring stability, 253, 254. Six-inch theodolite of very indifferent workmanship, from Canada, 254. Miner's theodolite, *ib.* Repeating theodolite, with concentric circles, *ib.* Repeating theodolite of the form used by Gambey, *ib.* Description of the instrument, *ib.* Divisions very good, as also the whole of the workmanship, *ib.* Theodolite with coverings for the graduations invented by M. Brachaupt, Prussia, *ib.* Usefulness of the covering, *ib.* Mining theodolite from Prussia, of improved construction, *ib.* Description thereof, *ib.* Six-inch theodolite, of good workmanship, from Prussia, 255.
- Theodorsalle Kreuznach Salt-works (Hesse Darmstadt), 32.
- Therot, J., 551, 569.
- THERMO-ELECTRICAL INSTRUMENTS**. Harris's thermo-electrometer, 282. Principle and object of the apparatus, *ib.* Discovery of thermo-electricity by Lubeck, of Berlin, *ib.* Large thermo-electric battery from Prussia, description thereof, *ib.* Apparatus for showing the action of the earth's magnetism on electric currents, *ib.*
- THERMOMETERS**.—Remarks on the various thermometers exhibited, 301, 302. Exhibition of two standard thermometers by Mr. Simms, constructed by the Rev. R. Sheepshanks, 301. Peculiar thermometers exhibited by Negretti and Zambra, *ib.* Description of Newman's standard thermometer, 301, 302. Delicate and accurate thermometers from France, 302. Thermometers from Prussia, Austria, and Denmark, *ib.*

- Thouret, F. A., 518.
- THREAD**.—Few specimens exhibited from foreign countries, 377. Specimens exhibited, 348, 349.
- THREAD COUPLERS**.—Account of a registering thread counter, 315. Purpose for which designed, *ib.*
- Thresher and Glenny, 479.
- THRASHING MACHINES**.—The most complicated agricultural machine in general use, 235. Their great imperfection not discovered till the Norwich meeting in 1843, *ib.* Enormous waste of power discovered at that time by Mr. Anon, *ib.* Improvements have since taken place, but they are still far from perfect, *ib.* Report of Mr. Thomson in detail on the result of trials at different periods with various threshing machines, 235, 236. Statement in detail of the comparative cost of threshing by flail, by horse, and by steam, showing the great saving resulting from the use of the steam threshing-machine, 236, 237. Load taken by Messrs. Clayton and Co. in the improvement of threshing-machines, 237. Prizes awarded, 241, 242.
- Thripp, F., 685, 693.
- Thum, A., 360.
- Thimer and Köpfer, 348.
- THRINGER FORTS (Prussia)**.—Crucibles, &c., made of white clay from, 297. Resembles Wedgwood ware, used for similar purposes, *ib.*
- Thurman, Pigott, and Co., 179.
- Thun, Count Von, 21.
- Thurston and Co., 546, 551.

- Thurnschelz, Count G., 509.
- Thury, Viscount Heriart de (Juror), xxx.
- TICKING.—Observations on the excellence of the specimens, 371-373.
- Tidomabe, G., 198.
- TIDE GAUGES.—Description of Hewitson's self-acting and self-registering tide gauge, 302. Description of New-  
man's self-registering tide gauge, 303. Apparatus for showing the ebb and flow of tides, 307.
- Tick, J., 617.
- Tisch, C. and Co., 513.
- Tifec, A., 657.
- Tiflis, Government of, 151.
- TILE MACHINES.—Great benefit and economy which has resulted from the invention of machines for making tiles, over the old method of making them by hand, 239. Report on the tile and brick machines of Mr. Clayton, Mr. Scragg, and Mr. Whitehead, *ib.* Prizes awarded, 242.
- TILES.—Specimens of white paving tiles, 580. Specimens of improved Italian tiles, 581. Specimens of roofing tiles, *ib.* New process of executing fine art designs on detached tiles, 688. Remarks on the examples of vitraglio and other tiles in the Exhibition, 717. Account of a new mode of monochrome painting on tiles, 694. —See also *Drainage Tiles, Encaustic Tiles.*
- TILLAGE.—Instruments of.—See *Agricultural Implements.*
- Tillmorent, E. de, 161.
- Tilley, Lieut., 157.
- Tilman, G. S., 5.
- TIMBER AND ORNAMENTAL WOODS.—Remarkable, complete, and interesting collection of timber and other woods, 104. Specimens arranged so as to form, as near as possible, a catalogue of the chief woods of different countries, *ib.* Attention drawn to the most valuable series of specimens exhibited, *ib.* Total annual importation of timber into Great Britain, *ib.* Table showing the countries from which wood was chiefly imported in 1813, *ib.* List of the chief woods employed in ship-building, *ib.* Collection of woods from all parts of the world exhibited by W. W. Saunders, *ib.* Collection of woods, native of, or grown in Britain, 104.
107. Woods of Europe, 108, 109. Woods of Asia, 109.
114. Woods of Africa, 114. Woods of North America, 114-116. Woods of the West Indies, 116-118. Woods of South America, 118, 119. Woods of Australia, 119.
120. Woods of New Zealand, 120. Beautiful series of ornamental woods exhibited, 121. Collection of Scotch woods, *ib.* Beautiful specimens of St. Domingo mahogany, *ib.* Handsome dark veneers, *ib.* Picture frame formed of various common English woods, *ib.* Specimens of bog wood of different kinds and from various localities, *ib.* Different processes for seasoning and preserving timber from dry rot, &c., 121. Five schemes in particular have attracted special attention, 121, 122. Mode adopted by Sir W. Burnett for preserving wood, *ib.* Specimens shown highly satisfactory, *ib.* Process employed by J. Bethell, *ib.* This process extensively employed in the preparation of railway sleepers, *ib.* Seasoning wood considerably diminishes its tendency to decay, *ib.* Value of any process for seasoning wood depends on the time required for its completion, *ib.* Valuable series of specimens shown in illustration of Davison and Symington's patent process for seasoning timber, *ib.* Various specimens of seasoned timber, *ib.* Collection of East Indian woods by far the most extensive in the Exhibition, *ib.* Remarkable for the large number of specimens and their excellence, *ib.* Valuable practical information to be gained by their examination, *ib.* Importance of Dr. Wallis's collection, *ib.* Awards made to the collectors of these woods, *ib.* Nature and properties of many Indian woods very little known, *ib.* Importance annually increasing from the increasing demand, *ib.* Destruction of timber best adapted for all practical purposes, *ib.* Probability that some of the ornamental and other woods of India will become articles of import when their properties and uses are better known, 123. List of the woods contributed by the Indian Government; woods of Nepal, 123-125. Woods of Gualpura, 126, 127. Woods from Calcutta, 127. Excellent Spanish mahogany may be raised in the East Indies, *ib.* Woods from Serampore, near Calcutta, 127. Woods of the Northern Circars, *ib.* Woods of Orissa, *ib.* Woods of Cuddapah, 127, 128. The best and most valuable and extensively used of all the timber trees of India, 128. Woods from Madras, 128. Woods of Travancore, 128-130. Woods of Hindostan, 130. Specimens of the Indian cedar and cypress, *ib.* Woods of Palamcottah, *ib.* Woods of Panchgaut Jungle, *ib.* Woods of Pignevally, 131. Woods of Coimbatore, *ib.* Woods of Cannara, 132. Woods of Malabar Forests, *ib.* Destruction of the forests by the natives, previous to the appointment of Dr. Gibson, as Conservator of Forests, *ib.* Regulations now adopted for the preservation and maintenance of the forests, *ib.* Government and mercantile supplies of Bombay chiefly supplied with timber from the Concan, *ib.* Supply of timber very limited in the Deccan, *ib.* Forests of Soonda Hanara, if properly managed, will in a few years afford a large and regular supply of first-rate timber, *ib.* Woods of Rohilkund, 132, 133. Woods of Assam, 133. Woods of Tavoy, 133-135. Woods of Amherst, 135, 136. Woods of Tenasserim, 136. Woods of Martaban, 136. Woods of Arrakan, 137. Woods of Chittagong, *ib.* Woods of Mirzapore, *ib.* Specimens of teak from Rangoon and the woods of Moumein, *ib.* Collections of the woods of Malacca, 137, 138. Woods of Prince of Wales's Island, 138. Woods of Penang, *ib.* Extensive collection of woods from the Indian Archipelago, *ib.* List of the woods from Labuan, 138, 139. Woods of Ceylon, 139, 140. Interesting specimens of timber and other woods from South Africa and the Cape of Good Hope, 140. Specimen of red ebony from Natal, *ib.* This wood appears to be new, and is unquestionably a valuable addition to the hard ornamental woods already known, *ib.* List of woods from the Cape of Good Hope, 140, 141, 142. Specimen of teak from the Western Coast of Africa, 140. Remarkable specimens of the chief varieties of Canadian timber and woods, *ib.* Small samples of a few woods from New Brunswick, *ib.* A few woods contributed from Nova Scotia, *ib.* Valuable and interesting collection of timber and other woods from British Guiana, 140, 143, 146. Table made of the ornamental wood of Guiana, containing 82 different woods, 146. Fine series of woods of Bahama, *ib.* List thereof, 146, 147. Small collection of the woods of South America, 147. Beautiful specimens of the ornamental and other woods of Trinidad, *ib.* Collection of Australian and Van Diemen's Land woods extensive and very interesting, *ib.* Specimens of woods from New South Wales, 147, 148. List of the woods contributed from Western Australia, 148. List of the contributions of woods from Van Diemen's Land, 148, 149. Small, but valuable collection of the woods of New Zealand, 149. Collection of American woods by no means numerous, *ib.* List of woods and specimens in bark from America, 151-151. Specimens of woods in the Austrian collection, 151. Numerous collection of the woods of China, 151, 152. Fine specimens of the chief woods of Egypt, 152. Highly valuable collection of the woods of Algeria, 152, 153. Numerous series of small specimens of the woods of the Upper Pyrenees, 153. Woods from France, *ib.* Interesting specimens of preserved woods from France, *ib.* Illustration of the process of Dr. Boycherie for protecting timber from decay, dry rot, &c., *ib.* Specimens of wood for sounding boards of musical instruments from Bavaria, *ib.* Small collection of woods admirably selected by Professor Nördlinger, *ib.* Comparatively small number of Portuguese woods, *ib.* None of them of very great importance, *ib.* Small number of woods contributed from Russia, 153, 154. No Spanish woods are exhibited, 154. Interesting and extensive collections of the woods of Cuba and the Philippine Islands, *ib.* List of the woods of Cuba, 154-156. Series of woods of the Philippine Islands, 156. Specimens of St. Domingo mahogany and satin wood, *ib.* Few specimens of timber from Tabarea shown in the Tunis collection, *ib.* Valuable series of some of the chief woods of Turkey; list thereof, *ib.* Excellent and valuable collection of Italian woods exhibited from Tuscany, *ib.* The collection comprises panel and block specimens, *ib.* List thereof, 156, 157. Excellent veneers of walnut wood, cut in a peculiar manner, invented and shown by A. Ducci, of Florence, 157.
- TIMBER SEASONING.—Different processes for seasoning and preserving timber from dry rot, &c. Five schemes in particular have attracted special attention, 121, 122. Mode adopted by Sir W. Burnett, 122. Specimens shown highly satisfactory, *ib.* Process employed by J. Bethell, *ib.* Specimens highly interesting and satisfactory, *ib.* This process extensively employed in the preparation of railway sleepers, *ib.* Seasoning

- wood considerably diminishes its tendency to decay, 122. Value of any process for, depends on the time required for its completion, *ib.* Valuable series of specimens shown in illustration of, Davison and Symington's patent process, *ib.* Various specimens exhibited, and awards to the exhibitors, *ib.*
- "TIMES," THE, NEWSPAPER.—Statistical particulars as to the, 338.
- Timmins and Song, 506.
- TIMOTHY GRASS.—Specimens of, from Canada, 51. From the United States, *ib.*
- TIN, BICHROMIC OF.—Samples of, 50.
- TIN, CHLOROMIC OF.—Samples of, 50.
- TIN ROIL.—Roll of, 506, 508.
- TIN MANUFACTURES.—General remarks on the articles exhibited, 497. Specimens of tin ware from France, 501.
- TIN ORE. Specimens of tin and copper ores from the principal Cornish mines, 12. Products obtained by the mechanical preparation and fusion of the ores, *ib.* Ingot of tin found in the mines of Ladock, near Truro, *ib.* Probability of its having been cast by the Phœnicians, *ib.* Specimens of tin ore from Malacca, showing the probability that the mining operations in that country are confined to steam work, 14. Extensive deposits of such ores in this part of India, *ib.* See also *Arsenic*.
- TIN, OXIDE OF.—Great improvement in the preparation of the ores of tin, resulting from Mr. Robert Oxley's method of separating wolfram from the oxide of tin, 9. Collection illustrating the successive operations of the system, *ib.*
- TIN PLATE.—Excellent workmanship of the specimens of pig and bar iron, and tin plate of the Cornish Works (Channongaishire), 13. Evenness of the tin coating, superior lustre, and good quality of the sheet iron basis, *ib.* Remarkable beauty of the manufacture of tin plate by Messrs. Phillips, Smith, and Co., *ib.* Sheet iron manufactured with wood fuel, specially intended for this purpose, *ib.* Observations on the Wollersdorf tin-plate works, Lower Austria, 21. All recent mechanical improvements have been adopted, *ib.* Products not inferior to the best manufactures in England and Belgium, *ib.* Largest establishment of its kind in Austria, *ib.*
- TIN, PRONOCOLORIC OF.—Samples of, 45.
- TIN, SALTS OF.—Samples of, 43. See also *Soda, Stannate of*.
- TINOT, J. M., 221.
- TINAVELLA (East Indies). Collection of the woods of, contributed by the Indian Government, 131.
- Tipping and Lawden, 221.
- Tite, W. (Juror), xviii.
- Tittle, Tatham, and Walker, 370, 373.
- Tizzard, W. K., 203, 205.
- TOBACCO.—The exhibition of raw and manufactured tobacco one of the most satisfactory of the class on which the Jury were called upon to decide, 60. The import trade fully represented, both as regards tobaccos and snuff, *ib.* Samples exhibited in the British Department of the Exhibition, 61. Samples from the British Colonies, 60, 61. From Spain, 61. From Portugal, 61. From Algiers, *ib.* From Turkey, *ib.* From Persia, *ib.* From Egypt, *ib.* From Russia, *ib.* From the United States, *ib.*
- Tobacco Contractors, Royal (Portugal), 23.
- TOBACCO PIPES.—See *Pipes, Smoking*.
- Tobacco and Snuff Company (Portugal), 61.
- Tobit, T., 411.
- Todt, A., 472.
- "TOILE VICTORIA."—Specimens of this fabric from France, 356.
- TOILET BOXES.—See *Dressing-cases*.
- TOILET GLASS.—Toilet-glass from Vienna, the frame entirely of massive silver, richly decorated with ornamental ornaments, and of elaborate and choice workmanship, 517.
- TOILET-SOAPS.—See *Soaps*.
- TOILET-TABLE (SILVER).—Remarks on the toilet-table of H.R.H. the Duchess of Parma, manufactured by Froment-Meurice, of Paris, in *repousse* work, 514.
- Toledo, Royal Ordnance Manufactory, 221, 687, 706.
- Tollet, G., 387.
- Tollpatt, W. B., 311.
- Tolson and Sons, 348, 353, 376.
- Tolstoy, Count T., 686, 706.
- Tomassini, L., 602.
- TOMBAC (DUTCH METAL).—Specimen of, from the works of Messrs. Estivant, of Givet (France), 5.
- Tombella-Lomba, E., 23.
- Tomlin and Co., 490.
- Tomlinson, J., 568.
- Tompson, L., 580.
- Toms and Co., 202.
- Toms and Lascombe, 552.
- Torsk Manufactory of Arms (Russia), 33.
- Torrey, J., 330, 335.
- TORRESE STONE.—Objects from France, constructed of this stone, obtained near the town of Tournay, department of the Yonne, 558.
- Touti, L., 666.
- TOOLS.—Observations on the specimens of engineers' tools for metal, wood, and other materials, 193. Specimens of machine tools for metals, 200. Machines for working in wood (excepting lathes), 201. Better represented in the Foreign than in the British Department, *ib.* Specimens exhibited, *ib.* Machines for working in stone, clay, leather, &c., *ib.* Specimens of various descriptions of tools, 489, 491, 507. See also *Cutlery and Edge Tools. Manufacturing Machines and Tools*.
- Toutal, Messrs., 202.
- Tough, L., 52.
- TOPIAZES. Specimens of fine topazes from New York, 18.
- TOU DRESSER, or MASURE-DISTRIBUTEUR.—Observations on, and description of Holmes's top-dresser, or manure-distributor; economy resulting from the use of it; likely to supersede the drill, 230. Prize awarded, 212.
- Töpper, Professor, 323.
- Töpper, A., 21.
- Topping, C. M., 268.
- TORRENS. See *Candles*.
- Tordeux, —, 166.
- Torstrup, —, 164.
- TOURCOUSIN, —. How obtained, and uses and purposes for which employed, 161, 593. Ways in which prepared for use, 599. Names of the exhibitors, prizes awarded, 164, 600.
- Tortosa, D. V., 84.
- Totschkoff, V., 480.
- Touaillon, C., 28, 202, 205.
- Touche Gilles, L., 615.
- TOUR DE CORDELAN (a lighthouse).—When founded and completed: introduction of the dioptric apparatus, 530.
- Tourey, H., 221.
- TOURMALINE. Specimens of crystals of tourmaline from the Isle of Elba, remarkable for the purity of their forms and the variety of their colours, 31.
- TOUR LES MOIS FLOUR.—Samples of Tour les Mois flour, of excellent quality, from the work of Cana, from Algeria and Barbadoes, 62.
- Toussaint, E. N., 470.
- TOWALLING.—See *Cotton Manufacture*.
- Towler, Camplin, and Co., 380, 381.
- Town, A., 689.
- TOX, CHARIOT.—Specimen of a, 193.
- Towne, J., 245, 246.
- Townend Brothers, 360, 362.
- Towns and Parker, 330.
- Townsend, Parker, and Townsend, 518, 551, 718.
- TOYS. Toys carved in wood from Bavaria, 602. Illustration of the supposed philosophical and national importance attached to toys, 678. Indian-club toys from the United States, *ib.* Toys of Austria exceedingly well and copiously represented, *ib.* Variety of automaton toys, *ib.* Bohemia famous for toys, *ib.* Numerous examples contributed, *ib.* Carved white wood toys from the Tyrol, *ib.* Mechanical and magnetic toys from Bavaria, *ib.* Large collections of toys in the Indian Coup, chiefly from Bengal and Madras, 679. Ingenious drawing-instruments, containing automaton birds from France, *ib.* Wax figures for hair-dressers, *ib.* Nature of the toy trade in Paris, *ib.* Quantity of toys exported from France, *ib.* Contributions of toys from Frankfort, Hamburg, Bremen, Saxony, and Switzerland, *ib.* Toy trade of the United Kingdom scarcely represented, 680. Objects exhibited, *ib.* Large quantities of toys of all descriptions made in England, *ib.* Large quantities of boys' marbles annually imported, *ib.* Value of toys of all sorts imported into the United Kingdom in the year 1860, *ib.* Immense quantities of toys manufactured in Wurttemberg, *ib.* Excellence of the contributions therefrom, *ib.* Classification of the number of exhibitors and the countries contributing, *ib.* List of awards, exhibits, and exhibitors, 680-682.
- Tancart, A. A., 600.
- THALES'S INSTRUMENTS.—Instrument for calculating the sum

- of the errors of a transit instrument, 312. Construction, *ib.* Accuracy, *ib.* Addition required for different latitudes, *ib.* See also *Astronomical Instruments*.
- TRAP ROCK, MANUFACTURES OF. Objects manufactured from trap rock found near Edinburgh, this trap being useful for various purposes, and extremely durable, 556. Specimens of curling stones made of greenstone trap, *ib.*
- TRAVANCORE (East Indies).—Collection of the woods of, 128, 129.
- TRAVANCOR, H. H. the Rajah of, 74, 75.
- TRAVELLING CASES.—Specimens of beautiful fittings for travelling cases in silver and silver gilt, from France, 518.
- Travers, P. L., 207.
- Travers, Messrs., 62.
- Treadwell, C. E., 469.
- TRASURE CHIEFS.—See *Safes*.
- Tredwell, Mrs., 748.
- Tree and Co., 503.
- TRENAULT.—Specimens of patent compressed treenails, 187.
- Trefry, J. T., 565.
- Treggon, H. and W., 506.
- Treloar, T., 601.
- Treloar, Weldon, and Co., 506.
- Tremblay, Le Baron A. du, 512.
- Tremel, A., and Co., 357.
- Tremlett, R., 301.
- Trendel, —, jun., 377.
- Trenholm, E., 54.
- Trenor, T., 162.
- Trent, T. W., 441.
- Trenton Iron Company (New Jersey), 17.
- TRILPANG.—Specimens of trepang (*beche de mer*, or sea slug), from Borko and Singapore, 66. Magnificent specimens exhibited in the Chinese Department, *ib.*
- Treschow, —, 34.
- Trichert, R., 331.
- TRIMMINGS AND FRINGS.—Specimens of, 469.
- TRINIDAD.—Enumeration of the series of useful minerals found in the island of Trinidad, 17. Brazil nuts, 56. Samples of coffee from Trinidad, very poor, 59. Samples of cocoa, truly magnificent, *ib.* Fine collection of East and West India spices, 62. Arrowroot, *ib.* Samples of crab or capia oil, 83. Samples of lustre, logwood, and turmeric, *ib.* Beautiful specimens of the ornamental and other woods of Trinidad, 147. Fine specimens of tortoise-shell, 161. Specimen of a walking-stick, 604. Examples of fans for ladies, 608.
- TRINKETS.—See *Jewellery*.
- TRIPLOID.—Specimen of a kind of, from the mines of Mayaguez, Diome, 29.
- Triqueti, Baron de, 706.
- Yris, J., 50.
- Trocon, A., 368.
- Troglon, G., 641.
- Trolope and Sons, 546, 551.
- Troaschon, N., 506.
- Trotter, Capt. H. D., 95.
- Trotter, E., 249, 252.
- Troupin Brothers, 196, 305, 490.
- Trubia, Royal Ordnance of (Spain), 506, 506.
- True, —, 509.
- Truchy, H., 518.
- Trueitt, G., 689, 695.
- Trueitt, W., 593.
- Truesdale, Jacobs, and Co., 95.
- Trulock, E., and Son, 221.
- Truman, —, 598.
- Truman, Hanbury, Buxton, and Co., 50.
- Truro Local Committee, 512, 52, 53.
- Tuberville, Smith, and Co., 728.
- TUBING (BRASS AND COPPER).—Specimens of, 503, 504.
- TUBULAR BRICKS.—See *Bricks*.
- Tuck, J. H., 178.
- Tucker, F., 77.
- Tucker, F. and Co., 626.
- Tucker, H. (Juror), xxiv, xxix, xxxii.—See also *Baker, Tucker, and Co.*
- Tucker, R. G., 77.
- Tucker, R., and Co., 164.
- Tuckliney, S., 685, 705.
- TUFA.—Vases manufactured of the tufa obtained from the hot-water springs of Carlsbad, 539.
- Tulley, C., 249.
- Tulloch, A. T., 80.
- Tulloch, Lieut.-Col., 122.
- Tulon, —, 335.
- Tunaberg Cobalt Works (Sweden), 35.
- Tunner, Professor P., xxvi.
- TUNGSTIC ACID.—Samples of, 43, 47.
- TUNIS.—The cereals from Tunis resemble those of Egypt in kind, 53. Wleats and barley exhibited, *ib.* Samples of hay-seed, 54. Samples of peas, beans, &c., *ib.* Samples of dates, great variety thereof, 57. Common oils and oils used for perfumery, 84. Collection of dyeing materials, 91. Tanning materials, 93. Specimens of timber from Tabarca, 156. Specimens of sponges, 163. Various articles of wearing apparel, 483. Specimens of general hardware and iron manufactures, 496. Gates, 552. Specimen of inlaid marble-work, 564. Composition of the Tunisian soaps and perfumery, 611. Specimens of perfumed waters, 615. Ungainly character of the candles, 626. Grape preserve, called *Kofza*, 640. Silk and leather parasols, 659. Collection of richly-embroidered fans, 669. A contribution of weeds for pipes and pipe guards, 672. H. H. the Bey of, 484, 552, 615.
- Tupper and Carr, 506.
- Tupper, M. F., 401.
- TOURBINE.—Double turbine from France, a hydraulic machine in frequent use in that country, 172. Description thereof, *ib.*
- Turgan, Madame, 688, 762.
- Turk, F. C., 507.
- Turker, S., 596.
- TURKEY.—Mineral exhibition of Turkey represented by a collection of upwards of 200 specimens sent by the Ottoman Government, 37. Impossibility of stating the precise value of the collection, from its having arrived so late, and the specimens being labelled only in the Turkish language, *ib.* Apparent importance of the collection from the variety of metalliferous ores included, *ib.* The principal of these are red hematite, lead ores, and rich copper pyrites, *ib.* Presence of 20 or 30 specimens of very good coal; localities, whence obtained, 35, 36.
- Large series of cerealia, illustrating the agriculture of Turkey, 53. Samples of flax, 54. Samples of beans, peas, haricots, pulses, and legumes of all descriptions, *ib.* Series of dried fruits, in insignificant quantities, and very dirty, 57. Samples of the mocha variety of coffee, not remarkable, 59. Large collection of aromatic seeds, used as condiments, 62.
- Valuable and important collection of raw produce, 69. List of the ordinary gums and resins of commerce, 77. Numerous and interesting series of oils, 84, 85. Valuable series of dye stuffs, 91. Excellent samples of important tanning materials, 93. Samples of cotton; general character of these cottons, 96. Samples of flax and hemp, 100. Series of the chief woods of Turkey, 156.
- Silks of a very fine character exhibited in the Turkish Department, 167. Cotton yarns, 347. Small assortment of woollen cloths, 352. Of a tolerably good quality for a first attempt, *ib.* Remarks on the silk fabrics, 364. Specimens of velvet and crêpe, 366. Large and interesting collection of skins, 387.
- Statistics of the paper manufacture of Turkey, 444. Excellent writing papers, 452. Remarks on the printed goods, 473. Various descriptions of costumes, 493, 484. Specimens of cutlery, 489-491. Hardware and iron manufactures, 496. Articles of glass, 537.
- Great variety of soaps and perfumery, 611. Stearic candles from Moldavia, 624. Wax candles and twisted tapers, 626. Confectionary and dried fruit preserves, 640. Remarks upon the employment of parasols and umbrellas in Turkey, 659. Specimen of an embroidered fan from Adrianople, 669. Account of the various descriptions of pipes from Turkey, 672, 673. Specimens of different kinds of snuff-boxes, 676.
- TURKEY, H. H. the Sultan of, 387, 483, 484, 600, 626, 652.
- TURKISH GOVERNMENT, THE, 69, 96.
- TURKEY-RED DYEING.—Specimens of, 457, 458.—See also *Woolen, Spun, &c., Fabrics* (printing or dyeing). *Lead, Chromate of.*
- TURKEY-CARPETS.—See *Carpets*.
- TURMERIC.—Samples of, from the East Indies, 88. Colouring matter obtained therefrom, *ib.* Exhibited in the ground state as used by dyers, *ib.*
- Turnbull, J. L. and J., 447, 451.
- Turnbull and Ramsay, 39.
- Turner, —, 509.
- Turner and Co., 548.
- Turner, G. (Juror), xxviii.

Turner, H. N., and Co., 552.

Turner, H. and W., 506.

Turner, J., 664.

Turner, J. A. (Furor), xxviii.

Turner, R., 447.

Turner, T., 490, 681.

TURNERY.—Notices on various articles illustrative of turnery, exhibited, 602.

TURNIP-CUTTING MACHINES.—Great utility of these machines, and economy in the use of them, 237. *Rival found at the Banbury turnip-cutters, ib.* Relative merits of Burgess' and Keys, B. Samuelsen's, and Phillips's turnip-cutters, 238. Prizes awarded, 238, 242.

TURNIP-FLY (*HALTICA HEOMORUM*)—Preparation for destroying the, 50.

TURPENTINE.—Series of the ordinary turpentine of commerce exhibited by English's Patent Camphine Company of Hull, 72. Samples of common turpentine for the United States, 73. Sample of purified turpentine prepared by J. F. Fleury of Bourdeaux, 76. Samples of turpentine from Spain, *ib.*

Turpin, F. A., 59, 641.

TURQUOISES.—Discovery by Major Macdonald in his journey into Arabia Petra of several localities in the country of Soualby, 16 days' journey from Suez, in which turquoise existed, 7. Difference in the colour of these turquoise from those of Persia, *ib.* Number and nature of the specimens exhibited, *ib.* Analogy of external character of the turquoise from Arabia and Abyssinia, 7, 8.

TURNER CLOCKS.—Small number exhibited, 338. Those which deserve favourable notice still fewer, *ib.* Two clocks with cast-iron wheels, *ib.* These ought to convince anybody that the prejudice against cast-iron clock wheels is altogether unfounded, *ib.* Both clocks have a remontoire apparatus in the going train, *ib.* Effect of that apparatus, *ib.* All turret clocks should have this apparatus, *ib.* It can be applied at a moderate expense, *ib.* Cheapness the principal advantage which cast-iron wheels have over brass or gun-metal, *ib.* Also greater strength, *ib.* New plan of striking in Mr. Robert's clock, *ib.* Explanation thereof, *ib.* Compensated pendulums to some of the clocks, *ib.* Mr. Robert's escapement a new one of his own contrivance, *ib.* Principle thereof, *ib.* Description of, and remarks on, Mr. Dent's escapement, *ib.* Maintaining power for keeping clocks going while winding, *ib.* Use of wire ropes, *ib.* Mr. Dent's clock possesses greater accuracy and greater strength than usual, *ib.* Collection of turret-clocks of M. Wagner of Paris, 339. Great fertility of invention displayed, *ib.* Clock with a continuous motion, intended for the purpose of driving equatorial telescopes, *ib.* Ingenious and simple mode by which effected, *ib.* Gravity remontoire apparatus, on the bevelled-wheel principle, *ib.* Description thereof, *ib.* Remontoire in one of these clocks without any additional wheel in the train, *ib.* How this is managed, *ib.* Escapement with a direct recoil, *ib.* Superior contrivance to Harrison's, *ib.* Remarks on the striking parts of the clocks, *ib.* The lever compensation pendulum the only one used in France, *ib.* Hardly any compensation now used in English clocks, *ib.* Other clocks from France remarkable for cheapness, *ib.* Observations on the electrical clocks, *ib.* These may be considered as connected with turret-clocks, *ib.*

Turton, S., 469.

Turton and Sons, 10, 486, 490.

TUSCANY.—Interest in a mineralogical point of view of the exhibition from Tuscany, 35. Fine collection of minerals sent by the Royal Technological Institution, including a magnificent series of marbles and alabaster and superb specimens of the numerous minerals found in the Isle of Elba, *ib.* Observations on two books of mineral fuel from Tuscany, *ib.* No agricultural produce from Tuscany worthy of notice, 52. The macaronies of this country the finest in the Exhibition, 55. Pine-seeds from Tuscany an article of great consumption in the Italian provinces, 57. Good samples of olive-oil, 85. Series of samples of dye stuffs, 91. Excellent and valuable collection of Italian woods, 156. List thereof, 156, 157. Samples of raw silk, 162.

Fine samples of coral, 164. Weavers' reeds, 199. Description of a planimeter, 303, 304. Beautiful specimen of a chamber organ by Ducci, of Florence, 326. Anatomical models, 346. Statistics of the paper manufacture of Tuscany, 444. Specimen of embroi-

dery, 472. Selections of very fine Leghorn hats and capotes, 483.

Specimen of iron-casting, 506. Elaborately carved furniture, 544, 550, 551, 552. Articles sculptured in a kind of lithographic stone, 558. Various fusts of columns in marble, one of them remarkable for the extreme beauty of the material, 563. Fine specimens of marble slabs and table tops, *ib.* Objects constructed of the true alabaster of Volterra, 565. Fine specimens of true Florentine mosaic, in pietra dura, 567, 704. New and peculiar manufacture in scagliola, 576.

Specimens of brooms made of Indian corn-straw, 602. Collection of soaps, some of them most excellent, 611, 613. Walking-sticks composed of horn, 665, 666. Beautifully carved ivory pipe-tube, 672, 673. Notices of the principal works of sculpture contributed by Tuscany, 704. Sculpture on a small scale, *ib.*

Tuscany, Royal Technological Institute of, 35, 71, 91, 468, 561.

Tustian, J., 50.

Tustian and Usher, 50.

Tutt, G., 218.

Tuvé and Co., 363.

Tuxford and Sons, 234, 212.

Twohale, J., and Sons, 359.

TWEEDS.—Specimens of milled, 353.

Twigg, G. and W., 609.

TWINE.—See *Cordage*, &c.

Tylden, Capt., 220.

Tyler and Co., 203.

Tylor and Pate, 506.

Tylor and Son, 506.

TYPE-BOXES (FOR COMPOSITORS).—New arrangement of type-boxes for compositors, 198.

TYPE-COMPOSING AND DISTRIBUTING MACHINES.—Ingenious machine for composing and subsequently distributing type, 198. Ingenious machine on an entirely new principle from Denmark, 406.

TYPES AND TYPE-FOUNDING.—Machines for founding types, 198. Gothic-shaped letters used in the earliest books printed in Germany, 408. Then rounded and became semi-Gothic, *ib.* Form completely changed in Italy under the influence of the Roman inscriptions, *ib.* Letters in imitation of the handwriting of the period adopted by Caxton, *ib.* Similar types used in France by A. Verard at the same period, *ib.* Modification of the form of the types by Basterville and others, *ib.* Improvements made in this art by Fournier at the close of the last century, *ib.* Exertions of the Didot family in improving the types and imparting the highest degree of elegance, 409. Pouches's patented type-casting machine in 1823, *ib.* Purchase of this machine by the type-founders and destruction thereof, *ib.* Engraving of vignettes and borders has made but little progress, *ib.* Fantastical types lately designated fancy letter, *ib.* Reinroduction of the old letters of Garand and Jensen, *ib.* Some beautiful works have been printed with these old letters, *ib.* But little progress made in the art of type-founding since the invention of casting types by Peter Schoeffer, *ib.* Work of the founder rendered somewhat more easy by the use of the American mould, *ib.* Invention of the sloping mould, and ingenious division of the letters by Didot in 1806, *ib.* Beauty of the types cut by Didot, *ib.* Invention of the compressing mould, *ib.* Mechanical mould invented by M. Brockhaus, *ib.* Invention of a series of types for printing Chinese, *ib.* Amongst all the types the most numerous and complicated are those required for the Chinese language, 409, 410. Great variety of beautiful specimens exhibited from all countries; England, 410. France, Russia, Sardinia, Holland, and Germany, *ib.* History of type-founding in the United States of America, *ib.* Invention of the American mould about the beginning of the present century, *ib.* Rapid advance of type-founding in America, 410, 411. Statistics of American newspapers, &c., 411. Quality of the American type, *ib.* Statement of the prices of types for the last half century, *ib.* Application of electrotyping to the formation of matrices an improvement deserving mention, *ib.* Specimens of types from the United States, *ib.* Combinations of logotypes, among the specimens from America, *ib.* No advantages result from their use, *ib.* General remarks on stereotyping specimens exhibited, 411, 412. Table showing the number of type-foundries, &c., in the Zollverein States in 1846, 442. List of awards and Exhibitors, 451-454.

- TYRHA MEAL**—Prepared from the rhizoma of *T. latifolia*, a curiosity worthy of notice, 54.
- TYRHONICTOR**—Description of this apparatus, 312. Designed as a storm-painter, *ib.* Mode in which used, *ib.*
- TYRODAPIS**—Writing machines for the blind, 311. No difficulty in use, *ib.*
- TYPOGRAPHY**.—See *Chromo-Typography*. Printing.
- TYREE BROTHERS**, 277.
- TYRROL**, —, 103.
- TYTHERLEIGH**, W., 239.
- TYACK**, W. V., 398.
- UBERY**, St., 153.
- UECHTRITZ**, L. von, 78.
- UHLHORN**, H., 200, 203.

- ULLENBERG AND SCHRITZLER**, 509.
- ULLERSDORF FLAX ESTABLISHMENT (Mordavia)**, 99.
- ULMER**, E. and W., 198.
- ULTRAMARINE**.—Pre-eminence of M. Guinét as a manufacturer of artificial ultramarine; his process unknown, 41. Desiderata in ultramarine, *ib.* Other discoverers of artificial ultramarine, *ib.* Increase in the number of manufacturing factories in France, Germany, and England; total production in France in 1846 and in 1851, 41, 42. Samples of ultramarine, 44, 45, 47–50.—See also *Green Ultramarine*.
- ULWAR**, Rajah of, 664.
- UMBRELLA**.—**UMBRELLAS**.—In carved ivory and bone, 682.
- UMBRELLAS AND PARASOLS**.—Oriental origin of parasols, 635. Form of, an indication of high rank, from its having been always carried by an attendant over the head of the owner, *ib.* Seems to have passed, both as a distinction and a luxury, into Greece and Rome in the declining ages of those countries, 636. Reference to the *Skedion*, or day-shade of the Greeks, *ib.* Not commonly known in this country till the beginning of the seventeenth century, *ib.* Its earlier use in Venice, *ib.* And far higher antiquity in China, *ib.* The general use of the parasol in England and France most probably adopted from China about the middle of the seventeenth century, *ib.* The use of umbrellas apparently adopted much later than the use of parasols, and but very slowly established in England, *ib.* Improvements which have been made in its construction since its first introduction, 647. Review of the various contributions from different countries; the largest quantities received from England and France, *ib.* et seq. Remarks on the contributions from Austria; names of exhibitors and articles exhibited, *ib.* Contributions from Belgium; observations thereon, *ib.* Contributions from the British Colonies, *ib.* Rich contributions from the East Indies and the island of Ceylon, *ib.* Description of the gorgeous state-umbrella from Moosheidabad, exhibited by his Highness the Maharajah of Nagpore, *ib.* Other examples from India, *ib.* Curious examples of umbrellas and parasols from China; not in common use among the middle and lower classes; statistics of the trade in them, 657, 658. France undoubtedly pre-eminent in the higher class of umbrellas and parasols; statistics of the trade in them, 658. Note on the French umbrella and parasol trade of the last century, 658, 659. Remarks on the contributions from Portugal, Prussia, and Tunis, 659. Use of umbrellas and parasols in Turkey, *ib.* England without a rival in the production of parasols and umbrellas of the plain descriptions; causes to which this may be attributed, *ib.* Statistics relative to the umbrella trade of the United Kingdom, *ib.* Description of the various processes in putting the frames together, showing the reason for the small cost of the labour in the manufacture of these articles, 660. Classification of the exhibitors according to the various countries, 660, 661. List of awards for various articles exhibited and for mechanical improvements, &c., 661.
- UMBRELLIST; ISLE OF WIGHT**.—Model of the, 108.
- UNDERWOOD**, —, 199.
- UNDERWOOD**, T., 688, 696.
- UNGERER**, E., 586.
- UNITED STATES OF AMERICA**.—This part of North America destined to occupy an important place in mineral industry, 17. Abundance of magnetic iron ore and specular iron ore, or oligist, in many of the States, *ib.* Also of fuel for iron-making establishments, *ib.* The trap formations of Lake Superior contain native copper of great richness, *ib.* The exhibition from the States, however, does not illustrate these sources of wealth, *ib.* Notices, at length, of the principal contributions in this Department, 17, 18. Details respecting the deposit of copper on the shores of Lake Superior, 18, 19.
- SERIES OF CEREALIA FROM THE UNITED STATES**, 53. The American rice, though originally imported from the Old World, now much the finest in quality, *ib.* Fine sample of Carolina rice, *ib.* Beautiful sheaf of beardless rice, *ib.* Beautiful samples of red and white millet, 54. Specimens of seeds and grasses, *ib.* Fine samples of flour exhibited from this country, 54, 55.
- SAMPLES OF MALT MADE FROM MAIZE**, *ib.* Samples of pearl barley, *ib.* Samples of oil-cake, 56.
- EXCELLENCE OF THE LONG-STAPLE COTTONS OF THE UNITED STATES**, 69, 95. Excellent specimen of bleached shell-lac, 76. Samples of starch, 78. Samples of oils, 83. Few small samples of flax and hemp; of fair average quality, 98. Collection of woods from America; by no means numerous, 149. List of woods and specimens in bark, 149–151. Samples of American wools, 158. Specimens of whalebone, 160. Specimens of oil, 163.
- CARRIAGES FROM THE UNITED STATES**, viz., a slide-top buggy, and a sporting waggon, 193. Drawing regulator for cotton, 195. Cotton-spinning machinery, 196. Self-acting lather and power-looms, 197. Sewing-machine, 198. Anti-friction engineers' tools and presses, 200. Wood-planing, tonguing, and grooving machine, 201. Card-clothing, 204. Kasim's stone-cutting machines, *ib.* Bookbinding machine, *ib.* Remarks on the naval architecture of the United States, 215. State of the steam navy, *ib.* Recklessness of the Americans in steam navigation, *ib.* Models of ships, 217. Nautical instruments, 218, 219, 220, 221. and pistols, 221. Ploughs, 226, 242. Notice of M'Cormick's and Hussey's reaping machines, 231, 232, 241.
- DESCRIPTION OF A NAUTICAL INSTRUMENT**, 251. Various nautical instruments, 252, 253. Surveying instruments, 258. Balances, 258. Large microscope by Hazzart, 267. Cameras, 275. Great superiority of the daguerreotype pictures exhibited in the United States Department, 277. Names of the various contributors and objects exhibited, *ib.* Domestic telegraphs, 294. Description of an instrument called an alarm barometer, 301. Use and construction of Ericsson's pyrometer, 302. Inflated globes of India-rubber and silk, 308. Also India-rubber maps, *ib.* Invention for teaching the blind to draw and write, 314. Lightning-rods of improved construction, 313. Dial of the seasons, *ib.* Diagrams intended to facilitate the study of mathematics, *ib.* Stringed, or bow, musical instruments, 330. Artificial leg, of excellent contrivance, 345, 346.
- COTTON MANUFACTURES**, 348, 349. Small quantity of woven goods of moderate pretensions, 352. Specimens of flannels, well made and finished, 358. Specimens of turbans, 382. Samples of various descriptions of leather, 350. Specimens of saddlery and harness, 394.
- COLLECTION OF NEWSPAPERS**; nothing remarkable either in the printing or lowness of price, 407. History and present state of type founding in America, 410, 411. Specimens of stereotypes and electrotypes of some merit, 414, 412. Apparatus and books for teaching the blind, 423. Numerous examples of bookbinding, 426. Specimens of wallum-bound ledgers and account-books, *ib.* History of paper-making in the United States of America, 443. Peculiar description of paper for envelopes, 448. Collection of stationery and book-binding, 452, 454, 455.
- SMALL VARIETY OF PRINTED GOODS FROM AMERICA**, 458. Chiefly adapted for their own markets, *ib.* Specimens of carpets and floor-cloths, 475. Specimens of boots and shoes, 479, 480.
- SPECIMENS OF CUTLERY, EDGE-TOOLS, &c.**, 489, 490. Observations on the various specimens of general hardware and iron manufactures, 496 et seq. Insignificant display of works in the precious metals and jewellery from America, 511. The American glass commended for the purity of its colour, 528. Articles of glass contributed by the United States, 536, 537. Mechanical reclining chair, 552.
- ARTICLES MANUFACTURED IN STEATITE, OR SOAP-STONE**, 559. Specimen of a kind of earthy fire-proof cement or paint, 587. Productions in caoutchouc, 594–596. Specimens of ivory veneer cut by machinery, 599. Various articles manufactured from ivory, *ib.* Superior specimens of coopers' work, 602. Specimens of brooms made of Indian corn straw, *ib.* Various kinds of soap, 609, 613–615. Specimens of sper-

- masetti and spermaceti candles, 627. Blacking, 631. Soft fruit preserves, 637. Brandy-peaches, 641. Stuffed animals, birds, and fishes, 646. Remarks on the collection of some of the mineral and vegetable products and manufactures of the State of Maryland, contained in an ornamental cabinet made of the principal woods of that State; list of the objects exhibited, 651, 652. Gold-headed walking-stick, of carved hickory, 666. India-rubber toys, 678.
- Notices of the principal works of sculpture on a large scale contributed by the United States, 700. Castings in bronze, 706, 707. Castings in zinc, 707. Castings in iron, *ib.*

- VEGETABLE KINGDOM.—Incompleteness of the collection of the natural raw produce from all parts of the globe, from the fact of the Exhibition being the first attempt to bring together a complete collection, 71. Circumstances by which the Committee of the Jury was influenced in making their awards, *ib.* General remarks on the objects in the various sections, *ib.*: 1st. gums and resins, including starch; samples exhibited, names of exhibitors, awards, &c., 71-79. 2nd. Oil series; general remarks, exhibitors, exhibits, and awards, 79-83. 3rd. Dyes and colours; general remarks, exhibitors and awards, 85-91. 4th. Tanning materials; list of exhibitors, exhibits, and awards, 91-93. 5th. Fibrous substances; bottom, general remarks on the objects exhibited, awards, with the names of the exhibitors, 93-96. Flax and hemp; samples thereof exhibited, remarks thereon, awards, &c., 96-100. Miscellaneous fibres; remarks thereon, exhibitors, exhibits, and awards, 100-103. 6th. Cellular substances; articles exhibited, notices and awards, 103, 104. 7th. Timber and ornamental woods; detailed report thereon, names of exhibitors and awards, 104-157. 8th. Miscellaneous substances; objects exhibited and awards, 157.—See also *Animal and Vegetable Substances, &c.*
- VEGETABLE OILS.—See *Oils*.
- VEGETABLE SUBSTANCES, WORKS OF ART IN.—Notices of the principal, 686.
- VEGETABLE WAX.—See *Wax*.
- VEGETABLES, PRESERVED.—Samples of, from France, 65.—See also *Alimentary Preserves*.
- Veil and Co., 440.
- Veitch, Captain, 74.
- Veitch, Dr., 245.
- Velkoff Estate, 907.
- VELUM BINDING.—Separate branch of bookbinding trade, 426. Consists of binding account-books, ledgers, &c., *ib.* Works of English binders fully sustain their reputation for beauty of execution and solidity of workmanship, *ib.* Remarkable progress of this branch of trade in France, *ib.* Improved mode of numbering the leaves by means of a paging machine, patented by Mr. Shaw, &c. Other machines for the same purpose, *ib.* Application of caoutchouc to the manufacture of account and other books, *ib.* Not sufficiently strong to sustain the wear and tear consequent on the frequent opening and

- shutting of leathers, 426. Specimens exhibited in the English Department, also from France and America, *ib.*  
 • Specimens exhibited, and awards to the exhibitors, 452-455.
- VELLUM AND PARCHMENT.—Mode of preparation; specimens exhibited, names of exhibitors to whom Prizes were awarded, 394. See also *Leather*, &c.
- VELOCIMETERS.—Aquatic velocimeter for showing the distance traversed by a vessel in a given time, and its velocity, 263. Description of the instrument, *ib.* Instrument well adapted to its work, *ib.*
- VELVETS AND VELVET RIBBONS.—Various specimens of velvet and velvet ribbons, exhibited in the British Department, and also from Prussia, France, Sardinia, and Austria, 365-366, 375, 376.—See also *Silks and Velvets*.
- VENTILATORS.—Specimens of, 553.
- Venables, C. (Juror, and Associate), xxviii, xxix; (Exhibitor), 431, 453.
- Venables, G., 431, 453.
- Venables, Wilson, and Tyler, 429, 431, 453.
- Vendellus, —, 399.
- VENETIAN GLASS.—Specimens of, 536, 537.
- VENICE.—Early period from which Venice has possessed the art of glass-making, 522. Concern with which the manufacture was regarded by the Government, *ib.* Its establishment in the island of Murano, privileges granted to the merchants; stringent regulations enforced, *ib.* Improvements in design and colour effected, *ib.* Circumstances which led to the destruction of the monopoly possessed by the Venetians, *ib.* The cylindrical process in glass-blowing was that principally employed by the Venetians, 525. See also *Bohemian*.
- VENTILATION OF MINES, APPARATUS FOR.—Contrivance for opening and shutting the ventilating doors of mines by means of levers, &c. Model thereof exhibited, *ib.* Great safety of this contrivance, *ib.* Ventilator for airing mines from the works of the Marcelline and Couillet Smelting Company's Works, Belgium; A. Fabry, inventor, 175. Construction of the machine and working thereof, *ib.*
- VENTILATORS.—Specimens of various descriptions of, 507, 509. Glass Ventilators, 537.
- Ventujol and Ghassang, 391.
- Verard, A., 404, 468.

 Warburton and Co., 491.  
 Ward, N. B., 314.  
 Ward, Ann, cxx.  
 Ward, C., 331, 332-334, 631.  
 Ward, J., 50, 193.  
 Ward, J. W., 358.  
 Ward and Payne, 490.  
 Ward, Smith, and Co., 50.  
 Ward, Sturt, and Co., 479.  
 Ward, W. and J. W., 48.  
 Ward, Lieut. E., xxv.  
 Warden, A. V., 373.  
 Wardle, H. and T., 367.  
 Waring, C. H., 201.  
 WARLICH'S PATENT FUEL.—Nature and object of this invention, 12. Specimens exhibited, *ib.*  
 Warming, E., 387.  
 Warmont, V. E., 59.  
 Warner, J., and Sons, 179, 510.  
 Warner, J., and Co., 502.  
 Warner and Sons, 507.  
 Warnes, —, 98, 370, 372.  
 WARP LACE.—See *Lace.*  
 WARP LACE MACHINES.—For making silk laces, 127.  
 Warren, R., 631.  
 Warriner, G., 65, 509.  
 Wart, H. van (Juror), xxix.  
 Warwick, C. (Juror), xxviii.  
 WARWICK VASE.—Model of, in terra cotta, 541.  
 Warwick, Weston, 83.  
 Washer, F. A. (Juror), xxix, x. xii.  
 WASHING BLUE.—Samples of, 45.  
 WASHING MACHINE.—Machine of galvanized iron, 507.  
 Washington and Davis, 368.  
 Wasgef, —, 407.  
 Wasserott, S., 583.  
 WATCH CASES.—Watch cases in enamel, and cases ornamented with gold and diamonds, and engraved gold plates from Switzerland, 617, 520.  
 WATCH GLASSES.—Specimens of, 536, 537.  
 WATCH-HANDS.—Machine for cutting, 201.  
 WATCH-PLATE DRILLING MACHINES.—Ingenious description of, 340.  
 WATCH-WHEELS.—See *Watches.*  
 WATCHES.—Observations on the various watches exhibited, 340. Carriage clocks included under this head, *ib.* Difficulty in establishing any principle on which prizes can be given, *ib.* Watches of such various descriptions, *ib.* London, Liverpool, and Coventry, the three principal places in England where watches are made, *ib.* Beautiful collection of various kinds by Dent, *ib.* Contrivance for winding up and setting the hands without a key, *ib.* Description of the contrivance, called a split second hand, *ib.* The watch for blind persons, *ib.* Description, *ib.* Remarks on the collection of Mr. C. Frodsham, and Messrs. Parkinson and H. Frodsham, *ib.* Ingenious watch-plate drilling machine, *ib.* Extraordinary number of watches exhibited, *ib.* Movements of watches and small clocks made by machinery by Messrs. Japy of Paris, 340, 341. Extraordinary cheapness thereof, 341. Cheap kind of watch alarm from Paris, *ib.* Models of different escapements, *ib.* Solitaire watch invented by Mr. Jackson, *ib.* Main springs from Paris, *ib.* Importance of good main springs, *ib.* Pocket chronometers, *ib.* Cheap watches in German silver cases, *ib.* Large collection of watches from Switzerland, remarks thereon, 341, 342. Small watch in the end of a pencil-case, 342. Instrument for tracing out the teeth of watch-wheels in the epicycloidal form, *ib.* Machine for polishing the teeth of the escape wheel of a horizontal or cylinder escapement, *ib.*  
 WATCHMEN'S CLOCKS.—See *Clocks, Timepieces, &c.*  
 WATER CLOSETS.—Specimens of, 208, 504, 505, 508, 509.  
 WATER COLOURS.—Specimens of, prepared with wax, 48.  
 WATER-CRANE.—Specimen of a, 187.  
 WATER-METERS.—Five different contrivances for this object exhibited, but none so far perfected as to satisfy the conditions of a good meter, 183. Patent power-engine to act as a water-meter, 315, 316. Novelty consists in its economy of space, *ib.*  
 WATER PAILS.—See *Coopers' Work.*  
 WATER-RAMS.—Hydraulic ram for raising water to the tops of houses, 182. Improved patent hydraulic ram, 182, 183. Table containing the results of experiments made to determine the useful effects of these rams, 183.  
 Waterhouse, G. and S., 520.  
 Waterlow and Sons, 198, 426, 447, 456.

- Watermeyer, C., 90, 102.  
 WATERPROOF FABRICS.—Specimens of, 475. Remarks on the application by Messrs. Macintosh and Co. of caoutchouc or India-rubber to the waterproofing of garments, 593, 594.—See also *Caoutchouc and Manufactures therefrom*.  
 Waterston, G., 451, 453.  
 Waterston and Brogden, 516.  
 Watkins and Lill, 173, 252, 262, 264, 267, 282, 283, 301-303, 315.  
 Watney, A., 13.

 Watson, G. W., 193.  
 Watson, H., 198.  
 Watson, J. and R., 163.  
 Watson and Ledyard, 443.  
 Watson, M. L., the representatives of, 685, 693.  
 Watt, James, and Co., 172.  
 Watt and Son, 165.  
 Watt, W., 50.  
 Watteyne, J., 99.  
 Watts, I. (Juror), xxvii.  
 Watts, J., 50.  
 Watts, R. M., 52.  
 Waun, T. W., 559.  
 WAX.—Substances of various origin and of very different composition included under the name of wax, 624. Description of wax employed in candle-making, *ib.* Chinese wax not a vegetable wax, *ib.* The knowledge of true chemical composition of wax, owing to the researches of Mr. Brodie, 624, 625. Observations on wax bleaching, 625. Processes employed, *ib.* Wax more valuable when bleached, *ib.* Large quantities of wax imported into the United Kingdom, 625, 626. Collection of specimens to illustrate wax bleaching, 626. List of awards and exhibitors, 628 *et seq.*—See also *Oil, Wax, &c.*  
 WAX CANDLES.—See *Candles*.  
 WAX CLOTH.—Remarks on the wax-cloth decorations exhibited by M. Vivet, 718.  
 WAX FIGURES.—See *Ethnographical Models*.  
 WAX FLOWERS.—See *Flowers, Artificial*.  
 Weaver, —, 274.  
 WEARDALE (Durham)—Existence of large quantities of brown hematite and carbonate of iron at, 7.  
 Weare, —, 538.  
 WEARING APPAREL. (Class XX.)—Tabular classification of objects in this class, xix. List of Jurors and Associates appointed for this class, xxix. List of exhibitors to whom Prize Medals have been awarded, xc-xxii. And of those of whom Honourable Mention is made, xxii, xxiii. (General) remarks on the articles for general or personal use exhibited, 481-484. Articles of upper clothing, 481, 482. Specimens of shirts, 482. Corsets, 483. Specimens of straw plait and bennet, *ib.*  
 Wearmouth Paper Company, 428.  
 Weatherley, H., 202, 642.  
 WEAVERS' REEDS.—Specimens of, 199.  
 Webb Brothers and Co., 63.  
 Webb, R., 383.  
 Webb, J. (Juror), xxx, xxii.  
 Webb, R., 52.  
 Webb, J., 536.  
 Webber and Hairs, 379.  
 Webber, J., 557.  
 Webber, S. (Juror), xxvii.  
 Weber, C., 520.  
 Weber, G. D., 507.  
 Weber, J. B., 448, 449, 455.  
 Weber, L., 102.  
 Weber, Professor, 313.  
 Weber and Schultheis, 291.  
 Weber and Co., 654.  
 Wedding, Professor W. (Juror), xxvii.  
 WEDGWOOD RAILWAY.—Specimens of wedges for railways, 187.  
 Wedgwood, J., and Sons, 540, 694.  
 Wedgwood, R., 422.  
 Weedon, F., 469.  
 Weekes, K., 686, 693.  
 Wegner, T. R., 469.  
 Wehrle and Steuert, 384, 335.  
 WEIGHING MACHINES.—Scales, weighing-machines, and various other implements for weighing, from France, 121. Description of J. Berlinger and Co.'s weighing machines, *ib.* Model of a patent weighing table, and description thereof, from Austria, 191. Steel-yard and weighing-machines invented by Davidson and Co., of Edinburgh, *ib.* Patent weighing-machines, invented by H. Pooley and Son, of Liverpool, remarkable for simplicity and neat and effective construction, *ib.* Patent weighing-machines of Day and Millward, of Birmingham, *ib.* Ingenious machine which registers on paper the weight of every article weighed, 259. Other specimens of weighing-machines, 506, 508.  
 WEIGHTS AND MEASURES.—Standard scales used for the formation of many scales now in use, 257.  
 Weige, J. J., 349, 876.  
 Weill, C., 65, 642.  
 Weinknecht, T., 387.  
 Weinmeister, G., 490.  
 Weishaupt, C. M., and Sons, 512, 684, 700, 738.  
 Weiss, —, jun., and Co., 360.  
 Weiss, J., and Son (Vienna), 491, 657.  
 Weiss, J. H., 50.  
 Weiss and Son (Strand), 344-346, 494.  
 Weissfloy, F. F., 357.  
 Welch, Margetson, and Co., 459, 482.  
 Welch and Sons, 483.  
 Welch, T., 459.  
 Welcker, A. C., 78.  
 Weld, J., 218.  
 WELD (A DYE).—Grown in Great Britain and the north of Europe, 88. Plant from which obtained, *ib.* Colouring matter extracted, *ib.*  
 Wells, J. T., 507.  
 Well and Thompson, 201.  
 WELSH HARPS.—See *Harps*.  
 Wemmer, J., 480.  
 Wemyss, Admiral, 559.  
 Wenzel, J. F., 267.  
 Wenham Lake Ice Company, 507.  
 Werley, R., and Co., 483.  
 Werth and Co., 78.  
 Wertheim, F., 590.  
 Wertheimer, D. J., 310.  
 Wertheimer, S., 520.  
 Wescher and Strassman, 509.  
 Wesenfeld and Co., 50.  
 Wessel, F. W., 373.  
 West and Son, 516.  
 WEST OF ENGLAND.—Observations on the woollen manufactures of, 351. Seats of the principal manufactures in, *ib.*  
 West Ham Gutta Percha Company, 598.  
 WEST INDIES.—Samples of rice and maize, 53. Samples of dried fruit, 56. Remarks on the various specimens and samples of cotton from the West India Islands, 93. Various specimens of vegetable fibres, 102, 103. Collection of wools, native of or grown in the West Indies, 116, 117. See also *Barbados, Jamaica, Trinidad, &c.*  
 Westall and Co., 166, 600.  
 Westermann and Co. (Berlin), 335.  
 Westermann, A. H., and Co., 372.  
 Westermann, A. H. C., and Sons, 730.  
 Westermann, G., 399.  
 Westhead and Co., 470.  
 Westley, J., 424, 453.  
 Westley and Co., 424, 453.  
 Westmoreland, J., 381, 282.  
 Weston, W., 476, 78, 83, 95, 104.  
 Westrup and Co., 202, 335.  
 Westwood and Moore, 587.  
 Wetherell and Brother, 50.  
 Wetsteins, —, 406.  
 Wetli, —, 384.  
 Wettli, M. H., 552.  
 Wex and Lingner, 479.  
 Weyen, S. Van de (Juror), xxv, xxviii, 397.  
 Weygand, A., 519.  
 Weyke, F. (Juror), xxvi.  
 WHALE OIL.—See *Oil*.  
 WHALEBONE.—Samples of whalebone exhibited; remarks thereon, awards, &c., 160. Articles made of whalebone exhibited; prizes awarded, 600.  
 Wharnccliffe, Lord (Juror), xxv, xxix.  
 Wharman, J., 427, 447.  
 WHEAT.—Samples of Mr. H. Payne's "Revitt" wheat, 52. Great value it possesses, *ib.* Should wholly supersede the cultivation of the Egyptian revitt, *ib.* This latter far too abundant in the English market, *ib.* Samples of R. Webb's "Talavera" wheat grown in England, *ib.* Excellent quality of samples of "white Chidham" wheat

- Exhibited by H. R. H. Prince Albert, *ib.* Samples of wheat from Ipswich, 52. Excellent white wheat from Cawdor, Scotland, *ib.* Samples of wheat from Australasia, including Van Diemen's Land and New Zealand, *ib.* Samples from Port Adelaide, *ib.* From Swan River colony and Port Phillip, *ib.* From New Zealand, *ib.* From Canada, *ib.* Samples of good red wheat from Nova Scotia, *ib.* Sample of soft white wheat from the Cape of Good Hope, *ib.* Collection of specimen ears of wheat from Jersey, *ib.* Sample of white wheat from Malta, *ib.* Numerous samples of wheat from a Belgium, none of any striking superiority, *ib.* Samples of wheat from France, *ib.* Sample of wheat of great promise from Algeria, *ib.* Samples from Spain, generally dirty, but unusually fine in quality, *ib.* Sample of wheat from Madeira, *ib.* From Odessa, 53. Fine sample of black wheat from Russia, *ib.* Samples of other wheats, *ib.* Sample of hard wheat from Turkey, *ib.* Samples of wheat from Tunis, *ib.* Samples from the United States, *ib.*
- Wheatstone and Co., 332-334.
- WHEATSTONE'S ELECTRIC TELEGRAPHS.—Referred to and described, 287.
- Wheeler, —, 203.
- Wheeler and Ablett, 482.
- Wheeler, T., 598.
- Wheeler, T., and Co., 479.
- WHEELS AND AXLES, RAILWAY.—Disc wheel and hollow axle for railways, 186. Specimens of Brigg's patent compound axle, tire, and rails, *ib.* Railway axle and railway wheel-tire, forge hammered, 187. Specimens of railway wheels and axles; form of wheel peculiarly adapted for express trains, *ib.* Locomotive carriage tires, *ib.* Description of Normanville's patent axle-box *ib.*
- WHEELSTONES.—Collections of wheelstones from Belgium, remarkable for their dimensions and preparation, 23.
- Whicker, —, 315.
- Whipple, —, 244, 277.
- WHIPS AND CANES.—Specimens of, 394.
- Whishaw, F., 598.
- Whitby, E., Jun., 481.
- WHITBY (York).—Specimens of jet from, 13.
- White, —, 97.
- White, A., 266.
- White, G., 509.
- White, Rev. G., 617.
- White, G. B., 58.
- White, J.—Statement by, showing in quinquennial periods from 1825-1850, the amount of dichromate of potash produced by a single manufactory in Scotland, 39.
- White, J., and Co., 574.
- White, Joseph, 217.
- White, J. B., and Sons, 575, 587-589.
- White, J. C., 394.
- White, M., 63.
- White, Messrs., 238.
- White, Son, and Co., 728, 729.
- White and Wing, 410.
- WHITE-LEAD.—Several producers of white-lead manufactured by the old processes distinguished by awards, 42. Other salts of lead proposed to replace the carbonate generally found deficient in some property when brought into use, *ib.* Originality of the process exhibited by Mr. H. Lee Pattinson; description thereof, *ib.* Statement as to the present condition of the white-lead manufacture in France, *ib.* Specimens exhibited, 43-50. See also Zinc-white.
- WHITE PAINTS.—Specimens of, manufactured from oxide of zinc, 48.
- WHITE POPPIES, EXTRACT OF.—Samples of, 50.
- Whitehead, J., 233, 509.
- Whitgift, M., and Co., 381.
- Whitehouse and Co., 507.

- Woods and Forests' Commission (Algeria)**, 103.
- WOODS, IMITATION**.—Various specimens of great excellence, 546. Awards to exhibitors, 551. See also *Painted Woods*.
- WOODS AND OTHER VEGETABLE SUBSTANCES, WORKS OF ART IN**.—Notices of the principal, 686.
- WOOD-VINEGAR**.—See *Vinegar*.
- Woodward, B. H., —.
- WOOL**.—The raw material of the most importance and in most general use for textile fabrics and clothing, 157. Naïve nature of the wool of sheep in their wild state; modifications and improvements which have taken place therein in the domesticated breeds, *ib*. Objects which the Jury have kept in view in judging of the quality of the wools exhibited, *ib*. Unanimous opinion of the Jury as to the wools exhibited from Germany very pre-eminent in the qualities of highest value, *ib*. Observations on the samples of wool from various countries; samples exhibited; names of exhibitors and awards, &c., 157–160. Blue samples of wool from Austria, 157, 158. Remarks on the samples of wool from various of the Zollverein States, 158. Samples of American wools; observations thereon, *ib*. Examples of wool of a good and valuable quality in the Russian Department, 158, 159. Remarks on the exhibits of wool in the French Department, 159. Numerous samples of wool of good quality transmitted from Spain, *ib*. Samples of wool in the British Department of the Exhibition, *ib*. Case containing 132 specimens of rearing wool from Australia, *ib*. Samples of wool from the Cape of Good Hope, *ib*. Remarks on the specimens of wool the production of the Cashmere goats kept by H.R.H. Prince Albert at Windsor, 159, 160. Specimens of Thibet wool, 478.
- Woolcock, Catherine, exx.
- WOOL-COMBING MACHINES**.—Machine for long-wool combing on a new principle, 196.
- WOOL-DYEING**.—Use of bichromate of potash for the purposes of, 39. Successful employment of red and yellow prussiates of potash in wool-dyeing, 41. Colours for wool-dyeing without boiling, 45. Extracts and solutions for dyeing wool in a single operation, 47. Specimens of dyeing broad cloths, 459.
- Woolams, J., and Co., 547, 548, 552.
- Woolams, W., and Co., 548, 552.
- WOOLLEN CLOTHS**.—Difference between our home productions and those of the Continent, 350. Considerable attention given to the dyeing of cloth, 351. Seats of manufactures from which the Exhibition has been supplied, &c. Woollen manufactures from the West of England, *ib*. Leeds the most important town in England for woollens, *ib*. Attention paid to perfect the woollen manufacture in all its branches, *ib*. Huddersfield and its neighbourhood second in importance for the production of cloths, *ib*. Other towns in the West of England celebrated for the production of cloths, *ib*. Variety of cloths from Scotland and Ireland, *ib*. Foreign countries contributing woollen cloth, 351, 352. Excellence of the goods exhibited by Messrs. Cooper of Leeds, J. Randoing of Abbeville, and E. Simonis of Belgium, 352. These exhibitors, being members of the Jury, are disqualified from receiving a Medal, although their goods are

...titled the etc. *ib.* Description of the goods exhibited and Awards made by the Jury, 351-353.

**WOOLLEN MANUFACTURING MACHINERY**—Very slenderly represented in the Exhibition, notwithstanding its extent and importance, 196. Machines exhibited in the British Department, *ib.* In the French Department, *ib.* Not a single shearing-machine contributed by English mechanics, but several of very creditable workmanship in the Foreign Department, *ib.*

**WOOLLEN AND WORSTED MANUFACTURES (CLASS XII.)**—

Tabular classification of objects in this Class, xiv.

List of Jurors and Associates appointed for this Class, xxviii. List of exhibitors to whom Prize Medals have been awarded, lxxi.-lxxiii. And of those of whom Honourable Mention is made, lxxiii. List of exhibitors in favour of whom Money Awards have been made, *ib.* Division of the duties of this Class into four

Sub-Juries—woollen cloths, flannels and blankets, worsted and mixed fabrics, and yarns, 350. Aid afforded by Associate Jurors, *ib.* Similarity and equality of merit displayed in every Department, *ib.* Reason why no Council Medal has been awarded in this Class, *ib.* See also *Flannels and Blankets. Woollen Cloths. Worsted Stuff Goods. Yarn.*

**WOOLLEN YARN.**—See *Yarns.*

Woolridge, J., 509.

**WORK-BOXES.**—Specimens of ladies' work-boxes in wood and papier maché from America, 653. Remarks on the contributions from Spain, Belgium, *ib.* Specimens exhibited, 653. Exhibition of work-boxes in the Chinese Department; remarks thereon, 653. Examples of Malaid and Japanese work-boxes from Persia, 654. Remarks on the Exhibition of work-boxes in the British Department, *ib.* Specimens of work-boxes from Wurtemberg, 654, 655. Awards, 655.

Workman, J., 581.

Wormum, R., 334.

Worsdell, G., and Co., 187.

**WORSTED STUFF GOODS.**—Distinction between these fabrics and woollen cloths, 353. The worsted manufacture, though of ancient date, only attained its present eminence in England during the last quarter of a century, *ib.* Invention of the wool comb attributed to St. Brise, *ib.* All the goods, up to about 1831, were made of wool alone, 354. Manufactures of worsted weft and cotton warp first brought forward in 1834; great impetus given to the trade thereby, *ib.* Introduction in 1836 of the wool of the Alpaca, *ib.* Difficulty at first experienced in the working of this material, *ib.* Introduction, about the same time, of Mohair or goats' wool; beautiful fabrics produced from it, *ib.* Progress of the trade illustrated by a reference to the population of the town of Bradford, *ib.* Increase in the number of mills, *ib.* Returns showing the extent of its present manufacturing operations, *ib.* Summary of the whole of the worsted factories in Great Britain and Ireland, 354, 355. Classification of worsted stuffs contained in the list drawn up for the Jurors, 354. Consumption of these various manufactures, *ib.* Exports from 1<sup>st</sup> January to 28th June, 1851, *ib.* Articles exhibited under this head, and Prizes awarded, 356-358. Specimens of worsted manufactures for personal use, 478.

**WORSTED YARN.**—See *Yarns.*

Worthington, W., 13.

Wostenholm, G., and Sons, 490.

Wotherspoon, J., and Co., 637, 642.

Wotherspoon, R., 77.

**WOVEN, SEWN, &c., FABRICS, SHOWN AS SPECIMENS OF PRINTING OR DYEING (CLASS XVIII.)**—Tabular classification of objects in the Exhibition into which this Class is divided, xviii. List of Jurors and Associates appointed for this Class, xxix. List of exhibitors to whom Prize Medals have been awarded, lxxxv, lxxxvii.

Remarks on the productions of the English and Scotch printers, 456. Changes in the trade since the repeal of the heavy duty on printed cottons in 1831, *ib.* Great improvements effected in the material printed upon, *ib.* Substitution of machine-work for block-printing, *ib.* Reduction in price consequent thereon, *ib.* Encouragement of a less showy taste in these goods; preference for goods of elegant and quiet patterns, *ib.* Formerly the English printer borrowed extensively from the style of the French, *ib.* Progress of the trade in scientific knowledge enables the English printers to produce all descriptions of goods successfully, *ib.* Taste in almost

every market changed and improved with the reduction of price, 456. Mousseline-de-laines of French and English manufacture, *ib.* Causes of superiority in the finer classes of French goods, 457, 458. Fine specimens of work and taste in bareges of English manufacture, 457. Triumph of art justly due to the English printers for specimens of blocked de-laine goods (tho' woollen and cotton fabric) *ib.* Choice specimens of machine work of de-laine shown in some of the collections, *ib.* Few good samples of English furniture prints shown, *ib.* This trade, *ib.* Dressing, *ib.* Woven damasks have superseded the use of calico printed furniture, *ib.* Special reference made to the variety of specimens of Turkey-red printed and dyed fabrics, *ib.* Its brilliancy and permanent colour secures it a steady consumption; high average of excellence shown in its production, *ib.* Observations on the printed silk handkerchiefs; originally of Eastern origin, *ib.* Still an article of considerable import, *ib.* Changes which have taken place in the relative imports, *ib.* Progressively increasing trade in this branch of the print manufactures, *ib.* Trade carried on for some years in Germany, *ib.* Attempts made in France of late years to print silk handkerchiefs, *ib.*

Excellence of the specimens of printed goods exhibited in the British Department, 457, 458. Absence of any specimens of printed goods, the productions of Rouen, 458. Reference to the contributions of the French printers, *ib.* Character of the French goods differs from that of the English, *ib.* Fine printed furniture from France, *ib.* Beautiful specimens of yarn-printed silks, *ib.* Interesting contributions of printed goods from Switzerland, *ib.* Specimens of printed goods from Russia, Prussia, Austria, and other foreign countries, prepared chiefly for their respective markets, *ib.* Egyptian contribution of printed goods, curious, *ib.* Specimens of printing from Central India, *ib.* Circumstances which have guided the Jury in their decisions and awards, *ib.* General remarks on the specimens of dyed goods, *ib.* Numerous specimens of great variety and purity of colour in the British Department, *ib.* Collection of dyed goods from France, variety of merinos, *ib.* Varieties of dyed yarns from Saxony, Prussia, Austria, and Russia, *ib.* Numerous specimens of dyed silk from Switzerland, *ib.* Complete assortment of dyed silks from China, as used in her manufactures, *ib.* The art of dyeing has participated in the great industrial movement of the last 25 years, *ib.* Difficulty of presenting bright and uniform colour, on fibres having different affinities, has been overcome, *ib.* Substitution of Prussian blue, with a tin mordant, for indigo, with complete success, *ib.* Colours extracted from dye-woods rendered brighter and more permanent, *ib.* Preparations of tin in general use, *ib.* Great improvement in the bleaching or whitening silks fibre intended for the dye-bath, *ib.* Points of excellence upon which the awards in this Class are founded, 1st.—In printing; 2nd.—In dyeing, 458, 459. List of exhibitors awarded Prize Medals in this Class for printing and printed goods, 459. Prize Medals awarded for dyeing, *ib.* Application of a scientific principle in preparing various textile fabrics, by John Mercer, *ib.* Results shown in the goods exhibited by him, *ib.* The Jury would have recommended this inventor for a Council Medal if his discovery had been extensively applied in manufacture, *ib.*

 Yarns.—General remarks on the cotton yarns exhibited, 347. Specimens exhibited, 348, 349.  
 The dyed yarns not worthy of special mention, with the exception of the Turkey red shown by Leumann Brothers, of Switzerland, 347. Specimens exhibited, 348, 349. Specimens of dyed woollen yarns in various colours, 459.  
 Different descriptions of worsted and woollen yarns, 359.  
 The Jury do not report on Berlin or embroidery yarns, *ib.* Remarks of those yarns depends on the colour, *ib.* Observations on the worsted Merino yarns, *ib.* Larger proposition of these than of any other, *ib.* Countries from which principally received, *ib.* Excellent samples from English exhibitors, *ib.* The mule better than the throstle for the production of yarns adapted to the manufacture of Merino cloth, *ib.* Samples of Merino yarns exhibited, 359, 360. Peculiar kind of barège yarn exhibited, 360. Samples of lustre worsted yarns, *ib.* Specimens of woollen yarns numerous and generally good, *ib.* List of exhibitors contributing the best samples, *ib.* Specimens of hosiery yarns from Leicester good, *ib.* Deserved fame which the Leicester houses have long maintained for the production of this class of yarn, *ib.* Cashmere yarns of excellent quality exhibited by Hindenlang, *ib.* Good samples of yarns made from a mixture of silk and wool, *ib.* This branch of the worsted trade comparatively new, *ib.* Excellent specimens of alpaca and mohair yarns, *ib.* Rapid strides made towards perfection in this branch of trade, *ib.* Numerous specimens of Genappe yarns, *ib.* Generally excellent in management, *ib.* Awards, 360, 361. Specimens of worsted yarns prepared from Merino and Virginia wools, 478.  
 Observations on the specimens of flax and hemp yarns exhibited, 360. Little competition in mill-spun yarns, *ib.* Ireland not adequately represented, *ib.* Specimens of fair quality from Scotland, *ib.* Excellence displayed in the various specimens from Belgium and Prussia, *ib.* Sample exhibited, 371, 372, 373.

 Zinc.—Specimens of zinc coated with lead by the galvanic process, 9, 10. Specimens of ores of zinc from Alston Moor, 12. Samples of sheet zinc, *ib.* Good quality of the zinc, *ib.* Improvement made in the method of obtaining it by John Grey, *ib.* Objects exhibited, *ib.* Zinc obtained from "Franklinite," and crystals of this mineral exhibited by the New Jersey Exploring and Mining Company, 18. Excellency of the zinc manufactures of the Nouvelle Montagne Zinc Mining Company (Belgium), 23. Objects exhibited, *ib.* Various products obtained in the preparation of zinc in the works in Beuthen, in Upper Silesia, 31. Zinc from the mines and foundries of the Mining Company in Eschweiler (Stolberg), *ib.* Specimens of ores of zinc and metallic zinc, from the Royal Iron Foundry at Königshütte, *ib.* Sheet zinc for roofing from Breslau, *ib.* Assortment of sheet zinc from Breslau; remarkable execution of some samples, as thin as paper, *ib.* Specimens of zinc ores from different mines in Mülheim or Ruhr, *ib.* Manufactured zinc, of fine quality, *ib.*  
 ZINC, ACETATE OF.—Samples of, 45.  
 ZINC, CASTINGS IN.—Specimens of sculpture, 68. See also *Castings, Zinc*.  
 ZINC, CHLORIDE OF.—Samples of, 43.  
 ZINC, GREEN OXIDE OF.—Samples of, 43.  
 ZINC MANUFACTURES.—Limited use made of zinc 30 years ago, 4. Extension of the application by the Vieille Montagne Company, *ib.* Objects specified, *ib.* Production of oxide of zinc as a substitute for white-lead in house painting, *ib.* Extent of the works of the Company, *ib.* High character of its products, *ib.* Numerous examples of manufactures, castings, and galvanoplastic productions from France, Belgium, and State of the Zollverein, 498. Use of this metal in this country confined chiefly to the manufacture of household utensils, *ib.* Extensive use of this metal on the Continent for castings, *ib.* Effect of castings generally good, *ib.* Specimens exemplifying the various uses to which zinc may be applied, *ib.* Zinc might be advantageously employed to a larger extent, *ib.* List of Awards, 503, *et seq.* See also *Castings, Zinc*.  
 ZINC, OXIDE OF (OR ZINC WHITE).—The introduction of this oxide in the place of a salt of lead a remarkable event in the history of the chemical arts, 42. This application first successfully made in France; it rapidly extending, *ib.* How prepared by some of the exhibitors, *ib.* Specimens of white paints manufactured from oxide of zinc, 43. Samples of this oxide, 4, 45, 47, 48, 49, 50.  
 ZINC, SULPHATE OF.—Price per pound in Germany, 49. Samples thereof, 50.  
 ZINC, YELLOW CHROMATE OF.—Samples of, 43.  
 ZINCOGRAPHY.—Notice of specimens of, 688. Nature of the process, 696. Its great advantages, *ib.*  
 Zlatoust Imperial Steel Works (Russia), 33.

Zhukovskiy Manufactory of Arms (Russia), 33.

Zohrab, M., 364.

Zolesi, S., 34.

**ZOLLVEREIN.**—All those mining districts of Germany regarded as classical by the antiquity of their work, or by the careful attention with which mining is carried on, included in the Zollverein, 29. The Hartz in Hanover, Freiberg in Saxony, Silesia and the Rhenish provinces the principal centres in which the metals are worked, *ib.* Statistics relative to the products of these various districts, 29, 30, *et seq.* Chief produce of the Hartz mines, 29. Large number of veins worked in Saxony Proper, of which Freiberg is the centre; produce of these various mines, and nature of the produce, 30. Considerable number of metalliferous localities widely spread over the surface of the Rhenish provinces; galena, blende, and calamine produced, *ib.* Neighbourhood of Siegen one of the most remarkable of the mining districts, *ib.* Spathic iron as abundant in the Stolberg as in Styria and Carinthia, *ib.* Importance of the mines of copper in the bituminous schist of Mansfeld, *ib.* Silesia offers, by the concentration of great operations and large establishments, a character entirely different from that of the other mining districts of the Zollverein, *ib.* Silesia the only country in Germany where the manufacture of iron in the English fashion is carried on on a large scale, *ib.* Annual production of Silesia in bar and pig iron, *ib.* Valuable deposits of calamine, very easily worked, included in the palæozoic rocks of Silesia, *ib.* Manufacture of zinc in Silesia, *ib.* Considerable deposits of mineral fuel possessed by the Zollverein; relative production of coal in the different states of the League, *ib.* Beds of excellent lignite found on the Rhine, in Saxon Prussia, in Silesia, and near Breslau, *ib.* The exhibition of the mineral wealth of the States of the Zollverein not corresponding with the richness and variety of the mines, *ib.* Enumeration of the objects which have been noticed by the Jury; names of exhibitors; rewards granted, &c. 1st. Specimens of iron ores and bar iron, 30, 31. 2dly. Natural steel, blistered steel, and cast steel, 31. 3dly. Ores of lead and metallic lead, *ib.* 4thly. Zinc and cadmium, *ib.* 5th. Copper, *ib.* 8th. Cobalt, *ib.* 9th. Manganese, *ib.* 10th. Coal, coke, lignite, and bitumen, 32. 11th. Amber, *ib.* 12th. Working of salt mines and purification of salt, *ib.* 13th. Millstones, marbles, and refractory clays, *ib.* 14th. Geological maps and collections, *ib.*

No agricultural produce from the Zollverein States worthy of notice, 52. Excellent quality of the specimens of starch, &c., shown, 78. Samples of flax and hemp, 99. Samples of wool, 155. Specimens of horse-hair, from Elberfeld (Prussia), 160. Specimens of animal charcoal from Prussia and Mecklenburgh-Schwerin, 166.

Machine for silk-winding, in the Zollverein Department, 196. Jacquard looms, 197. Machines for founding types, 198. Specimens of small arms, 221. Organs, 325. Remarks on the brass musical instruments from Germany, 331.

Cotton manufactures, 348. Immense quantity of woven goods, 351. Their excellent quality, *ib.* America the chief market for these goods, 352. Specimens of woven stuff goods, 356-358. Worsteds yarns, 359, 360, 361. Silk fabrics, 364-368. Mixed fabrics, 374, 375, 377. Collection of shawls of various descriptions, 380, 382. Specimens of furs from Prussia, 387. Samples of various kinds of leather from Prussia, Hesse, and Bavaria, 391, 392, 393. Specimens of vellum and parchment from Erfurt (Prussia), 394.

History and statistics of paper-making in the States of the Zollverein, 435-442. Specimens of paper and names of exhibitors, 442. Various specimens of articles of fancy stationery, 449.

General remarks on the printed goods, 458. Specimens of honey from Saxony, 478. Boots and shoes from Prussia, Luxemburg, and Hesse, 480. General hardware and iron manufactures, 495. Works in the precious metals, jewellery, &c., 511. Set of magnificent chessmen from Hanau, Prussia, 512. Shells presented by the King of Prussia to H.R.H. the Prince of Wales on his christening, 514. Specimens of articles manufactured in cray and agate, from Oberstein (Prussia), 517. Specimens of jewellery from Hanau (Prussia), *ib.* Works in silver from Leipzig, Saxony, *ib.* Vase and candelabra of cast-iron inlaid with silver, from Berlin, *ib.* Tea-service of coloured cornelian, from Oberstein (Prussia), *ib.* Various articles of jewellery from Prussia, the Grand Duchy of Hesse, Nassau, and Silesia, 520.

Veined Carrara marble chimney-piece from Cologne; 563. A few objects in marble of a miscellaneous character contributed from Germany, 564. Specimens of inlaid work in marble, 565. Specimens of cements and similar compositions from Wurtemberg and Prussia, 574. Specimens of terra-cotta works, from Wurtemberg and Prussia, 583. Specimens of carving in ivory, from Nassau, 599. Specimens of straw work and straw plaiting from Prussia and Wurtemberg, 602. Notices of the principal works contributed by the several countries forming the Zollverein, to the Fine Arts Department of the Exhibition, 697-700, 707. See also *De varia. Hesse Cassel, Electorate of. Hesse Darmstadt, Grand Duchy of. Prussia. Oldenburg, Saxe Gotha, Duchy of. Saxony. Wurtemberg.*

THE  
OFFICIAL  
DESCRIPTIVE AND ILLUSTRATED  
CATALOGUE

OF THE

Great Exhibition of the Works of Industry of all Nations,  
1851.

THE EARTH IS THE LORD'S AND ALL THAT THEREIN IS:  
THE COMPASS OF THE WORLD, AND THEY THAT DWELL THEREIN.

This Work forms a complete Scientific, Historical, and Illustrated Record of the Great Exhibition of 1851. It has been prepared with care from the descriptions of their own articles furnished by the Exhibitors themselves, with the assistance of a considerable number of men of science, eminent in the different departments embraced by the Thirty Classes into which the Exhibition is arranged. It is in addition furnished with a large number of Illustrations of the most interesting and important objects of art and industry.

The Catalogue comprises extensive original Notes and Papers on various subjects, which are intended to communicate to it a value enduring beyond the period occupied by the Exhibition itself, and to render it permanently interesting to readers of all classes. It has been prepared with the assistance of the following Gentlemen:—

Professor OWEN, F.R.S.  
Baron JUSTUS LIEBIG, F.R.S.  
Professor LINNLEY, F.R.S.  
Professor FORBES ROYLE, F.R.S.  
Professor BELL, F.R.S., Sec. R.S.  
Professor E. FORBES, F.R.S.  
Professor ANSTED, F.R.S.  
Professor HOSKING.  
Professor A. DE MORGAN, M.A.

PHILIP PUSEY, F.R.S.  
Rev. J. BARLOW, F.R.S.  
Rev. J. BOOM, F.R.S.  
Captain L. L. BOSCAWEN IBBETSON,  
F.R.S.  
JAMES GLAVIER, F.R.S.  
J. E. GRAY, F.R.S.  
ROBT. HUNT, Keeper of Mining Records.  
ROBERT ELLIS, F.L.S.

S. CLEGG, Jun. F.R.S.  
W. DE LA RUE, F.R.S.  
J. SPURGIN, M.D.  
JOHN WILSON, F.R.S.E.

### PREFACE TO THE OFFICIAL DESCRIPTIVE AND ILLUSTRATED CATALOGUE.

PRAYING no statement connected with the appearance of this work is calculated to create more surprise than that the greater portion of it was actually in type prior to the first of May. Its condition at that period may be thus described. The manuscript accounts of the articles of a large number of the Exhibitors had been compiled, set up in type, and subsequently condensed, annotated, and revised, and required but a little more attention to fit them for publication. In addition, a large proportion of the illustrations were completed and fit for printing. But at that moment, what was the condition of the Exhibition Building itself? Only on the morning of the first of May were tickets affixed to a few articles in a few Classes, and the position of many Exhibitors, even on the British side, was not finally determined. This arose out of the efforts made to obtain a strictly classified arrangement of articles on this side. Many articles placed in the hurry of preparation in the space allotted to one Class were improperly thus placed, and required to be removed to other Classes; and a large number of explanations were found to have been received from Exhibitors who had ultimately not been able to send in their goods in time. Whilst many Classes were arranged rapidly, others remained, owing to peculiar difficulties, in a state of great incompleteness, and incessant alterations of the numbers and positions of the Exhibitors were necessary before they could be considered perfect. During this time, which is to be reckoned by weeks rather than days, the number of additional manuscripts received from Exhibitors who had neglected sending them in until long after the opening of the Exhibition, was immense, and the adjustment of the additional matter thus created was in itself a difficulty not to be easily subdued.

While an amount of order—surprising in its extent, though imperfect in the degree requisite for the publication of a work so costly in its preparation as the present—reigned on the British side of the Building, the state of that devoted to other nations could scarcely be entitled to that term until a month subsequent to the day of opening. Many foreign states had not sent in their catalogues, and the arrangement of their productions was very imperfect.

The peculiar nature of the Catalogue, also, as a work produced by many thousand authors, naturally brought upon it, through the medium of the small Catalogue, the corrections of a large number of those whose manuscripts formed its foundation, in addition to those rendered necessary, in order to obtain some degree of uniformity in the literary composition.

The combination of the elements of disorder thus presented has never before arisen to oppose the publication of any work in this or other times; and its effect upon its preparation is only to be estimated by those who have watched its progress, and are familiar with the complicated arrangements necessarily preceding the production of any printed book containing illustrations. The great extent of the Catalogue rendered the disturbance of any of its parts absolutely fatal to its publication in a reasonable time, and even in a moderate condition of accuracy. In the midst of all these adverse circumstances an attempt was made to publish it as speedily as possible after the opening of the Exhibition; but this attempt was rendered fruitless in consequence of the ceaseless accession of additional matter, and of the alterations of position in that already set up.

Under these circumstances the Contractors, anxious to produce as extensive a work, in as perfect a condition as possible, resolved, at considerable loss to themselves, to delay its appearance until every alteration of importance had been made in the arrangement of the Building and by Exhibitors themselves. In this state it is now published, and is intended to serve as a satisfactory memorial of the splendid collection of which it professes to be the exponent. When its magnitude is considered, and due regard had to the great difficulties inseparable from the production of an illustrated book of this kind, it must be acknowledged that the period occupied in its publi-

cation has been comparatively brief and its preparation rapid.

The due appearance of the smaller Catalogue, on the first of May,—in itself, perhaps, one of the most remarkable instances of rapid typographical execution ever accomplished,—is also an indication of the substantial pre-existence of the present work before that date, since the smaller Catalogue is only a very condensed summary of the present, and was derived from the material forming the illustrated edition. The difficulties attending the publication even of that work, may be gathered from the fact, that only three days before it appeared was the order of succession and temporary arrangement of Exhibitors in the Building determined on; and in a very short interval, and before its publication, their arrangement in the Catalogue had much of it to be made.

For an account of the method adopted in the preparation of this Catalogue reference should be made to another page. It is, however, due to those whose valued assistance has added so much to the permanent interest which will attach to this work to state, that there are several portions which could not, by pressure of time, be submitted to the benefit of their revision, and for such, and the general scientific accuracy of the work, the subscriber to this notice must be considered as accountable. That the following pages are to be considered free from technical and scientific inaccuracies could scarcely be expected; but much care and labour have been expended to give them, as far as possible, this character.

The consideration just named may also render expedient, if not necessary, a simple statement of the part fulfilled by the writer in connection with this work. The production of the general plan of the book, its development, after sanction by the Executive Committee, and literary construction out of the crude material obtained after compilation from the manuscripts of Exhibitors—this material resulting from the official instructions given for the compilation of the Catalogue, and the term compilation including, in this case, merely the rough preparation of Exhibitor's manuscripts for setting up in type, the resulting matter being consequently in a very imperfect state—with the general literary and scientific superintendence and management of the work—these have formed the occupation of the writer in connection with it, and for these he may be held responsible. As the result of the combined labours of the scientific annotators and of the writer, and after having received official sanction and revision on the part of the Executive by the officer appointed, this Catalogue is now put forth. The constant effort of the writer has been to prepare a work of permanent value and enduring interest. May it be shown in the issue that the labour bestowed upon it has not been in vain.

At the period when this work makes its appearance in a complete state, the Exhibition is about to close. The first function of a Descriptive Catalogue can then scarcely be fulfilled—the great spectacle it illustrates will pass away. To those wonders of Art and Industry which man, taught by God, has been by Him enabled to accomplish, it will prove a guide but for a brief period. But its more permanently valuable offices then commence; and it may be reasonably hoped that, as a record of the most varied and wonderful collection of objects ever beheld, and as a book of reference to the philosopher, merchant, and manufacturer, it will constantly prove both interesting and instructive to the reader.

It is probable that, with the return of the Exhibitors and of the articles to the numerous localities abroad whence they were derived, copies of this Catalogue will be sent, and taken also, and that these pages will be read in many lands long after the Exhibition shall have become matter of history. May they be found, on examination, to contain nothing which is not in harmony with the spirit of the motto on the title-page; and, while descriptive of the successful labours of man, may it not have been forgotten that the glory and praise are due to God alone.

ROBERT ELLIS.

## OPINIONS OF THE PRESS.

Times.

No work published of late years has a history so remarkable as that of the *Official Catalogue*. The work was already designed in 1850, and the right of publication sold for a considerable sum. No definite idea was then entertained of its plan, or even of its authorship. Ultimately it was decided that the exhibitors themselves be the authors; and with a view of assisting the literary composition elaborate instructions were given for their guidance. The result of such a decision can be more easily imagined than described; and the labours of the editor, Mr. Robert Ellis, in reducing the mass to an intelligent shape may be classed with those of Hercules.

"The three volumes may be divided into four parts. First, the introductory matter, comprising a history of the enterprise by Mr. Henry Cole, an account of the building by Mr. Digby Wyatt, and of the compilation and revision of the *Catalogue* by Mr. Robert Ellis, a classification of the objects by Dr. Lyon Playfair, and a map by Mr. Peterman. After the introductory matter come, *secondly*, the catalogue proper, written by the exhibitors in the manner above described; *thirdly*, the system of introduction to classes and countries, with scientific annotations; and, *fourthly*, the illustrations. Of these four quarters, the chief popular interest will probably attach to the first, and especially to Mr. Cole's introduction, which tells the tale of the origin and progress of the Great Exhibition. The author glancing back observes that such institutions as industrial displays, in which the race is for excellence, and direct commerce is not the primary object, have taken place during the last century; and he dwells with proper emphasis upon the fact that from the first they have been entirely originated by individuals or societies, independently of any Government assistance. He then gives a sketch of the various minor exhibitions instituted by the Society of Arts and other societies, with a passing allusion to the important subject of the national exhibitions of France. Perhaps a greater detail was desirable on this part of his task, considering the importance that was attached to a report on the last French Exposition, by Mr. Wyatt, which undoubtedly furnished valuable elements in matters of detail towards the development of the Great Exhibition itself. To this succeeds a complete history of the undertaking, showing its adoption by His Royal Highness Prince Albert, the origination by him of the great idea of summoning all civilised nations to take part in it, the early difficulties through which the promoters of it had to struggle, and the arrangements necessary to its proper ordering and final institution. Mr. Cole evidently considers the great feature of this Exhibition to be the thorough development of the self-supporting principle on which it was established. We may take the following as the expression of a very general feeling on the part of the Royal Commissioners upon this subject:—

"Those who have had experience only of the Continental systems of exhibitions, which are managed and paid for wholly by their Governments, find it difficult to understand the self-supporting and self-acting principle of the present Exhibition, which has hitherto depended wholly upon the voluntary subscriptions of the British people; the heavy liabilities which still hang over the undertaking rest wholly upon individuals in their private capacity, and not upon the Government. The British people, as well poor and working men as the richer classes, have had the undivided responsibility, not only of conducting the first experiment of an Exhibition of their own works on a national scale, but of collecting funds to pay all the expenses of an Exhibition of the Works of all Nations. Our National Exchequer has not been charged with any portion of the expenses, but the contributions of the most remote towns have been received and applied, even

in payment of the military and police assistance which the Government has permitted to be employed on the occasion. So completely spontaneous has been the organization for the Exhibition, that not even the several municipal councils throughout the country were employed, but an independent organization was created for the express purpose wherever a locality was disposed to form its own local committee. Without the assistance of the local committees of the United Kingdom no Exhibition of the Works of Industry of all Nations could ever have been accomplished."

"The result has demonstrated the wisdom and the success attendant upon this career of honorable independence, and has taught, on a grand scale the truth of the popular aphorism—Heaven helps those who help themselves."

"Mr. Wyatt's account of the construction of the Crystal Palace is a good specimen of an architectural paper, partially popularised, and rendered intelligible to the general reader. It is divided into two parts—the first treating of the building as it stands; the second, of its creation. The progress of the structure is traced in this paper from the erection of the first column to the stopping in of the last pane of glass. The subjoined extract will indicate the general character of the paper, and contains an interesting allusion to one of the constructive phenomena attendant upon the progress of the Exhibition Building:—

"The glazing of the nave roof presented formidable difficulties, from the great extent of work to be got through in so short a space of time. The ingenuity of the contractors was, however, brought to bear upon the subject, and provisions were made by them for the instantaneous glazing of large areas, entirely independent of variation of weather. Seventy-six machines were constructed, each capable of accommodating two glaziers; these machines consisted of a stage of about eight feet square, with an opening in its centre sufficiently large to admit of boxes of glass, and supplies of sash-bars, putty, &c., being hoisted through it. The stage rested on four small wheels, travelling in the Paxton gutters, and spanned a width consisting of one ridge and two sloping sides. In bad weather the workmen were covered by an awning of canvas, stretched over hoops for their protection."

"In working, the men sat at the end of the platform next to whatever work had been last done; from which they pushed the stage backward sufficiently far to allow them to insert a pane of glass; and as soon as that was completed they moved again far enough to allow the insertion of another. In this manner each stage travelled uninterruptedly from the transept to the east and west end of the building. The dexterity acquired by the men working the machines was very remarkable. By means of them 31 men in one week put in upwards of 18,000 panes of glass, being not less than 62,600 feet superficial. The greatest number of panes inserted by a man in one day was 108, being 367 feet 6 inches of glazing."

"The third introductory article treats of the difficulties through which the *Catalogue* had to pass, from its first stage, as exhibitors' manuscript, to its completion in its present form. No person can read it without wondering that after such a complication of perplexities the book ever made its appearance. The following gives an outline of one of the first troubles into which it fell in its progress towards perfection:—

"So soon as the work actually commenced, a mechanical difficulty of no common proportions presented itself. On the distribution of proofs for the purpose of annotation and correction, they were incessantly cut up into separate portions, which had destinations as far distant as Germany and remote parts of the United Kingdom, whither they were despatched for the purpose of insuring their scientific and technical accuracy. Many thousand proofs were thus scattered in various directions, yet all were required to be gathered together again, and arrayed precisely in the

same form and order as that assumed prior to their dispersion. Some of these proofs were not more than three inches long, and not broader than a narrow ribband, containing only two or three lines; the difficulty of determining and immediately affixing the proper place of such a minute strip in a work of such magnitude as the present, seemed to be great. A simple method of ascertaining, not merely the place in the *Catalogue*, but its entire history, its destination, annotator, and return, was, however, contrived, and the history of every proof has thus been accurately recorded. The information thus obtained was so accurate, and precise that on the temporary delay of very small proofs their destination was instantly discovered, together with the date of transmission and the name of the annotator to whom they had been sent. Much punctuality characterised the return of the dismembered portions of this large volume. Had not such been the case, the original plan of scientific and technical revision could not have been persisted in."

"Of the classification of objects compiled by Dr. Playfair, with the assistance of eminent persons in the various arts, we can say no more than it is an elaborately accurate skeleton of the philosophy of industry and art.

"The Catalogue Proper is thus arranged:—1. 'United Kingdom, classes 1 to 30; British Colonies and Dependencies, which are thus subdivided—*a*, British possessions in Asia; *b*, in Europe; *c*, in Africa; *d*, in America; *e*, in Australia. To these succeeds the portion of the work devoted to Foreign States, commencing with Austria and ending with the United States. The British Catalogue extends over 1,000 pages, the Foreign over 470. In the former are included the united catalogues of almost all of our colonies and dependencies, with that of Great Britain; in the latter are the distinct catalogues of every Foreign State, even when, as in some cases, these were not represented by more than two, or even one, exhibitor in the Industrial Palace.

"It would be impossible to give an adequate idea of this portion of the work without such copious extracts as would swell this notice to an unusual and inconvenient length. Besides it might happen that the sacrifice of our space would receive no adequate compensation in the approbation of our readers. The vagaries of exhibitors, which would undoubtedly have proved confusing in their original shape, have necessarily been toned down to an uniform monotony, and the task of selection would be advantageous neither to reader nor reviewer. Something, however, should be said of the annotations, which form a series of short and pithy notes, which will always make them not less interesting than instructive to readers of every class and position in society. Their essential character is less commentatorial than elucidatory. They are explanations and additions—not criticisms. They are intended to give value to what might otherwise have escaped appreciation, and importance to subjects whose significance the general reader might not have otherwise caught. They often consist of what is true, simple enunciation of known facts; but they are so associated with the text as to give unusual force and prominence to the most universally accepted truths. At the same time the actual amount of information they embody offers a very complete view of the sciences which are now daily ministrant to industrial progress.

"We regard the introductions to the different classes and countries among the most valuable portions of this work. They are all, with one exception, the production of the scientific superintendent of the work, Mr. Robert Ellis, who has contrived to indicate distinctly in a single page the most prominent objects of every class or dependency.

"The addition of an index of names and a separate one of subjects adds great value to this *Catalogue*. The system of classification renders the work of easy reference to the end of the Catalogue of the United Kingdom; but beyond this it would have been of little use to the reader without the indexes. In fine, these volumes may be accepted as a very valuable addition to the stock of useful practical knowledge. Independently of the extraordinary undertaking which they are intended to commemorate, they form a collection of facts connected with the industrial progress of the civilised world which cannot fail of

producing important results for the future; and even admitting that greater care, and more leisure might have produced a more complete work than the *Official Catalogue* which lies before us, yet it must equally be admitted that the production itself in the short space of a few months is not the least wonderful event among the wonders of the Great Exhibition."

Observer.

"A work of immense magnitude, and most carefully and elaborately compiled. Produced with the assistance of men of science, it is intended to form a scientific, historical, and illustrated record of this gathering of the arts, products, and industries of the world; and when finished, it is likely to be one of the most interesting manuals of general information in the English language."

Globe.

"This will be a *crème* is *de* for all men's shelves; and the *Annus Mirabilis* 1851 will live in its pages, long after the longest assignable duration to Mr. Paxton's prodigy of glass and iron."

Sun.

"In the compilation of this catalogue, the official contractors have evinced not only enterprise and activity, but an extraordinary amount of care and of conscientious application. Nothing scarcely could be more clear than the whole arrangement of the contents, more easy of reference, more complete even to minuteness, or more comprehensive in their entirety. Those touching and majestic lines of Holy Writ are with a solemn significance inscribed upon the title-page—"The earth is the Lord's, and all that therein is: the compass of the world, and they that dwell therein."

Leader.

"The two 'Official Catalogues' must not be overlooked; they will be historical monuments. The larger catalogue, which is descriptive and illustrated, is a work interesting in itself. The introductory chapters give a lucid account of the story of the Exhibition, from its first conception through all the stages of its execution; and the illustrative woodcuts will render it a delightful work to turn over hereafter, when the images have somewhat faded in our memory."

Examiner.

"Jules Janin has been lately eloquent on the theme of British punctuality, and there surely never was a more marvellous exemplification of the quality that so startles the lively Frenchman than the appearance of the Catalogues of Messrs. Spicer and Clowes for sale on May-day morning. Up to a late hour on the previous day the thing not only seemed impossible, but would have been so to any person whose dictionary contained *ce bête de mot*; but, as already as promised, the goodly quarto of three hundred and twenty pages made due appearance for a shilling, and will remain a really striking monument of the zeal and determination employed in this great enterprise."

Morning Advertiser.

"The progress of the human race, Resulting from the common labour of all men, Ought to be the final object of the exertion of each individual.

In promoting this end We are carrying out the will of the great and blessed God."

"Such are the lofty sentiments recorded in imperishable print, upon the page of a mere catalogue, which, or our prescience is woefully at fault, will be treasured among the most remarkable records of this age of rapid progress. To this dry list, as it seems at the first glance to be, will many a future reference be made. The subject-matter, we need hardly say, rises above and goes beyond the mere scope of review. It is simply the dictionary of art and industry, the guide and expositor of man's progress, the indication of his state of civilization, the lexicon of his luxury, the symbol of his peaceful intercourse, the cata-

logue of its demands and aspirations, their position, number, and supply in the *annus mirabilis* '51. The initial year of the second half of the nineteenth century sees the completion of the first 'census' of commerce, art, and industry; the first marked epoch, whence hereafter shall date the history of pursuits as yet without chart, chronology, record, or the means of comparison and estimate. Such are some of the many thoughts suggested by a sight of the uninviting and multifarious catalogue of the objects as gabled beneath the crystal bow in Hyde Park. But, above all, and superseding other ideas, arises wonder at the vast labour of revision, the unsparing severity of excoriation, the kind yet cruel pruning redundancies that must have been herein exercised, ere the crude and undigested mass of material furnished by the various exhibitors could be reduced to the concise form in which we here possess it.

"To omit mention of the diligence, enterprise and executive ability here shown by the contractors, Messrs. Spicer Brothers, and Clowes and Son, would be more than an oversight, it would be a positive injustice.

"As a whole, the 'Official Catalogue,' like the great vitreous palace which stores the invaluable treasures, deserves study as one of the monuments of the national industry in the year which gives it to the world."

#### Examiner.

"Here in three handsome volumes we have the Exhibition itself upon paper minus the pleasure of the sight, and plus a great deal of information. What the eyes see, pictures, abounding in these volumes, do a equal deal to supply; and what the understanding gains is the concentrated aid of about forty of the best attainable guides (writers employed for the purpose), who tell the story of the building thoroughly, and take us through it, giving interesting information about everything that it contains.

"These three volumes, in short, are of a size somewhat commensurate with their subject, and of a quality that does not throw discredit on their size. They are also most liberally indexed. There is a directory of names connected with the undertaking, as exhibitors or otherwise, which occupies about ninety closely-printed three-columned pages. There is an index of all the articles exhibited; and really it is quite an amusement to look down this index merely, and note the strange variety of articles contained in the grand *omnium gatherum* which come into operation under the laws of alphabetical affinity. For example, here is a succession of things—Tinsel Ornaments, Tintern Abbey, Tippecoe Hall Farmery, Tire Bars, Tissue Paper, Tissues, Tobacco, Tobacco Boxes, Tobacco Pipes, Toilet Box, Toilets, Tombacs, and Tombs; from which we go on through Tonnages in Ships, Tools, Toothpicks, and Tow, to Towelling."

"The volumes of Messrs. Spicer and Clowes will of course be necessary furniture in every large library; and being anything but an uninteresting catalogue, being truly a real living, talking record of the Exhibition, and tending moreover in a very pertinent and interesting manner, it will be a pleasant book for any man to have upon his shelves.

"We need say no more to recommend this catalogue as a work most worthy of its object; a work that will remain for ever as the record of the famous undertaking. We do not know with what pecuniary results the 'official contractors' may have brought their labours to a close; but it is certain that they have perfectly kept faith with the public, and that among those who have largely contributed in various ways to the completeness of our industrial triumph they have established a strong claim to be remembered."

#### Morning Herald.

"Among the many wonders which the Crystal Palace contained, the Catalogue itself, from the extensive arrangements attendant upon its compilation, and the gigantic encyclopedical size to which it necessarily swelled out, is not the least. We have now before us three goodly-sized volumes, containing about 2,000 pages of engravings and letter-press, the result of the literary industry of many

months, and the fruits of the skill and intelligence of a whole army of editors, commentators, and correspondents, whose services were called into requisition for their production. We know of no department of literary labour which is at once so onerous, so uninviting, and so thankless as the compilation of catalogues; and yet there are many points of interest to the public involved in the complicated and extensive arrangements connected with the collection and arrangement, from so many thousand contributors and so many countries, of the varied and valuable mass of information contained in these volumes. It may be stated, in the first place, that the work is without a parallel or a precedent in the annals of our literature, and the design and means of execution being novel, rendered the publication a task of extraordinary, and, we may add, unforeseen difficulty.

"Every branch of science, art, and industry is here fully and efficiently represented. The most striking and remarkable features, and the whole scope and significance of the Exhibition, are here embodied and divested of all the promptings of partiality and all the infirmities of judgment. The literary department has been presided over by men fully conversant with the various processes in our manufactures, and the character and uses of the immense variety of objects collected in the building in Hyde Park; and the work will thus have an enduring interest in the mass of valuable information of almost every description which it contains, inasmuch as original information of great interest and novelty has been obtained from foreign countries which have taken a prominent part in the Exhibition.

"In addition to these difficulties, which have been surmounted to an incredible degree, it must be observed that the Catalogue embodies to a large extent the science of commerce. The changing and inaccurate conventional terms of trade are here, in many instances, converted into the precise and enduring language of science; and we have no doubt that this improvement will not be without its fruit in the promotion of the objects of industry; because hitherto obstacles have been experienced by commercial men in their endeavours to introduce into trade any new materials of industrial importance.

"Of the manner in which the wood engravings, amounting to upwards of 1,200, have been executed it is impossible to speak too highly. They have all the delicacy and finish in many instances of steel; and from many months' personal observation, we can bear testimony to the accuracy with which forms the most complicated and elaborate have been transferred to paper. Unlike a catalogue, in the ordinary acceptation of the term, it abounds in sources of amusement and instruction for every class and every taste, the vast collection of the Exhibition here finding its literary type, and furnishing matter for entertainment and reflection, as well to the fashionable reader, the student, the man of science, as to the hard-headed sons of labour, by whose energies and industry the vast pile and its contents have been brought together. That the respectable contractors, Messrs. Spicer and Clowes, have amply fulfilled all the stipulated requirements and conditions of the agreement cannot, we think, be questioned. Indeed, we have reason to think that they have felt something of the dignity and importance of the occasion, and have acted with a spirit and liberality beyond, perhaps, what the pecuniary results would justify. One of the great obstacles to the progress of the work, as well as one of the chief causes of the great additional expense incurred, was the incessant necessity for the alterations of descriptions and places, and insertions of fresh material. In its preparation, however, the amount of literary labour has been expended which communicates to it a value enduring beyond that of the occasion of its production. The vast and wonderful accumulation of the production of human industry, of which it is the type and the exponent, was collected only for a time. Its mission accomplished, and its objects achieved, the industrial store is being again rapidly scattered among the nations of the earth. The Illustrated Catalogue, the record of the history and objects of the Great Exhibition, will form an enduring memorial, which few of those who have rambled through the vast collection and can afford the means will willingly

be without. It is somewhat remarkable, as evincing the judgment that presided over the objects selected for illustration, that the bulk of them have been the recipients of prize medals. We have only one other observation to make, and we feel called upon, in justice to the contractors, to offer it for the consideration of the executive committee. During the time this large series of publications was in progress, the greater portion of the ordinary business of the contractors was suspended—the Catalogue itself was put in type at least three or four times over; thus adding another very serious item to the expenses incurred. We think when so many of those who have rendered good service to the Exhibition are being rewarded, it would be a graceful and appropriate act of liberality, on the part of the executive, to waive the claim for royalty, which the terms of the contract implied, even if they do not consider the contractors entitled to any further remuneration.”

#### “Athenæum.”

“A few weeks more, and of the visible glories of the Great Exhibition but a visible wreck will remain. Memory, as we have said, may reproduce—and will—many a picturesque section and selected object; but less uncertain records are required to inform us of the actual value, industrial and scientific, of those contributions from every quarter of the world which we have seen assembled in Hyde Park.

“Another Official Descriptive and Illustrated Catalogue” we have such a record. The work is without a precedent in the annals of literature; and when we regard the circumstances of difficulty that surrounded the task of its execution, the pains bestowed on those who undertook it can scarcely be too great. The contractors, in that enlarged spirit which appears to have entered into all that belongs to the Exhibition, engaged men of reputation and authority in every department of science and manufacture to contribute such descriptive notes as should render the work eminently instructive. It, thus, contains a body of annotations which express the condition of human knowledge and the state of the world’s industry in 1851—and is a document of the utmost importance, as a summary report of this vast international ‘stock-taking,’ which no great library—nor any gentlemen’s library, of those who aim at the collection of literary standards—can hereafter be without. It is not the work of a day, a month, or a year: it is for all time. Centuries hence it will be referred to as authority on the condition to which man had arrived at the period of its publication. It is at once a great Trades-Directory—informing us where we are to seek for any particular kind of manufacture—a Natural History, recording the localities of almost every variety of native production—and a cyclopædia, describing how far science has ministered to the necessities of humanity, by what efforts the crude products of the earth have been converted into articles of utility or made the medium of that refined expression which belongs to the province of decorative art.

“Let it not be thought that because the Exhibition is over it has fulfilled its purposes. It stands to the world in precisely the same relation as do the philosopher and his works. The individual will die; but the thoughts which have been born of him, the truths which he has discovered, live on, quickening and kindling other thoughts and truths. The Exhibition has lived its allotted time, and died; but this Catalogue is the sum of the thoughts and truths to which it has given birth—and which form the intellectual ground whereon the generations that we are not to see must build.”

“It will be evident from what has been already stated, that a more important contribution to a commercial country than the ‘Official Descriptive and Illustrated Catalogue of the Great Exhibition’ could scarcely have been offered;—and this will be yet more strikingly shown when we come to the consideration of the manufacturing sections and of the contributions of foreign states. Regardless of expense, this work has been completed by the aid of a band of no fewer than twenty-six translators, selected, as we have said, from eminent professors of science, and skilled manufacturers. In addition to these, and inde-

pendently of the editor’s staff of assistants, some ten other gentlemen were called on to furnish technical information and lend the assistance of their knowledge, so that all possible means have been taken to render the ‘Official Descriptive and Illustrated Catalogue’ worthy of the wonderful gathering of which it is the permanent record.”

#### Observer.

“It may be truly said that this is the most extraordinary work that has been ever brought forth in this or any other country, containing, as it does, a mass of information relative to the natural and artificial productions to be found in every quarter of the globe, with descriptions of the nature, use, and history of each. If the object of such a publication had been merely to serve the purposes of an ordinary descriptive catalogue, it might justly be observed that for such purposes it has come forth too late, seeing that the objects therein described have been already withdrawn from our view; but these volumes are designed to serve purposes at once more important and more enduring. They are designed to preserve and to fix in the public mind a lasting record of the results to which the industry, the ingenuity and the invention of the world had reached in the year 1851, and to establish a starting point whence future ages may proceed onward in the march of improvement.

“The first volume opens with a list of the illustrations. This list, simple as it may appear to the eye of an ordinary observer, is suggestive of the extraordinary character of the work in which it appears. The space devoted to this simple ‘list’ would suffice of itself to form a respectably sized volume; and hence may be inferred the enormous number of illustrations dispersed throughout the work, and which, when examined, are found to be in the beauty and the perfection of their execution, as well as in the judgment by which appropriate objects for illustration were selected, worthy of the occasion which these volumes are designed to commemorate.

“In noticing this Catalogue, we purposely abstain from attempting to particularise any of the innumerable and able descriptions of works of art or of fancy, or the admirably-executed illustrations with which these volumes abound. Our reason for this abstinence will be appreciated when we remind the reader of the almost countless subjects which are here described; and of the fact, that of these subjects some thousand are rendered the themes of artistic illustrations, the execution of which reflect the highest credit on the engraver. The publication of this Catalogue was a necessity, which, if left unsupplied, would have incalculably marred the benefits derivable from the great occasion which has called it forth. Great as was the good of calling all nations together to assemble in a display such as that which has so long maintained an attraction as deserved as it was unparalleled, a still more substantial, though possibly a less brilliant result, will be found to consist in the valuable record which these volumes contain. No have produced such a Catalogue at an earlier period is now shown to have been impossible. The very magnitude of its merits conduces to create that impossibility; but even at this period, and at future times, however remote, it will be not less welcome, or less wanted. It was not at the time when a gathering of millions during a period of excitement caused by the feelings incidental to an occasion so unparalleled—it was not at such a time that such a record could have been productive of its destined good to the reader, however occasionally profitable a hurried work might have been to the publisher; and, so far from regretting the delay, we rejoice at it; for by that delay the intrinsic merits of the work were enhanced, and its value stamped with an enduring character, which will remain as the best and most morally profitable result of the great industrial display of which it is a worthy and most invaluable record.”

#### Weekly Dispatch.

“In addition to the medals to be awarded by the Jurors to those exhibitors the excellence of whose productions may entitle them to that highly-coveted distinction, it has been decided to present each exhibitor with a medal com-

memorative of the great event. In connection with this decision, we have received a suggestion which we deem well worthy of the consideration of 'the powers that be.' It is, that each medal should be accompanied by a copy of the Official Illustrated Catalogue. The Illustrated Catalogue contains a mass of valuable information upon every branch of science, art, and manufacture, which renders it an invaluable work of reference; and its extensive diffusion among the industrial world, could not but be productive of the most beneficial results. And we cannot doubt that Messrs. Spicer and Clowes, the contractors, who have throughout carried out their arduous undertaking in so spirited and satisfactory a manner, would still further aid the views of the Royal Commission, by not permitting the question of expense to be altogether an insuperable element in the carrying out of what appears to us a very admirable idea."

#### Atlas.

"An enduring and valuable record of the industrial marvels which the Crystal Palace contained. The time taken by the editors in preparing this Catalogue has been excellently bestowed. It was, indeed, not a work to be done in a hurry. By way of *vade mecum* to the Exhibition visitors, there was many another volume of more manageable size devoted to special countries, departments, or branches of industry, besides that marvel of high pressure—the Official Catalogue. In the Illustrated Catalogue the attribute most desired was the permanency of its interest. By accurate self-illustration, lucid arrangement, and wealth of explanatory designs, this end has been effectually achieved. Long after the fairs and curious contents of the Crystal Palace have been scattered over the world, this work will be valued as a memento and reflex of that marvellous collection. And if at some distant jubilee year another Exposition of human industry should take place under other conditions, and occupying, probably, a vaster space even than that which is now presented to our eyes, the exhibitors of that day will eagerly turn to the Illustrated Catalogue as supplying a standard by which to measure the advances they shall have made in their several *metiers* since the memorable year of 1851."

#### Times.

"Although, in compliance with the original design of its projectors, the Great Exhibition has itself only an ephemeral existence, it is satisfactory to think that the most ample and complete records will be preserved of its character and details. Few events have attracted such an amount of contemporary publicity. The pen and pencil have both been incessantly at work in perpetuating its industrial triumphs, and when all the material vestiges of the display are removed from our eyes, it will still live in a form the most valuable and enduring. The reports of the Juries in each class will obviously prove an important *repertoire* of facts and observations, and the information which has been collected in newspapers, in periodicals, and in other channels of instruction, may also be turned to excellent account; but it is to the 'Illustrated Catalogue' that we must look as capable of being made the most complete and satisfactory work of reference hereafter on the great industrial pageant of 1851. That publication now approaches its completion, for three parts of it have already appeared, and the fourth will soon be ready. It is intended that it shall be issued in three volumes, the first two of which will be dedicated to the products of Great Britain and her colonies, while the last embraces the contributions of foreign countries. As far as our own exhibitors are concerned the work is complete, and from the portions that have already been given to the public we are enabled to form a pretty fair estimate of its character and the style of execution. Of all literary labours, that of getting up books of reference is, perhaps, the most tedious and the most thankless. The bare name of a catalogue kills the interest of the most indefatigable bookworm, after the collection of objects to which it was intended as a guide has ceased to be accessible. The present, however, is an exceptional case, and we predict for the 'Illustrated Catalogue of the Great Exhibition' a

standard reputation, and a large share of public patronage, when the grass has once more grown over the site of the Crystal Palace, and the great event of this year has become a thing of the past. From unavoidable causes, the contractors, Messrs. Spicer and Clowes, are only completing the last pages of their work as the spectacle to which it relates is about to close, but they need be little alarmed at such a consideration. It has an enduring interest in the mass of valuable information of almost every description which it contains. To put the industrial products of the world under a glass case was a wonderful feat to perform; but here we have a still more extraordinary example of condensation, partly executed and in process of successful completion. The Great Exhibition is reduced within the compass of three not very unwieldy volumes, and to the intellect in all respects, and in most important respects to the eye, its features and significance are preserved. Every object in the collection will be found noted down and described with the amount of particularity due to it. The promptings of partiality and the infirmities of judgment are equally excluded from this unbiassed record. An extensive series of illustrations is made to embrace every object worthy of emulation by the artists' power; and in order that the instructive character of the work may be fully sustained, annotations written by men of the highest qualifications are introduced to explain processes, point out the character and uses of objects, and develop in brief terms the rationale of the more remarkable or least understood branches of human industry. With these features of interest, the popularity of the 'Illustrated Catalogue,' when completed, seems secure. It will prove a complete literary type of the original to which it refers, opening up sources of amusement and instruction to every class of taste, and proving equally at home on the drawing-room table, handled by fashionable dilettanti, in the study, pored over by the scholar or the man of science, at the merchant's desk as a book of constant reference—in the factory, the foundry, the workshop, as a *repertoire* for designs, and as highly suggestive for future progress. A more pleasant work to dive into during an idle hour can hardly be imagined, for wherever it is taken up there is something new and striking, and worthy of attention. The necessity for condensation renders proving impossible, and the classification of subjects secures an agreeable variety of subjects without monotony on the one hand, or a miscellaneous effect upon the other. Illustrations have been sparingly resorted to in the first portion, which relates to raw materials, but, as a substitute for this, we have tables and statistics of great value, and a large mass of information entirely original in its character. In the second part, which is devoted to machinery, numerous diagrams and sketches are introduced explanatory of the different objects exhibited. The chief interest of the Catalogue, however, in this respect lies in the third and fourth parts, the latter of which is still unfinished. The three volumes will contain, altogether, about 1,200 illustrations, and the greater number of them will be given in the last volume, which will be dedicated to the foreign half of the Exhibition.

"This is the proper course to pursue, for the foreign contributions are those which it is most important to have sketched. We are informed that original information of much value and interest has been communicated to the compilers of the Catalogue from the different countries which have taken part in the Exhibition, and that this will form a prominent feature of the work when completed. At present, while the public mind is saturated with the subject, the introductory position of the book may not attract the notice to which it is entitled; but when we are able to look back upon the whole undertaking from a point in the future, and proceed to take its exact measure, as an historical event, we shall not fail to be duly impressed with the remarkable character of the information there contained. Within the limits of 197 pages are compressed Mr. Cole's account of the way in which the Exhibition was got up; Mr. Digby Wyatt's description of the Crystal Palace; Dr. Lyon Playfair's classification of the artificial world; the directory of the scheme; the list of jurors; and the preliminary notice of the Catalogue by Mr. Robert Ellis its editor. Mr. Cole's narrative is especially worthy

of attention for the insight which it affords into the machinery, by which vast projects like the Exhibition can be successfully carried out. Even in this country, where the principle of association is so thoroughly understood, that machinery must be pronounced to be a master-piece of skillful combinations.

Let us recall for a moment its chief incidents. A small body of men, without any influence of rank or wealth, and forming the council of what had previously been regarded as a useless society, conceived, as early as 1845, the idea of an industrial Exhibition, national in its character. After one fruitless attempt, they engaged in a series of preparatory measures calculated to render their scheme acceptable to the public and secure of its support. Four years of indefatigable labour elapsed, and they had gathered around their undertaking an amount of support which they conceived justified them in again bringing it forward. They had placed it under the direct patronage of the Crown, and had secured for it, as an appropriate head, the name and the personal exertions of the Prince Consort. A Royal Commission was appointed, in which men of all parties, irrespective of politics, were included. In the meantime, the views of the projectors had expanded, and they resolved to give their scheme a cosmopolitan character. The great seats of our manufactures were successfully canvassed for aid, and foreign Governments responded to the invitations given to them, and promised co-operation. Yet even this powerful combination did not exempt the undertaking from perils that more than once threatened to be fatal. The question of ways and means was for some time a stumbling-block in the path, and the Commission long hesitated to assume the pecuniary responsibility, which, in some way or other, it was necessary to provide for in consequence of the determination of Messrs. Munday's contract. At a most critical juncture Mr. Peto came forward, and, with a degree of public spirit and liberality which cannot fail to be appreciated, pledged his name for a startling amount. Then, when other difficulties had been overcome, the question of a building presented almost insuperable obstacles. At the last moment Mr. Paxton and Messrs. Fox and Henderson rushed to the rescue of the perplexed Commission, and after a succession of dangers, the scheme of the Exhibition was in safety. Had Mr. Cole's narrative been more detailed, it might have been rendered still more attractive; but the author, no doubt prudently preserved silence on points which would perhaps have been indiscreet to touch upon; and the leading men in the Council of the Society of Arts having gained their object, are seen quietly resigning to more exalted names the honour and glory of an enterprise which they not only originated, but rendered practicable by their exertions. Of Mr. Dibby Wyatt's account of the building, and of Dr. P. of Playfair's classification, it is unnecessary to speak, as the public is already well informed on these subjects; but to the directory of the Exhibition and to the list of names some amount of attention is fairly due. In these names are comprised an extent and variety of practical and scientific talent, the union of which on any one occasion, and for any given purpose, is altogether unprecedented. As the eye glances over the seemingly uninviting array, it is impossible not to be struck with the curious combination of persons which they present. Leading tradesmen and manufacturers rub shoulders with the most eminent philosophers of the age, and science, descending from her pedestal, mingles freely and unostentatiously with the followers of hard-headed industry. Not only so, but all the nations of the civilized world send the most distinguished of their citizens in the peaceful arts to sit in judgment upon the comparative excellencies of rival products, and to determine at polyglot conferences the stage of industrial progress which mankind have attained. The directory of the Exhibition and the list of Jurors taken together, form one of the most remarkable organizations that the world has ever witnessed—an organization which, considering its objects, implies not only an act of homage to industry, but a guarantee to civilization. The pages of the Illustrated Catalogue, which contain these names, are as instructive and reassuring as any within its limits.

#### Literary Gazette.

"The philosophy of the Exhibition has yet to be written; but whosoever would wield his pen in this high theme must take the Catalogue as his text-book, and discourse upon the sections which are stereotyped in its pages. We heard a wise man say, 'I enter this place as I would a church: the wonders of God are brought before me, and the achievements of man working in the spirit of truth are here displayed. I always leave this mighty building a better man than I entered it.' The contemplation is quiet—now the excitement of the Exhibition and its thousands of visitors is over—the Catalogue which registers its stores must have too its ennobling influences. None can know the difficulties attending the construction of such a Catalogue as this who have not been actually engaged on such a work. Under all the circumstances of difficulty by which we know the undertaking to have been surrounded, we are bound to declare that the work has been most ably performed in every department. Mr. Robert Ellis, to whom the editorial superintendence was committed, has worked most assiduously; and most of those gentlemen who were selected as annotators have added much to the value of the work. On the whole, we much question if in any country, in the same time, any book of the same extent, presenting so various a character, could have been so well produced. The letterpress is unexceptionable; the wood-cuts are good and faithful; the registration, as far as regards the Exhibition, is correct, and the notes of value. This is no ephemeral catalogue; a century to come it will be referred to as marking an epoch, and indicating the point to which man had arrived in the industrial arts in the Year of Grace 1851."

#### Morning Advertiser.

"The reader, on glancing over the pages of this great production, is struck no less with the number than the value of the pictorial subjects on which the prodigious outlay, untiring energy, and vast industrial and commercial resources of the contractors, have been expended and employed. Apropos of the contractors, it is but just to observe that they have more than kept faith with the public. They were indeed bold men, but bold with judgment too, who, while the success of the Exhibition itself was yet a problem of doubtful solution, stepped forward with the 3,200*l.* (then much needed by the now plethora-pursed Commissioners) for the privilege of printing the Catalogue, and further engaged to pay a 'royalty' of 2*s.* on each shilling, which, on 250,000 copies of the smaller shilling Catalogue, would amount, with the first-name*l.* sum, to 5,200*l.*

"To them, then, the public owes a debt of gratitude, as aids—and no mean one—in the fruition and perfection of an experiment of such magnitude and novelty of conception. Not only have they kept to the letter of their duty with the most scrupulous exactitude, but they seem to have been stimulated with the dignity and importance of the undertaking, and to have risen in spirit, and liberality, and energy as the task enlarged and new difficulties rose before them. A 'List,' a 'Catalogue,' a 'Guide,' a 'Hand-book,' was talked of—but lo! the demand was for an 'Encyclopædia.' The learned labours of academicians, the scientific researches of the chemist, the glories of sculpture and plastic art, the skill, activity, and the discoveries of the studios, the laboratories, the libraries, and the workshops of the world, are to be transferred to the paper of a book; and no object worthy of pictorial permanence, or requiring, from its nature, either portrait, view, plan, explanatory section, or diagram, is to be omitted from its contents. Add to this the Egyptian task of refining that necessary ingredient to artistic and literary, as well as typographic excellence, 'time.'

"Yet, how the difficulty has been grappled with, and almost utterly overcome, a careful collation of those vast volumes will show the wondering examiner, who shall honestly and diligently set him down to the task. As a Catalogue we fearlessly pronounce it a miracle of accuracy, a model of methodical arrangement. This will be well understood only by those who have experience in the difficult task of definition and classification. The

collective idioms, races, the varying varieties, the clashing characteristics of 18,000 people of every class and of every nation, for such is the number of exhibitors, are here epitomised, arranged, compressed, chronicled, and, in many hundreds of instances, given to the eye in faithful, elaborate, and costly engravings.

"And all this is achieved, so that the last pealing anthem on the evening of the 11th of October had but just died away along the huge ribbed curve of the transparent canopy, ere the gorgeous gilt-edged record, which is all that shall remain permanently of one of the world's wonders, is laid, in its gay liveries of blue and gold, upon the tables of its subscribers. In the words of Charles Dickens, applied to the smaller and cheaper issue, we have here 'the composition of fifteen thousand authors; most of them authors for the first time, who have had their exercises pruned, and their diction occasionally mended. Now, the first production of an author, if only three lines, is usually esteemed by himself as a sort of Prince Rupert's drop, which is destroyed entirely if a person makes upon it but one single scratch. Some thousands of authors, therefore, must be dissatisfied with the attempts to make it available for public use.'

"Thus far Boz's pleasantry as regards the cheap shillingsworth; but the 'Illustrated and Descriptive' essays a yet bolder experiment. While it retains the terseness of description, it adds annotations of equal perspicuity, ability, and impartiality. These aids to a full comprehension of the Exhibition, from pens of the most qualified writers, set forth in succinct phrase the peculiarities, beauties, and characteristics of the various objects enumerated. This alone must insure the permanent value of the 'Official Catalogue.'"

#### Daily News.

"The 'Official Descriptive and Illustrated Catalogue' has now been issued in the form of three not over-bulky volumes. In the front pages of the first volumes are contained a neat array of industrial charts, of comprehensive indexes, and introductory matters, which, along with the 'raw materials' and 'machinery' form, on the whole, a pretty solid mass of information. The whole of volume the second deals exclusively with all that is connected with the United Kingdom, as the third and last does with the industrial contributions of the 'foreign states.' Following so closely as does the present publication on the heels of so many nimble forerunners, it must necessarily follow, that much that it contains is not of a strikingly novel character, and to a certain extent, the present catalogue has lent its powerful aid in diminishing its claims to originality. Mr. Robert Ellis, the diligent and able editor, has let us into all the secrets of the Catalogue's gestation. Its type, he tells us, was actually ready, and so were most part of its illustrations, before the memorable 1st of May. One vast drawback, however, soon made itself manifest, inasmuch as that which, to the casual observer, might have seemed to contain all the necessary elements of order and symmetry, was, at least for the true purposes of the Catalogue's registry, confusion and confusion. While some exhibitors had taken up positions which were clearly untenable, others neglected altogether to be at their posts. In this terrible dilemma, which it seems, lasted not days, but months, the contractors, Messrs. Spicer and Clowes, wisely adopted the plan before mentioned, of using the main text work of the costlier Catalogue for the shilling one, which thus acted as a feeder and test of substantive correctness. By degrees, as every one knows, successive editions were issued, in which lacunae were filled up, and inadvertencies properly corrected. And thus, by joint addition and elimination, we are now furnished with the most trustworthy industrial chart that has ever been issued. Besides these considerations, other notable influences were at work to retard progress: there were not merely self-laudatory encomiums to praise, unintelligible technicalities to lop off, and scientific jargon to pare down, the contractors had undertaken a higher and more arduous, and more comprehensive task, that of being faithful exponents of the most striking features and instructive lessons derivable from the international gathering. The task, we are bound to add, they have executed in a lucid and masterly manner, which warrants the assertion of the

catalogue's having been carefully revised by scientific hands. It is pleasant for once to find science descending from its lofty curule chair, and cheerfully lending its aid to the sister arts. Somehow, one fancies that this is the auspicious dawn of another era; that the learned will no longer muffle themselves silently in the sheets of the encyclopædia; and on rails, as it were, the downfall of exploded and abstruse problems. Be this as it may, and without drawing any further distinctions between the commonly wise and the relatively sapient of this or any other generation, it may be fairly said that an immense fund of varied knowledge and sound gratification may be derived, almost at random from these volumes, and the countless facts disseminated throughout their 1,604 pages.

"Those versed in chemistry, or endowed with a mechanical comprehension, will naturally revert to the first portion of the 'Illustrated Catalogue,' wherein we notice with satisfaction, not only indicated, but also illustrated, those specimens of human skill and ingenuity to which of late, especially, the public mind has been attracted, since the long-expected awards of successful competition. In this respect, the promoters of the 'Descriptive Catalogue' seem almost to have been endowed with an intuitive, not to say a prophetic, sense of individual merits. It must be acknowledged that, even looking at the succeeding volumes from the same point of view, they will be not to convey impressions of greater interest. Many to whom the most brilliant mechanical achievements are neither more nor less than singular contrivances, will have a tolerably accurate perception of purely ornamental achievements; these will dwell once more, if only in the faint recollection of them, on the glories connected with the Milanese window and the 'Veiled statue,' the 'Prussian shield,' and other illustrations, which, amid the universal pictorial deluge, seem to have been withheld by their proprietors for exclusive insertion in the 'Official Catalogue.' It may here be stated that the embellishments to the letterpress have combined the lithographic process, steel engraving, and wood engraving; though the latter, as usual, preponderates. The archaic pencil of Mr. Lewis has given extra dignity to the cover as well as the frontispiece, the latter of which is decidedly Maclise in design. Let us turn over the tempting page. The arrayed list of contents and their exhibitors greet one, as it were, on the threshold, and by their twin aid we can steer through the troubled industrial sea. This people, anxious to discover what species of levitating apparatus has been rewarded by a medal, may search under either headings of 'stoves,' 'Mettlerich,' and will at once be directed to the 'Austrian Section, No. 413.' Then, nearer home, may be found under either title of 'tapestry,' or 'Sibthorpe'—the latter, no relation we hope to an M.P. namesake—and so on it goes throughout works of more or less universal interest.

"After dwelling in a sufficiently philosophical strain on the strangely varied host of individual characters contained in the list, and following each other with alphabetical respect and order, from His Royal Highness Prince Albert to Herr Zwickl, we next encounter a few brief but telling accounts of the rise and progress of the Great Exhibition. Mr. Henry Cole throws into his introductory notice of the first stages of the proceedings, some novel traits which redeem its hackneyed character. The construction of the building is narrated by Mr. Digby Wyatt in mingled facts, figures, and sketches. And lastly, Mr. Robert Ellis imparts to us a sense of the alarming difficulties he had to surmount in gathering together the thousands and one little manuscript slip of paper out of which one homogeneous work has arisen; justly remarking at the same time that the fact has hitherto been unexampled of bringing to successful issue a work of such monstrous complexity.

"The plan adopted in the long run was to direct attention at the opening paragraph of each section to the manufacture of the particular country or district; reserving, nevertheless, purely exceptional facts to be appended to that which was often its sole illustration. If the plain and venerable town of Krefeld exports the powerful ingredient known as 'Cacoste'; if Hesse sends over that noxious weed 'chicory'; if the quiet city of

Layden prides herself on her rigging; if Amsterdam, her horse-hair for the million, produces horse-hair for the saddle; Belgium, mill-stones, as well as linen; all these facts, great and small, are carefully scrutinised and the weight in the balance of universal utility tested. Following out the spirit which seems to have dictated a graceful impartiality towards our foreign rivals, the third volume, relating more specially to their efforts, has been evidently got up with extreme care, and a more lavish expenditure of illustration. Their jewellery, their damascene work, their laboured groups, their ingenious furniture, have received equal honours at the hands of the draftsman. We can only join in the love expressed by the contractors, that with the *effort* of the exhibitors and their contributions, to the numerous localities abroad whence they were derived, copies of this catalogue will be not only sent but taken also, and these pages read in many lands long after the Exhibition has become matter of history. The *Illustrated Catalogue*, in its present comprehensive form, now affords almost the sole industrial source of future investigations which are professedly or in any way connected with the yet undeveloped resources of the nineteenth century.

**Chemical Record.**

"The list of annotators of the Catalogue, who have brought their practical knowledge to the elucidation of the various departments with which they were most conversant, comprises men whose names are guarantees of the value of the information furnished by them, and the appellation of whose initials to the articles described, stamps the work with that degree of authority, without which its practical value to the philosopher, the merchant, the manufacturer, or the general reader, would have been greatly lessened.

"We must not, in our notice of the introductory part of the work, omit to mention the valuable and interesting series of maps which adorn the commencement of the first volume, and on which the various manufacturing districts of our own and other countries are accurately delineated, and their natural productions shown.

"We cannot conclude our brief and imperfect notice of this important work, which Dr. Whitwell commended in his inaugural lecture at the Society of Arts, on Wednesday evening, without stating that the highest credit is due to the publishers for furnishing so complete a record of the Great Industrial Exhibition. When we consider the immense difficulties attendant on the production of such a work—the joint production of more than 2,500 authors, whose varied contributions, in many languages, had to be classified and arranged, and, as far as practicable, annotated and explained—when we consider that the vast amount of matter was actually in type at the opening of the Exhibition, before even the articles were fully arranged in the building, we cannot but regard the 'Official Illustrated and Descriptive Catalogue' as being itself one of the wonders of the Exhibition. As respects the general style and getting up of the work, we need only say that it is worthy of the publishers, who have evidently spared neither cost nor pains to bring out a work every way worthy both of the great industrial undertaking and of public patronage and support. The library of the philosopher, the merchant, the manufacturer, the man of science and of refined taste, will be incomplete without the possession of a copy of this truly national work, which, interleaved, will serve the valued purpose of a record of the varied additions to our knowledge which every day present themselves to our attention, but which, from the want of a suitable place for their immediate record, pass from the memory almost as soon as received. New facts and discoveries, in any department of art and science, whether at home or abroad, would here find a local habitation—a place in which to be recorded, always easy of reference and access—and thus the vast amount of practical and useful information now lost, would be stored up for the future advantage of ourselves and others."

**Mining Journal.**

"Of all the various publications professing to treat of the Great Industrial Exhibition, none have in any way

approached, either as regards accuracy or completeness, the work now before us. We believe there never was a work, the preparation of which was attended with so many difficulties; and we consider that the highest credit is due to the publishers, who preferred rather to run the risk of pecuniary loss, than to present to the world an inefficient record of an event, which—whether as regards the magnitude of its operations or the complete success which has attended it—is without a parallel in the history of the world.

"The annotations on the articles exhibited in the class of greatest interest to our readers, were wisely intrusted to Professor Ansted and Mr. Robert Hunt, and the result has been the production of a compendium of mining and mineral products, containing 70 pages of valuable matter, deserving of publication in a separate form. The account of the nature and extent of the different deposits of mineral fuel in various parts of the world, written by Professor Ansted, is replete with information. The remarks of Mr. Blackwell, on the series of iron ores contributed by him to the Exhibition, form a valuable treatise on the iron-producing districts of the country and the ores obtained therefrom, and elicited the marked commendation of Sir Henry De La Beche, in his recent lecture at the Society of Arts. Mr. Sowter's detailed account of the lead mines at Allenheads forms a useful treatise on this department of mineral produce, especially as illustrative of the various stages of progress from the mine to the market. Mr. Hunt contributes a store of information on the tin and copper of Cornwall, whilst the general mineral produce is ably annotated by Professor Ansted.

"The objects in the class of machines for direct use are illustrated in a very superior style, and their description is replete with sound practical knowledge. The specimens of successful application of mechanical skill to objects both great and small, and their adaptation to useful purposes in the leading manufactures of our country, form one of the most valuable portions of the work before us, containing, as it does, a history of the enterprise and industry of the mechanics of Great Britain, not to be met with elsewhere.

"The general style and character of the work throughout is very superior, and the profusion of well-executed engravings with which it is adorned greatly enhances its practical value. The library of every Englishman will be incomplete without a copy of this truly national work, which will be handed down from generation to generation, as an enduring record of an event, which excited the wonder of the civilised globe, and formed one of the brightest pages of the present century.

"We have from time to time heard various suggestions put forth, as to the most useful mode of appropriating this surplus of 150,000*l.* in the hands of the Royal Commissioners. We consider that in the distribution of this surplus, no country which took part of the Exhibition should be overlooked; and we see, no practicable way of accomplishing this desideratum, more likely to give general satisfaction, than that of presenting a copy of the 'Official Descriptive and Illustrated Catalogue' to each mechanics' and scientific institution and public library throughout the United Kingdom, and also to the public libraries and institutions of the principal towns of the foreign countries which contributed to the success of the undertaking. Such a present would be a graceful acknowledgement of the assistance rendered by each town to the promotion of the general good, would meet with universal approbation, and give such an opportunity of including foreign countries in the distribution of the fund, as could not be well obtained in any other manner."

**Spectator.**

"But, it is not as a catalogue, in the common sense of the term, that the three large and handsome volumes before us were ever intended to be considered, or could be used in the nature of things. They are not an introduction, but a complement; they follow, not precede, the vast collection which occasioned them, and our experience of it. The purpose of the catalogue is fulfilled if it moulds and enlarges our views and strengthens our recollections; for neither has it in fact accompanied the general mind to any large extent in the study of the Exhibition itself, nor did it mainly profess such an aim.

"The 'Descriptive and Illustrated Catalogue' is, then, a memorial of the Great Exhibition: and if that was nothing less than a compendium of the industry of the age and a concrete of its tendencies, this is a cyclopædia condensed. It is well known that the best assistance was secured to render it a scientific no less than an accurate representation of the Exhibition in its several branches. France with her exquisite art, Austria with her proofs of wide and diverse empire, Northern Germany with her multiform thought, Russia with her massive productive-ness, America with her practicality, India with her gorgeousness, Egypt and Tunis with the lessons of their grand site, as old as the world and as unaltered in its basis, our Colonies with the elements of their future—the nations from the four points of the compass are returning from our shores; England herself is resolving her congregated industry into its thousand constituents: the phenomenon is gone, and its habitation knows it not—too dubious of its own existence for long; but with these volumes in our possession, the fact will remain still a present fact. It has stamped itself not on the retina only and the memory—though it will not fade thence yet awhile, but here also, copiously and enduringly, to be referred to as yet with us. And if the record is valuable to us, its historical worth to future generations as a picture of the nineteenth century, in its products and results, in its ideas of itself, its belief of what it has done, and its expectations of how that is to be applied and rendered fruitful, and of what remains to do, is not easily to be estimated at the present day. We cannot match with it any so complete expression of a period, material and inventive. The age has impersonated itself, and set for its daguerotype. Whether we shall be judged as eminently moral or spiritual, or truly progressive, we must leave to the future; but in one many-sided aspect we may expect to be known.

"The work, as we have said, has been ably got up. It presents a very sufficient view of the transactions relative to the Exhibition, as well as of its actual components: but we could wish, as the publication was of necessity postponed to so late a period, that it had been delayed some fortnight longer to admit of a list of the awards. Yet this, again, might be deemed by some to detract from its character for impartiality.

"And to party give us that was meant for thanking."

#### Athenæum.

"The third volume is devoted entirely to Foreign States; and to us as a manufacturing nation this volume is even more important than the other two. It furnishes the merchant and manufacturer with a copious Trades' Directory to all the great producers of the old and new continents. It gives intelligence in connection with the exhibition of particular manufactures—of the natural history, the locality, and the amount produced,—of substances employed,—such as we could not by any other means obtain. This is particularly the case with the Austrian Section of the Catalogue. The notes are most extensive, and convey information of the greatest importance on every variety of articles exhibited within the section of the Exhibition building devoted to that extensive empire.

"Such is an analytical review of the 'Official Descriptive and Illustrated Catalogue,' compiled and arranged, as we have said, amidst a complication of difficulties which greatly enhance the merit, though not the value, of the work. The descriptions furnished by the exhibitors were in nearly all cases, of necessity, to be altered before publication: and it was for some time even after the opening of the Exhibition, difficult to fix the class and number to which many of the exhibitors belonged. Things were falsely named,—there was much grammatical confusion,—scientific terms were seldom correctly applied,—technical terms were frequently such as could not be understood—and these were often wrongly translated from the foreign returns made to the Editor. Amidst these and a thousand other difficulties Mr. Robert Ellis has steadily pursued his work; and it cannot be denied that he has brought it to an issue for which he deserves all praise. We do not mean to say that the work could not have been better done; if the labour had to be again gone through, there is no doubt that many improve-

ments might be effected. But under all the circumstances of the time and the occasion, we regard the Catalogue as worthy of the great phenomenon which it records. A work of permanent value and enduring interest has been produced; and to all parties concerned it must be satisfactory to know that the labour which has been bestowed on it has not been in vain. To the philosopher, the manufacturer, and the merchant, we repeat, this Catalogue must, for ever, prove an invaluable work of reference.

"The 'Illustrated Catalogue' is, it is true, but an echo of the Great Exhibition. Three volumes can furnish but a faint reflex of the varied works of industry that were crowded together in an area of nearly twenty acres. Such, however, is the power of graphic and typographic art, that in these volumes are contained the essence and very pregnant soul of that so vast body. Tons of roses may be compressed into a few drops of the most precious attar,—a vast volume of vapour may be condensed into one drop of water. Such is the relation which may be summed to exist between the Great Exhibition and this its Catalogue. Should this record of human industry survive some thousand years, what a picture will it present of the universal activity, the fiery energy, and the indomitable aspirations of this truly iron age! When generations yet unborn, in turning over its pages, may yet reflect on the wonders of engineering skill and mechanical refinement which were concentrated within the glassy walls of the Crystal Palace, and remember within how brief a period they had attained to such extraordinary development, the conclusion will be forced on their minds that if the will and energies of the public and the artists of the present day had been directed with corresponding intensity towards carrying the Fine Arts forward to the same degree of perfection, a result might have been realized equal to that which characterized the palmyest days of Greece."

#### Weekly News.

"Among a profusion of excellent designs by first-rate artists, very carefully engraved, each highly deserving of attention, we cannot help calling to view the following as among the most striking:—An Axminster carpet for Her Majesty's drawing-room; a drawing-room stove-grate, by Pierce, London; a sumptuous four-post brass bedstead, clothed in green silk, and a gorgeous bronze candelabrum, by Winfield, of Birmingham; a rotary knife-cleaning machine, by Kent, of the Strand; the Tweeddale testimonial in silver, by Hunt and Roskell; the costly and tasteful silver goods by Smith and Nicholson; a porcelain statuette, by Celand; a magnificent cabinet, made for Her Majesty by J. M. Holland; and a Taylor's Oriental fowers in vegetable ivory. In the 4th Section, or Class XXX., relating to the fine arts, we have been much pleased with the statues by J. and Mary Thornycroft, representing the Prince of Wales as a shepherd, and the Princess Royal as a gleaner; the Greek Hunter, by John Gibson; the handle of Murat's sword, by Hope; Titania and Ariel, two beautiful statues, by Igoth; and a fountain, by Messrs. Seeley and Co. The artists employed to design these numerous specimens, and the engravers by whom the wood has been cut, have greatly contributed to exemplify and adorn this pictorial book."

#### Boston (American) Post.

"We will tell exhibitors, and particularly the successful ones, what books respecting the Great Exhibition they will find valuable in showing the part they have acted. The Great Exhibition 'Official Catalogue' (costs about fifty cents) contains all the contributors and contributions in brief mention of all nations. Then the 'prize list,' or as the title reads, 'List of Awards granted by Jurors,' an octavo of 266 pages, (price half a crown, or about seventy-five cents), contains the names of all the contributors from all nations who took the 'council medal,' or the 'prize medal,' and also those that were 'honourably mentioned.' By far the most valuable, complete, and ornamental list of contributors, artists and all, is the 'Great Exhibition Official Illustrated Catalogue,' in three volumes, octavo, at three guineas (about \$15). The 'List of Awards granted by

Juries, is the same size paper, and could be bound with it. In this magnificently illustrated work there are several thousand woodcuts engraved in the first style of the art, representing all of the most striking and beautiful objects shown at the exhibition. It will be, with the 'List of Awards,' granted by Juries, the only complete, valuable, and enduring record of the 'Great Exhibition of 1851.' I doubt not but there are several score of exhibitors in the United States that will get this work. The articles in the United States department that are illustrated by engravings are the American Chair Company's chairs, Chilson's furnaces, Cornelius and Co.'s chandeliers, Dennington's floating church, Philadelphia, Ericsson's nautical instruments, Goodyear's India-rubber goods, the Maryland cabinet of woods and other products, and Watson's gazelle carriages.

There were few of those splendid works of art from the United States that shone so conspicuously in the department of many of the old nations of Europe. Powers's 'Greek slave' not long ago (1850) was engraved in the London Art Journal, with a most fair, candid, and every way complimentary criticism. I will mention that Part V. of the 'Illustrated Official Catalogue' is done up as a separate part, and sold at fifteen shillings sterling (some \$4.) and that contains the United States part of the exhibitors, with the use of two or three other foreign countries. In the 'Illustrated Official Catalogue,' all, or nearly all, the articles are described much more *in extenso* than in the brief one-line paragraph of the 'Shilling (50 cent) Catalogue.' These 'Official Catalogues' are the only ones published that are deserving the name of catalogues, they are called the 'Art Journal Illustrated Catalogue' being a mere list of a few prominent contributors, with engravings, without one-twentieth part of the contributors being mentioned. \* \* \* \* \* No person now, who reads this, can say he does not know 'where to find himself' in the printed records of the Great Exhibition. I learn that a lot of the Official Catalogues (small), the Illustrated Catalogue in three volumes, and Part V. of the Illustrated Catalogue (separate,) have been sent over to the United States. Let those who have or have not been successful as contributors, that wish a permanent record of the Great Exhibition of 1851, send to his bookeller and get a copy of any or all of these works. As time flies away their value will increase with years."

#### Art Journal Guide.

The statistics furnished by Messrs. Spicer and Clowes, the enterprising contractors for the Catalogues, and, next, to numberless other works connected with the Exhibition, show the gigantic and formidable nature of this part alone of the undertaking. These statistics present, *ex facie*, somewhat of a barren, repellant appearance, being given in long columns of uninviting figures; but it is the very carelessness and minuteness of detail thus manifested that give to Messrs. Spicer and Clowes' statistics an added charm. Before proceeding to notice the actual sales of, and the sums realised for, the Catalogues Official and Illustrated, Handbooks, Synopses, &c., it should not prove unpleasant to say something of the preparatory

steps necessary to be taken before these publications were fit to be placed in the hands of the visitors to the Crystal Palace. And first as to the 'trades necessary for the production of the Catalogues: these were, type-founders, printers, joiners, iron-founders, paper-makers, wholesale stationers, letter-press printers, printing-ink makers, composition roller-makers, engravers on wood, lithographic printers, hot-pressers, and bookbinders—in all twelve. Then as to the quantity and value of new type manufactured, and the quantity of type actually used for the publications. The technical names given by printers to the different kinds of type required we consider it useless to state, as being unintelligible to a general reader. The quantity of type necessary solely taxes credulity; but the facts are incontrovertible. In addition to the usual resources of Messrs. Clowes' Establishment—the extent of which can be judged of from their employing from 500 to 600 workmen—the supply of new type was 37 tons; the cost of which, and other necessary material, amounted to above 6,000*l*. Adding the type required for the Report of the Commissioners, the work from which we gather these interesting facts, and for the Jury Reports, a weight amounting to nearly forty-eight tons was set apart for the service of the Exhibition of 1851. For each of the three small Official Catalogues in the English, French, and German languages—from three to four millions of types were required; for the "Priced Lists," upwards of four millions; and for the "Illustrated Catalogue," no less than seventeen million. As illustrative of the amount of type in use in these several publications, the combined quantity, it may be observed, should be equal to the printed surface of 116 single *Times* newspapers. Next, as to the paper required for the Official Catalogues, and Reports of the Juries and Commissioners. For the small Official Catalogues 24,171 reams, or 507,631 lbs. weight were required; upon which, and 357 reams of coloured paper for covers to these catalogues, the paper duty, at the rate of 1*3**d*. per pound, amounted to 3,260*l*. 12*s*. 6*d*. For the Illustrated Catalogue were required 100,000 lbs. weight of super-royal—the duty paid upon which was 625*l*. The entire weight of paper used for the Catalogues and Reports immediately mentioned was 758,098 lbs., the duty on which was, in round numbers, nearly 4,740*l*. Of the small Official English, French, and German Catalogues, 305,000 were printed; of the Synopsis of the Contents of the Building, 89,500; of the Popular Guide, 26,000; of the Illustrated Catalogue, 8,250; of the Reports of the Juries, in two different types, 20,550; and of the various smaller publications, such as Hunt's Hand-book, Keys to the Catalogues, Priced Lists, &c., somewhere about 30,000. The cost in the different departments, for the price of compositors' labour, engraving, lithography, hot-pressing, binding—is also noticed by Messrs. Clowes. As to the sale of the different volumes—Plans, Keys, Hand-books, Guides, Catalogues—the number sold, it may be briefly stated was 473,531, realising 19,014*l*. 8*s*. 4*d*.—a sum which, we have grave doubts, will prove anything but an adequate return to the spirited Contractors for their immense outlay.

#### EXTRACT FROM THE FIRST REPORT OF THE ROYAL COMMISSION.

**Catalogues.**—It was obviously necessary that a complete and accurate Catalogue should be made of the articles exhibited, not only for the use of visitors, and of the Commissioners, Jurors, and others during the continuance of the Exhibition, but also as an enduring record, in the most perfect shape, of the Exhibition itself. The Commissioners considered that these advantages would be best secured by submitting to public competition the exclusive privilege of preparing and selling the Official Catalogues. Of these the cheaper one was, in accordance with the conditions of tender laid down by the Commissioners, to be sold to the public at the price of one shilling, and to contain not less than 320 pages of foolscap quarto (printed in double columns). Out of the above sum a royalty of two pence per copy was to be paid to the Commissioners.

In addition to the Shilling Catalogue, an Illustrated Catalogue (also official), extending to two or more volumes,

was to be produced, the price and manner of printing of which was left to the discretion of the contractors. An option of preparing more editions than the two above mentioned was also given.

The Commissioners adjudged the right of printing and sale of these Catalogues to the joint tender of Messrs. Spicer Brothers and Messrs. Clowes and Sons, who offered the sum of £3,200 for the privilege (besides the royalty payable on the sale of the small Catalogue). The difficulties necessarily attendant upon the execution of the engagements entered into by the Catalogue contractors (owing not only to the extensive nature of the undertaking itself, but also to the changes consequent upon the continual arrival of additional articles from foreign countries for a long period after the opening of the Exhibition) were surmounted by them in a very satisfactory manner, and the volumes that accompany this Report will serve to

show, both by their accuracy, completeness, and their general execution, that the Commissioners have every reason to be satisfied with their having insisted the preparation of the Catalogues to Messrs. Spicer and Clowes.

Appendix No. XXVII. contains a statement furnished by the contractors, showing the extent of the size of the different Catalogues, and other works illustrative of the Exhibition, which they were authorized to sell in the Building:

**Statistics of the Catalogues, extracted from the Appendix to the First Report of the Royal Commission.**

**Trades necessary for the production of the Catalogues:**

|                        |                            |
|------------------------|----------------------------|
| Type-Founders.         | Printing-ink Makers.       |
| Printers' Joiners.     | Composition-roller Makers. |
| Iron-Founders.         | Engravers on Wood.         |
| Paper-makers.          | Lithographic Printers.     |
| Wholesale Stationers.  | Hot-Pressers.              |
| Letter-Press Printers. | Bookbinders.               |

**Type-Founding.** The first step towards the mechanical production of the Catalogues was the preparation of type on a scale commensurate with the magnitude of the undertaking. Two sizes were selected—one for the Small Catalogue and the French and German translations; the other for the Illustrated Catalogue. Of each of these types it was estimated that not less than six tons would be required; making a total of twelve tons, to be manufactured within the short space of six weeks.

As these works progressed, a larger supply was found necessary. New works illustrative of the Exhibition were contemplated; and the supply of new type was eventually increased to 37 tons, in addition to the usual resources of the house. The cost of this large quantity of type and other necessary material amounted to above £6,000. And, adding the quantity required for the Report of the Commissioners and for the Jury Reports, a weight amounting to nearly 48 tons was set apart for the service of the Exhibition of 1851.

The following Table shows the Quantity and Value of New Type manufactured, and used for each Publication:—

| TRIAL or WORK.                       | Weight<br>in lbs. | Number of<br>Types<br>required for<br>each Work. |
|--------------------------------------|-------------------|--|
| Small Official Catalogue—English     | 5,664             | 3,877,008  |
| Ditto Ditto French                   | 5,712             | 3,909,861  |
| Ditto Ditto German                   | 4,604             | 3,103,460  |
| Synopsis of Contents of the Building | 425               | 202,400  |
| Ditto Ditto French                   | 425               | 202,400  |
| Popular Guide                        | 984               | 210,944  |
| Index to Official Catalogue          | 2,780             | 1,555,910  |
| Priced Lists                         | 5,376             | 4,199,062  |
| Hunt's Hand-Book                     | 4,114             | 2,301,120  |
| Plans of the Building, &c.           | 195               | 285,888  |
| Key to the Catalogue                 | 81                | 1,200  |
| Illustrated Catalogue                | 28,210            | 17,345,120                                       |
| Reports and Awards by the Juries     | 30,107            | 22,513,336                                       |
| Ditto Ditto (large type)             | 14,124            | 8,002,280  |
| Report of Commissioners              | 3,752             | 1,824,084  |

The printers of the Catalogues are type-founders as well as printers, and by working night and day, with relays of hands, they produced a great portion of this quantity themselves; the assistance of other foundries, however, was necessary; and the Messrs. Miller and Kiplard of Edinburgh, and the respective firms of Besley, Caslon, and Figgins, of London, supplied the remainder.

As an illustration of the amount of type in use for the various publications, it may be observed that the combined quantity would be equal to the printed surface of 100 single Times newspapers.

A great subdivision of labour is necessary in the manufacture of type: the persons employed are usually in the proportion of 5 men to 3 boys. The following statement shows the weight of four descriptions of type manufactured in one week by 20 men and 13 boys, and the number of separate types in each quantity:—

|                            |                         |
|----------------------------|-------------------------|
| 360 lbs. Small Pica, equal | 124,720 separate types. |
| 240 „ Bourgeois, „         | 123,880 „               |
| 190 „ Brevier, „           | 113,280 „               |
| 168 „ Minion, „            | 109,200 „               |

Although type is much lower in price now than it was some few years back, it is still an expensive article, not so much from the cost of the raw material—a compound of lead, antimony, and tin—as from the amount of labour necessary for its production, five operations being required to complete a single type; while, from its natural softness, and the heavy pressure of the machine in printing, it soon wears out. In the case of the small English Catalogue, from the large number of copies printed, the value has been deteriorated at least 60 per cent.

The price of type varies according to its size; each page of the small English Catalogue cost 20s. 3d., and of the Illustrated Catalogue 21s. 9d. Large as these prices may appear, they are exceedingly low, when compared with the average market price, and are such as could only be obtained by contracting for the manufacture of large quantities.

**Paper.**—The manufacture of paper includes a variety of processes—from the sorting of the rags to the production of a complete sheet of paper. Two sizes only were necessary, described as super-royal and double-foolscap: the folding of the sheet into 4, 8, and 16, forming the different-sized books. For the convenience and economy of printing the small Catalogue, the double-foolscap was, however, made into four sizes, the sheets folding into 8, 12, 16, and 24 leaves. The Synopsis, consisting of 90 pages, was printed on one of these large sheets, at one impression. The entire quantity of paper manufactured was 398 tons; and its production required labour equal to 338 hands (men and women) for three months. Messrs. Spicer Brothers, (Wholesale Stationers,) joint contractors in the production of the Catalogues, supplied the whole of the paper; and so efficient were their arrangements with the various mills engaged in its manufacture, that not a single failure occurred in the appointed times of delivery.

The small Official Catalogue, with its cover, before the edges were cut, weighed 1 lb.; the duty on each copy was therefore 1d., or 14th the selling price: equal to 12½ per cent. of the cost of the Catalogue, but 21 per cent. on the manufacture of the paper.

**Compiling and Printing.**—The Catalogue Forms issued to the exhibitors (in order that they might supply their own descriptions of the articles exhibited) were printed in four colours, representing the four great divisions of the Exhibition; on a receipt of those forms they were examined by the compilers, who made such alterations as they considered requisite; determined, to the best of their judgment, the Class to which the article exhibited more especially belonged; and forwarded the returns thus corrected to the printer. On Jan. 27 the first portion of these returns was placed in the hands of the compositors, and speedily set up in type for the Illustrated Catalogue: keeping each of the four divisions separate; and distinguishing, by a figure at the end of the last line of each article, the presumed Class to which it belonged. Proofs of these returns were forwarded from time to time to the compilers, who examined them as to their general correctness, and returned them to the printer for such amendments as were necessary: these effected, 80 proofs were printed, and forwarded to the Executive; to the editor, who transmitted copies to the various authors; to the compiler of the small Catalogue, in order that the descriptions might be reduced; and to the French and German translators, for the same purpose of reduction and translation. Ten weeks now had elapsed—the 26th of April had arrived—the whole of the exhibitors' returns received.

up to that date were in type, amounting to nearly 2000 pages: this mass, however, was still unarranged; and it was not until four days previous to the opening of the Exhibition that any defined plan of classification would be determined upon. The contractors were bound under a penalty to produce a certain quantity of the small Catalogue on the first of May; to effect this within four days, seemed almost impracticable. It was originally intended by the contractors that the Illustrated Catalogue should also appear at the same time, but all hope of producing anything more than a specimen Part was abandoned.

The classification, which should have been the labour of literary men, became the task of the operative printer: the type was arranged in 363 slips, each representing a page; slip after slip was taken up by the compositor, and the exhibitors' returns, as numerically distinguished, collected together, until the whole 30 Classes of the United Kingdom were arranged. The same arrangement, necessarily took place for the Colonies and Foreign States; for although each State had but one numerical order for all the articles exhibited, they stand in the Catalogue in the respective State in the same order as the 30 Classes of the United Kingdom; upwards of 100 distinct arrangements had to be effected: the classification completed, revises were forwarded to the compiler, to receive the numbers by which the articles were to be distinguished in the Building; 324 pages was the prescribed limit of the small Catalogue, and 363 pages were in type; a further reduction had to take place in the description of the articles exhibited; and it was not until the midnight immediately preceding the opening of the Exhibition that the small Catalogue was finally "ready for press."

The first or specimen Part of the Illustrated Catalogue was also proceeded with on the same principle laid down for the production of the small Catalogue; and on the morning of the 1st of May both these works were on sale in the Exhibition Building.

The printing in itself would have been but a small affair for the number of persons employed, could the matter have been placed before them according to the usual routine of authorship and printing; this, however, was impracticable, and no better plan could perhaps have been suggested than that followed to a most successful termination and through many extraordinary difficulties.

After the opening, additional returns came in. The first edition was found exceedingly imperfect: the superintendents of Classes undertook the examination of the proofs, supplied omissions, and corrected the numerical arrangements; many articles were found in one class that belonged to another; the exhibitors' descriptions had again to be curtailed to make room for additions amounting to 41 pages; and a second edition was produced, with greater labour and exertion than the first.

New returns continued to come in—removals from one class to another were still found necessary, and it was not until a third edition was produced, at a cost of labour equal to the two preceding, that a correct Catalogue of the Exhibition could be said to exist.

Under these circumstances it was found impracticable either to produce the Illustrated Catalogue in a complete form, or the French and German translations, until a late period of the Exhibition; and as the labours of the printer did not really terminate until within four days of the opening, so neither did they terminate until within four days of the close of the Exhibition.

A detail of the progress of the Illustrated Catalogue would be a repetition of the circumstances connected with the small Catalogue; inasmuch, however, as the larger work is five times the size of the smaller, and the care and attention required more minute, the cost and labour in the printing-office were at least ten times greater.

French and German compositors were employed for the foreign translations. The Exhibition of all Nations, however, had created a demand for foreign papers; and the compositors, knowing that the employment in the Catalogue would not extend over a long period, accepted other engagements; and those works were finally and successfully brought to a close by men who knew not a word of the respective languages: French and German

readers, however, were employed to insure correctness. The repeated alterations and transpositions in the English Catalogue created a great amount of confusion in the foreign Catalogues. The mechanical classification, applied to the English, had to be effected: a number of persons were therefore employed to cut up each return separately, and paste them on sheets of paper under their respective class and country, and again place them in the compositors' hands for reproduction. Of the French Catalogue 146 pages, and of the German 62, were in this manner a second time set up in type.

The time occupied in printing the various works was 216 days. The whole of the other employments necessary for their production were also completed within the same period.

Every alteration in the small Catalogue created a corresponding alteration in the Illustrated Catalogue, and in the French and German translations.

The cost of these alterations, compared with the usual cost for setting up the types, was as follows:

- On the small Catalogue as four to one.
- Illustrated Catalogue as five to two.
- French Translation as five to two.
- German Translation as two to one.

And to this must be added, as an increased element in the expense of printing, the extra amount received by the workmen for night-work, equal to 10 per cent. on the wages paid.

Compositors are paid by the 1,000, for setting up the types; and by the hour for corrections: the complete arrangement of 10,000 types is considered an average day's work for one person. Tabular Statements similar to the Priced Lists are attended with extra trouble, and are paid double the price of other work; and works in Foreign Languages a small increased price per 1,000. From the circumstance of all the types used for the Catalogues being new, the Compositor had an advantage of about 10 per cent. on the day's work.

The hours of attendance are from 8 in the morning until 8 in the evening. When the men are employed during the night, they receive extra payment, equivalent to 40 per cent. on their earnings.

To this branch of printing must be added readers and reading boys, in the proportion of one reader and one boy to each 12 compositors.

From the extraordinary number of proofs required during the progress of the Catalogues, four proof-pullers were constantly employed so long as the compositors were at work: 54 reams of paper, equal to 27,864 sheets, were consumed in proofs only.

There are two descriptions of machines employed in printing: the cylinder machine, attended by one man and two boys, producing on the average 7,000 impressions per day of 10½ hours; and the platina machine, managed by one man and four boys, averaging 4,000 impressions per day. The machinemen and boys are paid by day-work.

Pressmen are paid by the ream of 500 sheets, printed on both sides (or 1,000 impressions), the price varying according to the quality of the work required. Each press is worked by two men; and it is estimated that, on the usual description of printing, two men would produce 1,250 perfect copies of one sheet (or 2,500 impressions) per day. The Illustrated Catalogue was printed entirely at the hand-press, and required so great an amount of care, that 500 sheets, or 1,000 impressions, were scarcely obtained from the men in one day; and of the separate engravings, eight of which were printed on one sheet of paper, but 500 impressions were produced in a day, and, in addition to the men engaged in printing, four men were constantly employed in what is technically called "bringing up" the engravings on wood, preparatory to the printing.

To the Press and Machine Departments must be added persons to wet the paper before printing, and others to dry and press it after printing, and deliver to the binders. The average number of persons employed in "wetting" paper was equal to 6 men for 90 days.

*Comparative Power of Production of Hand-Presses and Steam-Machines.*—Comparing the press and the cylinder

machine, the size of the paper and the quality of the work being the same, the press will produce 1,250 copies and the machine 7,000 in the day, at about the same cost for labour; and comparing the press with the platten machine, the press will yield 1,000 copies to the machine 4,000, at the same cost; the quality is always being in favour of the press.

This high rate of production, however, is only attainable where the number of copies required is large: where the numbers to be printed do not exceed 2,000, not more than one-half these quantities can be obtained on the average; and when less than 2,000 little advantage is gained by using the steam-machine.

The machines, however, have an advantage over the press in size, which doubles, and in the larger machines, doubles the quantity produced; while the press can only print 8 pages of the Catalogue at each impression, some of the machines printed 48 pages at one operation.

Taking the small Official Catalogue as an example:—200,000 complete copies were printed at 15 cylinder machines, in 42 days; it would have required 47 hand-presses 97 days to have produced the same result; or, while 15 machines, with 15 men and 30 boys, produced 7,000 copies of the Catalogue daily, 47 presses, and 94 men, could have produced but 3,000.

The following Table shows the average number of persons engaged in editing, compiling, and printing the various Catalogues, &c.—

|                       |   |   |   |   |    |
|-----------------------|---|---|---|---|----|
| Editor                | — | — | — | — | 1  |
| Compilers             | — | — | — | — | 17 |
| French Translators    | — | — | — | — | 17 |
| German Translator     | — | — | — | — | 1  |
| Annotators            | — | — | — | — | 30 |
| Indexers              | — | — | — | — | 20 |
|                       |   |   |   |   | 71 |
| Compositors           | — | — | — | — | 44 |
| Readers and Boys      | — | — | — | — | 8  |
| Pressmen              | — | — | — | — | 32 |
| Machine-men and Boys  | — | — | — | — | 55 |
| Writers of Paper      | — | — | — | — | 2  |
| Warehousemen and Boys | — | — | — | — | 11 |

— 152

**Printing Ink.**—The cost of this article forms a considerable item in the expense of printing. The ink used for the Catalogues was manufactured by Messrs. Shackell and Edwards; the quantity required for the small Catalogue amounting to nearly 4,000 lbs.; for the Illustrated Catalogue about 400 lbs.; and the entire quantity consumed on all the works printed for the Exhibition not less than 6,000 lbs. The ink for the Illustrated Catalogue is a fine specimen of black, made purposely for the printing of wood engravings. Printing ink varies much in price, according to the quality; that used for the Illustrated Catalogue is nearly four times the cost of the ink used in the small Catalogue; but as a less quantity of the finer description is necessary to cover the same amount of surface, the comparative increase of price is somewhat reduced.

**Engraving.**—Three classes of artists are necessary for the production of an engraving—the designer, the artist who transfers the original drawing to the wood-block, and the actual engraver. The designer is usually considered the superior artist, although the elaborate workmanship exhibited on some of the engravings in the Illustrated Catalogue would make this point somewhat doubtful; two, three, and even four weeks having been occupied on a single illustration. Engraving is a profession followed by both sexes: many engravers are also designers; and where this is the case, the highest point of excellence exhibits itself in their productions.

Upwards of six thousand pounds have been expended on this department: it would be difficult to form more than an approximate estimate of the number of persons engaged, but as a Supplementary Volume is in the course of preparation, probably not less than 200, from the commencement of 1851 to the present time.

**Lithography.** The art of printing from stone also contributed towards the embellishment of the Illustrated Catalogue. The Plan of the Building was lithographed in three colours, and employed a draughtsman 10 days to complete three stones: 96,417 impressions were therefore necessary to obtain 327,39 copies, and was equal to the work of 3 printers for 409 days. 22,187 of the Plans were mounted; this operation employed 6 persons 40 days.

The Prince of Wales' Shield occupied one draughtsman 10 days, and the Liverpool Model 6 days, in lithographing; and printing 9,000 copies of the former, and 11,000 of the latter, required 2 men 36 days.

The Kieff Bridge—a beautiful specimen of tinted lithography—employed the artist 14 days. To produce the desired effect, three stones were used; and as each impression was the result of three printings, 6,000 copies employed 3 men 24 days.

When the numbers to be printed are large, transfers to other stones can be made: and by this means, with the aid of additional presses, copies can be rapidly multiplied. This process, however, is only applicable to ink drawings, such as the Shield and Liverpool Model; but for chalk drawings, similar to the Kieff Bridge, it is scarcely practicable.

The entire impression of the Kieff Bridge, and the greater portion of the other lithographic illustrations, were executed by Messrs. Day & Son, and the remainder by Messrs. Staudidge.

The coloured map of the Geographical View of the Great Exhibition, by Mr. Petermann, was engraved on stone (a process combining despatch and excellence of execution). It was found necessary to refer to at least 150 different maps and books, in order to identify the various localities from whence the contributions to the Exhibition were supplied; and occupied 3 persons upwards of two months in compiling and engraving; printing 700 copies (and for which two printings were necessary) occupied 4 men 70 days; and the colouring 6 persons about 50 days.

**Hot-Pressing** preserves the fine gloss and smoothness that the paper originally possessed before printing, and which the wetting and the impression from the type destroys. After the printed sheets are thoroughly dried they are placed singly between highly-sized thin card boards, called Pressing Papers, and at certain intervals a sheet of zinc plate is introduced. When a sufficient quantity has been thus prepared, the batch (as it is technically termed) is placed in an hydraulic press or *grain* at power, for 8 or 10 hours. In cold pressing the only difference in the process is in the use of cold instead of hot plates. The pressing of 6000 reams employed 4 men and 4 boys for 75 days.

**Binding.** The services of 12 binders were retained to effect this last operation in the production of the small Official Catalogue, and by the united efforts of not less than 500 persons, 20,000 copies were sewn and covered in the course of a few hours.

The binding of the Illustrated Catalogue was intrusted entirely to Messrs. Remnant, Edmunds & Remnant, and the Messrs. Westley & Co., in addition to the binding of a very large portion of the small Official Catalogue.

Presentation copies of the small Catalogue, and of the first part of the Illustrated Catalogue, were also prepared for Her Majesty and H.R.H. Prince Albert, on the opening of the Exhibition. These books were elegantly bound, with gilt edges, by the Messrs. Westley & Co., in the short space of six hours.

The division of labour in binding is great: the various processes are performed by men, women, and young persons of both sexes. To complete the small English, French, and German Catalogues—the Priced Lists—Index—and the English and French Synopses—nine operations were necessary for each book; the binding of these various works gave employment to 20 men and 100 women for 80 days.

The Illustrated Catalogue required 17 operations to produce a complete volume; and binding the whole impression afforded occupation to 40 men and 90 women for about 43 days.

By Authority  
of the

Royal  
Commission.

JUST PUBLISHED, IN ONE VOLUME, PRICE ONE GUINEA.

## REPORTS BY THE JURIES,

Printed uniformly with the *Official Descriptive and Illustrated Catalogue*; and containing references to the Pages in the Catalogue where the Exhibitors' descriptions and Illustrations of the Articles receiving Awards may be found. To which is added a Complete Alphabetical and Classified Index.

Also, A LARGE-TYPE EDITION OF THE SAME WORK, IN TWO VOLUMES, PRICE TWO GUINEAS.

LIMITED IMPRESSIONS have also been printed, in IMPERIAL QUARTO, on fine PLATE PAPER, of the

### REPORTS BY THE JURIES;

### THE OFFICIAL DESCRIPTIVE AND ILLUSTRATED CATALOGUE;

AND

### THE REPORT BY THE COMMISSIONERS.

#### A SUPPLEMENTAL VOLUME,

Uniform with the OCTAVO EDITION of the CATALOGUE and of the JURY REPORTS, is now ready, containing the REPORTS of the ROYAL COMMISSIONERS, with APPENDICES. Forming a complete Historical, Statistical, and Financial Record of the Great Exhibition of 1851, with Plans and Diagrams, together with additional Engravings illustrative of the Articles for which Awards have been given, and Views of the Interior and Exterior of the Building.

### POPULAR RECORD OF THE GREAT EXHIBITION:

#### HUNT'S HANDBOOK,

Being an Explanatory Guide to the Natural Productions and Manufactures of the Great Exhibition of the Industry of all Nations, 1851. By ROBERT HUNT, Professor of Mechanical Science, Government School of Mines. In 2 volumes, price 6s.

### THE OFFICIAL SMALL CATALOGUE,

#### FINALLY CORRECTED AND IMPROVED EDITION.

With a full Alphabetical and Classified Index of Contributors, and of Articles exhibited, Lists of Commissioners and others engaged in the Exhibition, Local Committees and Secretaries, Jurors, and Description of the Building, &c., bound in 1 volume, price 7s. 6d.

### REPORT OF MR. REDGRAVE, R.A.

#### ON THE ORNAMENTAL DESIGN DISPLAYED IN ARTICLES IN THE EXHIBITION.

PREPARED AT THE DESIRE OF HER MAJESTY'S COMMISSIONERS.

For the use of students in the DEPARTMENT OF PRACTICAL ART (Manchester House, London), Manufacturers, &c., this Report is reprinted separately from the Juries' Reports.
